Let us first discuss the **First comment**. The answer to the second comment will become apparent during that discussion.

1. The critical issue brought out by the first comment is the first premise itself: By assuming that “there is a single sentient being...” we are distorting the actual reality. This is saying that there is a “soul” or “self.” To assign an **absolute identity**, there must be something unchanging in it.

- Now, let us discuss HOW the Buddha explained that the above premise is not correct.

- At the time of the Buddha, many believed in a “*ātma*” or a “soul” or a “self”. When asked what is a “person” is unique to give that absolute identity, some said it was one’s body (*rūpa*). Others said either one’s feelings (*vedanā*), one’s perceptions (*saññā*), one’s actions (*saṅkhāra*), one’s thoughts (*viññāṇa*), or some combinations of the above five. **However, we are not talking about *pañcakkhandha* here, i.e., not *rūpakkhanda* etc. I will write a series of posts later to clarify the difference.**

- There is nothing else that can be called as “one’s own.”

2. So, the Buddha explained in detail why none of the above remains the same in a “given person.” Let us take a simple example to understand the basic idea. Let us consider person A when entering the high school and when leaving the high school.

- Did any of the five categories (*rūpa*, *vedanā*, *saññā*, *saṅkhāra*, *viññāṇa*) remain the same at those two instances of time, several years apart? Person A would have grown and will not have the same body. At the time of his leaving high school, most of his primary thoughts (*vedanā*, *saññā*, *saṅkhāra*, *viññāṇa*) are on getting a job or entering a university. Those would be very different from the time he entered high school.

3. Now we can reduce the time interval to the end of his first year at the high school. All of the above arguments still hold. “He” would have changed in all five of the above characteristics that define “him”.

- We can keep reducing the time interval for that person. When we think about this carefully, we can see that even his physical body would have changed a little by the time he got to the school from home. Of course, all his “metal properties” keep changing moment-to-moment.
- To see a “significant change” over a long period of time, we need to look at time intervals several months apart. But when we keep narrowing down the time interval, we can see that all five characteristics about that person keep changing even moment-to-moment.
- Even when a person enters a room, walks to the other side, and leaves the room through a back door, is it the “same person” who left? Which of the above five characteristics would have remained the same?
- Once we start contemplating on it, it is easy to see that all four of our mental characteristics keep changing moment-to-moment. It is a bit harder to “see” that our bodies change moment-to-moment, but the above argument logically extends to smaller and smaller time intervals. **This is why it is called “seeing with wisdom”.**
- Furthermore, modern science indeed show how fast our bodies change. Every few months, most of the cells in our bodies get completely REPLACED. We have a “new body” every year.
- Still, this is NOT the same as saying EVERY SINGLE *suddhaṭṭhaka* (smallest material unit) in a body is re-made moment-to-moment; see, [“Does any Object \(Rūpa\) Last only 17 Thought Moments?”](#) However, at least SOME OF THE CELLS in a body of trillions of cells will change even moment-to-moment. Please re-read and understand the enormous difference. Also, see [“Human Life – A Mental Base \(Gandhabba\) and a Material Base \(Cell\).”](#)
- **This way of “seeing” with wisdom (instead of “seeing” with the eyes) is what the Buddha called “*cakkhuṃ udapādi..*” or “seeing with dhamma eye...” Unless we do this, when we look at a person, we automatically get the perception (*saññā*) of a “non-changing self,” say John Smith.**

4. We assign a name to a person and talks about a “John Smith”. But we can see that there was nothing at all common about John Smith at various points in his life. A newborn baby looks different when grown to a young person; with more time, the older adult will appear very different.

- However, we also should not go to the other extreme and say that “there is no such person called John Smith.” How can we say that either? We can talk to John Smith; we can see him actively engaging in various activities, etc. That is the other extreme of “no-soul” or “no-self.”
- That is why the Buddha rejected both “self” and “no-self” as reality.

- We need to use the terminology of a person named John Smith to be able to communicate. Even the Buddha talked about “his previous lives.” But we must keep in mind that there is nothing to be called an “unchanging person.”
 - A “person” can acquire a “new identity” within moments. We have talked about several people who attained *Arahanthood* within a few minutes. Even these days, we have heard about people who have made drastic changes in their character within a few months. Of course, we can gain or lose significant weight in a month and change our appearance.
5. The absolute truth (*paramattha*) is that all our mental phenomena CAN change moment-to-moment. Some of this mental activity arise due to *avijjā* and can lead to significant changes even in real-time; see, “[Idappaccayatā Paticca Samuppāda.](#)”
- While using conventional terminology (*vohāra*), we need to keep in mind that the absolute reality (*paramattha*) is that the “state of existence” changes moment-to-moment.
 - Our physical bodies (and any material form or a *saṅkhata* (*sankata* in Sinhala)) change with time. Some change fast (a fruit fly lives a few days; thus, it goes from birth to ripe age to being dead in a few days), but others change slower (a tortoise lives about 200 years).
6. Thus “a person,” in absolute reality, CAN change for better or worse even moment-to-moment, according to *Paṭicca Samuppāda*.
- A *kusala Paṭicca Samuppāda* cycle starts with “*kusala-mūla paccayā saṅkhāra*”; see, “[Kusala-Mūla Paticca Samuppāda.](#)”
 - An *akusala-mūla Paṭicca Samuppāda* cycle starts with “*avijjā paccayā saṅkhāra*”; see, “[Akusala-Mūla Paticca Samuppāda](#)” and “[Idappaccayatā Paticca Samuppāda.](#)”
 - But most of the time, we do things that are neither *kusala* or *akusala*.
 - Thus *avijjā* is not there ALL THE TIME, even for a normal human being. *Avijjā* is triggered when a desirable/undesirable sense input tempts one.
7. Now we can address the **second comment**. Yes, the *avijjā anusaya* is there with anyone who has not attained the *Arahant* stage of *Nibbāna*. But not all thoughts (*citta*) arise due to *avijjā*, and there are many levels of *avijjā* when it appears.
- *Anusaya* means our cravings and habits (that we have acquired through *avijjā*) that lie underneath the surface, waiting for a trigger to surface.
 - Thus *avijjā* itself is not something that is there all the time. A average human being acts without *avijjā* most of the time. Only when one does something with a greed, dislike, or without a full understanding of the situation, one takes action with *avijjā*.
 - *Avijjā* is **triggered by a sensory input** that is either pleasing or displeasing to our mind. Whether a given “trigger” will set off *avijjā* will depend on one’s *gati* (*gathi*) and *anusaya*; see, “[Āsava, Anusaya, and Gati \(Gathi\)](#),” “[Sansāric Habits, Character \(Gathi\), and Cravings \(Āsava\)](#),” and “[Gati to Bhava to Jāti – Ours to Control.](#)”
 - Thus it is not correct to say that a average human is an entity with *avijjā*. There is no such “fixed living being,” i.e., one with “self.” **The only things that can be associated with “a person” are his/her *gati* and *anusaya*; these keep changing too.**
8. Even when *avijjā* arises, it can occur at many different levels ranging from *moha* (totally covered mind) to just not knowing the Four Noble Truths. In that latter case, one may do moral acts (*puññābhi saṅkhāra*) but expecting meritorious results. Here also the *akusala-mūla* PS cycle operates but will lead to good births within the 31 realms.
- Only when one does meritorious acts without any future expectations, that one does not act with *avijjā*, and the *kusala-mūla* PS cycle operates. That happens when one becomes an *Ariya* or a Noble Person.

An *Ariya* knows that it is unfruitful to strive for anything in this world. An *Ariya* below the *Arahant* stage may act with *avijjā* at lower levels (i.e., would not act with *moha*).

- But in most cases, we disregard what we see, hear, etc. Unless one becomes interested in something, *avijjā* does not arise.
- Thus *avijjā* is something that is not there all the time for any person. The *avijjā anusaya* gets triggered by a sensory input.

9. Getting back to the **first comment**, instead of saying either “a person exists” or “a person does not exist”, the Buddha said a living being exists moment-to-moment. We cannot deny that people exist; but there is nothing absolute about “a person”. Instead, “a person” continually changes; we conventionally call a person “John Smith,” etc.

- Another way to say the same thing is to say that “a living being” exists in a given state until the cause (and conditions) that give rise to that existence exist. Once root causes are changed, that existence will change to a new one. For example, if a human starts doing things that animals usually do, then that person will likely get an animal birth after death.

10. We can get more insight on **both comments** by considering what happens when one attains the *Arahanthood*.

- **One attains the *Arahanthood* when one loses *avijjā anusaya***; see the links in #7. When that happens, *avijjā* will not get triggered by ANY sense input. There is no “*upādāna*” for any likes/dislikes. Thus at death, there is no “*sama uppada*” (birth of similar characteristics) corresponding to “*paṭicca*” (whatever one willingly attaches to).
- But the *kammic* energy that fueled the present life is still there. So, just a rock thrown by someone will stay up until the energy given to it is exhausted, the *Arahant* will live until the *kammic* energy for his/her life is exhausted. Still, he/she will not be tempted by any sensory input, since there is no *āsava/anusaya* left.
- An *Arahant* will experience all sense inputs just like any other human being, but will not generate any likes/dislikes. And since he/she is likely to have many *kamma vipāka* left, he/she could also experience pains and aches or even worse. The Buddha himself suffered from some ailments, and Ven. Moggalana was beaten to death.
- It is the FUTURE SUFFERING that is removed at the *Arahant* stage. Since there is no rebirth, there is no future suffering. The mind is forever released from the material body that CAN AND WILL impart suffering to those who remain in the *samsāra*, the cycle of rebirths.

9.1.5 Craving for Pornography – How to Reduce the Tendency

March 4, 2016; revised January 22, 2020

This post is not based on questions put to me directly. But I get a list of key search words, and it seems that many people would like to know how to suppress sexual urges and to reduce the tendency to visit pornographic sites.

Introduction

1. Of course, engaging in sexual activities with one’s spouse is not a problem for even a *Sotāpanna*. It is only when one gets to the *Anāgāmi* stage that one AUTOMATICALLY loses the sexual urge; see, “[The Cooling Down Process \(Nībbāna\) – How Root Causes are Removed](#)” and “[Is it necessary for a Buddhist to Eliminate Sensual Desires?](#).”

- Cravings for ordinary **sensory pleasures** (sexual or otherwise) CANNOT be removed by sheer will power, just like darkness cannot be removed by willing for light. Darkness can be gotten rid of only by bringing in light.
- Sense desires can be cleansed only by “cleansing the mind,” i.e, by contemplating on the real (*anicca*) nature of the world. In a simple words, that means seeing the bad consequences of strong cravings for sensory pleasures. As we discuss below, that understanding comes through learning Dhamma and getting rid of the extreme activities first.
- Even a *Sotāpanna* has only “seen” the futility of sense pleasures; he/she has not “experienced” the benefits of NOT DESIRING sense pleasures; see the posts in the “[Sotāpanna Stage of Nibbāna](#).”

The Bigger Picture

2. We have had an uncountable number of rebirths so far simply because we cannot comprehend the consequences of attaching to sense pleasures and also because we become angry when we don't get what we desire.

- Those objects that we desire so much will lose their appeal over time. Sense pleasures, sexual or otherwise, are short-lived. Even if one can have access to sense pleasures, the ABILITY to enjoy them WILL decrease with time. That is something that people typically do not realize.
- The attitude of most people is “I need to enjoy them to the fullest while I can.” But one needs to at least stay away from extreme behaviors at least. Learning Dhamma will help to avoid **future suffering; one must start as soon as possible**. **When we get really old, we lose not only the ability to enjoy such pleasures, but also the ability to comprehend Dhamma (because our brains degrade with time).**

[WebLink: YOUTUBE: Changes: Young to Old](#)

Many of Our Habits Are *Saṃsāric* Habits (*Gati*)

3. Fundamentally, craving sex-related activities are not any different from craving other sense pleasures. Each person has *saṃsāric* habits (*gathi*) for some specific set of sense pleasure(s).

- Some have an excess craving to eat tasty foods, some like gossiping about others, some want to go hunting, etc., and some may have the cravings for sexual pleasures, and it is usually a combination of several. Each person has a unique set, and that changes with time too.
- The danger with such habits is that under extreme conditions, they could lead to worse actions. Sexual tendencies could especially become problematic. We all have heard about cases where “good citizens” committing rape, when prevailing conditions led them to “lose control”.
- More on the subject at, “[The law of Attraction, Habits, Character \(Gati\), and Gravings \(Āsava\)](#)” and posts therein.

Contemplate on Adverse Consequences

4. **The critical and first thing to do is to get rid of those habits that bring harm to others. A *Sotāpanna* is inherently incapable** of doing such extreme acts because his/her mind has clearly grasped the consequences of such actions. Focusing on the sexual urges, one MUST NOT DO certain things: rape and having relationships with children or others' spouses are prominent examples.

- Learning Dhamma helps through all stages of “rehabilitation.” Learning the adverse consequences of extreme habits such as those mentioned above is one way to convince the mind (i.e., subconscious *viññāna*) to voluntarily give up those habits.
- The Buddha said, “don't do things to others that one would not like to be done to oneself.” Always try to pause a moment and contemplate the consequences of any harsh act. This is the basis of *Kāyānupassanā* in *Satipaṭṭhāna* meditation; see, “[Mahā Satipaṭṭhāna Sutta](#).”

Learning and Following Buddha Dhamma Will Help

5. It is also important to realize that one cannot remove the basic tendencies for ordinary sense pleasures by sheer willpower alone. Trying to do that could bring more harm (stress) than benefits.

- The key is to train the mind to grasp the harmful future consequences of **extreme** habits and desires (*gati*), whether it is due to excess craving for sex or the tendency to get mad at the slightest provocation. These are all habits that most likely originated in many lives back.
- We either develop new habits via repeated use or more likely re-energize and further cultivate old habits from previous lives.
- The following links discuss how to change one's *gati*: "[9. Key to Ānāpānasati – How to Change Habits and Character \(Gati\)](#)" and "[How Habits are Formed and Broken – A Scientific View](#)," among others. One could just type *gati* or habits in the Search button on the top right and get a list of relevant posts.

The validity of the Rebirth Process – Actions Have Consequences

6. The other important thing to realize is that one does not NEED TO get rid of less-severe cravings for sense pleasures (sexual or otherwise) at once. The key is to do it gradually. It is better to say, "realization will sink in gradually as one learns Dhamma or the true nature of this world."

- The Buddha gave the following simile: When one is cultivating a field, all one needs to do is to follow the procedures that will optimize bringing a good harvest. One needs to prepare the soil, plant healthy seeds, and then keep weeds out. One must also provide water and nutrients regularly. There is no point in watching the plants throughout the day to see whether they are growing or to worry about them. They will grow and yield a good harvest if one does one's part.
- In the same way, one needs first to understand the basic broader world view, i.e., that we are spending a relatively short time in this life and move from life-to-life based on causes that we create (based on how we live). The post on *dasa akusala* (ten defilements) is a guide: "[Ten Immoral Actions \(Dasa Akusala\)](#)."

7. Here is a list of critical things that is comparable to getting the soil ready to plant seeds:

- One needs to first understand, at least to some extent, the long-term nature of our lives far beyond our deaths. **Many people believe that it all ends with this life. What if that is not correct? One needs to be make sure, because the answer to that question may have consequences for billions and trillions of years to come.**
- Also, do things happen, or do they arise due to CAUSES? Cause and effect is the basis of science. Things ALWAYS occur due to (multiple) causes. People just get born out of nothing. Previous causes led to the birth of a human being (or any other living being). The Buddha said these causes are the *kamma*, what we have done in the past.
- There are certain principles or laws that Nature follows. Scientists can explain most of the things that happen to inert objects: If one throws up a stone, we can even calculate its path on the way back to ground. The reason that it falls to the ground is that the Earth is pulling it down; that is the cause for it to fall. Like that, EACH AND EVERY EVENT has a reason. Events based on mental causes typically are complex and not easy to sort out).

Consequences in the Rebirth Process

8. After making some progress, one needs to contemplate the implications of over-indulgences: (1) They are short-lived. When one's ability to enjoy them goes away, one gets depressed, (2) Such over-indulgences build corresponding character or "*gati*," and one's future births are according to one's *gathi*.

- Another *samsāric gati* is the tendency to get angry at the slightest provocation. Here also, one needs to think about the adverse consequences of that behavior.

- In both cases, the harmful consequences are two-fold: The short-term result is that one gets stressed out shortly after responding to the “urge” and getting temporary relief.
- The more adverse long-term consequences are worse. Each time one does it, the habit strengthened. Furthermore, **depending on the action**, one may cultivate animal *gati* (when blinded by extreme sense pleasures) or *niraya gati* (when blinded by rage).

9. There is a reason that one is born human and another is born an animal. A human-born had done a wholesome *kamma* that deserved being born human. Furthermore, that *kamma* was possible because that person tended to do that type of deeds. This tendency to do certain things depends on one's “*gati*.”

- If a human displays “animal *gati*” or does things that animals do (do whatever one feels like doing without any consideration for others, have sex indiscriminately, etc.), then it is likely that he/she will be born an animal in the future.
- On the other hand, if a human displays kindness, can even tolerate others' bad behavior, etc., then he/she has *deva* or *brahma* “*gati*,” then he/she is likely to be born a *deva*, Brahma, or a human, in future lives.
- In the language of *Paṭicca Samuppāda*, “*jāti*” is according “*bhava*,” “*bhava*” according “*upādāna*,” “*upādāna*” according to “*taṇhā*,” i.e., “what one likes to do or has craving for.” Thus if one likes to do what dogs usually do, then a future “*jāti*” or birth as a dog is hard to avoid. This is true for any other kind of birth.

Buddha's Middle Way

10. Thus whether it is a sexual craving or any other craving for sense pleasure, we need to be careful first to avoid any extreme behavior. One cannot jump from the bottom of the ladder to the top; one has to climb step-by-step. Get rid of the worst habits first and move up on the ladder.

- The one who was born an animal was likely to have engaged in activities suitable for an animal; some of the sexual activities shown in pornographic movies are suitable only for animals. One does such extreme deeds due to a reason: i.e., one has tendencies or *gati* to do such acts. They do not change much unless one willfully tries to change them. Getting rid of such extreme behavior is the first step. The sooner done is better.
- Then one can tackle less severe problems. Always thinking about tasty foods and overeating is as bad as the tendency to watch adult movies habitually. They are both bad habits that need to be broken gradually, with an understanding of the consequences. Of course, pornography has different categories; one tends to watch “extreme” pornography when one has extreme habits.
- **A living being can significantly change its “*gati*” only as a human.** An animal is not capable of any significant change of character, even though some of its habits can be changed if trained by a human. Even for *devas* and *Brahmā*, it is hard to improve their *gati* unless they had attained the *Sotāpanna* stage of *Nibbāna* as a human.

Summary

11. In summary, one MUST stop the most harmful acts (which could lead to rebirth in the lowest four realms or the *apāyā*) by any means possible using sheer will power. However, less harmful acts will reduce over time. One needs to follow a systematic procedure as outlined in the links given in # 4 and #5 above.

- Learning Dhamma can reduce the tendency to engage in any immoral or unwise activities in the long run. In this regard it is important to understand the different levels of greed and hate; see, “[Sorting out Some Key Pāli Terms \(Tanhā, Lobha, Dosa, Moha, etc.\)](#)” and, in particular the post, “[Lobha, Dosa, Moha versus Raga, Patigha, Avijjā](#).”
- The section on “[Assāda, Ādīnava, Nissarana](#)” provides more advanced analyses, especially for those who are at least on the way to become a *Sotāpanna*, i.e., a *Sotāpanna magga anugami*.

9.2 Book Reviews

[““Why Does the World Exist?” by Jim Holt”](#)

[““Waking Up” by Sam Harris”](#)

[““The Language of God” by Francis Collins”](#)

[““Spark” by John Ratey”](#)

[““The Life of the Buddha” by Bhikkhu Ñānamoli”](#)

9.2.1 “Why Does the World Exist?” by Jim Holt

1. I started writing this post while I was reading the popular book, “Why Does the World Exist? – An Existential Detective Story” by Jim Holt (2012). It is a good book with many thought-provoking questions. Here I would like to point out that most of those questions have answers in Buddha Dhamma.

- On p. 269, equating the *Nibbānic* bliss to annihilation of a person, he asks, “...But how can you enjoy something if you do not exist?”. I initially started the post with the title, “Does Nibbāna Mean Annihilation of a “Person”?”, to address this question, but then I started addressing other issues in the book and eventually changed the title to be the same as the book title.
- Even many Buddhists are terrified of the idea of *Nibbāna*, thinking that it means annihilation. This is why even many *Bhikkhus* like to give “blessings” to the effect, “May you attain *Nibbāna* at the end of much pleasures in the heavenly worlds”. This illustrates a total lack of understanding of the deep message of the Buddha.

2. The problem is in the question itself. If a person is to be annihilated, a “person” need to exist in the first place. Now this is a very deep issue that needs some knowledge of Buddha Dhamma to understand. As the Buddha said in his first sermon, his Dhamma is, “*pubbe anunnassutesu dhammesu.....* “ or “a concept that has not been known to the world before...”

- In order to annihilate, there must be something “concrete”, what the Brahmins of the day of the Buddha called “*āthma*”, or what the major religions of today call the “soul”. It is very difficult for all of us to get rid of the perception of “me” or “myself”. **In fact, that perception is totally removed only at the Arahant stage of Nibbāna; it keeps decreasing as one advances on the Path.**
- Thus as long as one “belongs to this world of 31 realms”, one always thinks in terms of “me” and “the external world”. This is why the Buddha rejected the concept of “no-self” even though most people incorrectly translate *anatta* as “no-self”; see, “[The Grand Unified Theory of Dhamma.](#)”
- On the other hand, the Buddha said that it is also incorrect to say there is “self”. This is because any “person” changes even moment-to-moment; see, “[What Reincarnates? – Concept of a Lifestream.](#)”
- In rejecting both “self” and “no-self” extremes, the Buddha said “this changing being” or “a lifestream” changes moment-to-moment due to changes in the causes that support that lifestream. This is not something that I can explain in one essay, and is explained via many posts at the site, including the important section on *Paṭicca Samuppāda*.
- In the book there is a separate chapter on, “The Self – Do I Really Exist?”. I will discuss that chapter below, and point out a few more related facts.

3. The book’s main theme is “why is there something rather than nothing?” or “how did the world got started?”. It summarizes most of the arguments that have accumulated over thousands of years, and of course come to the inevitable question on “the nature of the Creator God who would not need a cause for being there”.

- However, regarding the two questions on existence as expressed above, the Buddha's answer is the simplest: The world has existed forever and it is not possible to pinpoint to a specific first cause. The proof is very simple: Suppose there is a first cause; then what caused that? QED.
- Thus in the scientific basis of cause and effect, the absence of a first cause is built in.
- On p. 82 of the book, Jim Holt did point out, *"..Scientific thinkers by and large, have not shared such qualms about eternity. Neither Galileo nor Newton nor Einstein had any problem conceiving of a universe that was infinite in time. Indeed, Einstein added to his field equations a fudge factor – the infamous “cosmological constant” – to ensure that they would yield a universe that was static and eternal."*
- And a few philosophers have discussed the problem with “first cause” arguments, as Jim Holt noted. Talking about the late philosopher John Mackie on p. 206, *"..Obviously, as Mackie observed, no explanation in terms of a “first cause” could answer the ultimate question of existence, for such an explanation would merely raise the further question of why that first cause -whether it be God, an unstable chunk of false vacuum, or some still more exotic entity- itself existed"*.

4. If one accepts that the world has existed forever, then many other questions discussed in the book do not even arise. Thus 100% of the questions discussed are answered if we start off with the premise that the world has existed forever AND the root causes (greed, hate, and ignorance) for the existence of the world given by the Buddha.

- For example, on p. 7, Leibniz's Principle of Sufficient Reason is discussed: For every truth, there must be a reason why it is so and not otherwise; and for every thing, there must be a reason for that thing's existence. This is basically “cause and effect”. The Buddha said that the world exists because of the greed, hate, and ignorance; and those causes have no beginning.
- This is related to the issue of the mind taking precedence over matter, and I am slowly building evidence for that in the website. There are some introductory posts in the “Abhidhamma” and “Dhamma and Philosophy” sections.
- On p. 188, Jim Holt discusses the fact that all science says about the “stuff that makes up our world” is that mass is equivalent to energy, *"...but it gives us no idea of what energy really is..."* This is exactly what is explained in Abhidhamma, and I will get to it eventually. He goes on to say, *"...As Bertrand Russell noted in his 1927 book, The Analysis of Matter, when it comes to the intrinsic nature of the entities making up the world, science is silent"*.
- He also briefly discuss another big issue in philosophy on p. 192: *"The conclusion of the philosophersthat there is more to consciousness than the mere processing of information. If this is true, then science, insofar as it describes the world as a play of information states, would seem to leave out a part of reality: the subjective, irreducibly qualitative part"*. Actually, as we will see, Buddha's answer solves both this and the issue above in one fell swoop.
- A world without a beginning also gives an answer to the question of “why do I exist” (p. 18). We all have “existed” forever; there is no beginning so the question has no meaning. Another frequently asked question is, “what is the meaning of life?”. There is no meaning to life: The bottom line is that we all suffer in this existence ON THE AVERAGE, IN THE LONG TERM while we meander aimlessly among the 31 realms of existence; see, [“Evidence for Rebirth.”](#)

5. Now the only critical question is how do we know that the Buddha's world view is correct? The answer is that it can explain the complex world around us; it has the “explanatory power”. Also see, [“Vagaries of Life and the Way to Seek Good Births”](#) and [“Good Explanations – Key to Weeding out Bad Versions of Dhamma,”](#) among many other posts.

- Furthermore, one can EXPERIENCE the truth of Buddha's teachings and the results for oneself. I have described part of my experience in following the Path in, [“11. Magga Phala and Ariya Jhānā via Cultivation of Saptha Bojjanga.”](#) Do not be discouraged by the title of the post.

6. Now let me briefly discuss the 2nd last chapter on, “The Self – Do I Really Exist?”. Here Jim Holt comes across the answer himself (p. 256): Talking about the Descartes’ famous phrase, “I think, therefore I exist”, he says, “... ..*Did Descartes here infer more than he was entitled to? As many commentators have pointed out (beginning with Georg Lichtenberg in the eighteenth century), the “I” in his ultimate premise is not quite legitimate. All Descartes could assert with certainty was “there are thoughts”. He never proved that thoughts require a thinker.....*” (bold face mine).

7. This is exactly what the Buddha said. There are thoughts, but no REAL thinker; there is the PERCEPTION of a thinker in “one’s mind” until one’s mind is purified to the level of an *Arahant* and it becomes clear that there is no “thinker”. However, the irony is that until that wisdom is gained, “one’s suffering” is real. The suffering is there simply because one thinks there is a real thinker!

- But one cannot honestly say, “there is no-self” as most people try to do, unless one is an *Arahant*; one is just trying to fool oneself in saying that. When something bad happens to “anything that belongs to oneself” one INEVITABLY feels the pain associated with it; see, “[Anatta and Dukkha – True Meanings.](#)”
- When the mind is purified (i.e., is absent of greed, hate, and ignorance) perception of “self” goes away at the *Arahant* stage, then the suffering associated with “one’s stuff” is not there anymore. When one comprehends the concept of *anicca* to some extent, this will become clear to some extent. In other words, *Nibbānic* bliss or *nirāmisā sukha* increases as one advances on the Path, with the mind being purified at each step; see, “[Three Kinds of Happiness – What is Nirāmisā Sukha?](#),” and “[Nirāmisā Sukha.](#)”
- Thus we cannot forcibly get rid of the sense of “I”. Only through the true understanding of the Three Characteristics of this world, *anicca, dukkha, anatta*, that one can slowly start getting rid of that sense of “I” or “self”. Until then there is neither a “self” nor “no-self”, but just a stream of thoughts; see, “[What Reincarnates? – Concept of a Lifestream.](#)” Only at the death of an *Arahant* that stream of thoughts is ended and the mind becomes free of any attachment to the material world of the 31 realms; see, “[Nibbāna – Is it Difficult to Understand?](#),” and “[What are Rūpa? Relation to Nibbāna.](#)”

9.2.2 “Waking Up” by Sam Harris

Sam Harris, “Waking Up: A Guide to Spirituality Without Religion” (2014).

1. I am quite encouraged by the fact that many people are beginning to see through something that is contrary to the basic human instincts: That it is possible to find a different and more permanent form of happiness that is not related to material things.

- Right at the start of the book, when he talks about his first “meditation retreat” at the age of 16 under harsh conditions in wilderness, the author says he was puzzled by the positive reaction of the older people in the group, “...*How could someone’s happiness increase when all the material sources of pleasure and distraction had been removed?*” (p.2).
- But now with many years of experience in meditation and studies on human nature as a neuroscientist, he can understand it: “...*Unlike many atheists, I have spent much of my life seeking experiences of the kind that gave rise to world’s religions. Despite the painful results of my first few days alone in the mountains of Colorado, I later studied with a wide range of monks, lamas, yogis, and other contemplatives, some of whom had lived for decades in seclusion doing nothing but meditating. In the process, I spent two years on silent retreat myself (in increments of one week to three months), practicing various techniques of meditation for twelve to eighteen hours a day*” (pp. 13-14).

2. Harris, like many others, has found that there is something about human life that cannot be explained away just in terms of the workings of the material world, but cannot quite pinpoint to the source of that “something extra”.

- Modern science has obliterated the concept of a “divine influence” as has been put forth by various religions, as Harris explains. So I was quite interested to see what his conclusion would be as to the “source of this extra something”.

3. On p.8, he makes a very valid statement: *“Spirituality must be distinguished from religion – because of people of every faith, and of none, have had the same sorts of spiritual experiences....Nothing that a Christian, a Muslim, and a Hindu can experience – self-transcending love, ecstasy, bliss, inner light – constitutes evidence in support of their traditional beliefs, because their beliefs are logically incompatible with one another. A deeper principle must be at work”*. (my highlighting).

- This is exactly what I have been trying to emphasize at this website.
- In the next very paragraph, he says what he found that deeper principle to be: *“That principle is the subject of this book: The feeling that we call “I” is an illusion”* (p. 9). This is probably the “no-self” theory that is erroneously presented as Buddha’s concept of “*anatta*”; see, [“Anicca, Dukkha, Anatta – Wrong Interpretations.”](#)
- However, on that same page, he also summarizes most of my own conclusions about religions in general, including “Buddhism” the way as it is practiced by most in both Theravāda and Mahayana sects.

4. I am just going to quote the relevant sentences from pp. 9-10: *“I am often asked what will replace religion. The answer, I believe, is nothing and everything. Nothing need replace its ludicrous and divisive doctrines....But what about love, compassion, moral goodness, and self-transcendence? Many people will imagine that religion is the true repository of their virtues. To change this we must talk about the full range of human experience in a way that is as free as the best science already is”*.

- And through the rest of the book he does go through that process. I agree with most of it, except of course that while “Buddhism” may be a religion, Buddha Dhamma is certainly not (if religion is defined as one providing salvation via following set rituals or having blind faith in an entity or a supreme being).

5. The key to Mr. Harris not understanding of Buddha Dhamma becomes apparent on p. 28: *“We can also grant that Eastern wisdom has not produced societies or political institutions that are any better than their Western counterparts. In fact, one could argue that India has survived as the world’s largest democracy only because of institutions that were built under British rule. Nor has the East led the world in scientific discovery. Nevertheless, there is something to the notion of uniquely Eastern wisdom, and most of it has been concentrated in or derived from the tradition of Buddhism”*.

- The problem here is that Mr. Harris has not had exposure to Buddha Dhamma, the “non-religious” original teachings.
- The focus of Buddha Dhamma, as delivered by the Buddha, was not on enhancing the mundane life and on building a better society. It was focused on the fact that it is in fact a “waste of time” to try to build large cities, develop technology, and in general to spend too much time on “making things better for this life”, because this life is only a brief stop-over in a much longer journey.

6. If one really understood the key message of the Buddha, one would see that this life is too short to be “wasted” on such things. This is due to three key foundational aspects of Buddha Dhamma:

- Human life, even though wrought with some suffering, is the best in all of 31 realms of this world for attaining Nibbāna; see, the description of the wider world of 31 realms in, [“The Grand Unified Theory of Dhamma”](#).
- In the process of rebirth we spend only a tiny amount of time in this life of about 100 years; see, [“Evidence for Rebirth.”](#)
- And immersing in mundane sense pleasures becomes only a hindrance to attain the “true and permanent happiness” of Nibbāna; see, [“Three Kinds of Happiness – What is Nirāmisā Sukha”](#), and [“Nirāmisā Sukha?”](#).

- Of course, especially the Mahayana version of “Buddhism”, or even the Theravāda version, has veered away from this key message of the Buddha.

7. Yet, I must hasten to point out two additional points:

- The Buddha stated that not everyone is able to comprehend this key message. Thus, for those who did not wish to pursue *Nibbāna*, and asked for advice on how to live a moral and fulfilling family life while enjoying sensual pleasures, he did provide advice. In Chapter IV of Bhikkhu Bodhi’s popular book, “*In the Buddha’s Words*” (2005), such advice from different *sutta* have been extracted to one place; this book also has other categories separated out like good rebirths, mind etc.
- The Buddha never tried to change or influence the political systems that were in place, even though he praised the democratic system that was in place in the small autonomous region of *Vajji*, which was really a republic similar to the one we have now in the United States. Other than openly criticizing the caste system, he stayed away from politics.

8. I am impressed that Mr. Harris has been able to catch at least a glimmer of the uniqueness in Buddha Dhamma despite the fact that he has not been exposed to the true teachings of the Buddha: “*Buddhism in particular possesses a literature on the nature of the mind that has no peer in Western religion or Western science. Some of these teachings are cluttered with metaphysical assumptions that should provoke our doubts, but many aren’t. And when engaged as a set of hypotheses by which to investigate the mind and deepen one’s ethical life, Buddhism can be an entirely rational enterprise*” (p. 29).

- The author is highly impressed with the Buddhist “*vipassana*” meditation. However, what he describes is just breath meditation or “*samatha* meditation”; see, “[Bhāvanā \(Meditation\)](#)”.

9. And he has the concept of Enlightenment (*Nibbāna*) all wrong (this says a lot about the Mahayana “Buddhism” that he has been exposed to): “...*the state of “full enlightenment” – is generally described as “omniscient”. Just what this means is open to a fair bit of caviling. But however narrowly defined, the claim is absurd*” (p. 43).

- To understand the concept of *Nibbāna*, one must understand the world view of the Buddha as described in the above mentioned posts, and then one needs to read other posts at this site on describing *Nibbāna* (just do a search with the key word *Nibbāna* at the top right box on Keyword Search).

10. Interestingly, there is no mention at all about purifying the mind of defilements, which is key to true Buddhist meditation; see, “[The Importance of Purifying the Mind.](#)”

- I do not blame the author of course, but it is sad to see how far “Buddhism” has veered off from the original message of the Buddha.
- It is these three root causes greed, hate, and ignorance (and the counterparts of non-greed, non-hate, and wisdom) that clarifies the basis of morality that he has puzzled over in two other books, “*The Moral Landscape*” (2011) and “*Free Will*” (2012).
- As Mr. Harris correctly points out in “*The Moral Landscape*,” “*there is no such thing as Christian or Muslim morality.*” There is no “Buddhist morality” either. Morality is universal and comes out naturally on the basis of benevolence, compassion, and wisdom having precedence over greed, hate, and ignorance; see, “[Origin of Morality \(and Immorality\) in Buddhism.](#)”

11. Chapter 2 is on consciousness. The author has a good introduction and his own thinking about consciousness may be expressed here: “*I am sympathetic with those who, like the philosopher Colin McGinn and the psychologist Steven Pinker, have suggested that perhaps the emergence of consciousness is simply incomprehensible in human terms*” (p. 57).

- Consciousness has also been fully explained by the Buddha. Consciousness is NOT an emergent property, it is a fundamental entity. I have several introductory posts on consciousness at the site; see, “[What is Consciousness?](#)” and follow-up posts.

- I hope those who are interested would read the comprehensive description of the mind provided by the Buddha in the *Abhidhamma* section of this site, which may not be ready for an comprehensive analysis for several more months. But there are a few introductory posts there.

12. The rest of the book is about the author's experience with trying out different types of meditations. It is too bad that he was not exposed to real Buddhist meditation. On the other hand, even in countries where the *Theravāda* Buddhism is practiced, it is the breath meditation that is widely taught.

- Overall, I am impressed by the fact that even with the minimum exposure Mr. Harris had to Buddha Dhamma, he has been able to see there "there is something hidden there". I am glad to say that the Buddha did teach a much more deeper doctrine, and I am sure he and many others in the West will be enthusiastic about finding the true message of the Buddha.
- The author knows that as an atheist, he was treading into unknown territory in talking about spiritual experiences: "...*.....many of my fellow atheists consider all talk of spirituality to be a sign of mental illness, conscious imposture, or self-deception. This is a problem, because millions of people have had experiences for which spiritual and mystical seem the only terms available*" (p.11).
- However, once one understands the true message of the Buddha, one can clearly see that there is nothing in his doctrine that goes against the beliefs and convictions of most atheists; Buddha Dhamma describes the Nature's laws at a fundamental level.
- The only difference between science and Buddha Dhamma is that science assumes that mind phenomena can be derived from material phenomena, while in Buddha Dhamma mind is at the forefront; see, "[Philosophy of the Mind.](#)"

13. I encourage those who are interested to read the book because the author has not only contemplated deeply about the subjects of morality, questions on existence, world religions, etc, but also has tried to experience different meditation techniques. I only wish he had been exposed to the true teachings of the Buddha, so that he could perhaps make more stronger statements about the value of the Buddha Dhamma in addition to finding much more benefits for himself.

9.2.3 "The Language of God" by Francis Collins

Revised August 9, 2019

This is a top-rated book (published in 2007), as apparent from a large number of reviews on Amazon. The author is a respected scientist and is the director of the National Institutes of Health (NIH). This post is based on a review that I posted at the Amazon site back in 2012.

- I have read numerous books trying to find solid arguments for believing in a Creator. The author has put together the best case he could also using previous ideas of C. S. Lewis and others. The main points in the book can be summarized as follows (not in the order presented in the book):
1. God is responsible for the "Big Bang," i.e., the creation of the universe, and for creating the just right physical parameters (fine tuning) that enabled human life on planet Earth.
 2. The "Intelligent Design" theory needs to be abandoned, since it may damage the case for the existence of God.
 3. Darwin's theory of evolution does account for leading to the appearance of a "human-like" creature, even though the theory explains the evolution of more complex animals.
 - Whether this creature further evolved by itself to be human or whether at some point, God directly instilled conscience to this creature, he leaves it open.
 - Either way, God is responsible for the existence of morality in humans. He prefers to call "BioLogos," the theory of "Theistic Evolution."

4. The existence of “Moral Law” (the ability to differentiate right from wrong) is the fundamental basis for his belief in God.

5. The issue of “pain and suffering” was a problematic issue for C. S. Lewis, and the present author also runs into difficulties in addressing it.

My comments are as follows:

1. Proponents of the Big Bang theory say that Big Bang was not just one event, but such events are supposed to be of frequent occurrence. Thus there is no need to invoke a higher power.

- Stephen Hawking, whose book “A Brief History of Time” that the author quoted to make a case for God’s role, has since come out with a new book “The Grand Design” (2010). In that book he clearly states that the need for a Creator God is no longer there based on new evidence.
- Also, in the inflationary theory, Big Bangs are occurring all the time, and there is no need to invoke a fine-tuning of physical parameters; see, “The Beginning of Infinity” by David Deutsch.

2. Actually “Intelligent Design” is a somewhat better theory than the hypothesis of a God, in the sense that the proponents of that theory have put forth some formidable arguments for it.

- Of course, I do not subscribe to that theory (which some say is making a case for a Creator God without admitting it). However, Collins does not make a better case for the Creator God hypothesis.
- The problem with the “Intelligent Design” theory is that of course, the question arises as to how that designer came into being! That is why many people say it is the same as the God hypothesis.
- If anyone is interested in learning about the “Intelligent Design” theory, a good book is “Signature in the Cell” by Stephen Meyer (2009).

3. The big question here is “wherein this sequence did the God instill moral values in the evolving creature?”. Is there a clear-cut transition from a robotic animal to a human with moral values?

- The “uniqueness of a human” according to the author, is the ability to know right from wrong. Humans indeed have this quality stronger than in animals. Some animals also have at least a glimpse of this quality. If you have a pet, especially a dog, you know that it has feelings and even its mind to do things, i.e., it is not like a robot.
- While people sometimes sacrifice their own lives to save others, there are also people like Hitler and Pol Pot who have committed unmentionable atrocities. And that was with planning (not just on impulse).
- In Buddha Dhamma, both moral and immoral choices are in the “human psyche”; based on many complex factors (*sansāric* habits or “*gati*”, family, friends, and associates, etc) people choose to be moral or immoral at different times depending on the situation. Of course, greed, hate, and ignorance play a big role; see, “[Living Dhamma.](#)”

4. Now on the existence of “moral law”: From #3 it is clear that even though morality is in human psyche, it does not have a “binding effect” on humans. Humans are, in general, more “moral” than animals. But within the wider world described by the Buddha Dhamma, there are other sentient beings (*devas* and *brahmā*) who are more “moral” than humans.

- If the man is to be judged by just one life, why is it that everyone not given the same chance (including “same morality”)? People are born poor, rich, healthy, unhealthy, etc., and some die even before getting a chance to prove their worthiness.
- These apparent “vagaries of life” are a strong argument for the case that this life is only one of many. Furthermore, by the diversity that we observe is due to the effects of past actions (*kamma vipāka*); see, “[Vagaries of Life and the Way to seek “Good Rebirths.”](#)”
- The basis of morality (as well as immorality) comes out naturally in Buddha Dhamma; see, “[Origin of Morality \(and Immorality\) in Buddhism.](#)”

5. Of course, the issue of “pain and suffering” — not only in this life but in the cycle of rebirths — is the fundamental problem of existence according to Buddha Dhamma.

- **Again, the issue of “pain and suffering” is unexplainable by any approach that is based on just one life.** Just like modern science, Buddha Dhamma has a foundation in “causes and effects.” Suffering — as well as happiness — arises due to past causes, and since most of these effects (e.g., disability at birth, poverty) are even apparent at birth, “past” means past lives.

9.2.4 “Spark” by John Ratey

Early post of 2014; revised August 28, 2019

1. There is a good book, “Spark: The Revolutionary New Science of Exercise and the Brain” by John J. Ratey (2013). It discusses new findings on the effects of regular exercise on the brain as well as the body. (Most of the books I review are likely to be available at public libraries).

2. The book discusses how exercise can keep the brain working at higher efficiency and lower stress and anxiety. Also, regular exercise can rid of addictions, and even Attention Deficit Hyperactivity Disorder, ADHD. It also talks about women’s hormonal changes and aging too.

3. The key is to engage in a moderate exercise program up to 6 days a week. And to ratchet it up to high-intensity once-in-a-while, even for a minute at a time. For example, if you jog, try to run fast for 30 seconds to 1 min once-in-awhile. That is called “interval running.”

- The maximum heart rate for a person is 220-AGE.
- low-intensity exercise: 55%-65% of max rate
- moderate: 65%-75%
- high intensity: 75%-90%

4. There are “wristwatch type” heart rate monitors available. But you basically “know” when you are at low intensity (walking), moderate (jogging/slow running), and high (dashing to catch a bus or running a 100-meter race).

- Should not do high intensity unless you have been active for a while.
- In the anaerobic range (high intensity), the brain releases human growth hormones (HGH). **That is a natural way to “get high.”**
- Even low-intensity workouts release many other beneficial chemicals. But in high-intensity workouts, they all get a boost. All these are good for the sustenance/growth of neurons so that your memory can be improved.
- But should not do high-intensity regularly unless one is in great shape.
- He also mentions yoga as an enjoyable activity. Any exercise, i.e., just walking, is better than none.
- He discusses how children in a school district in PA are avoiding obesity and health problems and getting good grades because the schools have good exercise programs.
- I find that the best time to meditate is after a good workout and a shower. The body and the mind are refreshed and alert.

5. We are born with a body and a mind that are results of specific *kamma vipāka* in the past. But we are not bound by either; we can improve both. That does not mean we should try to “beautify” the body; we should make it healthy. The physical body is a “temporary shell” that will be with us for about 100 years, and if we do not take care of it, that will lead to much discomfort.

- We can make conditions conducive to get “good *kamma* seeds” and to prevent “bad *kamma* seeds” from bearing fruits; see, “[Anantara and Samanantara Paccaya](#).” Do not be discouraged by those Pāli words. The post is easy to understand.

6. Exercise and meditate! That is key to a long healthy life as well for “cooling down” in the sense of getting some long-lasting peace-of-mind or attaining one of the four stages of *Nibbāna*.

- As we get old, it is imperative to keep both body and mind in good condition. It is hard to concentrate, let alone meditate, with an aching body or a defiled mind.
- Walking a mile or two a day can keep one reasonably healthy. For the mind, solving word puzzles or reading a book is better than watching television.

9.2.5 “The Life of the Buddha” by Bhikkhu Ñāṇamoli

October 13, 2018

1. “[The Life of the Buddha](#)” by Bhikkhu Ñāṇamoli is good to read and even to keep as a reference (page numbers quoted are for the 2001 First BPS Pariyatti edition). It is a good book for two reasons:

- A chronological record of the Buddha’s life (after the Buddhahood),
- Detailed accounts of events that are not in the *suttā* (taken from the *Vinaya Piṭaka*).

2. The Buddha said that if there is any doubt or a concept that is not clear, one should check with *sutta*, *vinaya*, and *dhmma*. These basically refer to the *Tipiṭaka* (three baskets) of *Sutta Piṭaka*, *Vinaya Piṭaka*, and *Abhidhamma Piṭaka*.

- Most people just refer to the *Sutta Piṭaka* and forget about the other two. *Abhidhamma Piṭaka* is a bit hard to understand, and without a firm grasp of basics it is harder.
- Most people think that the *Vinaya Piṭaka* is just for the *bhikkhus* and *bhikkhunis*. But there are sections in the *Vinaya Piṭaka* that have details that are not in the *suttā*. Furthermore, those sections in the *Vinaya Piṭaka* are easy to understand, as we see below.

3. I will provide the following as an example of what is in this book that is not available in any *sutta*. It describes in detail how the five ascetics attained the *Sotāpanna* stage over several days with the delivery of the *Dhammacakkappavattana Sutta*.

Here is a direct quote from p. 45 of the book (starting from the point where the Buddha had just finished the first delivery of the *Dhammacakkappavattana Sutta*):

“Then *Aññata Koṇḍañña*, who had seen and reached and found and penetrated the *Dhamma*, whose uncertainties were left behind, whose doubts had vanished, who had gained perfect confidence and become independent of others in the Teacher’s Dispensation (**My Comment:** i.e., became a *Sotāpanna*), said to the Blessed One: “Blessed One, I wish to go forth under the Blessed One and to receive the full admission?”

“Come, *bhikkhu*” the Blessed One said, “The *Dhamma* is well proclaimed. Live the holy life for the complete ending of suffering.” And that was his full admission.

Then the Blessed One taught and instructed the rest of the *bhikkhus* with talk on the *Dhamma*. As he did so, there arose in the venerable Vappa and the venerable Bhaddiya, the spotless, immaculate vision of the *Dhamma* (**My Comment:** i.e., became *Sotāpannas*). All that is subjected to arising is subjected to cessation. They too asked for and received the full admission.

These, having seen *dhmma*, attained *dhmma*, known *dhmma* ... having attained without another’s help to full confidence in the teacher’s instruction, spoke thus to the Blessed One: “May we, Blessed One, receive the going forth in the Blessed One’s presence, may we receive ordination?”

Then living on the food they brought to him, the Blessed One taught and instructed the rest of the *bhikkhus* with talk on the *Dhamma*. All six lived on the food brought back by the three of them. Then there arose in the venerable Mahānāma and the venerable Assaji the spotless, immaculate vision of the *Dhamma* (**My Comment:** i.e., became *Sotāpannas*), and they too asked for and received the full admission”.

4. We can learn several important facts from the above account.

- Only Ven. Koṇḍañña attained the *Sotāpanna* stage in the first round in the first night of the delivery of the *sutta*. It actually took several days for all five ascetics to attain the *Sotāpanna* stage.
- Buddha actually did not just recite the *sutta* as it appears in the *Tipiṭaka*. That recital would have been finished within 15 minutes!
- So, we can see that what is in the *Tipiṭaka* are HIGHLY CONDENSED summaries of those discourses and possibly many discussions.

5. What we see as the *Dhammacakkappavattana Sutta* today is a highly condensed version of the material that was taught by the Buddha over several days, as is clear from #3 above.

- It appears that the Buddha himself summarized the material in each *sutta* in a short concise way to a limited number of verses that was suitable for oral transmission (easy to remember). **A *sutta* is supposed to be explained in detail;** see, “[Sutta – Introduction.](#)”
- We must remember that all the *suttā* in the *Tipiṭaka* were transmitted down several generations over about 500 years before it was written down. It was not even remotely possible to include all that was discussed over those several days!

6. What happens these days is that even highly condensed *suttā* are translated word-by-word into English. This is a very bad practice. It is no different from just reciting a *sutta*!

- One can finish reading a *sutta* in 15 minutes, and ONE would not understand any of the deep concepts embedded in the *sutta*.
- **Then how could one understand the *sutta* by just reading a word-by-word translation of a *sutta*?**

7. In fact, this could be the reason for many people to believe that one can attain *Nibbāna* by just reciting a *sutta* or a set of verses. This practice is sometimes called “*mantra* chanting”. But there is no basis for that belief.

- *Nibbāna* can be attained ONLY by cleansing one’s mind.
- The MENTAL stress arises ONLY due to *lobha, dosa, moha* in one’s mind.
- As one cleanses one’s mind, the mental stress will decrease. This decrease is gradual in the beginning. It will have significant drops at the *Sotāpanna Anugāmi* stage and then more drops at *Sotāpanna, Sakadāgāmi, Anāgāmi* stages.
- An *Arahant* does not have any mental stress. He/she may have physical suffering, but that also will end at death. No more physical or mental suffering!

8. Of course, there is a value in even chanting a *sutta*. They have been formulated in a format to “calm down the mind”, even if one did not understand the meaning; see, “[Buddhist Chanting.](#)”

- It would be much better if one understood the basic message of the *sutta*.
- One could get to the *Sotāpanna* stage ONLY BY fully understanding the concepts discussed in a major *sutta* like the *Dhammacakkappavattana Sutta*.

9. A related key point is that upon attaining the *Buddhahood*, the Buddha wondered whether the humans will ever be able to understand the deep *Dhamma* he had just uncovered.

- This is stated on p. 37 of this book. The Buddha was really doubtful whether humans will be able to comprehend his *Dhamma*, and *Brahma Sahampati* made an invitation to the Buddha saying that there

are many beings in the world who can understand Buddha Dhamma. He would know, because he had become an *Anāgāmi* by listening to Dhamma by a previous Buddha.

- So, the point is that if one thinks one can make progress on the Path by just chanting *suttā* or even learning the word-by-word translations, one would be very much mistaken.
- **In some cases, it can take a book to really do justice in explaining a single verse in some of the deep *suttā*!**
- However, there are some long *suttā*, especially in the *Dīgha Nikāya*, that can be translated word-by-word for the most part, since there may not be any deep concepts discussed there.

10. Another good aspect of the book is that it provides the background for the delivery of some major *suttā* or verses.

- For example, there is a detailed account (pp. 55-60) of how the Buddha had to perform even a few miracles to convince Uruvela Kassapa, his two brother, and 1000 of their followers before they agreed to listen to the *Aditta Pariyaya Sutta* or the Fire Sermon.
- So, we can see that it was very difficult in those early days for the Buddha to even convince some of the ascetics who had their own beliefs of what *Nibbāna* was about.

11. The subsequent chapters provide a good chronological account of what happened until the *Parinibbāna*. One can get a sense of which major *suttā* were delivered at around what time.

- There are accounts on the two chief disciples, and short accounts of other important personalities such as Anathpindika, Aṅgulimāla, Visākha, etc. Chapter 7 describes the formation of the order of *bhikkhunis*.
- Several encounters with the *Māra Devaputta* are scattered throughout the book.
- There is one paragraph on p. 109 on how the Buddha visited the *Tāvātimsa deva* realm and delivered *Abhidhamma*. A summary was conveyed to Ven. Sariputta, who expanded it with the help of his students, to the form that we have today.
- There is a chapter on Devadatta, which describes events that are not found in *suttā*. How he attained (*anāriya*) *jhānā* and *iddhi* (super-normal powers) powers. How he appeared on the lap of Prince Ajatasattu as a baby using his *iddhi* powers.
- It provides a good account of Devadatta's efforts to take the life of the Buddha, and how he lost all those super-normal powers and *jhānā* at the end.

12. There is a relatively long chapter on "The Doctrine", including the Four Noble Truths and the Noble Eightfold Path.

- Then, there is another relatively long chapter on the final year of the life of the Buddha including *Parinibbāna*.
- The final chapter is on the First Buddhist Council (*Sangāyanā*) that took place 3 months after the *Parinibbāna* of the Buddha.

X Dhamma and Philosophy

- [Dhamma and Philosophy – Introduction](#)
- [Philosophy of the Mind](#)
- [Is Buddha Dhamma \(Buddhism\) a Religion?](#)
- [The Infinity Problem in Buddhism](#)
- [Free Will in Buddhism – Connection to Saṅkhāra](#)

10.1 Dhamma and Philosophy – Introduction

1. One may ask the question: “What does Buddhism have to do with philosophy?”

The Merriam-Webster online dictionary defines philosophy as:

- the study of ideas about knowledge, truth, the nature and meaning of life, etc.
- a particular set of ideas about knowledge, truth, the nature and meaning of life, etc.
- a set of ideas about how to do something or how to live

Other dictionaries and books define philosophy in a similar manner.

2. The origin of the word “philosophy” comes from the Greek words “phila” (meaning love) and “sophia” (meaning wisdom). Thus philosophy is “love of wisdom”. It is said that Pythagoras (570 BCE) coined the term, and that is basically the time the Western philosophers started looking for “natural explanations” instead of accepting that a Creator needed to be invoked to explain phenomena that we see around us.

- This method of “acquiring knowledge” was supposed to be based on reason, argument, and observation. **But as we discuss at this website, any knowledge gained by that method is necessarily limited, because we have senses faculties that are very limited, and whatever deductions we make with unpurified minds are faulty and incomplete;** see, “[Dhamma and Science](#)” section for an introduction. Science actually branched off from philosophy, first as “natural philosophy”.
- Therefore, Buddha Dhamma has a lot to say about philosophy, even though there is no such thing as “Buddhist philosophy”; there is only “Buddha Dhamma” which describes the nature. The Buddha did not speculate on anything like philosophers. He said he experienced everything that he taught. One time a *Brahmin* asked the Buddha whether he believed *devas* and hell beings exist. The Buddha said he KNOWS they exist and could see those beings.
- Buddha Dhamma can sort out the philosophical arguments that have gone back to the Buddha’s time (in the Western world); philosophical views have evolved over the intervening time, but Buddha Dhamma has not. Ironically, “the pure form of Dhamma” had been left out of the discussion mainly because “Mahayana forefathers” like Nagarjuna, Asanga, and Vasabandhu made up a “Buddhist philosophy”.

3. **Since Buddha Dhamma is a complete set of nature laws only for its faithful followers, it is logical to present it as a philosophy to those who are not familiar with it or who have not seen enough evidence to believe that claim.** In presenting Buddha Dhamma as a philosophy the second definition is a more valid one, because these are not evolving ideas; rather, they were laid down 2500 years ago, and have been documented in the *Tiṭṭaka*, the Pāli Canon.

- It is a set of ideas about knowledge and truth not only about human existence, but ALL that exists in the seen and unseen parts of “this world”, which also encompasses not only the Solar system, but an infinite number of such planetary systems.
- This may sound as an arrogant claim, but it is not. One could scan different sections of this site and see that there is a complete theory about the whole existence; it may take another year or more to get even the “basics” of the Dhamma published. As of mid-2015, I have not yet been able to present even a fraction of the Abhidhamma material.

4. My basic incentive for creating this section is to make a request to the philosophy community: It is time to take a close look at Buddha’s world view, and see how it compares with existing philosophical arguments on various topics. No one has done a serious study on the worldview of the Buddha.

- It has been difficult to make a true assessment of what the “real Buddha Dhamma” is, because there are so many different versions out there.

- I hope to make a logical presentation to convince the philosophy community. Please make any comments/requests, and I will try to address any serious request.
5. Perhaps as important, I want anyone reading the site to appreciate the significance of what the Buddha told us 2500 years ago. Compared to the pure Dhamma, all philosophical theories are at very early stages. Any interested reader can learn about the current philosophical arguments (and those going back to the early Greek philosophers) and then compare with Buddha Dhamma presented at this site.
6. Within the framework of the Buddha Dhamma all standard philosophical questions have been answered.
- These include, “the relation between the brain and mind”, “the nature of death”, “whether we have free will”, etc. Thomas Nagel’s short book listed below gives an introduction to some of such topics.
 - Most existing literature on Buddhist philosophy says some of these questions are in the category of “questions that the Buddha refused to answer”, which itself is an incorrect statement; see, [“Misconceptions on the Topics the Buddha ‘Refused to Answer’](#)”. The Buddha refused to answer questions posed by a person who was not capable of comprehending the answers. But he has given the answers in other places.
 - We will discuss how Buddha Dhamma provides answers to these philosophical questions one by one, as sufficient background material is added to site.

REFERENCES

For those who are interested on the subject, here are some references (both for philosophy in general and also on “Buddhist philosophy”; not in any particular order). Among those on “Buddhist philosophy”, I have not read a single book that provides a true description of the Buddha’s world view.

For those who are not familiar with the subject, I would recommend the first two introductory books on philosophy:

“What does it all mean?” by Thomas Nagel (1987) – Excellent introductory book and only 100 pages.

“The Making of a Philosopher”, by Colin McGill (2003) – Another excellent introductory book.

“Buddhist Philosophy – Essential Readings”, ed. by William Edelglass and Jay L. Garfield (2009).

“Mahayana Buddhism: The Doctrinal Foundations”, by Paul Williams (2009)

“Buddhism as Philosophy”, by Mark Siderits (2007).

“Buddhist Philosophy – A Historical Analysis”, by David J. Kalupahana (1976).

“Causality: The Central Philosophy of Buddhism”, by David J. Kalupahana (1975).

“A History of Buddhist Philosophy”, by David J. Kalupahana (1992).

“Nagarjuna – The Philosophy of the Middle way”, by David J. Kalupahana (1986).

“Causality and Chance in Modern Physics”, by David Bohm (1957).

“Conversations on Consciousness”, by Susan Blackmore (2006) – input from a number of philosophers.

“Mind – A Brief Introduction”, by John R. Searle (2004).

“The Character of Consciousness”, by David J. Chalmers (2010).

“Consciousness Explained”, by D. C. Dennett (1991).

“The Quest for Consciousness: A Neuroscientific Approach”, by C. Koch (2004).

“Rocks of Ages: Science and Religion” by Stephen Jay Gould (2002).

“The Self and Its Brain”, by Karl R. Popper and John C. Eccles (1977).

Next, [“Philosophy of the Mind”](#),

10.2 Philosophy of the Mind

1. One nice thing about Buddha Dhamma is that there are no separate theories for the mind, meaning of existence, the physical world, or ANYTHING in this world. Thus I can refer to the section on "[Buddha Dhamma](#)" when I talk about the mind, the same way I refer to that section when I discuss "[Dhamma and Science](#)."

2. There seems to be three basic problems that the philosophers are trying to tackle regarding the mind (there are many others, but let us start with these):

- How does the mental experience arise in a physical body? Most scientists and philosophers say that it originates in the brain, but they have not been able to make the connection. This is the "mind-body problem".
- How can non-physical mental states of consciousness cause something in the physical world? For example, how can your intention ever cause a movement of your hand? This is the "problem of mental causation". Yet, the case for "physicalism" — that everything in this world is matter-based — is made with this as a premise.
- Finally, how your thoughts refer to something that is happening (or happened) in a distant city? This is called the "problem of intentionality". If you are thousand miles away from home, you can take "tour" of the home, room by room, in your mind.

3. The philosophers are divided into two camps in addressing the above problems:

- One camp says the "physical" and "mental" are two distinct realms. They do not think "mental" can arise from 'physical'; This camp is mostly religious and attribute the "mental" to the concept of a "soul". They are "dualists".
- The other camp is 'materialistic': they say the 'mental' arises from "physical". In the worst case, some materialists deny even the existence of a mental reality, even though I cannot quite understand what that means. Because they are obviously thinking about these concepts, which is "mental".

4. Let us look at the current status of these two camps:

- Following the extreme dualism of Rene Descartes, there have been many dualists, including Stephen Jay Gould whose "non-overlapping magisteria" in the late 1990's put matter and mind into non-overlapping disciplines: matter can be handled by science and morality and mind can be left to religion. However, these days only dualists left seem to be those who hold a dualist view for religious reasons, i.e., a soul.
- These days most philosophers are materialists. With the amazing progress of science and technology, it is hard for most people to believe anything that is not "confirmed" by science. And they think science, based on a purely materialistic approach, should be able to explain everything about "this world". They believe that it is only a matter of time before brain activity will be able to explain the workings of the mind; see the reference list in "[Dhamma and Philosophy – Introduction](#)."
- The inadequacy of the materialist approach is detailed in a comprehensive manner by Thomas Nagel in his recent book, "Mind and Cosmos" (2012); it is an easy read with no fluff and only 128 pages. I was impressed by how close he came to advocating a "mind first" approach, just like in Buddha Dhamma (apparently he does not know anything about Buddha Dhamma and does not even mention it).

5. Mind is the ultimate cause of everything in this world. The Buddha said, "*mano pubbangama dhamma, mano setta manomaya*...". "Mind precedes all dhamma, all dhamma are mind made...". But Buddha's is not a dualist world view. Mind and matter are intimately connected.

- This is in sharp contrast to both the "dualistic" and "materialistic" views.
- Most people translate the above Pāli verse as, "mind precedes all mental phenomena...." So, we need to examine what "dhamma" means here.

- Dhamma explains how anything and everything in this world comes about “dhamma” means “to bear” or “to explain” or “how anything “comes about”. Nothing happens without (multiple) causes.
- In the *Sabba Sutta*, the Buddha clearly defines what “*sabba*” or “all” that in “in this world”: It is everything that can be experienced via the five physical senses and the mind. Specifically, eye and visible objects, ear and sound, nose and smells, tongue and tastes, body and touch, and the mind and concepts (these are the six internal and corresponding six external “*ayatana*s”), this is “the all”.
- Is there anything that is not included within those 12 *ayatana*s? There is nothing else in the whole world that is not included in those 12 *ayatana*s. Six of those are “internal”; eye, ear, nose, tongue, body, and mind, and the other six are external, they exist “out there”.
- Therefore, it is NOT correct to say that “dhamma” in the above verse includes only mental phenomena, as many translators of the *suttā* have done. This is why I keep saying that we need to check consistency all the time. If one thing is not defined properly, then that error propagates and lead to contradictions.
- This “all” can also be expressed as the 31 realms of existence; of those 31 realms, normal humans experience only two realms (human and animal); see, “[The Grand Unified Theory of Dhamma](#)”. But it is possible to experience other realms via developing mental power, i.e., *jhānā*: see, “[Power of the Human Mind – Introduction](#)” and the follow-up posts. Thus, the Buddha’s world view is much more expansive than the ones that are subjected to current scientific and philosophical investigations.

6. According to Buddha Dhamma, the ultimate realities in this world are just 28 types of *rūpa* (matter), *citta*, and 52 types of *cetasika*. Then different combinations of the *cetasika* in *citta* gives rise to 89 (121) types of *citta*.

- Of course *citta* and *cetasika* constitute the mind, and 28 types of *rūpa* constitute matter.
- Another way to state the same thing is in terms of the 6 *dhatu*s: *pathavi*, *āpo*, *tejo*, *vāyo*, *akasa* (space), and *viññāṇa*. The 28 types of *rūpa* mentioned above (including *akasa dhātu*) are derived from the *satara mahā bhūta*: *pathavi*, *āpo*, *tejo*, *vāyo*. *Viññāṇa* constitutes of *citta* and *cetasika*.
- All inert things and plants in this world (31 realms) are made of *rūpa*. All sentient beings “are made of” *rūpa* and have *viññāṇa* (*citta* and *cetasika*), i.e., a mind.
- As I will explain in a separate post, *rūpa* are ultimately caused by the mind; see, “[The Origin of Matter – Suddhatthaka](#).” But *rūpa* are inherently unstable (this is basically the root cause for suffering in the material world), and there is a fundamental law in physics which states the fact that matter is unstable and the universe itself “runs down”; see, “[Second Law of Thermodynamics is Part of Anicca!](#).”
- When the mind is released from the material body, one attains *Nibbāna*, i.e., one is never reborn “in this world”. It is the material body that is subject to decay and death, and lead to suffering.

7. The reason that I started this website is that it is not possible to provide a reasonable explanation of the Buddha’s world view in an essay or even in several essays. At the website, I can make references to related posts. I hope it would be a rewarding experience for anyone who is willing to allocate some time to read AND contemplate.

- Another reason to start the website is that I want to have it all out in the open, so anyone can challenge any inconsistency. I want to find the truth myself, and the only way to do that is to get as many as possible to look at the emerging picture and make corrections to any errors anyone can find.
- Therefore, I would appreciate any comments pointing to any errors or inconsistencies anywhere on the site, in addition to suggestions for relevant topics to discuss.
- There is more to follow. This is an introduction.
- How “physical” arises from “mental” in the most fundamental sense is really complex and we may not get to that for a while. First we will concentrate on how physical bodies of the living beings arise *with causes from* the “mental”. I will be building up the Abhidhamma section and then will refer frequently to that section as we proceed.

8. It is time to make a paradigm change: Consciousness is not only ontologically fundamental, it takes precedence over matter. Mind can create matter. Right now we have evidence that the mind can change the brain; see, "[Truine Brain – How the Mind Rewires the Brain via Meditation/Habits.](#)" **If the brain creates the mind, how can the mind alter the brain?**

9. Here are a couple of papers on the subject related to the "mind body problem" for those who are interested (click on them to open):

[WebLink: What is it Like to be a Bat – Nagel \(1974\)](#)

10.3 Is Buddha Dhamma (Buddhism) a Religion?

October 21, 2015; revised November 8, 2015

It is best to learn (or even investigate) Buddha Dhamma with a mindset pretty much the same as when one is trying to learn about a new concept, say in mathematics or science. There are some key assumptions (axioms) involved, which cannot be proven, but do make sense especially if one takes time to contemplate. This is contrary to conventional religions.

1. Merriam-Webster defines “religion” as:

- the belief in a god or in a group of gods
- an organized system of beliefs, ceremonies, and rules used to worship a god or a group of gods
- an interest, a belief, or an activity that is very important to a person or group

The Oxford dictionary has the following definitions:

- The belief in and worship of a superhuman controlling power, especially a personal God or gods
- A particular system of faith and worship
- A pursuit or interest to which someone ascribes supreme importance

2. The word “religion” invokes the idea of a Creator God in most people’s minds. Even though this is correct for most major religions of the world, it is definitely not correct for Buddha Dhamma.

- The foundation of Buddha Dhamma is that the world has been in existence “forever” (no First Cause and thus it was not created). Universes come and go, but there have been living beings at all times.
- It may first appear to be inconsistent with the current “Big Bang theory” that says our universe started some 14 billions years ago in a “Big Bang”. In fact, major religions embraced the idea of a Big Bang when it was first proposed, since it had connotations of creation. However, when the inflationary theory that describes the Big Bang (proposed in the 1990’s) says there are multiple, parallel universes. Thus, the hope for a unique “event of creation” fizzled out.
- Of course “Big Bang theory” is just that, a theory. There are some scientists who do not believe everything “popped up” all of a sudden in a Big Bang. They believe that universes are cyclic, i.e., they transform and evolve; see, for example, “Endless Universe – Beyond the Big Bang”, by P. J. Steinhardt and N. Turok (2007).

3. So, Buddha Dhamma does not count as a religion if one takes the first two definitions from either Merriam-Webster or Oxford dictionary. Yet, it can be included in the third category.

- **One could say that most major religions are theistic**, i.e., based on the belief of a Creator.
- Buddha Dhamma can be categorized as an **atheistic religion**, in the sense that there is no assumption of a Creator. It must be noted that in Buddha Dhamma there are beings called “*devas*” (sometimes translated as “gods”) in other realms; they cannot affect our lives in a significant way, much less than creating universes.

4. However, I prefer to label Buddha Dhamma as the “ultimate science”. It encompasses all of nature’s laws not only pertaining to matter, but also pertaining to the mind. It is the Grand Unified Theory that the scientists are striving to discover, but they are only focusing on the material side.

- Scientists are beginning to realize the importance of the mind. In fact, many scientists are attempting to make a connection between quantum theory and the mind. This is NOT going to work, because any “matter-based theory” cannot explain the mind. Mind is the forerunner: “[Manopubbangamā Dhammā...](#)”

- As I build the Abhidhamma section, it will become clear why the mind takes precedence over matter. And it will also become clear why the Buddha is the top-most scientist. He was only concerned with sharing what he discovered with the others.
- The “new found knowledge” about innumerable planetary systems existing in our universe was known to the Buddha and is described in the *Tipiṭaka*; see, “[Dhamma and Science](#).”
- The Buddha was not interested in “starting a religion” so that he could be worshipped by the masses. Instead of residing in many luxurious residences like the *Jetavanaramaya* in his last days, he chose to travel by foot to Kusinara enduring many hardships on the way. He wanted to show that his body was not exempt from suffering.

5. When I listen to current debates between those who believe in a Creator and those who don't (atheists), I think the following summarizes the key ideas from each group:

- Atheists correctly point out that there is no evidence supporting the idea of a Creator God. Our ancestors could not fathom the workings of our complex world, and envisioned a Creator, who was supposed to have created the humans and a suitable habitat for them. But many “mysteries” of our world have been resolved with the advance of science, and in fact, these findings contradict key ideas in major religions.
- Those on the other side do not have any “winning points” or scientific evidence, but they insist that the idea of a “totally physical world” goes against our experiences and innate feelings that cannot be denied. That there must be something in addition to a physical body, i.e., there is a “conscious experience” that cannot be attributed to atoms and molecules in our bodies.

6. Buddha Dhamma encompasses both these key points. First, on the side of the atheists, there is no need for a Creator. Natural processes can account for not only what happens on Earth, but an uncountable number of habitable planetary systems in a vast universe.

- On the other hand, science can account for only how the material world evolves. There is something other than inert matter in this world as the theologians argue, and that is consciousness. Consciousness cannot be derived from inert matter. There are six elemental entity types in this world: *pathavi*, *āpo*, *tejo*, *vāyo*, *akasa* (space), and *viññāṇa* (consciousness). Consciousness thus cannot be derived from other five. The first four have deeper meanings than just earth, water, fire, and wind; we will discuss this in a future post.
- However, consciousness was not imparted by a Creator. Furthermore, contrary to what most theologians believe, animals are conscious too (even though their consciousness is at a lower level compared to humans).
- This is why one could say Buddha Dhamma is an “atheistic religion”, within a narrow context.

7. Some people tell me that Buddha Dhamma is not that different from other religions because there are certain “assumptions” that need to be believed “on faith”, for example, that there is a rebirth process. In fact, it is true that “not believing in the possibility of a rebirth process” is a wrong view that could make one eligible to be born in the lower four realms or the *apāyā* where suffering is much more compared to in the human realm; see, “[The Grand Unified Theory of Dhamma](#).”

- However, the axiom of a rebirth process is not to be taken as a tenet, like in the case of the Ten Commandments; it is up to oneself to examine and accept or reject that concept. Even a Buddha cannot make anyone be “forced to believe” in anything.
- Thus, there is a difference in what is meant by “faith” in Buddha Dhamma, compared to that in theistic religions. In any theistic religion, one has to accept the idea of a Creator without question; it is THE basis of any major theistic religion.
- Buddha Dhamma just describes the nature of this world; this [The Grand Unified Theory of Dhamma](#) has some basic axioms just like geometry or the theory of relativity. These “assumptions” can be verified to be correct if one takes time to examine the evidence.

- One could start off by not embracing these basic assumptions, but not rejecting them outright either. One could keep an open mind and explore the key ideas in Buddha Dhamma and decide for oneself whether those assumptions start to make sense as one proceeds.
- In fact, accepting such assumptions on blind faith will not do any good for anyone. One has to comprehend WHY those HAVE TO BE correct in order to make sense of this world that we live in. One has to spend time and critically evaluate the key concepts in Buddha Dhamma.

8. Buddha dhamma based on some key axioms like the rebirth process and the existence of other types of beings in 29 more realms (other than the human and animal realms), has the explanatory power to explain anything in this world, ranging from the existence of innumerable planetary systems (which was only accepted within the past few hundred years by science) to how morality comes about without a Creator; see, "[Dhamma and Science](#)" and "[Origin of Morality \(and Immorality\) in Buddhism](#)."

- It may take me another year or two to get the more deeper concepts explained, but I think there is enough material at the site to see that the knowledge of the Buddha (who was a human being just like us) cannot be matched by any other human. It took us the workings of many brilliant scientists from Galileo to Newton to Einstein to realize the vastness of this universe, which the Buddha described 2500 years ago.
- But the even more astounding fact is that the Buddha described in detail how the consciousness arises in a living being, in addition to describing the material world. Science is still under the "wrong view" that consciousness can arise in the brain out of inert matter. I am just beginning to layout the basics of *Abhidhamma* that have been hidden in the past several hundred years, and have been revealed by a very special *Thero* in Sri Lanka.
- Whenever possible, I try make connections to current findings in science, and to show the new confirmations as well the wrong concepts still embraced by science. Time will reveal that Buddha Dhamma, in its pure form, cannot be refuted. I have started to add the date of posting of essays, so that we can keep track of these predictions over the coming years.
- And there are no "mysteries" in Buddha Dhamma, even though some concepts are still not amenable to science.

9. I just read the recently published book, "Life on the Edge" by Johnjoe McFadden and Jim Al-Khalili (2014) which describes how scientists are slowly, but surely, revealing many "mysteries of nature". These are all consistent with Buddha Dhamma, and I can point out a couple of "possible future breakthroughs".

- Scientists will be able to extend the lifespans of humans. There is no set limit to human lifetime in Buddha Dhamma, with lifetimes extending to thousands of years at times.
- It may even be possible to make conditions in a laboratory (chemical concoctions) that allows a lifeform to arise. This does NOT mean that scientists will be able to CREATE LIFE. Buddha Dhamma describes how animals and humans can exist in the "*gandhabba* state" until a suitable conditions for it to start building a physical body become available; see, "[Manomaya Kāya](#)." When a human baby is conceived, for example, what happens is that a matching "*gandhabba*" taking possession of the zygote in the womb or even out in the laboratory; see, "[What does Buddha Dhamma \(Buddhism\) say about Birth Control?](#)."
- If careful experiments are designed, it will be possible to demonstrate even now that small insects "can be born" out of decaying leaves; what happens is that decaying leaves lead to the formation of the "seed" (right chemical concoction) necessary for a "*gandhabba*" of that insect species to start a new physical body.

10. For those who would like to look into arguments on why theistic religions do not make sense, below is a compilation of arguments by Sam Harris, a prominent atheist.

- By the way, Buddha Dhamma does not agree with some of the positions of Mr. Harris (issues on how consciousness arises, as we discussed in #9 above). For example, at the end of the video (last several minutes) he talks about human embryos not being qualified as "human", i.e., there is no life there. There

Mr. Harris says a zygote is the same as any other trillions of cells in a body. That is not even consistent with modern science.

- Modern science has not pinpointed when life begins in a zygote; see, [“What does Buddha Dhamma \(Buddhism\) say about Birth Control?”](#) This is why I am saying that science is incomplete; it does not know about the “*gandhabba* state” of a human discussed in #9 above. By the way, a “*gandhabba*” is not a soul; see, [“Ghost in the Machine – Synonym for the Manomaya Kāya?”](#) I have other posts at the site that provide more details, but it may not be for another year or so until all the details are presented.
- With regard to the mind, science is still at the same stage that it was 500 years ago regarding the material world, i.e., when most people thought stars were embedded in a celestial sphere around the Earth; see, [“Dhamma and Science.”](#)

Please note : The video seems to start around 43 minutes into the presentation. You may need to manually reset to the start of the video.

10.4 The Infinity Problem in Buddhism

July 15, 2017; Revised February 5, 2018 (link at the end of the post)

This question was posed to me by Mr. C. Saket from India, who also sent along his ideas too. Apparently, this question has been discussed in several online forums, without reaching a satisfactory answer.

1. The question is: “The Buddha has said that there is no discernible beginning to the rebirth process (see the *suttā* in [WebLink: suttacentral: Anamatagga Samyutta, Samyutta Nikāya](#)). In other words, we have had infinite number of attempts at attaining *Nibbāna*. So, why have we not attained *Nibbāna* yet?”

- This question seems to have its origin in the [WebLink: WIKI: infinite monkey theorem](#), which states that a monkey hitting keys at random on a typewriter keyboard for an infinite amount of time will almost surely type a given text, such as the complete works of William Shakespeare.
- By the way, this infinite monkey theorem is another evidence of how unimaginably large infinity is: “[Infinity – How Big Is It?](#).”

2. First of all, the proof of the monkey theorem is based on a monkey generating random characters using a keyboard. The following example is given in the above link to the monkey theorem:

- Suppose the typewriter has 50 keys, and the word to be typed is *banana*. If the keys are pressed randomly and independently, it means that each key has an equal chance of being pressed. Then, the chance that the first letter typed is ‘b’ is 1/50, and the chance that the second letter typed is *a* is also 1/50, and so on. Therefore, the chance of the first six letters spelling *banana* is

$$(1/50) \times (1/50) \times (1/50) \times (1/50) \times (1/50) \times (1/50) = (1/50)^6 = 1/15\,625\,000\,000,$$

less than one in 15 billion, but not zero, hence a possible outcome.

- Let us first discuss the differences between the infinite monkey theorem and the current problem. However, at the end it will be shown that the conclusion of the infinite monkey theorem does apply to the present case too, and there is no contradiction even though infinite number of beings have not yet attained *Nibbāna*.
- The key point is that an infinite number of beings have attained *Nibbāna*. This is why infinity is such a complex concept.

3. Attaining *Nibbāna* is NOT a random process. First of all, one needs to hear or read about the *Tilakkhaṇa* (*anicca, dukkha, anatta*) in order to even start on the process.

- No matter how hard one tries, one will never be able to attain *Nibbāna* if one has not heard the TRUE VERSION of the *Tilakkhaṇa*. In some eons (*mahā kalpa*, lasting roughly 10 billions years), there is not even a single Buddha, and the probability of attaining *Nibbāna* during that eon is ZERO.
- Even during a given *Buddha Sāsana*, the true meanings of the *Tilakkhaṇa* get distorted from time to time and thus the probability goes to zero. For example, at present time, most people interpret *anicca* as impermanent and *anatta* as “no-self”.

4. There have been only 7 Buddhas within the past 91 *mahā kalpas*. This timeline is discussed in the “[WebLink: WIKI: suttacentral: Mahapadana Sutta \(DN 14\)](#).”

- There was only a single Buddha (*Vipassī*) in the *mahā kalpa* that was 91 *mahā kalpa* earlier. There were no Buddhas in the next 60 *mahā kalpas*, and then two Buddhas (*Siki* and *Vessabhu*) appeared. Then there were 30 *mahā kalpas* without a single Buddha, and so far in the current *mahā kalpa* there have been four Buddhas (*Kakusanda, Konagama, Kassapa, Gotama*), and one more Buddha (*Maithree*) is expected to appear before this eon ends.

- Even during a given *Buddha Sāsana*, only a fraction of HUMANS will get to hear/read about the true *Tilakkhaṇa*. Today, the percentage of Buddhists worldwide is roughly 5%-10%, and much less than 1% have heard about the true *Tilakkhaṇa*.
 - Furthermore, the human population is negligible compared to the population of beings in the *apāvā*, who have zero probability of comprehending *Tilakkhaṇa*. So, we can see that there are many zero probabilities for a given LIVING BEING, compared to a relatively few non-zero probabilities.
5. We can refine the progress to *Nibbāna* a bit more. The key to *Nibbāna* is first to attain the *Sotāpanna* stage; once that is reached, *Arahanthood* is guaranteed. It is mostly only in the human realm that one will be able to attain the *Sotāpanna* stage.
- In order to attain the *Sotāpanna* stage, one first needs get rid of the 10 types of *micchā diṭṭhi*; see, "[Micchā Diṭṭhi, Gandhabba, and Sotāpanna Stage](#)." Only then one will be able to comprehend the *Tilakkhaṇa* and start on the Noble Eightfold Path to attain the *Sotāpanna* stage.
 - Suppose one is born human during the time of a Buddha, having gotten rid of the 10 types of *micchā diṭṭhi*, makes good progress towards the *Sotāpanna* stage. But if, for some reason, he/she is unable to reach the *Sotāpanna* stage (i.e., without grasping *Tilakkhaṇa*) and dies, then even if the next birth is in the human realm, one could be born to a family with *micchā diṭṭhi* and thus may have to start over.
 - We do carry our "*gathī*" from life-to-life. "Good *gathī*" can grow in the next life under conducive conditions, but they can also be reversed or changed under adverse conditions.
 - We can call such an occurrence an "event with significant probability".
6. Therefore, reaching *Nibbāna* cannot be considered a mechanical process, and thus cannot be compared to a monkey hitting arbitrary keys on a keyboard to generate Shakespeare's *Hamlet*.
- One has to make a concerted effort — via several intermediate stages — to reach *Nibbāna*.
 - However, a mathematician could still say that one could consider an infinite number of such "events with significant probability" by a living being per #5 above.
 - One such "event with significant probability" can be equated to a monkey hitting a key stroke on the keyboard.
 - Even though such "events with significant probability" may be separated by huge time spans, given infinite time, **an infinite number of them can accumulate**. Therefore, the infinite monkey theorem should still hold.
7. It is indeed true that an infinite number of living beings HAVE ATTAINED *Nibbāna* in the past.
- Not only that, infinite number of living beings have attained the *Buddhahood* in the past. Of course, attaining the *Buddhahood* is infinitely more difficult than attaining *Arahanthood*.
 - Therefore, the infinite set of living beings who have attained *Nibbāna* is "much larger" than the infinite set of living beings who have attained the *Buddhahood*.
8. Infinity is a very complex concept. There are many levels of infinity. Infinity minus infinity is still infinity. **So, even as there have been an infinite number of Buddhas, and even higher infinity of those who attained the Arahanthood, there are still an infinite number of living beings (including us) who have not yet attained Nibbāna.**
- Therefore, while the infinite monkey theorem does apply here, there is no contradiction.
 - Of course, several other questions now arise: Where do all these infinite number of living beings live? Do they all live in our Solar system? Have all these infinite number of Buddhas appeared in our Solar system? It will take many more future posts to fully explain these, but we can summarize as follows.
9. There are 31 realms that are associated with our Earth or the Solar system (*Cakkāvāta* or *Cakrāvāta*), see, "[The Grand Unified Theory of Dhamma – Introduction](#)." So, there are many more living beings in our

Cakkāvāta other than the humans and animals that we can actually see; most living beings are in the other three realms of the *apāyā*; animal realm is the fourth.

- Furthermore, there are an infinite number of such *Cakkāvāta* (planetary systems) in existence at all times with living beings. Buddhas can appear in some of them.
- These *Cakkāvāta* are in clusters of small, medium, and large “world systems” (galaxies, galaxy clusters, and superclusters in terms of modern science). But none is permanent. They come into being and eventually perish, only to be reborn again. Just like us, these world systems also undergo death and rebirth; it is a cyclic process. We will discuss this at a later time.
- Within the past 100 years or so, scientists have confirmed the existence of billions of planetary systems within each galaxy and billions of such galaxies in our universe. As far as science is concerned, the number of *Cakkāvāta* (planetary systems) is likely to be infinite — as stated by the Buddha 2500 years ago.

10. If there are infinite number of planetary systems with life (just like ours), how come that scientists have not detected life outside our Solar system?

- The distance between adjacent *Cakkāvāta* is enormous. The star closest to us, Proxima Centauri, is 4.2 light years away from us. This means, if we travel at the speed of light (186,000 miles/second), it will take 4.2 years to get there! Of course, we can only travel at a small fraction of the speed of light.
- For comparison, our own Sun is only 8 “light minutes” away from the Earth, i.e., it takes only 8 minutes to get to the Sun if we travel at the speed of light. The moon is about 1.3 light-seconds away from the Earth (240,000 miles). We have been able to only land on the Moon so far!
- So, it is fair to say that we may not be able to communicate with living beings in another planetary system in the near future, if ever. Even if we find that our closest star has a habitable planet like Earth, it will take over 8 years to even send a light signal and get a reply back.

11. This is why the Buddha said not to waste time on thinking about these questions. In the [WebLink WIKI: suttacentral: Acinteyya Sutta \(AN 4.77\)](#), he listed four things that are inconceivable (*acinteyya*) by a human, and if one persists on that path one may become insane (may lose one’s mind, because these issues are so complex):

- *Buddha Visaya* (things that are discernible to a Buddha), *Jhāna Visaya* (powers that can be accessed by one in *jhānā*), *Kamma Vipāka* (how the laws of *kamma* work), and *Loka Cintā* (comprehending the real nature of the world).
- The issue that we just discussed belongs to the fourth category. We will never be able to figure out or comprehend everything about the unimaginably large and complex world (the universe). But from the above discussion, hopefully we all can at least get a glimpse of the complexity of the universe with infinite number of *Cakkāvāta* like ours.

February 5, 2018: An update on this subject can be found at the Discussion Forum topic, “[The Infinity problem – BIG Doubt.](#)”

10.5 Free Will in Buddhism – Connection to Saṅkhāra

November 3, 2018; revised July 6, 2019

Introduction

1. Free will is at the core of Buddhism (Buddha Dhamma). If one does not have free will, one would not be able to attain *Nibbāna*.

- In a mundane sense also, the applicability of free will should be obvious. Free will is what determines (within certain limits) whether one will become a successful businessman or a master thief.
- When I said “within limits”, we can only compare situations for two people who are born with comparable capabilities. For example, one born with an “*ahetuka* birth” (born with brain defects) will never be able to achieve much success.
- However, a person born with a “normal level of intelligence” (*tihetuka* or *dvihetuka* births) can make decisions that can lead to a wide variety of possible outcomes in the future. For example, one could become a great scientist or a ruthless dictator. Both require a “sharp mind”.

2. In the following video by Sam Harris, we can clearly see where modern philosophers get stuck on the issue of free will.

[WebLink: youtube: Sam Harris on the Illusion of Free Will](https://www.youtube.com/watch?v=3pW1D1u1o04)

- He agrees that things happen due to causes, but he cannot figure out the causes of many things. He says, “you don’t pick your parents, you don’t pick your body...”. **But we do. That is explained with *paṭicca samuppāda* in Buddha Dhamma.** We even choose our rebirths too; see, “[Uppatti Paticca Samuppāda \(How We Create Our Own Rebirths\)](#).”
- As long as he does not believe in rebirth, Sam Harris will never be able to understand those “missing causes”. The rebirth picture provides those “missing causes”. **Laws of *kamma* (causes and effects) operate over many rebirths. One cannot analyze the current life in isolation.**
- **Furthermore, we need to include animals and beings in other 29 realms too, in order to fully explain the laws of *kamma*.**
- Nature treats every single living being fairly, according to what they have done in the past.
- One is born into a given existence (human, animal, *deva*, etc), a given family (good, bad), under different conditions (healthy, handicapped, poor, etc), and so on based on one’s *gati*. **One’s *gati* are based on the types of *saṅkhāra* that one cultivates (basically how one thinks, speaks, and acts).**

Background Material in Buddha Dhamma

3. **Continuing with the key points in #2:** Another other key point is that “*kammic* energy” that leads to future *vipāka* (results) are generated in one’s *javana citta*. Don’t be put off by that word. *Javana citta* are basically thoughts that arise in one’s mind when one is generating conscious thoughts about speaking/doing **moral or immoral deeds**.

- *Vacī* and *kāya saṅkhāra* become ***abhisāṅkhāra* (strong *saṅkhāra*) that can lead to future *vipāka*, ONLY IF those actions or speech is either **moral (good *vipāka*) or immoral (bad *vipāka*).****
- That is the difference between *saṅkhāra* and ***abhisāṅkhāra***; see, “[Saṅkhāra – What It Really Means](#).”

4. *Vacī saṅkhāra* are responsible for our speech (either out loud or just to ourselves). When we do something (walk, play, etc) we move our bodies with *kāya saṅkhāra* that arise in the mind (basically in the *gandhabba*). We have control over both those.

- On the other hand, when thoughts arise automatically due to a sensory input, those are *mano saṅkhāra*.
- That is the difference between *mano saṅkhāra* (which arise without our DIRECT control) and *vacī saṅkhāra/kāya saṅkhāra* (which we have control over).
- Whether just *saṅkhāra* or *abhisāṅkhāra*, this distinction holds. For example, we can stop saying anything anytime. We can stop raising our hand anytime we want to, whether it is to say “Hi” to someone (*saṅkhāra*) or to hit someone (*abhisāṅkhāra*).

5. As we have discussed before, the word “*saṅkhāra*” comes from “*san*” + “*khāra*” or actions that involve “*san*”; see, “[What is “San”? Meaning of Sansāra \(or Samsāra\).](#)”

- “*San*” are responsible for just getting things done to live the current life (even everyday activities).
- **However, if they involve moral/immoral actions that can bring results (*vipāka*) in future lives, then those arise due to “strong *san*” or “*abhi san*” and thus become “*abhisāṅkhāra*.”**
- ***Kamma* are actions (done with *saṅkhāra* that arise in the mind).** Most are neutral *kamma*: They do not bring significant *vipāka*.
- Those moral or immoral **strong *kamma*** — done with ***abhisāṅkhāra*** — are the ones that lead to ***kamma vipāka in the future*** (either in this life or in future lives).

Key Idea: *Vacī/kāya Saṅkhāra* are Willful

6. Let us look at some examples now.

- Thinking about going to the bathroom is a *vacī saṅkhāra* (*kammically* neutral). One gets the body to move to the bathroom using *kāya saṅkhāra*.
- Thinking about killing a human being involves *abhisāṅkhāra* with high *kammic* consequences or *vacī abhisāṅkhāra*; doing the actual killing is done with *kāya abhisāṅkhāra*. Those can lead to rebirth in the *apāyā* because both are based on immoral or *apuñña abhisāṅkhāra* (or *apuññabhisāṅkhāra*).
- On the other hand, *puñña abhisāṅkhāra* (or *puññabhisāṅkhāra*) (thoughts responsible for good speech and actions) have good *kammic* consequences and can lead to “good births” (human, *Deva*, or *Brahma*). Even more importantly, they are essential for making progress on the Path.

7. I keep repeating these because it is very important to understand these key ideas.

- All *saṅkhāra* arise in the mental body (*gandhabba*).
- Then the brain helps to put those into action/speech (i.e., moving body parts).
- Most of those actions/speeches are *kammically* neutral.
- Good *kammā* that will have good *vipāka* in the future are done with *abhisāṅkhāra* that have ***sobhana cetasika (compassion, non-greed, etc)***. Bad *kammā* that will have bad *vipāka* in the future are done with *abhisāṅkhāra* that have ***asobhana cetasika (anger, greed, etc)***; see, “[Living Dhamma – Fundamentals.](#)”
- ***Saṅkhāra* is the generic word used in the *suttā*, even if they could be *abhisāṅkhāra*. One needs to be able to see which ones are *abhisāṅkhāra* based on the actual situation.**

8. *Mano saṅkhāra* are those automatically arise in a mind due to a sensory input, based on one’s *gati*.

- **We don’t really experience those initial *mano saṅkhāra* and we only experience when it comes to the next stage called *vacī saṅkhāra* (“talking to oneself”).**
- This is an important point. Even if one does not say a word when one is “thinking to oneself” that is called *vacī saṅkhāra*. If one gets really interested, one may speak out and that is still a *vacī saṅkhāra*.

- If one's interest builds up, one may even take bodily action. Those bodily actions are done with *kāya saṅkhāra* that arise in the mind.
- I strongly urge everyone to re-read the posts: [“Difference Between Tanhā and Upādāna”](#) and [“Correct Meaning of Vacī Saṅkhāra.”](#)
- The strength of *kammic* energy created increases in the following order: *mano*, *vacī*, *kāya saṅkhāra*.

Mano Saṅkhāra Arise Based on Our Gati

9. As we discussed many times, we get “attached” to something AUTOMATICALLY based on our *gati* and arise as *mano saṅkhāra*.

- If the attachment is strong enough, the mind will now start thinking about it consciously, i.e., *vacī saṅkhāra* arise and we become aware of these *vacī saṅkhāra*.
- Now, we have the ability to be mindful and think about its consequences and move away from it, as soon as we become aware of this “attachment” to something. Therefore, we can stop such thoughts at the *vacī saṅkhāra* stage; see, [“Correct Meaning of Vacī Saṅkhāra.”](#)
- However, our minds like to enjoy such *vacī saṅkhāra*. It is easy to do and is very tempting. Many people get their sexual satisfaction from just “daydreaming” about either event in the past or sexual encounters that one would like to have in the future.
- In order to change *mano saṅkhāra*, we need to change our *gati*; see, [“Difference Between Tanhā and Upādāna.”](#)

10. Please read #9 again. That is the key to understanding “free will”.

- We have total control over *vacī saṅkhāra* and *kāya saṅkhāra*.
- The reason is that there is a “time delay” between the mind (in the *gandhabba*) deciding to speak or make a bodily movement and the time takes for the brain to carry out those commands and to move parts of the physical body; see, [“Brain – Interface between Mind and Body.”](#)
- However, animals do not have this “safety barrier”. Lower animals do not have a neocortex. Even in monkeys, the neocortex is only partially developed. Thus, their *mano saṅkhāra* automatically continue as *vacī* and *kāya saṅkhāra*. Also, see, [“Truine Brain: How the Mind Rewires the Brain via Meditation/Habits.”](#)
- **Those are the reasons why humans have free will and animals do not.**

Key Concepts in *Satipaṭṭhāna* and *Ānāpāna*

11. Therefore, the concept of free will becomes clear if one can understand the concepts of *mano*, *vacī* and *kāya saṅkhāra*.

- In fact, in order to have a firm grasp of *Satipaṭṭhāna* and *Ānāpāna* meditations, it is essential to understand what is meant by “mindfulness” and how *vacī* and *kāya saṅkhāra* are different from *mano saṅkhāra*.
- The bottom line this: **Once we become aware of an action that we are about to take, we have the total freedom to choose to either to go ahead with it or to stop it.**
- We should stop any bad actions that we are about to do and continue with any good actions. That is the basis of *Satipaṭṭhāna* and *Ānāpāna* meditations.
- All we need to do is to cultivate the habit of “catching one's response early enough”. “Being mindful” is just that; see, [“6. Ānāpānasati Bhāvanā \(Introduction\)”](#) and [“Maha Satipaṭṭhāna Sutta.”](#)

12. If one can understand the post, “[Difference Between Tanhā and Upādāna](#),” one can not only see that free will is “built-in” for humans, but one will also be able to see how one can purify one’s mind and make progress on the Noble Path.

- As explained in that post — and the reference posts mentioned there — only *mano saṅkhāra* arise without our control.
- We have total control over *vacī* and *kāya saṅkhāra*, at least when one gets better in practicing *Satipaṭṭhāna/Ānāpāna*.
- This is also why humans are different from animals: Humans have the ability to think for themselves and make rational decisions.

Libet Experiments on Free Will

13. Scientists misinterpret the experiments on the famous “Libet experiments” simply because they believe that the mind resides in the brain. Therefore, they wrongly conclude that the “brain activity starts” before one makes a decision; see, “[Neuroscience says there is no Free Will? – That is a Misinterpretation!](#).”

- Libet experiment is very simple: A person was asked to move his/her own finger whenever at his/her will, and scientists monitored that person’s brain activity. They concluded that the brain started the “finger moving” process before the person made the decision to move the finger!
- If the brain indeed started the decision-making process, that would confirm that humans do not have free will. But then the question arises what triggered that brain activity? Of course, scientists or philosophers do not have an answer to that question. **If human decisions are random, this world would be a very chaotic place.**
- However, the explanation is simple with the concept of a mental body (*gandhabba*) controlling the physical body with the help of the brain.
- As explained in the above post, the decision made by the *gandhabba* and that started the brain activity. Scientists did not correctly monitor the time at which the person made the decision, because their “model” was incorrect.

14. *Gandhabba* or the “mental body” or the “*manomaya kāya*” is a key concept that has been neglected in even the current Theravada texts. This concept is ironically somewhat similar to the “ghost in the machine” concept; see, “[Ghost in the Machine – Synonym for the Manomaya Kāya?](#).”

- There are several subsections at the website that discuss this concept: “[Mental Body – Gandhabba](#),” “[Gandhabba \(Manomaya Kāya\)](#),” and “[The Grand Unified Theory of Dhamma](#).”

XI Bhāvanā (Meditation)

The numbered posts are to be read in that order. Even for those who are practicing Buddhists, I recommend starting at the Introduction (#1), and going down the list of topics at least the first time.

- It would be a good idea to read the posts in the following subsection at some point, in order to get an idea about the reasoning behind this approach: "[Essential Buddhism](#)."

11.1 1. Introduction to Buddhist Meditation

Revised September 7, 2019

The top 10 posts in this section describe the fundamentals of Buddhist meditation. The rest of the posts in this section are on possible meditation subjects. They can clarify unresolved questions, and lead to *samādhi*. But one must contemplate on them.

Rāgakkhayo Nibbānan, Dosakkhayo Nibbānan, Mohakkhayo Nibbānan

1. We can get an idea of what “Buddhist Meditation” is, by looking at the Path described by the Buddha to achieve various stages of *Nibbāna*. *Nibbāna* is not an esoteric concept, as many people believe. That is why I like the synonyms “*niveema*” or “cooling down.” *Nibbāna* can be EXPERIENCED even in the early stages.

- The Buddha defined *Nibbāna* as “*Rāgakkhayo Nibbānan, Dosakkhayo Nibbānan, Mohakkhayo Nibbānan.*” ***Nibbāna is the removal of greed, anger, and ignorance from one’s mind.*** That gives the essence of how this “cooling down” results. [[SN 38.1 A Question About Extinguishment - Nibbānapañhāsutta](#) “Friend, the ending of greed, hate, and delusion is called extinguishment.” “*Yo kho, āvuso, rāgakkhayo dosakkhayo mohakkhayo—idaṃ vuccati nibbānan*”*ti.*]
- The more one gets rid of greed, hate, and ignorance, the more one experiences *Nibbāna* or “*niveema*” or “cooling down.”
- One does not, and one cannot, get rid of greed, hate, and ignorance in a few days. It is a gradual process. One can experience the “cooling down” to the extent one can purify the mind. **And there will be ups and downs, especially in the early days, thus ONE MUST HAVE THE RESOLVE to stay on the Path.**
- **Some people just stay with breath meditation for “stress reduction,” and actually avoid anything to do with *Nibbāna*.** They equate *Nibbāna* with extinction, but there is no need to worry; **the fact that one has that mindset means that one is nowhere close to *Nibbāna*.** I am not saying this in a derogatory way, but just as a fact. Until one experiences some “cooling down,” and get some idea about *anicca, dukkha, anatta*, it is tough to get an idea of what *Nibbāna* is.

2. Meditation provides ways to achieve this “cooling down” by person. There are three types of people who are interested in meditation:

- Many people just want to practice some basic meditation that the Buddha advocated for achieving some “inner peace.”
- Some are convinced about the rebirth process but are mainly concerned about getting a “good birth” in the next life.
- **The main goal of this site is to provide enough material for one to attain the first stage of *Nibbāna*, the *Sotāpanna* stage.** After that, one does not need outside help to complete the rest of the journey. However, many people who are either not ready to take that task yet. They have doubts about the existence of 31 realms, the process of rebirth, or *Nibbāna*.

Nibbāna Is Cooling Down

3. In several posts, I have tried to give an idea of what this “cooling down” is. You may want to reread them. They vary from a basic description to deeper details. They all deal with reducing greed, hate, and ignorance from our minds.

- The words greed and hate are clear, but many do not understand what is meant by ignorance. The post, [“What is Avijjā \(Ignorance\)?”](#) gives a bit deeper description. But since it is essential, I want to say a few words here about ignorance.

- The “traditional method” for achieving some “cooling down” or “calming sensation” is to do “breath meditation” or “*kasina* meditation.” **As I questioned in several posts, how can the greed, hate, or ignorance be removed via concentrating on one’s breath or some *kasina* object? Such meditation techniques DO NOT remove ignorance and only SUPPRESS greed and hatred.**
- **We need to start gradually reducing greed and hate from our minds; this called “*sīla*” (pronounced “seela”) or moral living. Then one’s mind becomes clear, and one starts feeling the *nirāmisā sukha*. Then it will become easier to grasp Dhamma concepts and get rid of *avijjā*.**
- Buddha Dhamma is for the wise; it is not to be followed by blind faith but with understanding. One needs to learn and “see” Dhamma first. A sustained “Cooling down” cannot be attained via following a set procedure like watching the breath.
- One could go a long way (up to the *Sotāpanna* stage) just by learning Dhamma and comprehending the key concepts. When one grasps the key concepts, it begins dawn on oneself that it does not make sense to be too greedy. Or to hate someone with a level of hatred that makes one’s heart to “heat up” to uncomfortable degrees.
- Thus through a better understanding of Dhamma (i.e., removing ignorance), one automatically “cools down.” **Removing ignorance via learning Dhamma leads automatically to reducing greed and hate.**

Correct World View is Critical

4. That is why “*Sammā Diṭṭhi*” or “Correct Vision” comes first in the Noble Eightfold Path. **Actually “*sammā*” means “*san*” + “*ma*” or “removing defilement”; but for brevity, we will use the word “correct”. But keep in mind that “*sammā diṭṭhi*” means “removing defilement through correct vision.”** I cannot emphasize enough the importance of learning Dhamma. That is the first BIG step. Without understanding the message of the Buddha, how can one follow his Path?

- When one starts to understand the key Dhamma concepts, one regularly tend to think about such ideas and how they should be kept in mind while going through daily chores. That is “*sammā saṅkappa*” or “correct concepts.” That automatically lead to “*sammā vācā*” (correct speech), “*sammā kammanta*” (correct action), *sammā ājīva* (correct livelihood).
- With those five steps, one becomes attuned to correct mindfulness (“*sammā sati*”). Yes. There is “incorrect mindfulness” (“*micchā sati*,” pronounced “michchā sathi”) too, like when a master thief plans a robbery. One needs to be “engaged” or focused accomplishing any task, either good or bad.
- With cultivated “*sammā sati*,” one will be able to “see” the consequences of any action very quickly. Then one can decide whether to go ahead with it (since only good can come out of that action) or to abandon it (because it is not good for oneself or to others).
- When one sees the benefits of these steps (i.e., “cooling down”) one will be motivated to work harder on all these steps, i.e., one cultivates “*sammā vāyāma*” (correct effort).
- The culmination is “*sammā samādhi*” (correct calm state of mind). Yes. There is a “*micchā samādhi*” too. When that master thief is planning a big robbery, he gets into a kind of *samādhi* also. He feels a sense of calm too, but that will have very bad consequences down the road.
- The latter three develop at the same time. One could get into “*sammā samādhi*” just via “*sammā diṭṭhi*.” When one listens attentively to a Dhamma talk or gets absorbed in reading about a key Dhamma concept, one could get into “*samādhi*.” A *jhānic* state is a deeper *samādhi* state.

Reading About Concepts Is Not Enough

5. That is why I recommend everyone to read these posts during a quiet time. **One will absorb more and just by contemplating on the material while reading one could easily get into *samādhi*.** That is what meditation is all about. “Absorbing the good” will automatically force the “bad” out, and one gets into *samādhi* automatically; we will talk about this “*ānāpāna*” process in the following posts.

- It will get to the point that one can sit down and get into a *jhāna* within a minute or two. But that will take time.
- I hope you will be able to experience the LONG TERM benefits from the procedures we discuss in this post and the followup posts. Initially, it will be a bit slow. But if one sticks with it for a few months, one should be able to see a change in oneself that is not merely a temporary relief. For some, it will be faster.

6. In this life, we feel two kinds of suffering: bodily pains and aches as well as various diseases and mental distress (disappointments to depression).

- Bodily ailments take time to recover. But even those can be reduced by careful planning and being mindful too. If one engages in physical activity (ranging from walking to rigorous exercise) and be cognizant of what one eats, many such ailments will be reduced over time.
- Mental suffering could have direct causes in greed, hate, and ignorance. While some are due to past *kamma*, most can be avoided or reduced by being mindful of what one thinks, speaks, and does. Any thought, speech, or bodily action arising from a greedy, hateful, or ignorant view is going to cause mental anguish sooner or later.
- The easiest way to determine whether any action is inappropriate is to contemplate on the consequences. An action rooted in greed, hate, or ignorance can harm oneself or another being.

Buddhist meditation Is The Noble Eightfold Path

7. Thus Buddhist meditation is basically to cultivate the Noble Eightfold Path.

- By preventing from killing, stealing, verbal abuse, etc, what we are effectively doing is to “put out existing fires” in our minds and also prevent such “future fires” from starting. This is “*niveema*” or “cooling down” or *Nibbāna*.
- We should also do things that are conducive to a calm mindset — associating with like-minded people, actively engaging in moral behavior that makes the heart joyful, etc.
- The most important thing is to learn Dhamma so that one can “see” how all this will liberate one’s mind permanently. Then the change will become “permanent”.

When perfected, one will be doing meditation all day long while doing daily chores. That is what is stated as “*āsevitāya, bhāvitāya, bahuleekathāya.*” That means, “associate and use what is good, and do that as much as possible.”

[See, [AN 8.1 Mettāsutta](#) *āsevitāya bhāvitāya bahulikatāya*

“Friends, the emancipation of heart's (*cetovimutti*) by loving-kindness (Metta) expected eight good results: associated, developed, and practiced frequently, made a habit of, made a basis of (practised thoroughly), has been implemented, acquainted with, and thoroughly undertaken.

“*Mettāya, bhikkhave, cetovimuttiyā āsevitāya bhāvitāya bahulikatāya yānikatāya vatthukatāya anuṭṭhitāya paricitāya susamāradhāya aṭṭhānisamsā pāṭikaṅkhā.*

cetovimutti: [f.] emancipation of heart.

āsevita : [pp. of *āsevati*] associated; practised; frequented.

bhāvita : [pp. of *bhāveti*] increased; cultivated; developed.

bahulikata : [pp. of *bahulīkaroti*] took up seriously; increased. (adj.) , practised frequently.

yānikata : [adj.] made a habit of; mastered.

vatthukata : [adj.] made a basis of; practised thoroughly.

anuṭṭhita :a. [anūṭṭhata's pp.] has been implemented, has been affected, has been experienced (to).

paricita : [pp. of *paricināti*] practised; attended; acquainted with; accumulated; accustomed.

susamāradha : [pp.] thoroughly undertaken.

ānisaṃsa :[m.] profit; merit; good result.

pāṭikaṅkha :[adj.] to be desire or expected.]

- In a formal meditation session one does the same. The best is to read a post or two on a given Dhamma concept just before (or during) the session and then contemplate on those ideas. It is important to compare those concepts with one's life experiences, and things will become clear with time: for example, why it is unfruitful to "live life lavishly, especially if that involves hurting oneself or others."
- You will be surprised that this process itself will get you to *samādhi*, and even *jhānā* in the long term. But we will discuss some other variations too.
- As I have mentioned in several posts, one could even get to the *Sotāpanna* stage just via comprehending the key Dhamma concepts to some extent.

8. Buddha Dhamma is all about the mind; Anything we say or do also start with a thought. The Buddha said, "*manopubbangama dhamma...*", "the mind takes precedence over everything else..."

- It should be clear from the above discussion that Buddha's meditation techniques are attuned to Nature's laws. They can be followed by one with a religious background or by an atheist.
- One becomes a "*Bhauddhayā*" or a "Buddhist" in his/her mind. If one understands some basic Dhamma concepts and lives by them, then one is automatically a Buddhist. After one gets started with a firm determination on the Path, "*Dhammo have rakkhati dhammacāriṃ,*" or "Dhamma will guide one to be on the right Path."
- The foremost goal is to live a moral life without causing harm to oneself or others, and to seek some "peace of mind" from the modern hectic life. That is our starting point.

9. I also recommend listening to the following discourse for anyone seriously considering Buddhist meditation (You need to adjust volume control on your computer):

"The Hidden Suffering that We All Can Understand"

[WebLink: The Hidden Suffering that We All Can Understand](#)

This is in the post, "[Starting on the Path Even without Belief in Rebirth](#)" in the "[Living Dhamma Overview](#)" subsection of the "[Living Dhamma](#)" section.

Next, "[2. The Basics in Meditation](#)",

11.2 **2. The Basics in Meditation**

Revised August 17, 2019

The top 10 posts in this section describe the fundamentals of Buddhist meditation. The rest of the posts in this section are on possible meditation subjects and can be used to clarify unresolved questions, and to gain *samādhi*. The first 11 posts should be followed in that order, at least initially.

1. Those who are doing breath meditation or “watching the stomach rise and fall” know that it is relatively easy for some to calm the mind compared to others. Some cannot even keep a calm mind for more than a few minutes; distractions start “popping up.”

- This “popping up” is due to the five hindrances (*pañca nīvaraṇa*) that I have described in a post. These are the “residues” or “gunk” that we have deep inside our minds that start bubbling up to the surface when we sit down to meditate.
- that I have described in a post; see [“Key to Calming the Mind – The Five Hindrances.”](#) These are the basic “residues” or “gunk” that we have deep inside our minds that start bubbling up to the surface when we sit down to meditate.

2. Let us take the simile of water well contaminated with all the rotten stuff fallen into it over many years; our minds have accumulated gunk over repeated births, not just in this life. When we are engaged in stressful day-to-day activities, those activities stir up the “gunk,” and the mind gets clouded; it is like taking a long pole and stirring the well water; the “gunk” at the bottom comes up.

- The two “primary rotten things” we have are the first two on the list of the five hindrances: *kāmacchanda* (excessive greed) and *vyāpāda* (deep hate). Even though the word *vyāpāda* is commonly used, the correct Pāli is *byāpāda*.
- *Vicikicchā* is a set of person “likings,” and these can be likings for material things OR things that one likes to “hate”; one does these because of the ignorance of *anicca*, *dukkha*, *anatta*. *Vicikicchā* is sort of like a “favorite list” from the main ingredients of excessive greed and deep hate, the first two hindrances. ***Kaṅkā vicikicchā* is a worse form of *vicikicchā* that arises due to the wanton disregard of correct views.**
- The other two are more like “stirrers” that stir up these bad habits and bring them up on their own: *thina middha* (“trapped” or “frozen” mind), *uddhacca-kukkucca* (a restless mind).
- *Thina middha* or inability to concentrate on *Dhamma* concepts usually happens when tired or after a meal. But it can be a personal characteristic or a habit; we will call this the “lazy mind.” An “unsettled” or “excited” mind (*uddhacca-kukkucca*) is also personal, and arises when one feels “superior” or “inferior” compared to others.
- The five hindrances discussed at [“Key to Calming the Mind – The Five Hindrances.”](#)

3. When we are engaged in day-to-day activities, we see, hear, smell, taste, touch, and also think about all sorts of things; all these are “external stirrers” that make our minds look like whirlpools. All these gang up to get the mind to stress out and “heat up.” That is the tension that we feel in a busy day. We need to “cool down”; we need “*niveema*.”

- One way to “cool down” is to turn off those external stirrers temporarily. That is what some people do in a breath meditation session: one goes to a quiet place and closes eyes; this will turn off mainly the five physical senses (i.e., we do not see, hear, smell, taste, touch). That helps to calm the mind for some people, especially if they have practiced a lot.
- But it is not possible to turn off the sixth one, the mind itself. The mind likes to move around and not to be focused. Many people try to fix the mind on one object, say the breath or the rising of the stomach. That provides only a temporary solution.

- Some people try to “turn off the mind” or try to stop thoughts from arising. That is DANGEROUS. We need to PURIFY the mind, not to turn it off. The Buddha had a perfectly pure but very active mind. When one follows the Path, one’s mind will become sharper, not inactive.

4. However, if we have too much gunk (defilement), then our minds can be contaminated even without the aid of “a stirrer.” It is like an abandoned old well. It has dirty water, and one needs to REMOVE the existing dirty water first.

- Similarly, if one is engaged in immoral behavior, then the mind is like a well that has dirty and turbulent water. That is due to the **BIG EIGHT defilements**: killing, stealing, sexual misconduct, lying, gossiping, slandering, harsh speech, and getting “drunk” with not only drugs or alcohol, but also with wealth, fame, power, etc.
- Those defilements cannot be removed just by focusing the mind on one object, like the breath. That is the fundamental problem with “breath meditation.”
- **The mind calms down (or gets to *samādhi*.) when one lives a moral life (*sīla*.)** Stopping the BIG EIGHT is the start of a moral life (*sīla*.) With that calmed mind (*samādhi*) one can comprehend deeper aspects of *Dhamma* and cultivate wisdom (*paññā*.) That is the initial order: *sīla*, *samādhi*, *paññā*.

5. Thus it would be hard to achieve calmness even with breath meditation if one is actively engaged in the BIG EIGHT (unless one has had a lot of practice.

- That is *Kāyānupassanā*, the first step in *Satipaṭṭhāna*; see, “[Satipaṭṭhāna – Introduction](#).”
- If one is habitually engaged in one or more of those eight activities, the first thing to do is to try to get rid of them. First, start with the worst habit and proceed gradually until all are bad habits removed. It is like emptying the well of the dirty water.
- That is a BIG STEP. It may take a little while, depending on how much “gunk” is there. But one thing is not to rush out and try to do much. That could be stressful too. The best thing to do is to abstain from one or two big ones and experience the “cooling down” that results from it.
- Vain talk is a habit that should be gotten rid of early. It does not do any good for oneself or others. One will inevitably say something inappropriate (possibly slandering and lying too, which are also in the BIG EIGHT) when one gets carried away during the vain talk. Getting rid of it will help with being able to calm the mind quickly.
- The mind needs to see the benefits of doing something before it gets on board. That is why, initially, it may take a lot of determination to stick with the plan.
- **It is important NOT to get used to the breath meditation; if you are used to it, I urge you to gradually stop and try the procedures described here at least for a couple of months. We want LONG TERM results. Many people get addicted to breath meditation to get temporary relief. THAT IS A MISTAKE.**

6. Getting rid of bad old habits and installing new good habits is a KEY in the meditation practice; we will talk about habits (“*gathi*,” which become “*āsavas*” over time) in more detail in the next section. Here are some basic ideas that would be helpful:

- To form a new habit, it takes some effort initially. I tried it out by making a new habit of peeling oranges with my left hand (I am right-handed). Initially, it was hard, and the main problem was that I kept forgetting to use the left-hand. I had to set the alarm to remind myself first. But after a few days, I started remembering, and after a week or two, the new habit was working. Now I automatically do it, and now it is a bit strange to try to peel oranges with the right hand!
- When we make a new habit, a set of neurons in the brain start to wire together for that task; the more we do it, the stronger the neural connections become. That is what happens when we learn to ride a bike, drive a car, or zillions of other things that we do without even thinking about it; see, “[True Brain: How the Mind Rewires the Brain via Meditation/Habits](#)” and “[How Habits are Formed and Broken – A Scientific View](#).”

- In breaking a habit, one needs to do the reverse. When one starts to smoke less and less, the neural connections for that task will get weaker and weaker. After a while, it will become more natural not to smoke. The brain will stop giving that signal. So it is critical to have the determination to hold off the urge in the beginning. Try to replace that activity with something else at that time. One can remove any bad habit that way. It is the same principle.

7. The primary formal meditation technique is in the next section. For those who need time to get rid of the BIG EIGHT, they can also monitor the progress by doing such formal meditation sessions. It is essential to realize that all defilement (bad habits) are removed only at the *Arahant* stage. So, there is no point in getting discouraged if it takes time to stop bad habits; **the key is to make progress, and not to go backward.**

- Sometimes when one starts on the *Ariya Bhāvanā*, things may look worse before getting better. It is like trying to cool a hot iron by sprinkling water on it when all that smoke comes out and may appear to be getting worse. But one needs to be persistent. One needs to keep in mind that uncountable beings have attained “cooling down” by having faith in the Buddha.

Next, “[3. The Second Level – Key to Purify the Mind](#)”,

11.3 3. The Second Level – Key to Purify the Mind

The top 10 posts in this section describe the fundamentals of Buddhist meditation. The rest of the posts in this section are on possible meditation subjects and can be used to clarify unresolved questions, and to gain *samādhi*. The first 11 posts should be followed in that order, at least initially.

1. Let us go back to the example of the abandoned well. Now we have done a decent job of cleaning the dirty water that had been there for a long time, i.e., we have reduced at least some of the main immoral acts, the BIG EIGHT.

- Now we need to make sure that things do not fall into the well while we try to make the water even more cleaner; if there is no barrier around it, when it rains mud water can fall into the well. As with the well, we need to make sure that we keep those BIG EIGHT out of our minds as much as possible. **This is ‘sīla’ (pronounced “seela”) or moral living.**

2. In order to make sure that we will not drift back to the old ways, we need to cultivate moral mindfulness (“*sati*”): we need to be on the “lookout” for any temptations to break the BIG EIGHT. But there is a catch that most people do not comprehend: bad habits and cravings or “*gathi/āsavas*” that we have are not only from this life, but possibly from previous lives as well.

3. Again, we can use the old water well as an example: When we drained the water out of the well, the well starts filling up with water from underground fresh water oozing through cracks (from underground aquifers) which is pure.

- However, if we have lot of rotten stuff at the bottom of the well that had been there for a long time, then that pure water gets contaminated. Our bad habits (*gathi/āsavas*) are like the dirt at the bottom of the well. They give rise to the five hindrances, that we mentioned in the above section.

4. The water in the above well will now look relatively more clear if it is undisturbed, i.e, when we let the water to settle down. **This is effectively what we do in breath meditation or any such *samatha* meditation.** When someone is abstaining from the BIG EIGHT, it is relatively easy to calm the mind by going to a quiet place, closing the eyes, and then focusing on one object, say the breath.

- Such meditations are *anāriya* meditations; they provide only temporary relief. One could also get into *anāriya jhānā* this way, with lots of practice, especially if one could live a secluded life. Ancient *yogis* who lived moral lives and stayed away from other humans in forests could attain higher *jhānā*.
- What happens here is that the five hindrances are kept SUPPRESSED. It is like the rotten stuff kept undisturbed at the bottom of the well.
- If one takes a long pole and stir the well, those contaminants start coming up.

5. In the same way, when someone comes out of the quiet place, one gets “disturbed” with external sense stimuli (i.e., when a particularly strong sense object is presented). For someone with a lot of lust, it could be a picture of an attractive person. If someone has a lot of hate towards another, then hateful thoughts can come to the surface just by someone mentioning that person’s name.

- This “bubbling up of bad stuff to the surface” is called “*anusaya*.” To stop such *anusaya*, those *gathi/āsava* need to be removed (gradually).
- These terms are explained in, “Gathi (Gati), Anusaya, and Āsava.”
- This is why people who have a very calm and peaceful experience at a meditation resort come back to regular hectic life and see that experience fade away gradually. That is because it WAS a temporary solution. **What we have in mind here is a more permanent solution. But this approach takes a bit more time.**

6. So, how do we really clean the well? It is not enough to let the gunk to sink back to the bottom; we need to remove the gunk that has accumulated at the bottom of the well. There could even be toxic things down

there. Thus it takes an effort to remove all those. Once those are removed, there is nothing down there that can contaminate the fresh water coming out. When the well fills up we only need to make sure that things do not fall back in to contaminate the well.

- Similarly, what we need to do with our minds is to remove the bad habits (*gathi/āsavas*) that have been accumulated over countless past lives and reinforced in this life. If we have hate in our minds, that hate can triggered easily. This is why some people are prone to “flare-ups” than others. If we have extreme greed, we can be tempted easily to act immorally for sense satisfaction through any of the six senses.
- Even though the main ones are greed and hate, there are uncountable number of combinations (when included with ignorance). That is why we see uncountable number of habits/personalities/tendencies in different people. **No two persons are alike, even identical twins.**

7. Looking at the five hindrances, the main culprits are of course, greed, hate, and *vicikicchā* (the particular set of things one has a liking for, which can be things liked or disliked). The other two help bring out these: the “lazy mind” will not take any effort to suppress bad thoughts; the “dispersed mind” is too dispersed to be focused, to think clearly. All these are intimately connected to the habits (*gathi/āsavas*).

- By the way, if one can remove all the *gathi/āsavas*, that is when one attains *Nibbāna*. The Buddha realized the “*āsavakkhaya nana*” just before attaining the Buddhahood. *Āsavakkhaya* is “*āsava*+”*khaya*” or removing the temptations; “*khaya*” is the getting rid of “*san*”; see, “[What is “San”? – Meaning of Samsāra \(or Samsāra\).](#)”
- Here we are trying to remove some easily removable less potent habits, and at least try to reduce the big ones. The good news is that we can EXPERIENCE the relief or “cooling down” or “*niveema*” each time we either remove a small bad habit or lessen the severity of bigger ones. We don’t have to remove ALL bad habits/cravings in order to experience the “cooling down”.

8. After making a commitment to abstain from the BIG EIGHT as much as possible, we need to sort out our bad habits.

- Make a list with little things on the top and more serious things towards the bottom. We all have greed and hate; those are the “big ones”; what we need to do here is try to remove easily identifiable smaller bad habits; for example, explosive temper, stinginess, seeking too much sense pleasures (i.e., being addicted to alcohol, drugs, even excess eating).
- It is important to get rid of the ones at the top (the easy ones), and that will provide incentive to continue. If one tries to tackle the big ones straight away, one might get discouraged and give up the whole effort.

9. Of course, focusing on the BIG EIGHT is very important. If one is engaging in killing animals for pleasure (eg., fishing), then that needs to be stopped if one is serious about meditation. If one is making a living by stealing from others, that needs to be stopped. If one is engaged in sexual activities with other married people, that needs to be stopped, etc.

- Those are common sense things too. If one looks at one’s actions and see that it can cause harm for oneself AND/OR others, then one needs to seriously start thinking ways to initially reduce and eventually to stop such actions.

10. There are several posts on habits and *gathi/āsavas*; you may want to find and read them. And contemplate on those ideas. An English discourse on this topic is given in the post, “[How Are Gati and Kilesa Incorporated into Thoughts?](#).”

- As I emphasized at the beginning, one has to make an effort; even the Buddha could only show the way. We need to examine what he suggested, think through to make sure they make sense. Then the mind gets on-board, especially when it starts seeing the benefits, even small benefits.
- The key is to get started; accomplishing things (no matter how small), and that provides the fuel to go further.

11. One could and should use the “four bases of mental power (*satara iddhipada*)” in accomplishing these goals. Tackle one goal at a time. As you accomplish more and more goals, the *iddhipāda* (*chanda*, *citta*, *virīya*, *vīmaṃsā*) will grow as well. These are the critical factors that the *yogis* used to cultivate mundane (*anāriya*) *jhānā* and gain extraordinary mental powers too.

- *Chanda* is the desire to achieve the goal. *Citta* is the determination one makes and the *virīya* is the effort that one puts in to get it done. *Vimansa* is careful examination of the benefits of breaking the habit and the possible repercussions of keeping the habit. As the four *iddhipada* grow (with accomplishment of more and more goals), the *vīmaṃsā* faculty grows in particular; this is a facet of wisdom (*paññā*).

12. In trying to remove any bad habit, it is essential to look at the negative repercussions or bad consequences (called *ādeenava*) from that activity. Let us take the bad habit of getting into a rage as an example:

- Think about the unpleasant feeling of getting “heated up” in a moment of rage. Of course, at the moment of rage one may actually enjoy it: In extreme cases, this is why there are people dead with 30-40 stab wounds, when all it takes to kill a person a couple of stabs; such is the danger of getting into a rage. One feels bad about it only later, and then it is too late.
- Even worse are the *sansāric* consequences: If rage becomes a dominant characteristic of one’s personality, it is possible that this is what will be grasped at the moment of death and a birth of a “similar kind” could result, i.e., birth in a burning hell (this is the principle of *paṭicca samuppāda*: “*pati+ichcha*” leading to “*sama+uppada*”).

13. Let us take a few examples to see how some bad habits can be tackled:

- Many people have bad temper (which could develop into hate) which is a result of *vyāpāda*. Yes. This is a *sansāric* habit, and unlike many other habits, this one is hard to control when triggered. This is one that needs to be dealt with when the anger is absent. The best is do the *metta bhāvanā*. We will use the *Ariya metta bhāvanā* later. For now, one could close the eyes at a quiet time, and sincerely say, “May all beings be free of suffering, free of ailments, free of anger, and be happy”. If you have a particular person that you are not in good terms, repeat with his/her name. We cannot remove the anger in the mind of that person. We can only remove the anger within ourselves. Do this a couple of times a day and if you do it sincerely it will give results (for YOU to have a peace of mind).
- If you are a person with cravings for sense pleasures (I do not mean necessities), your mind is likely to be frequently seeking such things. Try to cut down on such activities, and also try to do more giving. Donate to charities, give a few dollars to a homeless person. All these will make you feel better; this is called *pīti* (“*preethi*” in Sinhala or joy).
- Also, when you simplify your life, the burden on your mind will be less, and you will get a different kind of joy than that from sense pleasures; this is “*niveema*” or “cool down,” or *nirāmisā sukha*; see, “[Nirāmisā Sukha](#).”
- Alcohol or cigarette addiction is another example. Instead of trying to stop such a habit “cold turkey,” it is better to cut down gradually. But one MUST have the discipline (the importance of cultivating the *iddhipada* comes here) to stick to the plan, and not go back. It also helps to find a replacement activity at that time (taking a less potent drink or chewing a gum, etc). One of the four *iddhipada* that is essential here is *citta* or determination.

14. Now we are at a point where I can introduce the real *ānāpānasati bhāvanā* that was described by the Buddha.

Next, “[4. What do all these Different Meditation Techniques Mean?](#)”,

11.4 4. What do all these Different Meditation Techniques Mean?

Revised April 11, 2020

The top 10 posts in this section describe the fundamentals of Buddhist meditation. The rest of the posts in this section are on possible meditation subjects and can be used to clarify unresolved questions, and to gain *samādhi*. The first 11 posts should be followed in that order, at least initially.

1. Buddha Dhamma is focused on purifying the mind of greed, hatred, and ignorance. A pure mind does not attach to even a trace of material form and has attained *Nibbāna*. As the mind is purified, it gains *nirāmisa sukha* which can be experienced at various levels from the beginning. If one can “stick to” this program for a couple of months, and then one can look back and see the change in oneself. One should have a more peaceful, calm mind that has “cooled down”.

- A mind is impure because it attaches to “things in this world” with the misconception that things in this world (31 realms) can be maintained to one’s satisfaction, i.e., with the perception of *nicca*. Thus the prevailing mindset is that happiness (*sukha*) should be attained by employing any means. And once attained it can be maintained and thus one is in total control of one’s affairs (*atta*).
- These three misconceptions of *nicca*, *sukha*, *atta* are the three culprits that keep us bound to “this world” of 31 realms, i.e., bound to the endless rebirth process in *samsāra*. What the Buddha showed was that the actual reality of “this world” is described by the three characteristics of *anicca*, *dukkha*, *anatta*: No matter how hard we try, we cannot maintain things to our satisfaction in the long term (*anicca*), thus we get distraught (*dukkha*), and thus we are not in control (*anatta*).
- More details in the first discourse at, [“Tilakkhana – English Discourses.”](#)

2. I am NOT saying that one should not work hard to get educated and get a good job. That MUST be done; one cannot have a peace of mind if one is hungry and homeless. But we also need to be aware of the FACT that all mundane achievements are temporary. Even if we get a live this life without a major catastrophe, we have to leave all behind when we die.

- One acts with greed, hate, and ignorance and makes the mind impure because of the wrong perceptions of *nicca*, *sukha*, *atta*. Then one is capable of immoral acts to get some temporary satisfaction because one does not see the bad consequences of such actions may not be clear. However, when one truly understands the reality (i.e., *anicca*, *dukkha*, *anatta*), such immoral actions become unlikely.
- For that stage to be reached, one has to train one’s mind to “take in the good” and “reject the bad”. For that, a change in one’s habits (with *Ānāpānasati* meditation) is necessary.

The following is a logical sequence for meditation:

3. First one needs to sort out what is good and what is bad, and the consequences of good and bad actions. This is why the vision, *Sammā Dīṭṭhi*, comes first in the Noble Eightfold Path. To get to *Sammā Dīṭṭhi* one need to “sort out the good from the bad.”

- *Vipassanā* (*vi+passa* means “to see clearly” and discard. Here, where “*vi*” means “special” and “*passa*” is to “see.” *Vidassana* (*vi+dassana* means sort out by clear vision, where “*dassana*” means the vision) mean the same thing. To understand Buddha Dhamma and acquire the vision needed to be able to sort out the “good” from the “bad”.
- I cannot emphasize enough the importance of *vipassanā* (*vidassana*) or insight meditation. **Without the “correct” vision, one could strive for the whole life and not get anywhere:** one has to understand the true nature of this world (*anicca*, *dukkha*, *anatta*), the Four Noble Truths, and the Noble Eightfold Path. It is not memorization, but understanding that counts.

4. A huge amount of defilements are removed from one’s mind with this insight meditation. The key is to understand the “*anicca* nature of this world”. It is the first type of meditation that is needed. One can attain the *Sotāpanna* stage without doing any other types of meditation discussed below.

The Buddha once took a bit of soil to a fingertip and told the *bhikkhus* that, “if the amount of defilements a *Sotāpanna* needs to get rid of is comparable to this amount of soil, then a normal human being has to get rid of an equivalent to the soil in the whole Earth”.

- That is not a misprint or an exaggeration. A *Sotāpanna* is bound to attain *Nibbāna* within a maximum of seven “*bhava*.” A normal human being could be trapped in the rebirth process for trillions of years to come. We all have been through the rebirth process for uncountable trillions of years; see, “[Infinity -How Big is It?](#)”.
- Many people say, “I do like my life. Why would I not want to be reborn?”. **The problem is, that future rebirths may not be in the human realm.** We have no idea what we have done in past lives. Thus even if we live a perfectly moral life, there are no guarantees that we will get a good rebirth. This is why understanding *kamma*, rebirth, etc via insight meditation is important.

5. How does one do the insight meditation? Listening to discourses and reading Dhamma concepts are the two main forms of getting the correct information. Then one could contemplate on those concepts in a sitting meditation. **But reading up on Dhamma concepts during a quiet time itself is meditation; also see, “[How to Cultivate the Anicca Saññā](#)”** and the follow-up post.

- Once some understanding is reached via *vipassana* (*vidassana*) *bhāvanā* or insight meditation, one can start the next two key steps. *Mettā bhāvanā* and various forms of *anupassanā bhāvanā*.
- Once one understands the true status of affairs in the wider world of 31 realms, one can really comprehend the amount of suffering that has been hidden. With that understanding, one can engage in the *Ariya mettā bhāvanā*, which is an excellent way to pay back our old debts to other beings. **This is the second way to purify our minds too.**
- I hope I have been able to convey the idea that the bulk of work can be done with just insight meditation, contemplating “*anicca, dukkha, anatta*.” However, doing the other two types of *bhāvanā*, i.e., *mettā bhāvanā* and *ānāpānasati*, can be helpful for the insight meditation too.

6. The last and third way to purify the mind is via *anupassana*. *Anupassana* means “discard according to the principles learned” (“*anu*” means according to and “*passana*” means to “see.” Another meaning of “*anu*” is defilements, which is applicable too). *Anupassanā* can take various forms: *Ānāpānasati bhāvanā* is the foundation. Once “*ana*” and “*pana*” are sorted out by *vipassana* (*vidassana*), one needs to engage in *ānāpānasati* all the time. This means one needs to be mindful of what one is about to do and make sure it is a “right thing to do”.

- When one starts understanding *anicca, dukkha, anatta*, one can start doing the *aniccānupassanā, dukkhānupassanā, and anattānupassanā*, and four more related “*anupassanā*”. I will elaborate on this later.
- *Satipaṭṭhāna bhāvanā* (with *kāyānupassanā, vedanānupassanā, cittānupassanā, and dhammānupassanā*) includes all the *bhāvanā* techniques that we have discussed so far. It is THE ultimate which encompasses everything needed to attain stress relief. It can take one all the way to attain the *Arahanthood*. *Ānāpānasati* is a big part of the *satipaṭṭhāna*, and that is the first step to attain the *Sotāpanna* stage.

7. Thus one could make things simpler by just doing insight meditation, *ānāpānasati*, and the *mettā bhāvanā*. That is all one needs to do to have a “better state of mind” or even to become a *Sotāpanna*.

8. The problem with meditation techniques taught even in *Theravāda* schools these days is the following. They are either breath meditation or chantings. How can one remove defilements by watching the breath? Even though it can calm the mind, there are no long-term benefits, because watching the breath CANNOT reduce defilements from the mind.

- Another popular technique is to just contemplate on the impermanence, a popular form. They keep repeating something like, “my body is impermanent, it is subjected to decay and death”. Has anyone

achieved any progress doing that for even twenty, thirty years? A Buddha does not need to tell us that. All people, belonging to any religion, know those are facts of life.

- Yet another popular “chanting” is to contemplate the “foulness of the body”. That is not what the Buddha meant by the “*patikula manasikara bhāvanā*.” Again, everyone knows that our bodies are subject to decay and death; see, “[Mahā Satipatthāna Sutta](#).”

11.5 5. Ariya Mettā Bhāvanā (Loving Kindness Meditation)

Revised February 11, 2020

The top 10 posts in this section describe the fundamentals of Buddhist meditation. The rest of the posts in this section are on possible meditation subjects. They can be used to clarify unresolved questions, and to get to *samādhi*. The first 11 posts should be followed in that order, at least initially.

Introduction

1. We all have acquired innumerable “bad *kamma vipāka*” in this cycle of rebirths (*samsāra*) that has no beginning. There is a very simple recipe for stopping many of such “bad *kamma vipāka*” from coming to fruition by “wearing out” and ultimately removing the “*kamma seeds*” (*kamma bīja*) associated with them.

- We acquire a bad “*kamma seed*” when we do something wrong to a living being, and we become indebted to that being. Just like we can become “debt-free” by paying off debts, we can pay off that debt. The problem is that we have become indebted to innumerable beings in previous rebirths. In the *Mettāsaḥagata Sutta* (SN46.54) and other *suttā*, the Buddha has explained how much of this debt can be paid off by doing the *Ariya metta bhāvanā* and also by transferring merits to “all beings” when we do a good deed; see, “[Transfer of Merits \(Patidana\) – How Does it Happen?](#).”
- Here we focus on the *Ariya Mettā Bhāvanā*. First some background material to clarify what this means. Also see, “[Karaniya Mettā Sutts – Mettā Bhāvanā](#).”

Mundane Mettā Bhāvanā

2. The standard or mundane *Mettā bhāvanā* (loving kindness meditation) goes something like, “May myself and all beings be free of suffering, healthy, happy, and be free of all suffering”, or some similar (longer) passages.

- Any type of such meditation is of course good. It makes your own mind calm down, and makes you think about the (mundane) welfare of the other beings.

Ariya Mettā Bhāvanā

3. However, the *Ariya Mettā Bhāvanā* has a much more deeper meaning. It is done with at least some idea of the complexity of “this world” with 31 realms and the status of the beings in those realms. In order to cultivate true compassion and loving-kindness one NEEDS TO FEEL the possible suffering in all those realms; see, “[The Grand Unified Theory of Dhamma](#)”:

- The beings in the lowest four realms (*apāyā*) undergo unimaginable suffering, both physical and mental.
- In the lowest five realms (the *apāyā* and the human realm), beings have physical bodies that are subject to sicknesses, body aches, and getting old before dying.
- The sixth through eleventh realms are that of the *devas*. They have spontaneous births with fully formed (but less dense) bodies that are not subjected to sickness, aches and pains. There are no visible signs of old age until close to death. But they also have all five physical senses just like the lower five realms. But their physical bodies are much more dense, “[Body Types in 31 Realms – Important of Manomaya Kāya](#).”
- The higher 20 realms that include *rūpa loka* and *arūpa loka* have even less dense bodies than the *devas*, and do not have the physical sense faculties for taste, smell, and body touch. Thus any suffering they have is all mental, and not as intense as in the lower realms.

The Difference With the *Sotāpanna* stage

4. Therefore, no living being is free of FUTURE suffering in any of the 31 realms, because unless the *Sotāpanna* stage of *Nibbāna* has been attained, even the beings in the highest realm can end up even in the *apāyā* (lowest four realms) in future rebirths.

- And the only way to attain the *Sotāpanna* stage of *Nibbāna* is by comprehending the Three Characteristics of this world of 31 realms: *anicca, dukkha, anatta*.
- The first level of understanding of *anicca, dukkha, anatta* leads to the *Sotāpanna* stage; when one attains the *Sotāpanna* stage, one becomes free from the *apāyā* FOREVER. This happens via the inability of the mind of a *Sotāpanna* to generate certain *cittā* with “*apāyagāmī*” kammic power; see, “[Akusala Citta – How a Sotāpanna avoids Apayagami Citta](#)” and “[Conditions for the Four Stages of Nibbāna](#)”.

Higher Stages of *Magga Phala*

5. When the next stage of *Nibbāna* (*Sakadāgāmī* stage) is attained, one becomes free of births in the lower five realms where suffering due to physical ailments and diseases are possible. Thus one PERMANENTLY becomes “healthy” by attaining the *Sakadāgāmī* stage.

- At the *Anāgāmī* stage, one removes more *akusala citta* (and other fulfill other conditions; see, “[Conditions for the Four Stages of Nibbāna](#)”), and will never be born again in *kāma loka* including the *deva* realm. Thus one becomes PERMANENTLY free of any physical suffering.
- Then at the *Arahant* stage, all defilements are removed from the mind, and one will never be reborn in any of the 31 realms. The mind truly becomes free and one attains permanent *nirāmisa sukha*; see, “[Three Kinds of Happiness – What is nirāmisa sukha?](#)” and other posts on *nirāmisa sukha*.
- As you can see, the *Ariya Mettā Bhāvanā* is similar in structure to the conventional one, but the words have deeper meanings. For example, by saying “be healthy” now it is meant to be healthy forever. That means not to be born ever with a body that is subject to diseases and old age.

Elements of the *Ariya Mettā Bhāvanā*

6. Now we can see how the *Ariya Mettā Bhāvanā* is formulated:

- “May myself and all living beings attain the *Sotāpanna* stage and be free from suffering in the *apāyā* forever”
“May myself and all living beings attain the *Sakadāgāmī* stage and be healthy forever”.
“May myself and all living beings attain the *Anāgāmī* stage and be content (attain peaceful happiness) forever”.
“May myself and all living beings attain the *Arahant* stage and be free from all suffering and attain the full *Nibbānic* bliss”.
- All four *Brahma Vihāra* (*mettā, karuṇā, muditā, upekkhā*) cultivate with this *bhāvanā*.
- Off course, the *Bhāvanā* becomes increasingly effective as one starts to comprehend *Tilakkhaṇa* better.

Just Chanting Is Not Enough

7. What matters is not the particular set of word used, but what is felt in one's heart. In order to do that one needs to truly comprehend that there is REAL SUFFERING in this world, not only at the human or animal realms but in many other realms.

- The impact of the *Mettā Bhāvanā* increases gradually with an increased understanding of *anicca, dukkha, anatta*, because then one realizes the dangers and suffering that all living beings face in future lives.

- The potential of the *Mettā Bhāvanā* is enormous. The Buddha said one could attain the *Anāgāmi* stage by correctly doing the *Mettā Bhāvanā*. But that entails understanding *anicca*, *dukkha*, *anatta*, i.e., attaining the *Sotāpanna* stage or at least embark on the path to *Sotāpanna* stage.
- However, even before attaining the *Sotāpanna* stage, one could reap many benefits by doing this correct *Ariya Mettā Bhāvanā*; see, “[Kamma, Debt, and Meditation](#).”

Essential of Meditation

8. It is best to do *Ariya Mettā Bhāvanā* and *Vipassanā Bhāvanā* (meditation on *anicca*, *dukkha*, *anatta* and other dhamma concepts) **in a sitting meditation session every day**; see, “[4. What do all these Different Meditation Techniques Mean?](#).”

- Initially, 10-15 minutes would be good for formal meditation. That time will automatically increase as the *nirāmisā sukha* sets in one starts seeing the benefits. Later on, one could stay in meditation for hours.
- Of course, *Ānāpānasati* needs to be practiced the whole day. *Ānāpānasati* means being aware of what is “taken in” (*āna*) and what is “discarded” (*āpāna*.) See, “[7. What is Ānāpāna?](#)” and other related posts in the meditation section.
- Listening to discourses and reading about Dhamma are also forms of meditation. That should be done during quiet times so the key concepts can be absorbed.

Results Will Grow With Better Understanding

9. The *Ariya Mettā Bhāvanā* is one of the most POTENT tools that we have. It is a simple concept, but the main difficulty is with the “*Ariya*” part. One needs to comprehend *anicca*, *dukkha*, *anatta* for the *bhāvanā* to be fully effective.

- Still, even the mundane version stated in #2 above is a good start. As one follows the Path and understands the concepts better (not the book knowledge), the *javana* power in one’s thoughts become strong, and the *bhāvanā* becomes stronger and more effective.
- In the *Abhidhamma* language, the most potent *kusala citta* is the “*somanassa saḥagata ñāṇa sampayutta asaṅkhārika citta*,” i.e., the “thought that arises with joy and wisdom automatically”. This thought also gets stronger with increasing wisdom and gets stronger as one gets to *Sotāpanna magga*, *Sotāpanna phala*, etc and optimum only at the *Arahant* stage.
- Yet even when one is following the mundane eightfold path, this *citta* is there, at a lower strength. One needs to be cultivate it. See, “[Buddha Dhamma – In a Chart](#),” and “[What is Unique in Buddha Dhamma](#).”

Next, “[6. Ānāpānasati Bhāvanā \(Introduction\)](#)”,

11.6 **6. Ānāpānasati Bhāvanā (Introduction)**

Revised July 22, 2020

The top 10 posts in this section describe the fundamentals of Buddhist meditation. The rest of the posts in this section discuss meditation subjects. They clarify unresolved questions and help gain *samādhi*. The first 11 posts should be followed in that order, at least initially.

1. I hope that several key points are clear from the discussion in the post, "[3. The Second Level – Key to Purify the Mind](#)“:

- Bad habits (*gati/āsava*) are associated with one more immoral or unworthy acts, speech, or thoughts. We need to discard those.
- To counter the bad habits, one needs to cultivate good habits. For this, we need to improve moral behavior by engaging in ethical activities that bring joy to the heart.
- AND we need to do this all the time; we cannot let bad habits come back, which means we need to be on the lookout for any lapses in our practice. And we need to be on the lookout for opportunities to do moral acts that are beneficial for oneself and others.

2. In a general sense the Pāli word *ānāpāna*, “*āna*” includes anything that needs to “taken in” for the betterment of life, and “*āpāna*” the opposite. For example, we should eat only foods that are good for the body and stay away from or discard bad foods.

- Nowadays, “*āna*” is taken to be “breathe in” and “*āpāna*” is assumed to be “breathe out.” Now, “*sati*” means mindfulness, and thus, the word “*ānāpānasati*” interpreted as “mindfully breathing in and mindfully breathing out.” That is the mundane (or “*padaparama*”) interpretation of “*ānāpāna*.”
- Buddha meant something deeper that would help cleanse the mind.

3. The Buddha described *bhāvanā* as follows: “*āsevitāya, bhāvitāya, bahuleekathāya,...*” or “keep close association, use often, and use all the time (what is good).....”. **When one is making an effort to form a new habit, one should be thinking about it and doing things to support that whenever possible. Trying to do it in a formal meditation session will not be enough.**

- We discussed the current scientific explanation of how repeated acts help form habits by strengthening a set of neural connections in the brain. See, “[True Brain: How the Mind Rewires the Brain via Meditation/Habits](#).” The same thing works to break bad habits by NOT doing it whenever that comes to the mind. Then existing neural connections will get weaker.
- **What is to contemplate: To be mindful to “take in good things (*kusala* or moral things), and to “discard bad things (*akusala* or immoral things).” That is the real meaning of *ānāpānasati bhāvanā*.**

4. Now, with all the discussion we have had up to this point, how can just a process of “breathing in” and “breathing out” mindfully GET RID OF either the bad habits (*gati/āsāvā*) or the five hindrances?

- Of course, that is not possible.
- But it CAN do one thing, as we mentioned before. If we sit in a quiet place with the eyes closed (i.e., turn off the five physical senses in effect), AND fix the mind on the breath, we can get the five hindrances to settle down and not come up (assuming that we are staying away from committing the BIG EIGHT immoral acts).
- However, this calming down or getting to *Samatha* is a TEMPORARY solution. The moment we come back to the real world with all its distractions and temptations, those habits take over.

5. The breath meditation needs to be used appropriately, with the understanding that it can provide only temporary relief. This breath meditation is the same meditation that was used by the Hindu *yogis* to attain mundane (*Anāriya*) *jhānā* even before the Buddha.

- Since the time Buddhaghosa’s Visuddhimagga was accepted as the basis of Theravāda Dhamma (in the fifth century CE), this “literal interpretation” of the *ānāpānasati* has been used.
- The real *ānāpānasati bhāvanā* is not described in the *Visuddhimagga* and is not described in any Mahayana or even Theravāda texts today. One needs to go directly to the *Tipiṭaka* to find it; it is described in many *suttā*, for example, the *Assāsa sutta*. I could not find an English translation of this *sutta*. Another one *Arittha Sutta*, and the translation published at the Access to insight site is not complete, even though it does contain Buddha’s admonition to Ven. Arittha that in and out-breathing is only one version of *Ānāpānasati* (in the *sutta* it says it is NOT the *Ariya* or Noble version) : [WebLink: ACCESSTOINSIGHT: Arittha Sutta: To Arittha](#)
- [Arittha Sutta: To Arittha \(On Mindfulness of Breathing\)](#)

6. Thus there are two interpretations of the *Ānāpānasati Bhāvanā*. One is the conventional “breathing” version and the other is the real version recommended by the Buddha, which has a wider interpretation, including breathing to a minor extent.

- The correct meaning is in many *suttā*. Of course, the main *sutta* is “[WebLink: suttacentral: Ānāpānasati Sutta \(MN 118\)](#).” The *Ānāpānasati sutta* is the condensed version of the Buddha’s discourses on *Ānāpānasati Bhāvanā*. As with most main *suttā*, the discourse was condensed into the form for easy transmission. Other *suttā*, mostly by Ven. Sariputta, have explained the terms like “*āna*” and “*āpana*” in detail (like the *Assāsa Sutta*).
- I have discussed the *sutta* at a bit deeper level in “[7. What is Ānāpāna?](#)” and “[8. The Basic Formal Ānāpānasati Meditation](#).”
- See, “[Is Ānāpānasati Breath Meditation?](#),” where I provide a detailed discussion based on the *Tipiṭaka*.
- Furthermore, Sinhala commentaries (*Atthakathā*) were also written to explain the main *suttā*. Unfortunately, these *atthakathā* were burned down shortly after Buddhaghosa wrote his *Visuddhimagga* and other books. However, three important ones (*Paṭisambhidā Magga Pakarana*, *Pitakopadesa*, and *Netthipakarana*) have survived because they had been included in the *Tipiṭaka*. What I describe here is from those books in the *Tipiṭaka*.
- Buddhaghosa was a Hindu before converting to be a Buddhist later on; see, “The Life and Work of Buddhaghosa” by B. C. Law (1927). Some say he became a Buddhist in order to introduce Hindu concepts to Buddha Dhamma. Either that or he just used whatever he understood to be the *Ānāpānasati* without any malicious intentions. Either way, the correct interpretation had been hidden for all these years; see, “[Buddhaghosa’s Visuddhimagga – A Focused Analysis](#).”

7. The key message of the Buddha was that we need to remove the greed, hate, and ignorance that we all have in our minds, and by doing that we can experience the *nirāmisā sukha* that is of better quality and of permanent nature. Let us now discuss the basic meditation technique that will start us on the correct path to achieve lasting happiness.

- More evidence from the *Tipiṭaka*: “[Is Ānāpānasati Breath Meditation?](#).”

Next, “[7. What is Ānāpāna?](#)”,

11.6.1 Arittha Sutta - To Arittha (On Mindfulness of Breathing)

SN 54.6

PTS: [S v 314](#)

CDB ii 1768

Arittha Sutta: To Arittha
(On Mindfulness of Breathing)

translated from the Pāli by

Thanissaro Bhikkhu

© 2006

At Savatthi. There the Blessed One said, "Monks, do you develop mindfulness of in-&-out breathing?"

When this was said, Ven. Arittha replied to the Blessed One, "I develop mindfulness of in-&-out breathing, lord."

"But how do you develop mindfulness of in-&-out breathing, Arittha?"

"Having abandoned sensual desire for past sensual pleasures, lord, having done away with sensual desire for future sensual pleasures, and having thoroughly subdued perceptions of irritation with regard to internal & external events, I breathe in mindfully and breathe out mindfully."^[1]

"There is that mindfulness of in-&-out breathing, Arittha. I don't say that there isn't. But as to how mindfulness of in-&-out breathing is brought in detail to its culmination, listen and pay close attention. I will speak."

"As you say, lord," Ven. Arittha responded to the Blessed One.

The Blessed One said, "And how, Arittha, is mindfulness of in-&-out breathing brought in detail to its culmination? There is the case where a monk, having gone to the wilderness, to the shade of a tree, or to an empty building, sits down folding his legs crosswise, holding his body erect, and setting mindfulness to the fore.^[2] Always mindful, he breathes in; mindful he breathes out.

"[1] Breathing in long, he discerns, 'I am breathing in long'; or breathing out long, he discerns, 'I am breathing out long.' [2] Or breathing in short, he discerns, 'I am breathing in short'; or breathing out short, he discerns, 'I am breathing out short.' [3] He trains himself, 'I will breathe in sensitive to the entire body.'^[3] He trains himself, 'I will breathe out sensitive to the entire body.' [4] He trains himself, 'I will breathe in calming bodily fabrication.'^[4] He trains himself, 'I will breathe out calming bodily fabrication.'

"[5] He trains himself, 'I will breathe in sensitive to rapture.' He trains himself, 'I will breathe out sensitive to rapture.' [6] He trains himself, 'I will breathe in sensitive to pleasure.' He trains himself, 'I will breathe out sensitive to pleasure.' [7] He trains himself, 'I will breathe in sensitive to mental fabrication.'^[5] He trains himself, 'I will breathe out sensitive to mental fabrication.' [8] He trains himself, 'I will breathe in calming mental fabrication.' He trains himself, 'I will breathe out calming mental fabrication.'

"[9] He trains himself, 'I will breathe in sensitive to the mind.' He trains himself, 'I will breathe out sensitive to the mind.' [10] He trains himself, 'I will breathe in satisfying the mind.' He trains himself, 'I will breathe out satisfying the mind.' [11] He trains himself, 'I will breathe in steadying the mind.' He trains himself, 'I will breathe out steadying the mind.' [12] He trains himself, 'I will breathe in releasing the mind.' He trains himself, 'I will breathe out releasing the mind.'^[6]

"[13] He trains himself, 'I will breathe in focusing on inconstancy.' He trains himself, 'I will breathe out focusing on inconstancy.' [14] He trains himself, 'I will breathe in focusing on dispassion.'^[7] He trains himself, 'I will breathe out focusing on dispassion.' [15] He trains himself, 'I will breathe in focusing on cessation.' He trains himself, 'I will breathe out focusing on cessation.' [16] He trains himself, 'I will breathe in focusing on relinquishment.' He trains himself, 'I will breathe out focusing on relinquishment.'

"This, Arittha, is how mindfulness of in-&-out breathing is brought in detail to its culmination."

Notes

¹. The Commentary reads this statement as indicating that Arittha has attained the third level of Awakening, non-return, but it is also possible to interpret the statement on a more mundane level: Arittha is simply practicing mindfulness in the present moment, having temporarily subdued desire for past and future sensual pleasures, and having temporarily subdued any thought of irritation with regard to the present.

2. To the fore (*parimukham*): The Abhidhamma takes an etymological approach to this term, defining it as around (*pari-*) the mouth (*mukham*). In the Vinaya, however, it is used in a context (Cv.V.27.4) where it undoubtedly means the front of the chest. There is also the possibility that the term could be used idiomatically as "to the front," which is how I have translated it here.
3. The commentaries insist that "body" here means the breath, but this is unlikely in this context, for the next step — without further explanation — refers to the breath as "bodily fabrication." If the Buddha were using two different terms to refer to the breath in such close proximity, he would have been careful to signal that he was redefining his terms (as he does below, when explaining that the first four steps in breath meditation correspond to the practice of focusing on the body in and of itself as a frame of reference). The step of breathing in and out sensitive to the entire body relates to the many similes in the *suttā* depicting *jhāna* as a state of whole-body awareness (see [MN 119](#)).
4. "In-&-out breaths are bodily; these are things tied up with the body. That's why in-&-out breaths are bodily fabrications." — [MN 44](#).
5. "Perceptions & feelings are mental; these are things tied up with the mind. That's why perceptions & feelings are mental fabrications." — [MN 44](#).
6. [AN 9.34](#) shows how the mind, step by step, is temporarily released from burdensome mental states of greater and greater refinement as it advances through the stages of *jhāna*.
7. Lit., "fading."
- See also: [MN 118](#); [SN 54.8](#).

11.7 7. What is Ānāpāna?

Revised April 2, 2017 (#4); September 2, 2019; July 23, 2020

The top 10 posts in this section describe the fundamentals of Buddhist meditation. The rest of the posts in this section discuss meditation subjects. They clarify unresolved questions and help gain *samādhi*. The first 11 posts should be followed in that order, at least initially.

1. The *Ānāpānasati Sutta* in the *Majjhima Nikāya* ([WebLink: suttacentral: Ānāpānasati Sutta, MN 118](#)) has the following verse:

“*Ānāpānassati*, bhikkhave, bhāvitā bahulikatā mahapphalā hoti mahānisaṃsā. *Ānāpānassati*, bhikkhave, bhāvitā bahulikatā cattāro *satipaṭṭhāne* paripūreti. Cattāro *satipaṭṭhānā* bhāvitā bahulikatā satta *bojjhaṅge* paripūrenti. Satta *bojjhaṅgā* bhāvitā bahulikatā *vijjā vimuttim* paripūrenti.”

That means: “*Ānāpānasati*, Bhikkhus, when practiced frequently bears many fruits and leads to many benefits. *Ānāpānasati*, Bhikkhus, when cultivated and pursued, brings the four *Satipaṭṭhānā* to their completion. The four *Satipaṭṭhānā*, when cultivated and pursued, bring the seven *Bojjhaṅgā* to their completion. The seven *Bojjhaṅgā*, when cultivated and pursued, bring *vijjā* (opposite of *avijjā*) and *vimutti* (or *Nibbāna*) to their completion.”

- Now, if *ānāpāna* means “breathing in and breathing out”, how can that lead to the completion of the four *satipaṭṭhānās*, the seven *bojjhaṅgas*, removal of *avijjā*, and the attainment of *Nibbāna*? Can anyone seriously think that is possible?
- Instead, *ānāpāna* MEANS cultivating *Satipaṭṭhāna*, *Satta Bojjhaṅga*, etc., by “taking in morals” and “expelling immorals” as we discuss below.

2. *Satipaṭṭhāna Bhāvanā* is a more detailed version of the *Ānāpānasati Bhāvanā*. Thus it is important to learn the correct version of the *Ānāpānasati*. If one does *Ānāpānasati* correctly, it can be easily turned to *Satipaṭṭhāna Bhāvanā*.

- Section 4 on “Dhammānupassanā” describes how the cultivation of the four types of *Satipaṭṭhāna* leads to the removal of the five hindrances and fulfillment of the seven *Bojjhaṅga* to their completion. See, [“WebLink: suttacentral: Satipaṭṭhāna Sutta \(MN 10\).”](#) That confirms the statements in the *Ānāpānasati Sutta* mentioned above.

3. First, let us figure out exactly what the Buddha meant by “āna” and “āpāna” in “āna+āpāna+sati” which rhymes as *ānāpānasati*; of course “sati” is mindfulness.

- “Āna” is taking in; In Sinhala, “*ānayaṇaya*” is “import”. “āpāna” is discarding; In Sinhala, “*apānayaṇaya*” is “export”. Thus “āna”+“āpāna” or *ānāpāna* is “taking in/discarding” or import/export.
- “Assa” is same as “āna”, and “passa” is the same as “āpāna”. In Sri Lanka, parents tell their child to clean his/her room by saying, “*kāmaraya* (room) *assa passa* (or *aspas*) *karāganna*”.
- When cleaning the room, the child needs to get rid of the clutter (*passa*), but also can take in (*assa*) something like a flower vase to make the room look more pleasant, or to take in a chair that can be useful.

4. During the time of the Buddha itself, auxiliary *suttā* as well as commentaries (“*Atthakatha*”) were written to explain the key words/phrases in the main *suttā* that were abbreviated for easy transmission; see, [“Preservation of Dhamma.”](#)

There are two important *suttā*, [“WebLink: suttacentral: Assāsappatta Sutta \(SN 38.5\)”](#) and the [“WebLink: suttacentral: Paramassāsappatta sutta \(SN 38.6\)”](#) that describe how one should “take in” *kusala* thoughts and “discard” *akusala* thoughts; that is “āna” + “āpāna” (*ānāpāna*) or “*assa/passa*”, for cleaning up (the

mind). The English translation there is hopeless, but one can get the idea by just looking at the Pāli version. You don't need to be an expert on Pāli to see that.

- In the *Mahasaccaka Sutta*, “*assa/passa*” was also used to indicate “in and out breathing” when the Buddha was describing to Saccaka how he engaged in the “breath meditation” per instructions by Ājāra Kālāma and Uddaka Rāmaputta while he was searching for the truth as Bodhisattva.
- But the very next verses of that *sutta* describes how he gave up on that technique and moved onto the correct path.
- So, we need to be careful about making sure a given phrase is used in the right context, depending on the situation.
- For example, there are several conventional and deeper meanings to the key words “*atta*” and “*anatta*,” and one needs to be able to figure out which meaning to use for a given case; see, “[Attā Hi Attano Nātho](#),” “[Anatta – the Opposite of Which Atta?](#),” and links in those posts.

5. When one knows what *kusala/akusala kamma* are, the first thing to do is to prevent from doing *akusala kamma* and to make an effort to do *kusala kamma* by engaging in meritorious actions (*puñña kriya*); see, “[Ten Immoral Actions \(Dasa Akusala\)](#),” and “[Punna Kamma – Dāna, Sīla, Bhāvanā](#).”

- Thus when one leads a moral life, one is automatically engaging in the basic form of *Ānāpānasati*.
- AND one cannot do a proper formal *Ānāpānasati* meditation and get to even *samādhi*, let alone a *jhāna*, unless one leads a moral life. The five hindrances are too strong to be suppressed; see, “[Key to Calming the Mind – Five Hindrances](#)”.

6. **Formal *Ānāpānasati Bhāvanā*** can be done in a formal sitting or walking meditation session, while engaging in the basic version (taking in what is good/discarding what is bad) all the time.

- There is no need to do *Samatha Bhāvanā* separately. If one does a formal *Ānāpānasati* session with the eyes closed in a quiet place, one will automatically get into *samādhi*. **Let good thoughts grow, and discard bad thoughts. Very simple.**
- Another thing to do in a formal meditation session is to **contemplate on a particular dhamma concept like *anicca, dukkha, anatta*. This is really focusing on “āna”**.
- When one gets to *samādhi*, the mind goes on “auto-pilot”; you will feel that your mind is taking charge and you need to exert less effort to keep the focus.

7. When one does the basic version while engaged in other activities, one is only being mindful of what one is engaged in, i.e., the task at hand. That task presumably does not involve any of the BIG EIGHT we discussed previously; see, “[The Basics in Meditation](#).” It could be a technical task or a daily chore like washing dishes or driving. **Be mindful of just the task (washing, driving, etc).** Here one will NOT get into *samādhi*, so there is no danger in injuring oneself; Many people get into accidents while driving, because they are not being mindful of driving.

- However, if one does not have a specific task (say, when riding a bus or waiting at the doctor's office), one could be engaged in *Ānāpānasati Bhāvanā*. When our minds are not focused on something (like in the above mentioned cases), all sorts of ideas bubble up. As we discussed in “[The Basics in Meditation](#).” These are due to deeply-ingrained habits or *āsavā* that we have acquired not only in this life but also from previous lives.

8. The more we keep reviving or re-living this habit (i.e., doing *āna/apāna* or *assa/passa*), we strengthen that good habit (*gati*).

- We have come all this way in the cycle of rebirths that are mostly filled with suffering because of our bad habits (*gati*) that have been percolated to a very dense state of deep-seated cravings (*āsavā*). It may take some time to develop this “*āna/pāna*”, but you will definitely see results in a few weeks to few months.

9. In the *ānāpānabba* of the *Satipaṭṭhāna sutta*, it says, “...so sato vā assa sati, sato vā passa sati. Dīghaṃ vā assasanto dīghaṃ assasāmī ti pajānāti, dīghaṃ vā passasanto dīghaṃ passasāmī ti pajānāti,” Here it DOES NOT mean “take long breaths in, expel long breaths out”; rather it means, “get rid of old bad habits, and cultivate the old good habits”.

- Similarly, the very next sentence (“...rassaṃ vā assasanto...”) is not about short breaths, but on those good habits that you started to work on recently, and those bad habits that started to creep in to the mind recently (if there is any).
- There is no way that one can purify one’s mind by breathing in/out, even though it can get one’s mind to calm down (*Samatha*). The correct way of doing it does both *Samatha* and *Vipassāna* together.

10. When we think a bit more about this, we realize that what needs to be discarded are *micchā diṭṭhi* (wrong views), *micchā saṅkappa* (wrong thoughts or ideas), *micchā vācā* (incorrect, harmful speech), *micchā kammanta* (incorrect/harmful actions), *micchā ājīva* (incorrect/harmful way of living), *micchā vāyāma* (tendency to strive on immoral activities), *micchā sati* (tendency to focus on immoral activities); when one does all that *micchā samādhi* (tendency to get absorbed in immoral ideas/actions) is the result.

- In the same way, what we need to “take in” are *sammā diṭṭhi*, *sammā saṅkappa*, *sammā vācā*, *sammā kammanta*, *sammā ājīva*, *sammā vāyāma*, *sammā sati*, and when one keeps doing that one automatically gets to *sammā samādhi*.
- Put it in another way, *Ānāpānasati* is nothing but “taking in” the Noble Eightfold Path and “discarding” the opposite.

11. The longer one “takes in” or “lives” the Noble Eightfold Path and “rejects” the opposite, the easier it becomes to get to *samādhi* in a formal meditation session. When *samādhi* grows little by little, one day, one will automatically get into the first *Ariya jhāna*. However, there is one more thing that is needed before getting to the *Ariya jhānā*, an understanding of *anicca*, *dukkha*, *anatta*. See, “[Is Ānāpānasati Breath Meditation?](#)”

- Keep practicing “*ānāpāna*” as much as possible throughout the day. With time, you will feel the “cooling down” or “*nivāna*” or “a taste of *Nibbāna*.”
- Buddha Dhamma is NOT about following rituals. It is all about cleansing one’s mind and that takes an effort and concentration. Initially, it could be hard, but as one gains *samādhi* bit by bit, one gets motivated. In a few months, one can look back at one’s life and see that it has changed for the better.
- Even though one can start with discarding immoral deeds and cultivating or taking in moral, one needs to know the real meanings of “*san*,” *anicca* and *anatta* in order to do the *ānāpānasati bhāvanā* in a deeper sense: (i) One needs to comprehend which “*san*” or defilements to be discarded; see, “[San](#).” (ii) One needs to know the deeper meanings of *Tilakkhaṇa*; see, “[Anicca, Dukkha, Anatta](#).”

Next, “[Is Ānāpānasati Breath Meditation?](#)”,

11.7.1 Ānāpānassati-sutta (Majjhima Nikāya 118)

Majjhima Nikāya 118

Ānāpānassati-sutta

Evaṃ me sutam— ekam samayaṃ bhagavā sāvatthiyaṃ viharati pubbārāme migāramātupāsāde sambahulehi abhiññātehi abhiññātehi therehi sāvakehi saddhiṃ—āyasmata ca sāriputtena āyasmata ca mahāmoggallānena āyasmata ca mahākassapena āyasmata ca mahākaccāyanena āyasmata ca mahākoṭṭhikena āyasmata ca mahākappinena āyasmata ca mahācundena āyasmata ca anuruddhena āyasmata ca revatena āyasmata ca ānandena, aññ ehi ca abhiññātehi abhiññātehi therehi sāvakehi saddhiṃ.

Santi, bhikkhave, bhikkhū imasmiṃ bhikkhusaṃghe ānāpānassatibhāvanānuyogamanuyuttā viharanti. Ānāpānassati, bhikkhave, bhāvitā bahulikatā mahapphalā hoti mahānisamsā. Ānāpānassati, bhikkhave, bhāvitā bahulikatā cattāro satipaṭṭhāne paripūreti. Cattāro satipaṭṭhānā bhāvitā bahulikatā satta bojjhaṅge paripūrenti. Satta bojjhaṅgā bhāvitā bahulikatā vijjāvimuttiṃ paripūrenti.

Katham bhāvītā ca, bhikkhave, ānāpānassati katham bahulikatā mahapphalā hoti mahānisaṃsā? Idha, bhikkhave, bhikkhu araṇṇagato vā rukkhamūlagato vā suṇṇāgāragato vā nisīdati pallaṅkam ābhujitvā ujum kāyaṃ paṇidhāya parimukhaṃ satim upatthapetvā. So satova assasati satova passasati.

Dīghaṃ vā assasanto 'dīghaṃ assasāmi'ti pajānāti, dīghaṃ vā passasanto 'dīghaṃ passasāmi'ti pajānāti; rassaṃ vā assasanto 'rassaṃ assasāmi'ti pajānāti, rassaṃ vā passasanto 'rassaṃ passasāmi'ti pajānāti; 'sabbakāyapaṭisaṃvedī assasissāmi'ti sikkhati, 'sabbakāyapaṭisaṃvedī passasissāmi'ti sikkhati; 'passambhayaṃ kāyasaṅkhāraṃ assasissāmi'ti sikkhati, 'passambhayaṃ kāyasaṅkhāraṃ passasissāmi'ti sikkhati. (1)

'Pīṭipapaṭisaṃvedī assasissāmi'ti sikkhati, 'pīṭipapaṭisaṃvedī passasissāmi'ti sikkhati; 'sukhapapaṭisaṃvedī assasissāmi'ti sikkhati, 'sukhapapaṭisaṃvedī passasissāmi'ti sikkhati; 'cittasaṅkhārapapaṭisaṃvedī assasissāmi'ti sikkhati, 'cittasaṅkhārapapaṭisaṃvedī passasissāmi'ti sikkhati; 'passambhayaṃ cittasaṅkhāraṃ assasissāmi'ti sikkhati, 'passambhayaṃ cittasaṅkhāraṃ passasissāmi'ti sikkhati. (2)

'Cittapaṭisaṃvedī assasissāmi'ti sikkhati, 'cittapaṭisaṃvedī passasissāmi'ti sikkhati; 'abhippamodayaṃ cittaṃ assasissāmi'ti sikkhati, 'abhippamodayaṃ cittaṃ passasissāmi'ti sikkhati; 'samādahaṃ cittaṃ assasissāmi'ti sikkhati, 'samādahaṃ cittaṃ passasissāmi'ti sikkhati; 'vimocayaṃ cittaṃ assasissāmi'ti sikkhati, 'vimocayaṃ cittaṃ passasissāmi'ti sikkhati. (3)

'Aniccānupassī assasissāmi'ti sikkhati, 'aniccānupassī passasissāmi'ti sikkhati; 'virāgānupassī assasissāmi'ti sikkhati, 'virāgānupassī passasissāmi'ti sikkhati; 'nirodhānupassī assasissāmi'ti sikkhati, 'nirodhānupassī passasissāmi'ti sikkhati; 'paṭinissaggānupassī assasissāmi'ti sikkhati, 'paṭinissaggānupassī passasissāmi'ti sikkhati.

Evaṃ bhāvītā kho, bhikkhave, ānāpānassati evaṃ bahulikatā mahapphalā hoti mahānisaṃsā. (4)

Katham bhāvītā ca, bhikkhave, ānāpānassati katham bahulikatā cattāro satipaṭṭhāne pariṭṭeṭi? Yasmiṃ samaye, bhikkhave, bhikkhu dīghaṃ vā assasanto 'dīghaṃ assasāmi'ti pajānāti, dīghaṃ vā passasanto 'dīghaṃ passasāmi'ti pajānāti; rassaṃ vā assasanto 'rassaṃ assasāmi'ti pajānāti, rassaṃ vā passasanto 'rassaṃ passasāmi'ti pajānāti; 'sabbakāyapaṭisaṃvedī assasissāmi'ti sikkhati, 'sabbakāyapaṭisaṃvedī passasissāmi'ti sikkhati; 'passambhayaṃ kāyasaṅkhāraṃ assasissāmi'ti sikkhati, 'passambhayaṃ kāyasaṅkhāraṃ passasissāmi'ti sikkhati; kāye kāyānupassī, bhikkhave, tasmिṃ samaye bhikkhu viharati ātāpī sampajāno satimā vineyya loke abhijjhādomanassaṃ. Kāyesu kāyaṇṇatarāhaṃ, bhikkhave, evaṃ vadāmi yadidaṃ—assāsapassāsā. Tasmātiha, bhikkhave, kāye kāyānupassī tasmिṃ samaye bhikkhu viharati ātāpī sampajāno satimā vineyya loke abhijjhādomanassaṃ. (1)

Yasmiṃ samaye, bhikkhave, bhikkhu 'pīṭipapaṭisaṃvedī assasissāmi'ti sikkhati, 'pīṭipapaṭisaṃvedī passasissāmi'ti sikkhati; 'sukhapapaṭisaṃvedī assasissāmi'ti sikkhati, 'sukhapapaṭisaṃvedī passasissāmi'ti sikkhati; 'cittasaṅkhārapapaṭisaṃvedī assasissāmi'ti sikkhati, 'cittasaṅkhārapapaṭisaṃvedī passasissāmi'ti sikkhati; 'passambhayaṃ cittasaṅkhāraṃ assasissāmi'ti sikkhati, 'passambhayaṃ cittasaṅkhāraṃ passasissāmi'ti sikkhati; vedanāsu vedanānupassī, bhikkhave, tasmिṃ samaye bhikkhu viharati ātāpī sampajāno satimā vineyya loke abhijjhādomanassaṃ. Vedanāsu vedanāṇṇatarāhaṃ, bhikkhave, evaṃ vadāmi yadidaṃ— assāsapassāsānaṃ sādhukaṃ manasikāraṃ. Tasmātiha, bhikkhave, vedanāsu vedanānupassī tasmिṃ samaye bhikkhu viharati ātāpī sampajāno satimā vineyya loke abhijjhādomanassaṃ. (2)

Yasmiṃ samaye, bhikkhave, bhikkhu 'cittapaṭisaṃvedī assasissāmi'ti sikkhati, 'cittapaṭisaṃvedī passasissāmi'ti sikkhati; 'abhippamodayaṃ cittaṃ assasissāmi'ti sikkhati, 'abhippamodayaṃ cittaṃ passasissāmi'ti sikkhati; 'samādahaṃ cittaṃ assasissāmi'ti sikkhati, 'samādahaṃ cittaṃ passasissāmi'ti sikkhati; 'vimocayaṃ cittaṃ assasissāmi'ti sikkhati, 'vimocayaṃ cittaṃ passasissāmi'ti sikkhati; citte cittānupassī, bhikkhave, tasmिṃ samaye bhikkhu viharati ātāpī sampajāno satimā vineyya loke abhijjhādomanassaṃ. Nāhaṃ, bhikkhave, muṭṭhassatissa asampajānassa ānāpānassatiṃ vadāmi. Tasmātiha, bhikkhave, citte cittānupassī tasmिṃ samaye bhikkhu viharati ātāpī sampajāno satimā vineyya loke abhijjhādomanassaṃ. (3)

Yasmiṃ samaye, bhikkhave, bhikkhu ‘aniccānupassī assasissāmī’ti sikkhati, ‘aniccānupassī passasissāmī’ti sikkhati; ‘virāgānupassī assasissāmī’ti sikkhati, ‘virāgānupassī passasissāmī’ti sikkhati; ‘nirodhānupassī assasissāmī’ti sikkhati, ‘nirodhānupassī passasissāmī’ti sikkhati; ‘paṭinissaggānupassī assasissāmī’ti sikkhati, ‘paṭinissaggānupassī passasissāmī’ti sikkhati; dhammesu dhammānupassī, bhikkhave, tasmīṃ samaye bhikkhu viharati ātāpī sampajāno satimā vineyya loke abhijjhādomanassaṃ. So yaṃ taṃ abhijjhādomanassaṃ pahānaṃ taṃ paññāya disvā sādhukaṃ ajjupekkhitā hoti. Tasmātiha, bhikkhave, dhammesu dhammānupassī tasmīṃ samaye bhikkhu viharati ātāpī sampajāno satimā vineyya loke abhijjhādomanassaṃ. (4)

Evaṃ bhāvitā kho, bhikkhave, ānāpānassati evaṃ bahulikatā cattāro satipaṭṭhāne paripūreti.

Kathaṃ bhāvitā ca, bhikkhave, cattāro satipaṭṭhānā kathaṃ bahulikatā satta bojjhaṅge paripūrenti? Yasmiṃ samaye, bhikkhave, bhikkhu kāye kāyānupassī viharati ātāpī sampajāno satimā vineyya loke abhijjhādomanassaṃ, upaṭṭhitāssa tasmīṃ samaye sati hoti asammūṭṭhā. Yasmiṃ samaye, bhikkhave, bhikkhuno upaṭṭhitā sati hoti asammūṭṭhā, satisambojjhaṅgo tasmīṃ samaye bhikkhuno āraddho hoti. Satisambojjhaṅgaṃ tasmīṃ samaye bhikkhu bhāveti, satisambojjhaṅgo tasmīṃ samaye bhikkhuno bhāvanāparipūriṃ gacchati. (1)

So tathāsato viharanto taṃ dhammaṃ paññāya pavicinati pavicayati parivīmaṃsaṃ āpajjati. Yasmiṃ samaye, bhikkhave, bhikkhu tathāsato viharanto taṃ dhammaṃ paññāya pavicinati pavicayati parivīmaṃsaṃ āpajjati, dhammavicayasambojjhaṅgo tasmīṃ samaye bhikkhuno āraddho hoti, dhammavicayasambojjhaṅgaṃ tasmīṃ samaye bhikkhu bhāveti, dhammavicayasambojjhaṅgo tasmīṃ samaye bhikkhuno bhāvanāparipūriṃ gacchati. (2)

Tassa taṃ dhammaṃ paññāya pavicinato pavicayato parivīmaṃsaṃ āpajjato āraddhaṃ hoti vīriyaṃ asallīnaṃ. Yasmiṃ samaye, bhikkhave, bhikkhuno taṃ dhammaṃ paññāya pavicinato pavicayato parivīmaṃsaṃ āpajjato āraddhaṃ hoti vīriyaṃ asallīnaṃ, vīriyasambojjhaṅgo tasmīṃ samaye bhikkhuno āraddho hoti, vīriyasambojjhaṅgaṃ tasmīṃ samaye bhikkhu bhāveti, vīriyasambojjhaṅgo tasmīṃ samaye bhikkhuno bhāvanāparipūriṃ gacchati. (3)

Āraddhavīriyassa uppajjati pīti nirāmisā. Yasmiṃ samaye, bhikkhave, bhikkhuno āraddhavīriyassa uppajjati pīti nirāmisā, pītisambojjhaṅgo tasmīṃ samaye bhikkhuno āraddho hoti, pītisambojjhaṅgaṃ tasmīṃ samaye bhikkhu bhāveti, pītisambojjhaṅgo tasmīṃ samaye bhikkhuno bhāvanāparipūriṃ gacchati. (4)

Pīṭimanassa kāyopi passambhati, cittampi passambhati. Yasmiṃ samaye, bhikkhave, bhikkhuno pīṭimanassa kāyopi passambhati, cittampi passambhati, passaddhisambojjhaṅgo tasmīṃ samaye bhikkhuno āraddho hoti, passaddhisambojjhaṅgaṃ tasmīṃ samaye bhikkhu bhāveti, passaddhisambojjhaṅgo tasmīṃ samaye bhikkhuno bhāvanāparipūriṃ gacchati. (5)

Passaddhakāyassa sukhino cittaṃ samādhīyati. Yasmiṃ samaye, bhikkhave, bhikkhuno passaddhakāyassa sukhino cittaṃ samādhīyati, samādhisambojjhaṅgo tasmīṃ samaye bhikkhuno āraddho hoti, samādhisambojjhaṅgaṃ tasmīṃ samaye bhikkhu bhāveti, samādhisambojjhaṅgo tasmīṃ samaye bhikkhuno bhāvanāparipūriṃ gacchati. (6)

So tathāsamāhitaṃ cittaṃ sādhukaṃ ajjupekkhitā hoti. Yasmiṃ samaye, bhikkhave, bhikkhu tathāsamāhitaṃ cittaṃ sādhukaṃ ajjupekkhitā hoti, upekkhāsambojjhaṅgo tasmīṃ samaye bhikkhuno āraddho hoti, upekkhāsambojjhaṅgaṃ tasmīṃ samaye bhikkhu bhāveti, upekkhāsambojjhaṅgo tasmīṃ samaye bhikkhuno bhāvanāparipūriṃ gacchati. (7)

Yasmiṃ samaye, bhikkhave, bhikkhu vedanāsu ... pe ... citte ... dhammesu dhammānupassī viharati ātāpī sampajāno satimā vineyya loke abhijjhādomanassaṃ, upaṭṭhitāssa tasmīṃ samaye sati hoti asammūṭṭhā. Yasmiṃ samaye, bhikkhave, bhikkhuno upaṭṭhitā sati hoti asammūṭṭhā, satisambojjhaṅgo tasmīṃ samaye bhikkhuno āraddho hoti, satisambojjhaṅgaṃ tasmīṃ samaye bhikkhu bhāveti, satisambojjhaṅgo tasmīṃ samaye bhikkhuno bhāvanāparipūriṃ gacchati. (1)

So tathāsato viharanto taṃ dhammaṃ paññāya pavicinati pavicayati parivīmaṃsaṃ āpajjati. Yasmiṃ samaye, bhikkhave, bhikkhu tathāsato viharanto taṃ dhammaṃ paññāya pavicinati pavicayati parivīmaṃsaṃ āpajjati, dhammavicayasambojjhaṅgo tasmīṃ samaye bhikkhuno āraddho hoti, dhammavicayasambojjhaṅgaṃ tasmīṃ samaye bhikkhu bhāveti, dhammavicayasambojjhaṅgo tasmīṃ samaye bhikkhuno bhāvanāpāripūriṃ gacchati. (2)

Tassa taṃ dhammaṃ paññāya pavicinato pavicayato parivīmaṃsaṃ āpajjato āraddhaṃ hoti vīriyaṃ asallīnaṃ. Yasmiṃ samaye, bhikkhave, bhikkhuno taṃ dhammaṃ paññāya pavicinato pavicayato parivīmaṃsaṃ āpajjato āraddhaṃ hoti vīriyaṃ asallīnaṃ, vīriyasambojjhaṅgo tasmīṃ samaye bhikkhuno āraddho hoti, vīriyasambojjhaṅgaṃ tasmīṃ samaye bhikkhu bhāveti, vīriyasambojjhaṅgo tasmīṃ samaye bhikkhuno bhāvanāpāripūriṃ gacchati. (3)

Āraddhavīriyassa uppajjati pīti nirāmisā. Yasmiṃ samaye, bhikkhave, bhikkhuno āraddhavīriyassa uppajjati pīti nirāmisā, pītisambojjhaṅgo tasmīṃ samaye bhikkhuno āraddho hoti, pītisambojjhaṅgaṃ tasmīṃ samaye bhikkhu bhāveti, pītisambojjhaṅgo tasmīṃ samaye bhikkhuno bhāvanāpāripūriṃ gacchati. (4)

Pīṭimanassa kāyopi passambhati, cittampi passambhati. Yasmiṃ samaye, bhikkhave, bhikkhuno pīṭimanassa kāyopi passambhati, cittampi passambhati, passaddhisambojjhaṅgo tasmīṃ samaye bhikkhuno āraddho hoti, passaddhisambojjhaṅgaṃ tasmīṃ samaye bhikkhu bhāveti, passaddhisambojjhaṅgo tasmīṃ samaye bhikkhuno bhāvanāpāripūriṃ gacchati. (5)

Passaddhakāyassa sukhino cittaṃ samādhīyati. Idha, bhikkhave, bhikkhu satisambojjhaṅgaṃ bhāveti vivekanissitaṃ virāganissitaṃ nirodhanissitaṃ vossaggapariṇāmiṃ. Dhammavicayasambojjhaṅgaṃ bhāveti ... pe ... vīriyasambojjhaṅgaṃ bhāveti ... pītisambojjhaṅgaṃ bhāveti ... passaddhisambojjhaṅgaṃ bhāveti ... samādhisambojjhaṅgaṃ bhāveti ... upekkhāsambojjhaṅgaṃ bhāveti vivekanissitaṃ virāganissitaṃ nirodhanissitaṃ vossaggapariṇāmiṃ. Evaṃ bhāvitā kho, bhikkhave, satta bojjhaṅgā evaṃ bahulikatā vijjāvimuttiṃ paripūrentī'ti.

Idamavoca bhagavā. Attamanā te bhikkhū bhagavato bhāsitaṃ abhinandunti.

Ānāpānassatisuttaṃ niṭṭhitaṃ aṭṭhamaṃ.

11.8 Is Ānāpānasati Breath Meditation?

June 2, 2017; revised September 2, 2017; April 25, 2020

Introduction

1. If you Google “Ānāpānasati”, almost all websites that come up identify it as “Buddhist breath meditation” or “mindfulness of breathing”. But *Tipiṭaka suttā* clearly lead to the conclusion that breath meditation is not Buddhist *Ānāpāna Bhāvanā*.

- Breath meditation was practiced by *yogis* even at the time of the Buddha. **So, breath meditation predates Buddha’s *Ānāpāna Bhāvanā***. Buddha rejected it because it does not lead to *Nibbāna*, or PERMANENT relief from suffering.
- There are many *suttā* in the *Tipiṭaka* that clearly state that *Nibbāna* can be attained with the *Ānāpāna Bhāvanā*. It automatically fulfills *Satipaṭṭhāna*, *Satta Bojjhaṅga*, and all 37 Factors of Enlightenment. **Therefore, *Ānāpānasati* is infinitely deeper than just focusing on one’s breath.**
- I will provide evidence for those two statements below. First, let us see what can be accomplished with Buddhist *Ānāpānasati bhāvanā*.

Ānāpānassati by Itself Is Sufficient to Attain *Nibbāna*

2. According to the [WebLink: suttacentral: Ānāpānassati Sutta \(MN 118\)](#): “..*Ānāpānassati, bhikkhave, bhāvitā bahulīkatā cattāro satipaṭṭhāne paripūreti. Cattāro satipaṭṭhānā bhāvitā bahulīkatā satta bojjhaṅge paripūrenti. Satta bojjhaṅgā bhāvitā bahulīkatā vijjāvimuttiṃ paripūrenti.*”

- Translated, “..*Ānāpānassati*, when used (*bhāvitā*) and used frequently (*bahulīkatā*), completes (*paripūreti*) four types of *Satipaṭṭhāna*. *Cattāro satipaṭṭhāna*, when used and used frequently, completes *Sapta Bojjanga*. *Sapta Bojjanga* when used and used frequently, completes the full release (*Nibbāna* or *Arahanthood*)”.
- Exactly the same statement was made in the [WebLink: suttacentral: Ānanda Sutta \(SN 54.13\)](#). In fact, most of the *suttā* in [WebLink: suttacentral: Ānāpāna Samyutta \(SN 54\)](#) has that phrase or the phrase: “..*Ānāpānassati, bhikkhave, bhāvitā bahulīkatā mahapphalā hoti mahānisamsā.*” Here, “*mahappalā*” (“*mahā*” + “*pala*”) means the four Noble stages: *Sotāpanna*, *Sakadāgāmi*, *Anāgāmi*, *Arahant*.
- Therefore, it is quite clear that *ānāpānassati*, **by itself**, can lead to all the way to the *Arahanthood*. Thus, one does not need to do “**separate vipassana (insight) meditation after getting to *Samatha* with *Ānāpānassati***” as some suggest.

Can *Nibbāna* be Attained With Breath Meditation?

3. **The key question is: “Can breath-meditation, by itself, lead to *Arahanthood*?** That is the critical question that needs to be contemplated by those who equate *Ānāpānassati* to breath meditation.

- *Nibbāna* is the removal of greed, hate, ignorance: “*rāgakkhayo dosakkhayo mohakkhayo idaṃ vuccati nibbānanti.*” This verse is in many *suttā*, for example, in [WebLink: suttacentral: Nibbāna pañhā Sutta \(SN 38.1\)](#).
- If *Ānāpānassati* means breath meditation, how could keeping the mind on one’s breath **by itself** REMOVE *rāga*, *dosa*, *moha* from one’s mind?

4. **The conventional (and erroneous) teaching in many texts today is that one needs to get to *samādhi* with *Ānāpānassati* and then one needs to do *Vipassanā* or insight meditation to attain *magga phala*.**

- However, from the above-discussed *suttā*, it is quite clear that *Ānāpānassati* by itself can lead to even the *Arahanthood*!
- Of course, this erroneous interpretation — that breath meditation is Buddhist *Ānāpāna bhāvanā* — is not something that current practitioners came up with. It can be traced back to Buddhaghosa's *Visuddhimagga*, see, "[Buddhaghosa's Visuddhimagga – A Focused Analysis](#)."

The *Arittha Sutta*

5. The incorrect version of *Ānāpānassati* was there even before the Buddha. In the [WebLink: suttacentral: Arittha Sutta \(SN 54.06\)](#), the Buddha, upon finding out that *Bhikkhu Arittha* was practicing the incorrect breath meditation as *Ānāpānassati*, told him the following. “..*Atthesā, ariṭṭha, ānāpānassati, nesā natthī'ti vadāmi. Api ca, ariṭṭha, yathā ānāpānassati vitthārena paripuṇṇā hoti taṃ suṇāhi, sādhukaṃ manasi karohi; bhāsissāmi*”ti.

- Translated, “..**There is that *ānāpānassati*, Arittha.** I don't say that there isn't. But I will describe the real (*yathā*) *ānāpānassati*, listen and pay close attention. I will speak.”
- Furthermore, that incorrect version of breath meditation was used by *yogis* at that time even to attain higher *jhāna*. However, those *anāriya jhāna* are attained by just SUPPRESSING defilements (*keles*), and will not lead to ANY *magga phala*. Those who cultivate such *anāriya jhāna* will also have next birth in *Brahma* realms, but after that they can be reborn even in the *apāyā*.

Assāsa/Passāsa And Āna/Āpāna

6. The main reason for the incorrect interpretation of *Ānāpānassati* as breath meditation is that in many *suttā* it is described as *assāsa/passāsa*, which conventionally means taking in/putting out of something, and particularly to breathing in/breathing out.

- In fact, *āna/āpāna* (which rhymes as *ānāpāna*) also mean taking in/putting out, as we discuss below.
- However, in the *suttā* on *Ānāpānassati*, *assāsa/passāsa* or *āna/āpāna* specifically mean taking in *kusala*/getting rid of *akusala*, or, equivalently, taking in the Noble Eightfold Path/discarding the *micchā* eightfold path.
- That should be clear to anyone who knows that *Nibbāna* is attained via getting rid of *dasa akusala*.

Evidence from the *Tipiṭaka*

7. In the [WebLink: suttacentral: Assāsappatta Sutta \(SN38.5\)](#), it is specifically said what needs to be “taken in” (*assāsa*):

- “*Katamo panāvuso, maggo katamā paṭipadā, etassa assāsassa sacchikiriyāyāti* (what needs to be “taken in”). *Ayameva kho, āvuso, ariyo aṭṭhaṅgiko maggo etassa assāsassa sacchikiriyāya* (it is the Noble Eightfold Path that needs to be “taken in”). *Seyyathīdam* (namely): *sammādiṭṭhi sammāsaṅkappo sammāvācā sammākammanto sammājīvo sammāvāyāmo sammāsati sammāsamādhi*”. [*paṭipadā* : (f.) line of conduct; mode of progress. *sacchikiriyā* : [f.] realisation; experiencing.]
- [WebLink: suttacentral: Parama assāsa Sutta \(AN38.6\)](#) has the same statement, emphasizing with the term “*parama*” or “superior”.
- Therefore, there should not be any confusion about what *assāsa* means.

8. A detailed description of how the cultivation of correct *Ānāpānassati* leads to *Ariya jhānā* as well as *magga phala* is described in the [WebLink: suttacentral: Paḍipopama sutta \(SN 54.8\)](#), also called the *Dipa Sutta*.

- “*So satova assāsati, satova passāsati*” means “He maintains his mind on *dhamma* that should be taken in (*kusala* or moral) and those that should be gotten rid of (*akusala* or immoral)”.
- “*paṭinissaggānupassī assasissāmī’ti sikkhati, ‘paṭinissaggānupassī passasissāmī’ti sikkhati*” means, “one cultivates discipline (*sikkhati*) by removing bonds that bind one to the rebirth process (*patinissaganupassī*) by taking in morals (*assasissāmī*) and getting rid of immoral (*passasissāmī*)”.

Meaning Embedded in *Ānāpāna*

9. As is the case with many Pāli words, the meaning of the word *Ānāpāna* is embedded in the word itself. The two words “*āna*” and “*āpāna*” combine to rhyme as *ānāpāna*. When “*sati*” is added for being mindful of that, it becomes *ānāpānassati*.

- “*Āna*” is taking in; In Sinhala, “*ānanaya*” is “import”. “*Āpāna*” is discarding; In Sinhala, “*apānanaya*” is “export”. Thus “*āna*” + “*āpāna*” or *ānāpāna* is “taking in/discarding” or import/export.
- “*Assa*” is same as “*āna*”, and “*passa*” is the same as “*āpāna*”. In Sri Lanka, parents tell their child to clean his/her room by saying, “*kāmaraya* (room) *assa passa* (or *aspas*) *karāganna*”.
- When cleaning the room, the child needs to get rid of the clutter (*passa*), but also can take in (*assa*) something like a flower vase to make the room look more pleasant, or to take in a chair that can be useful.
- So, one does not throw away everything or take in everything. One needs to be selective in taking in “good things” and throwing away “bad things.” That is where mindfulness comes in. That cannot be done with the breath.

Breath Meditation Can be Harmful

10. Most people are reluctant to give up the wrong practice of “breath meditation” simply because they are attached to a “state of well being” that can be reached with breath meditation. But that relief is only temporary.

- It is even possible to attain *anāriya jhānā* with breath meditation. Yet, those *jhānā* are also temporary because the defilements are only SUPPRESSED. On the other hand, the *Ariya jhānā* attained via correct *Ānāpānasati Bhāvanā* are permanent. That is because even to attain the first Ariya jhāna, one MUST have first removed *kāma rāga*, not merely suppress it. See, “[Samādhi, Jhāna, Magga Phala – Introduction](#)” and “[Mundane versus Supramundane Jhāna](#).”
- It must also be mentioned that breath meditation can be used to calm down one’s mind. But one should not expect to make much progress towards *Nibbāna* using it. **In fact, if one gets “addicted” to it (as I have seen many people do), it could be a serious distraction to the Noble Path.** See, “[Breath Meditation Is Addictive and Harmful in the Long Run](#).”

Ānāpānasati Bhāvanā Is Not Only a Formal Meditation

11. As I have emphasized in the “[Bhāvanā \(Meditation\)](#)” and the “[Mahā Satipatṭhāna Sutta](#),” one should not restrict either *Ānāpānasati* or *Satipatṭhāna bhāvanā* to formal sessions conducted sitting down at an isolated place.

- When the Buddha said, “*..Ānāpānassati, bhikkhave, bhāvitā bahulīkatā..*” in #2 above, he meant doing it as much as possible, anywhere possible. That means basically all the time! One just needs to be mindful of one’s actions, speech, and thoughts, and stop bad ones and cultivates good ones.
- This is the fundamental approach to practice, see, “[Living Dhamma](#)” section for a step-by-step process that can be used by even those who do not believe in the basic tenets of Buddha Dhamma, like rebirth or *kamma*.

- In particular, see, "[Ānāpānasati Eliminates Mental Stress Permanently](#)" and "[Ānāpāna and Satipatthāna – Fundamentals](#)."

Mistranslated Verses

12. Some people believe that *Ānāpānasati* or *Satipatthāna bhāvanā* should be done in formal sessions. That belief has origins in the verse, "*Idha, bhikkhave, bhikkhu aranna gato vā rukkhamūla gato vā sunnāgāra gato vā nisidati pallankaṃ ābhujitvā, ujum kāyaṃ pañidhāya, parimukhaṃ satim upatthapetvā*", that appears in multiple *suttā* explaining both *Ānāpānasati* and *Satipatthāna bhāvanā*.

- **In most English translations** this verse is written as, "There is the case where a monk, having gone to the wilderness, to the foot of a tree, or to an empty building, sits down folding his legs crosswise, holding his body erect, and setting mindfulness to the fore".
- But there is a deeper meaning to this verse. For example, in the word "*rukkhamūla*," "*rukkha*" is "tree" and "*mūla*" is the "root"; even though the top of a tree sways back and forth with the wind, the tree trunk close to the root is very stable. Thus "*rukkhamūla gato vā*" means getting to a stable mindset. In the conventional interpretation is says, "having gone to the foot of a tree".
- The **deeper meaning** of that complete verse is discussed in detail in, "[Prerequisites for the Satipatthāna Bhāvanā](#)." Then the verse can be stated something like, "get into a calm and stable mindset that is devoid of greed, hate, and ignorance; keep a modest attitude without any sense of superiority; be forthright and honest, and keep the mind on the main object of cooling down the mind". That can be done anywhere, a formal session is not needed, even though that could be helpful.
- One could also use the conventional meaning for formal sessions. But of course, it is the deeper meaning that is much more important even in formal sessions.

Only Three Commentaries Can be Trusted

13. If anyone has any evidence to the contrary **from the *Tipiṭaka***, please make a comment at the "[Discussion Forum](#)." I will be happy to address any such issues.

- There are only three commentaries ([Patisambhidāmagga](#), [Petakopadesa](#), and [Nettipakaraṇa \[Netti\]](#)) that can be trusted. Those are in the *Tipiṭaka*. All other commentaries written later have many inconsistencies and outright misinterpretations; see, for example, "[Buddhaghosa's Visuddhimagga – A Focused Analysis](#)."

11.9 8. The Basic Formal Ānāpānasati Meditation

The top 10 posts in this section describe the fundamentals of Buddhist meditation. The rest of the posts in this section are on possible meditation subjects and can be used to clarify unresolved questions, and to gain *samādhi*. The first 11 posts should be followed in that order, at least initially.

1. As we discussed in the previous posts of this series, it is important to live a moral life without engaging in the BIG EIGHT in order to achieve the full benefits of meditation. One could start even while making progress on the BIG EIGHT, and these formal sessions will help with those as well.
2. Now let us talk about how to do the correct *Ānāpānasati* meditation as taught by the Buddha; see, “[7. What is Ānāpāna?](#).”
 - First pick out a quiet time slot that you can allocate without having to worry about other tasks. Initially, 10-15 minutes a day would be fine and you can extend the time to several hours when the benefits of proper meditation becomes clear and you start feeling the *nirāmisā sukha*.
3. Pick out a room away from external disturbances as much as possible. A room that can be darkened and the door can be closed would be ideal. Sit in a comfortable chair with arm rest, and this becomes important when one start getting into *samādhi*, because the body could become less rigid and tends to slide off (however, some people including myself tend to “freeze” just like in *samādhi* statues).
 - Anyway, do not make the chair too comfortable because you may fall asleep. With practice this sleepiness will automatically go away, when the mind starts liking the meditation sessions, i.e., when one of the *pancanivarana*, *thina middha*, is automatically removed. One comes out of *samādhi* energized.
4. Sit in the chair with the hands on the lap and eyes closed. What we will be trying to do is to ward off any thoughts of lust, cravings, etc. (*kamachanda*), any thoughts of hate (*vyāpāda*) in particular, and also any stray thoughts such as on kids or other pending tasks. We want to experience the “cooling down” due to the absence of *kamachanda* and *vyāpāda*, and also to focus the mind on a Dhamma concept. For those who are starting out, it may be good to do the following first:
 - In order to keep the mind from running away, keep saying in your mind, “May all beings be happy and healthy”. Or, you could think about some act of generosity that you did recently. But all of a sudden you may drift to a thought of some type of a sensual pleasure (involving any of the senses). Deliberately get rid of that thought and focus the mind back on the original task.
 - If a hateful thought (towards someone or something) comes to mind, forcefully stop that thought as well. Here you should deliberately think about good thoughts about that person. It is important to remember that even the most vile person has friends/family that love that person. Sincerely say, “May X be happy and healthy”. Even if you have good reasons to despise that person, it is important to realize that our task is to remove the hateful feelings that WE have. When we do that, in the future we will not generate strong hateful feelings even if someone does something that may appear to be against us.
 - Thinking about the serenity of a Buddha statue helps in the case of both *kamachanda* and *vyāpāda* (and any stray thought).
5. Once one gets some practice to sit at one place with a focused mind for a little while, one should start meditating or contemplating on Dhamma concepts. **It may be a good idea to start with the introductory posts (posts above this post).**
 - After that, one could read one of the posts from the “Key Dhamma Concepts” on the top menu just before the meditation session and then contemplate on those concepts; for example, one could think about examples on “*anicca*”: We cannot maintain anything to our satisfaction over long term. If you are old enough you have many examples on your own. If you are young, you can still maintain your body, hair, teeth, etc to your liking but when you get to middle age, you will see that it is an impossible task. The easiest is to think about your parents/grand parents and see how their bodies have changed, how they are unable to keep their bodies the way they would like.

- For this purpose, I have also added new posts on how one can look at the world through Buddha Dhamma in this section. The posts that I have added after the “[Myths about Meditation](#)” are good ones to read before the session and then to meditate on those ideas; for example, “[A Simple Way to Enhance Merits \(Kusala\) and Avoid Demerits \(Akusala\)](#).” The other three posts below that one may be a bit advanced for some; if so, browse around and find ones that are suitable. Eventually, the key concepts in the “[Key Dhamma Concepts](#)” section need to be grasped. I encourage everyone to read the posts in the “[Moral Living and Fundamentals](#)” section first.
- You could actually read any post from any area of the site and use that as a “focal point” on the meditation session later on. Not all sections are relevant to everyone. **Different people can get to samādhi focusing on different topics. The only posts that is absolutely necessary are the ones on *anicca, dukkha, anatta*. But if they are hard to grasp, one should probably start at the “Moral Living” section. It is a matter of getting used to new concepts. In meditation, one will automatically “drift to samādhi” when the concepts become clear; the mind becomes awake and clear.**

6. Inevitably, your mind will try to wander off during the session. **Stopping lustful and hateful thoughts is the main task of this formal meditation session. If any distracting thought comes to the mind, DO NOT let it “run wild”; this is what is called “being mindful”. Keep a sharp eye on such stray thoughts and put a stop soon as they surface.**

- The other three hindrances (*thina midha*, *uddhacca kukkucca*, and *vicikicchā*) will automatically come down. You will be surprised how refreshed you feel after a “good meditation session”.
- Initially it may be hard, but if you are persistent you should be able to see the results within a week to a month depending the situation with the BIG EIGHT. Those will also gradually diminish too.
- Once one gets the mind to calm down some, one could start focusing on the good/bad habits that one has, in addition to “taking in” Dhamma concepts.

7. In the *Anapanapabba* of the *Satipatṭhāna sutta*, it says, “...so sato va assa sati, sato va passa sati. Digham va assasanto digham assasami ti pajanati, digham va passasanto digham passasami ti pajanati,” Here it DOES NOT mean “take long breaths in, expel long breaths out”; rather it means, “get rid of old bad habits, and cultivate the old good habits”.

- Similarly, the very next sentence (“...rassam va assasanto...”) is not about short breaths, but on those good habits that you started to work on recently, and those bad habits that started to creep in to your mind recently (if there is any).
- This is why understanding how habits are formed and becomes āsavas is important; there are several posts on this subject.
- There is no way that one can purify one’s mind by breathing in/out, even though it can get one’s mind to calm down (*samatha*). The correct way of doing it does both *samatha* and *vipassana* together.
- In the above verse, ***sati* is a very important term; it is not mere concentration, but contemplation with an understanding of *anicca, dukkha, anatta*** (actually any form of meditation cannot be done effectively without at least some understanding of *anicca, dukkha, anatta*).

8. The key to success is to do this as often as possible. You do not need to be in a quiet place either, even though it helps especially initially. As you make progress, try to do it while riding the subway or a bus (but not while driving!), while waiting at the doctor’s office, during a lunch break, etc.

9. When one starts on *Ariya Bhāvanā*, sometimes things may look worse before getting better. It is like trying to cool a hot iron by sprinkling water on it, when all that smoke comes out and may appear to be getting worse. But one needs to be persistent. One needs to keep in mind that uncountable beings have attained “cooling down” by having faith in the Buddha.

- **Understanding key Dhamma concepts is key to any type of meditation. Whenever you have time, try to read on different topics. Things will start “falling into place” at some point, if it hasn’t yet.** From that point

on, one will start feeling the joy of Dhamma, and will be seeking to clarify things with enthusiasm. It is a good addiction to have!

Next, "[Key to Ānāpānasati – How to Change Character and Habits \(Gathi\)](#)",

11.10 Possible Effects in Meditation – Kundalini Awakening

June 25, 2016; updated July 19, 2016

In the post, "[Can Buddhist Meditation be Dangerous?](#)" in the Section "[Myths or Realities](#)," I discussed some possible effects of meditation, both in conventional and in true Buddhist meditations. Here I will focus on just Buddhist meditation, and explain the physical and mental changes that one may experience. However, this does not mean everyone will experience these; these symptoms cannot be generalized, and some may not even feel them.

1. It is possible that one may encounter some soothing physical sensations first and then even some discomforts, when one starts seriously cleansing one's mind. I did not want to discuss this topic until I had enough background material to explain the origins of such effects.

- Some people may feel such first experiences to be not bad at all, and even get attached to them. I believe that what is known in Hinduism as "*kundalini* awakening" is also a manifestation of this effect. Those are supposed to be encountered in *anāriya* meditation techniques, where one stops the cleansing process at this stage. It is the **goal** of most of those non-Buddhist meditators.
- Such effects could also be experienced in genuine Buddhist meditation. Then, they may even turn a bit painful before it gets better. In order to go through such stages and to end up with genuine tranquility, one needs to comprehend *anicca*, *dukkha*, *anatta*, and proceed further.
- **Before reading this post, it is advisable to first read the introductory post, "[Can Buddhist Meditation be Dangerous?](#),"** because some body sensations encountered in early stages of meditation are discussed in that post.

2. Fully understanding the current post requires some background material on the concept of *gandhabba*; Click to hear pronunciation:

[WebLink: Listen to "Gandhabba" pronunciation](#)

The inert physical body is made alive by the *gandhabba* (or "*manomaya kāya*") that comes out of the physical body in the case of "out-of-body experiences"; see, "[Manomaya Kāya and Out-of-Body Experience \(OBE\)](#)."

- There are many posts at the site that explain various aspects of the *gandhabba*; see the sections "[Gandhabba \(Manomaya Kāya\)](#)," "[The Grand Unified Theory of Dhamma](#)," and "[Udayavaya Ñāna](#)."
- While it is not necessary to learn about the *gandhabba* to attain *Nibbāna*, if one needs to understand the mechanisms underlying these "meditation experiences", it is the bridge between mind and the physical body. **In any case, it is good to know about these possible effects (more of which are discussed below), so that if one gets to experience them, one would not be perplexed.**

3. The *gandhabba* has a very fine body which is really an invisible blueprint of the physical body. And that fine body is the one that controls the heavy physical body according to the commands from the mind, which is also located in the *gandhabba* (at the *hadaya vatthu*).

- **The best way to visualize this is to imagine the *gandhabba* as a fine mesh that overlaps the physical body; its fine body has all the parts of the physical body, and is able to move any part that it wishes to move. For example, when the *gandhabba* moves its fine arm, the physical arm moves with it.**
- This is how we control our physical bodies. Of course, there are more details with the brain acting out as an intermediary; see, "[Brain – Interface between Mind and Body](#)."
- For example, most of the energy to move the heavy body parts comes from the food that we eat. Gandhabba just

4. The nervous system of the physical body overlaps the fine nervous system of the *gandhabba*, and tries to maintain that overlap all the time. If one sits down cross-legged, for example, the nervous system of the

physical body may shift from that of the *gandhabba*. Then the physical nervous system will try to adjust for that shift, pulling the attached muscles with it.

- That is why it could become uncomfortable, especially for those who are not used to sit cross-legged (when one gets used to it, the physical system will learn to adjust quickly).
- Therefore, this effect does not give an indication of a progress in the meditation program. Significant effects are discussed below.

5. Our thoughts (i.e., the *cittaja kaya*) can influence the fine body (*utuja kaya*) of the *gandhabba*. In fact, the *utuja kaya* arises out of *suddhatṭhaka* produced by the *cittaja kaya* and the *kammaja kaya*.

- **Thus the fine body of the *gandhabba* can be affected by two methods: by the *kammaja kaya* (i.e. by *kamma vipāka*) AND by the *cittaja kaya* or according to how we think.**
- **The first effect** can bring about aches and pains in the physical body due to *kamma vipāka* (by shifting the *gandhabba*'s body to out-of-balance in a short time, so we can feel the shift). **These are mostly experienced as we get old (e.g., chronic back pains) and are of course not due to meditation.** Some of these may get better with meditation.

6. **In addition to the shifts caused by *kamma vipāka*, we can change the equilibrium position of the *gandhabba*'s fine nervous system with consistent thoughts over long periods of time.** For example, if we think hateful thoughts a lot, the nervous system of the *gandhabba* may twist in a certain way; if we think mostly greedy thoughts, it may shift in a different way.

- Thus, as we think defiled thoughts and act on them on a regular basis, it leads to gradual twisting of nerve bundles in the *gandhabba*, and physical muscles also get twisted accordingly. Since it is a gradual process compared to the first effect, we do not normally feel it (until we get old).
- However, when we start cleansing our minds the fine body of the *gandhabba* tries to come back to its equilibrium position. **During a good meditation session, this can happen fairly quickly and that when one starts feeling such nerve (and muscle) movements.** We are basically trying to “undo” those twists in nerve bundles that occurred over years and years.
- This is why this effect is much less in young children. Their nerves have not yet being shifted too much.

7. **Thus the second effect has its origins in our thoughts.** Normally such effects occur above the waist, along the spine, neck, and in the head. This is related to the fact nerve bundles propagate through the spine and also there are cranial nerves in the brain. Thus *Kundalini* awakening is an example of this category.

- This effect is experienced by different meditators somewhat differently. But the dominant feature is the “pressure waves” that arise above the waist, and normally located around the spine, neck, throat, and the head. These have been attributed to energy centers or “*chakras*” in *Kundalini* awakening; see, “[WebLink: wiki: Kundalini.](#)”
- That is why they say that the *kundalini* energy is “uncoiled” (or “awakened”) during meditation. But this is nothing more than the out-of-balance nervous systems coming back to the equilibrium position. In *anāriya* meditations there is not much further cleansing possible, because in order to proceed further, one needs to comprehend the *anicca* nature of this world.

8. In Buddhist or *Ariya* meditations, one should start contemplating on the *anicca* nature when one starts any type of body sensations. **Any type of body sensations means the mind is beginning to affect the body, and that one has made progress in the cleansing process.** Of course those Hindu yogis who got to this stage had prevented from immoral acts and suppressed such thoughts, and thus had gained a tranquility of mind at least temporarily.

- But if one does not cleanse one's mind in a permanent way, with the comprehension of the true nature of this world (*anicca, dukkha, anatta*), such corrections are temporary and can go right back to the twisted positions. Thus such effects can be re-experienced in varying degrees.

9. When one starts comprehending the *anicca* nature, this “unwinding process” can accelerate (and the body sensations too), and this is when one may even start feeling significant discomfort or even mild pain.

- If the body is really “out-of-alignment”, the realignment process can lead to different types sensations; some may be mild, but some could be even a bit painful.

10. Many people experience sweating, which is definitely part of the “cleansing process”. Our defiled thoughts lead to the generation of “impurities” in various body sites. The pure *citta* generated in meditation can burn them and the body will get rid of the waste via sweat too. Thus sweating is also possible during a good meditation session (in the early stages of progress; of course all these go away eventually).

- Another related symptom is becoming thirsty during a good session; mouth can get dry. It is good to keep a glass of water close-by if that is the case.
- By the way, one can move around even while in a *jhāna*. In fact, when one cultivates the *jhāna*, one can open eyes and not be bothered by it. I can confirm that. In fact, those who have *abhiññā* powers are said to be able to do regular work while using *abhiññā* powers.
- For example, a famous story in the *Tipiṭaka* describes how Ven. Chullapanthaka had created thousand copies of himself with *abhiññā* powers and how they were all sweeping the temple premises.

11. Here is another experience that I have heard people described according to my teacher *Thero's* recorded *desanās*:

- “Something propagated from the neck area to the top of the head and stayed there during the session. This happened during subsequent sessions too”. Such a “propagation” is probably more like a “pressure wave”. This is another “*kundalini* type” effect.
- When these “pressure waves” are strong, it may be a bit painful too. But be rest assured that those effects will gradually go away as one continues when the nervous system comes back to equilibrium. However, if such sensations persist outside the meditation session it may be a good idea to go for a medical examination, since it could be due to a medical condition.

12. There is actually a way to reduce these sensations to some extent. This was suggested by my teacher *Thero* in a *desanā* that I listened to. Even if one meditates with the eyes closed (as most people should do in early stages), the eye balls inside eyelids are in constant motion; they move around a lot.

- One should try to focus the eyes to the nose area. This is done sort of by one’s mind, but the eye balls then keep steady pointing towards to nose. In my case it stopped most of the sensations in the head. Eventually, of course these sensations go away, once one attains “equilibrium”. Then one can proceed even with the eyes open, but still focused towards the nose/mouth area.
- Now I do not have any of those “pressure waves” that experienced in the throat area and recently those in the head area also went away.
- By the way, I have not been able to make it past the third *jhāna* for the past year and a half or so, even though I am making progress (*jhānā* have three levels: weak, medium, and strong). Getting to the fourth *Ariya jhāna* means one has reached the *Anāgāmi* stage, where one loses desire for all sense pleasures (i.e, transcend *kāma loka*).

13. Our thoughts or our “*cittaja kaya*” is the most important of the four types of “*kaya*” that we have. For a discussion of those four types of bodies, see, “[Āhāra \(Food\) in Udayavaya Ñāna](#),” in the Section: [Udayavaya Ñāna](#).

- As discussed there, our physical bodies (*karaja kaya*) that we value so much are there only for about 100 years, while our human *bhava* or human existence can possibly last many hundreds of years. The other three types of bodies of *kaya* that we have are *kammaja kaya*, *cittaja kaya* and *utuja kaya*. All three of these prevail through the whole human *bhava* (of course they undergo constant change); they make a “big transition” when a new *bhava* is grasped at the *cuti-paṭisandhi* moment).

- And it is this *cittaja kaya* (or basically our thought stream) that is the most important. If we use the *cittaja kaya* wisely we can make progress in our mundane lives as well as in pursuing *Nibbāna*. We will discuss this in detail in the last post in on the [Udayavaya Ñāna](#) in an upcoming post.

14. The key point here is that if one starts feeling these body sensations, one has cleansed the mind to the point of being able to comprehend *anicca*, *dukkha*, *anatta* (or any other Dhamma concept) with more ease; see, “[Buddha Dhamma – In a Chart](#),” and the post discussed there.

- At this stage (i.e., when feeling thirst, sweating, body sensations, etc), one is likely to be somewhere around “[9. Key to Ānāpānasati – How to Change Habits and Character \(Gati\)](#)” in the meditation section.
- Of course it is also possible that one could have already comprehended *anicca*, *dukkha*, *anatta* and has attained the *Sotāpanna* stage without any such symptoms. Each person needs to decide that for him/herself; see, “[How Does One Know whether the Sotāpanna Stage is Reached?](#).” **The fundamental guide is whether one has removed those “*apāyagāmi gathi*” via cleansing the mind.** The physical body may or may not give those clues that we discussed above.
- For attaining *magga phala*, *jhānā* are not necessary. Furthermore, *Ariya jhānā* cannot be attained without attaining at least the *Sotāpanna* stage first; see, “[11. Magga Phala and Ariya Jhānā via Cultivation of Saptha Bojjanga](#).”
- **Mental (and associated physical) phenomena are highly personal. Thus above discussed symptoms may or may not be experienced by a given person.**

11.11 9. Key to Ānāpānasati – How to Change Habits and Character (Gati)

The top 10 posts in this section describe the fundamentals of Buddhist meditation. The rest of the posts in this section are on possible meditation subjects. They can clarify unresolved questions, and lead to *samādhi*. But one must contemplate on them.

Meditation is all about purifying one's mind. We all have individualized cravings and habits that we have acquired in our past lives that continue during this life unless we act to change or stop them. We need to cultivate good habits and stop bad ones. The only way to do this is to be mindful of our actions and stop bad actions as they start as thoughts in our minds. **Most bad thoughts arise due to bad habits; they just “pop up”.**

- [Introduction to Character or Personality \(Gati\)](#)
- [A Broad View of the “Person” Trying to be a “Better Person”](#)
- [How Character \(Gati\) Leads to Bhava and Jāti](#)
- [How Habits are Formed and Broken – A Scientific View](#)

11.11.1 Introduction to Character or Personality (Gathi)

1. Here is a good place to see why the Buddha rejected both the concept of a “self” AND a “no-self” (or “soul” AND “no-soul”). We first need to realize that the task of purifying the mind is very personal; only you know about your mind and only you can purify it. The perception of a “no-self” is a bad starting point to do this cleansing.

- We can easily see that “a person” changes over time, both physically and mentally (see the next post). Thus it is easy to see that a concept of a “soul” or “self” does not hold water.
- However, each of us is DIFFERENT, and UNIQUE; no two are the same even at a fixed time. Even though each person changes, the change itself is unique to “that person” and CAN BE initiated by that person. What makes one person different from another is his/her character (*gathi*).
- For those people who say, “there is no-self” or “there is no real me”, I ask: “Then is it OK if someone hits you with a stick or hurt you badly in some way?”. Obviously, that is not fine. Just by denying something that is as real as suffering itself, will not make the problem go away. Just being philosophical is not going to make the problem disappear.
- This is why the Buddha rejected both extremes of “self” and “no-self”.

2. Actually as one increasingly realizes the fruitlessness of struggling to seek sense pleasures, the feeling of “self” starts to decrease. An *Arahant* is the closest to a “self-less person”; but even an *Arahant* has some unique character qualities: nothing to do with greed, hate, and delusion, but more like kammically neutral habits.

- For example, there is this story about a very young *Arahant*. One day a man came to take this *bhikkhu* to his house for a “dāna”, which consists of a lunch followed by a gift (usually things that are needed for a *bhikkhu* like a robe, a towel, etc). On the way, they ran into some puddles on the ground and the young *bhikkhu* jumped over one. The man thought, “Oh, this *bhikkhu* is not even disciplined let alone having any *magga phala*; maybe I should not give him the gift”. They came across a few more puddles and the *bhikkhu* went around them. So, the man asked, “Why did you jump over only that one?”. The *bhikkhu* told him, “If I jumped over anymore puddles, I would probably lose my lunch too”. It turned out that the *bhikkhu* was an *Arahant* with *abhiññā* powers and read the man's mind! Also it is said that the *bhikkhu* was born a monkey for many lives in the recent past, and he still had that *sansāric* “monkey habit” of jumping over things.

3. Habits are formed via repeated use. The Buddha said, “*yā yan taṇhā pono bhavitha.....*” or “*bhava* or habits are formed by *taṇhā* for various things, activities. Remember that *Taṇhā* means “getting attached to something via greed, hate, of ignorance”; see, “[Tanhā – How we Attach via Greed, Hate, and Ignorance.](#)”

4. What we are concerned about is only getting rid of immoral habits and cultivating moral habits. This will make oneself a “better person” long before one even thinks about attaining Nibbāna. This can be done with simple process called “*āna-pāna*” or “taking in good habits” and “discarding bad habits”.

- The Buddha said, “*bhāve thabbancha bhavithan, pahee thabbancha paheenan*” or “keep doing what is good, get rid of those that are not good”. The meaning is a bit deeper than that because “*bhāve*” there refers to making “*bhava*”. The more one does something, it becomes one’s “*bhava*”. And the less one willfully stops doing, that “*bhava*” tends to go away. This is what the neurologists are re-discovering today; see, “[How Habits are Formed and Broken – A Scientific View.](#)”

5. The bad habits need to be stopped each time it surfaces, right there. The Buddha said, “*ette san uppajjamana uppajati, paheeyamana paheeyathi*” or “each time a “*san*” (a bad habit) resurfaces, it needs to be recognized and stopped right then.”

- Therefore, one must do this not only in sitting meditation sessions, but as much as possible, whenever possible.
- This is what the Buddha also meant by “*asevitaya, bhavithaya, bahuleekathaya,*” or “associate, use, and do as much as possible whenever possible” everything that helps with *Ānāpānasati*. These are described in the post, “[Habits, Goals, and Character \(Gathi\)](#)”.

6. I cannot emphasize enough the importance of understanding what is truly involved in *ānāpānasati*. The recent findings on the workings of the brain really helps clarify and highlight some key points that the Buddha emphasized. I think it will help anyone understand the process much better. But first we will take a brief look at how these character qualities are inherited.

Next, “[A Broad View of the “Person” Trying to be a “Better Person”](#)”,

11.11.2 A Broad View of the “Person” Trying to be a “Better Person”

Revised November 28, 2018

1. Let us see how and why we act with greed, hate, and ignorance. Stated simply, all we do during a day does not happen by chance.

- **Our actions are based on our “character” (more correctly *gati*) AND “our way of thinking about this world based on our views about the world”;** “*gati*” is pronounced as “*gati*”.
- For example, if one does not believe in a rebirth process, or the law of *kamma* (that each action has consequences), then it may be easier to seek enjoyment at the expense of other beings.

2. What our character or world view today is due to a complex combination of many things, but the main factors are: (i) *sansāric* habits (also called *gati* and *āsavas*), (ii) biological parents who provide parts of the physical body (this is also related to *kamma vipāka*), (iii) the environment that one grew up AND the current environment (i.e., physical environment and people one associates with).

- Even though the complexity of a “person” cannot be reduced to simple things, those are major ones. As the Buddha pointed out in the *Sabbasava sutta* (see, “[Habits, Goals, and Character \(Gathi\)](#)”), the main things that CAN BE changed NOW are “physical environment and people one associates with” which is a part of (iii) above. If we are talking about a child, then (iii) applies in its entirety.
- Once these “external influences” are taken care of, next is to purify the mind by “taking in” good things and “discarding” bad things or “*ānāpāna*”; see, “[7. What is Ānāpāna?](#)”

3. When we are conceived in the mother's womb, a "blueprint" of the new life is in the form of a *manomaya kāya* (which is made of undetectably fine matter) descends to the womb and combines with the zygote formed by the combination of an egg from the mother and the sperm from the father.

- This *manomaya kāya* is the same as *gandhabba* or *paṭisandhi viññāṇa*.

4. The *manomaya kāya* comes with three *rūpa kalapas* called the *kaya dasaka* (blueprint for the physical body), *bhava dasaka* (whether male or female), and *vatthu dasaka* (mind element, which has the "gati" in it) that were determined by the *kamma vipāka* that led to the birth; we will discuss these later in the Abhidhamma section.

- Thus the physical body of the new life is now going to be affected by not only the *kaya dasaka*, but also the genetic material in the egg and the sperm (DNA of the parents). As the fetus grows, it will also be affected by the food intake by the mother as well as her mental state, home environment, etc. After the birth until death, the physical body (as well as the mind) will be affected by many other factors including the diet and the environment.
- This is discussed in detail at: "[Buddhist Explanations of Conception, Abortion, and Contraception.](#)"

5. Thus there is no "unchanging self" either mentally or physically; everything is in constant flux. But one cannot say "there is no-self" either because the character qualities (*gati* and *āsava*) that comes in with the *manomaya kāya* will keep "evolving"; even though they change, there is a continuation of a particular lifestream.

- Each person or animal that born is unique with a complex set of mental and physical parameters that evolve moment-to-moment like a flowing river; see, "[What Reincarnates? Concept of a Lifestream](#)".
- We will discuss some of these factors in various sections, but the key point I wanted to get across is the fact that each person has a unique set of character qualities (*gati* and *āsava*) that have evolved over uncountable number of lives in the past. And those are the key to one's destiny. **One has the power to change those.**

6. What makes one person different from another is this set of "*gati* and *āsava*", which can be loosely translated as, "character qualities and deep-seated cravings". Some people are calm and quiet while others are rough and boisterous; some like music while other like to watch things or engage in physical activities; the possibilities are endless and there are innumerable combinations of them. That is why each person is different.

- Hidden in these apparently harmless "habits" and "cravings" are the defilements or the tendencies to engage in certain types of activities that are harmful to oneself or the others.
- The key is to focus on the glaring character flaws first: if one engaged in activities such as fishing or hunting, that means willfully taking the life of other beings for one's pleasure. Does that makes sense within the wider world view of any given being repeatedly born in any of the 31 realms? Within that broader view, we can see that any animal, how small or insignificant, has an attachment to its life; and we could have had that very life in the past.
- Take another example of a transaction between two people. The goal should be to make a decent profit for oneself making sure one covers the cost and make enough profit to "stay in business and provide for the family", but not to make the transaction too burdensome on the other party. As we discussed in the post, "[Kamma, Debt, and Meditation](#)", one could get into deep debt to other people and beings by exploiting them in many different ways.

7. The easiest way to deal with this is to look at each action mindfully and decide whether that act is "fair" to everyone involved. Of course one could check to see any of the ten defilements (*dasa akusala*) are committed by that action; see, "[Ten Immoral Actions \(Dasa Akusala\)](#)".

- As I keep saying, one needs to focus on the more extreme violations first. There is no point in worrying about inadvertently killing some insects while gardening if one is engaged in lying and deceit or killing

animals for pleasure. It is good to get an idea of the severity of different acts; see, "[How to Evaluate Weights of Different Kamma](#)".

8. **This is why it is important to learn Dhamma as much as possible, while engaging in meditation. The Path becomes clear as one learns the subtleties in key Dhamma concepts.**

- I am amazed how much I learn each and every day; it is like a picture becoming clearer by the day. You start to see the even smallest detail, and instead of becoming distraught you get a sense of clarity and peacefulness by cleansing the mind. You realize that no one is perfect until the *Arahanthood* and the key is to make progress, no matter where you are. Each step in the right direction makes you feel better.

Next, "[How Habits are Formed and Broken – A Scientific View](#)",

11.11.3 How Character (Gathi) Leads to Bhava and Jathi

1. One of the special knowledges that the Buddha gained at the Enlightenment was the *āsavakkhaya ñāṇa*. This is the key to stop the suffering FROM ARISING via getting rid of the deep-seated cravings (*āsava*) that we all have. *Āsavakkhaya ñāṇa* ("*āsava*" + "*khaya*," where "*khaya*" is the opposite of "*san*"; see, "[What is "San"?](#)") is the knowledge on how to remove those cravings (*āsava*).

2. Throughout the site, I keep emphasizing the importance of understanding (not memorizing) the meanings of the key Pāli words like *gathi*, *anusaya*, *āsava*, *bhava*, *jāti*, *saṃsāra*, and *dukkha*; they are intimately inter-connected in many ways including *paṭicca samuppāda*. The way to stop future suffering (*dukkha*) from arising and reach Nibbāna is to break the perpetual cycle that lead to a new *jāti* (birth) at each death.

- Our problems do not go away at death (committing suicide is a bad idea); they merely get started in a new phase with a new body, which could be worse than what we have now; see, "[What Reincarnates? – Concept of a Lifestream.](#)"
- The connections among *bhava* and *jāti* on one side and *āsava*, *anusaya*, and *gathi* on the other side are intimate, and need to be understood well; see, "[Sansāric Habits, Character \(Gathi\), and Cravings \(Āsava\).](#)" before reading the rest of this post.

3. **And this understanding is needed even if one is not seriously thinking about Nibbāna. The whole key to suffering in general is embedded in these intricate relationships.**

- *Bhava* and *jāti* also happen during this very life; *jāti* could mean birth of a new desire; see, "[Idappaccayatā Paticca Samuppāda](#)" and "[Bhava and Jāti – States of Existence and Births Therein.](#)"
- It may be a bit confusing at first for a new person to this site, but have patience and read the inter-connected posts; I have links everywhere to pertinent posts/material. Once you get an idea of the underlying connections, it will clarify everything, like a fog being lifted.
- I have set up links to open in new windows, so that you can go back forth between posts easily and try to "fill-in-the-gaps".

4. A perpetual cycle that is ever-present in the sansāric cycle of rebirths is described in the following verse:

"uppado pavattan, pavatta nimittan

nimitta paṭisandhi, paṭisandhi gathi"

- "*Uppada*" means arising. When *anusaya* (temptations) arise due to *āsava* (cravings), we need to stop that temptation and break the cycle at "*pavattan*" (which means keeping it or go with it).
- If we go along with the temptation ("*pavatta*"), then it becomes a *nimitta* (literally a "sign"). A *nimitta* is a characteristic that is associated with that particular act. For example, for an alcoholic a picture of an alcohol bottle or a bar (or where one normally drinks), or even seeing a friend with whom one drinks

often, can be a *nimitta*; when any of such a “symbol” comes to the mind, it reminds of the drinking act and gets one in the “mood”.

5. Most times, the *paṭisandhi* (linking of the next rebirth) takes place via a *nimitta*; this is what is meant by “*nimitta paṭisandhi*” above. At the dying moment, what comes to the mind is likely to be something that one does often, and that could become the link to the next life.

- A drug addict, if he/she is lucky to be born human again, will be attracted to a mother who is a drug addict.
- For a person with lot of hate, what comes to the mind at the dying moment could be a picture of an arch enemy; then the kammic power shows him a gun or a knife and he will be likely to attack the person with that weapon (in a dream-like state); the next moment he will be in an *apāya* (hell), which is the “matching place”.

6. The worse thing is that the old habits continue and even strengthened in this new life; this is what is meant by “*paṭisandhi gathi*” above. Suppose that drug addict who was born to an addicted mother is adopted by another family and raised in a drug-free environment. Still, if that child becomes exposed to drugs later in his life, he could be tempted to use drugs because of his *sansāric* habit.

- This is the danger in the rebirth process or *samsāra*; one keeps going down the slippery slope unless one changes one’s habits with effort. And reversing that trend can be done only in a human life.
- Sentient beings in most realms do not act willfully but according to their *sansāric* habits. We can see only the animal realm and clear that they do things mechanically (**almost like robots, but not quite only because they have FEELINGS**). Only the beings in higher realms have genuine free-will and it is optimum for the humans.
- You can see that many animals have unique characteristics: such characteristics and habits are associated with that particular existence (*bhava*). For example, some types of birds have been building the same type of nests from beginningless time through countless world cycles; **but they are unable to make it any better**. Migrating birds know exactly where to fly. New born turtles head to the sea right after the eggs are hatched; see the video:

[WebLink: YOUTUBE: New Born, Baby Sea Turtles Race to the Ocean!](#)

7. However, humans can change their destiny. They have free will and the ability to come up with “new ideas”. We keep building new things, discovering new things, and making progress.

- We need to keep in mind that we can also purify our minds and become free of this unending and suffering-laden rebirth process. If we ever get a birth in one of the lower realms, we will be stuck there for a long time to come.
- The way to purify our minds is to get rid of bad habits. Excessive greed (this include addictions to anything including food, money, property, alcohol, drugs, etc) and anger are the first two things one needs to work on.
- This does not mean one has to give away one’s wealth; just don’t be too attached to them. One has “earned” that wealth from previous good deeds, so one does not need to feel bad about it. But those things last only about 100 years, and who knows what we will inherit in the next life.

8. And the key to be permanently free of the *apāyā* is to get rid of those bad character qualities (*gathi*) that can give us birth in those four realms.

- We can avoid the *niraya* (hell) by getting rid of hate; we can stay away from *peta* (hungry ghost) worlds by getting rid of greed, we can make sure to not get a birth in the *asura* realm by not getting “free rides”, and making our own living honestly (“*a*”+“*sūra*” means “not able” or those who depend on others).

- An animal birth results from *gathi* that have all three roots of greed, hate, and ignorance; animal realm is called “*thirisan*” in Pāli or Sinhala: “*thiri*” is three and “*san*” is greed, hate, and ignorance, thus an animal birth is caused by *gathi* that have all three immoral roots.
- In the same way, we can make it possible to be born a deva by being generous to others; we can make it possible to become a *brahma* by cultivating *metta*, *karuna*, *mudita*, *upekkha*; and we can optimize chances for a human birth by cultivating wisdom as well.

9. But no matter how well we live this life, we do not know what kind of “*kammic* baggage” that we carry from previous lives. Thus the only way to avoid the four lower realms (*apāyā*) with CERTAINTY is to attain the *Sotāpanna* stage of *Nibbāna*. And we can do this by comprehending *anicca*, *dukkha*, *anatta*, the true nature of this world.

- When one truly comprehends *anicca*, *dukkha*, *anatta*, one’s mind automatically rejects actions that are bound to maintain and cultivate bad *gathi*, and will encourage actions that will cultivate good *gathi*. If this is done to the level of getting rid of the four greedy *citta* with wrong vision and the *citta* with *vicikicchā*, then one becomes PERMANENTLY free of the *apāyā*; see, “[Akusala Citta – How a Sotāpanna Avoids Apayagami Citta.](#)”

10. Finally, here is another interesting video from the animal world which shows how ants build sophisticated cities. But unlike humans, the ability to do that does not come from ingenious minds; ants have been doing the same from eternity. It is a “characteristic” that is naturally associated with the “ant *bhava*.” Each ant “knows” what to do, just like the baby turtles who race to the sea just after being hatched. It is the same with how birds know where to fly in their long migrations.

- There is so much that the Buddha explained to the world, but the world is still unaware of.

[WebLink: YOUTUBE: Giant Ant Hill Excavated](#)

11. More details on the importance of *gathi* in the rebirth process are discussed in, “[Patisandhi Citta – How the Next Life is Determined According to Gathi.](#)”

11.12 **Karaniya Metta Sutta – Metta Bhāvanā**

October 7, 2018; revised September 6, 2019

Karaniya Metta Sutta is one of the popular *suttā* in Buddhist countries. However, like many *suttā*, it has not been appropriately translated properly in most current English translations.

1. First of all, the actual name of the *sutta* is *Karaniyamattha Sutta*. It comes from “*karaniyama*” meaning “essential to do” (කලයුතුමා (kalayutuma means “requires”) in Sinhala) and “*attha*” meaning “oneself.” That means this *sutta* summarizes what one must do (to make progress on the Path). But this is not a significant error since Metta *bhāvanā* is there too.

- Those “requirements” are stated in the first three verses.
- The actual ctual “Metta *bhāvanā*” part is in verses 4 through 8.
- Verse 9 says that one should do this *bhāvanā* in all four postures. This *bhāvanā* is the “*Brahma Vihāra*” or “living like a *Brahma*” or “living with the mindset of a *Brahma*.”
- Verse 10: When one fulfills the “requirements” at the basic level, one will get to the *Sotāpanna* stage. With the cultivation of Metta *bhāvanā* one will get to be an *Anāgāmi* (not born in a womb again).

| | Pali | English |
|---|--|--|
| 1 | <i>Karaṇīyamattha kusalena, Yantam santam padaṃ abhisamecca; Sakko ujū ca suhujū ca, Sūvaco cassa mudu anatimānī</i> | What <i>kusala</i> should be done by one who is seeking cooling down (by seeing the unfruitful nature of this world) : moral, upright and disciplined, with pleasing manners and humble . |
| 2 | <i>Santussako ca subharo ca, Appakicco ca sallaukavutti; Santindriyo ca nipako ca, Appagabbho kulesuananugiddho</i> | Always happy, bearing only good (<i>gati</i>), with few mundane duties and simple life , with senses calmed and a cooled mind, with few burdens (possessions), and treating everyone the same (regardless of race, color, etc.). |
| 3 | <i>Na ca khuddamsamācare kiñci, Yena viññū pare upavadeyyum; Sukhino va khemino hontu, Sabbe sattā bhavantu sukhittā</i> | Not engaging in harmful/lowly actions (and this thought that one always holds), may all beings attain Nibbāna (and get to the ultimate happiness) . |
| 4 | <i>Ye keci pāṇabhūtatti, Tasā vā thāvarā vā anavasesā; Dīghā vā ye mahantā vā, Majjhimā rassakāṇukathulā</i> | Whoever there may be with a breath of life , trapped by greed for so long in <i>saṃsāra</i> , may they be free of fear and greed without exception. |
| 5 | <i>Diṭṭhā vā ye va adiṭṭhā, Ye ca dūre vasanti avidūre; Bhūtā vā sambhavesī vā, Sabbe sattā bhavantu sukhittā</i> | Those who are seen or unseen, those dwelling far or near, those born as well as those seeking birth (<i>gandhabbā</i>), may all beings attain Nibbāna . |
| 6 | <i>Na paroparaṃ nikubbetha, Nātimaññetha katthacinam kañci; Byārosanā paṭighasañña, Nāññamaññassa dukkhamiccheyya</i> | May no one deceive another, treat everyone like close relatives. May they not wish each other harm, and by seeing the unfruitful nature of this world, may they be free of suffering . |
| 7 | <i>Mātā yathā niyaṃputtam āyusā ekaputtamanurakkhe; Evampi sabbabhūtesu, Mānasaṃbhāva ye aparimāṇaṃ</i> | Just as a mother would protect her only child with her life, may this protection affect all beings on an equal footing . |

| | Pali | English |
|----|--|---|
| 8 | <i>Mettañca sabbalokasmim, Mānasambhāva ye aparimāṇaṃ; Uddhaṃ adho ca tiriyañca, Asambādhaṃ averam asapattaṃ</i> | May all cultivate <i>mettā</i> towards all beings on an equal footing , those who live above, below, or across. May all be unhindered and without enmity. |
| 9 | <i>Tiṭṭhaṃ caraṃ nisinno vā, Sayāno vā yāvatassa vighatamiddho; Etaṃ satim adhiṭṭheyya, Brahmametaṃ Vihāram idhamāhu</i> | Whether standing, walking, sitting or lying down, may all sustain this <i>mettā</i> mindset (what the Buddha called Brahma Vihāra). |
| 10 | <i>Diṭṭhiñca anupaggamma, Sīlavā dassanena sampanno; Kāmesu vinaya gedhaṃ, Na hi jātugabbaseyyam punaretī”ti</i> | Being moral based on right vision (a Sotāpanna) , and by removing <i>kāma rāga</i> with effort one will never again be in a womb (Sakadāgāmi or higher) . |

Note: The pdf file of the *sutta* itself can be downloaded here: [“WebLink: PDF File: Karaniya Metta Sutta.”](#)

2. Deeper explanations are in some words like “*abhisamecca*” (“*abhi*” + “*san*” + “*avecca*”), and “*dukkhamiceyya*” (“*dukkham*” + “*aveceyya*”).

- *Avecca* is the keyword in both cases, and I discussed the deep connection to “*icca*” and thus *Tilakkhaṇa* in the post, [“Sotapatti Anga – The Four Qualities of a Sotāpanna”](#) (starting at #9 in the post).
- If anyone needs more explanations of other words, we can discuss it at the discussion forum, but we will look at one more next.

3. Another keyword is “*mānasambhāva*,” which comes from “*mānasan*” and “*bhava*,” meaning one’s mind (ideally) does not contaminate beyond the “*mānasaṃ*” stage.

- When thoughts (*citta*) arise, they get contaminated within a fraction of a second due to one’s *gati*. That is discussed in the post, [“Amazingly Fast Time Evolution of a Thought \(Citta\).”](#)
- Therefore, the goal is to improve one’s *gati*, so that one’s *citta* will not contaminate beyond the “*mānasaṃ*” stage (reached the *Arahan*t stage). **One should strive to approach that mindset right now, at least while meditating.**
- As one gets closer to that stage, one will have true *mettā* AUTOMATICALLY for increasingly more and more living beings. At *Arahan*thood, one will have boundless *mettā* to all: “*mānasambhāva ye aparimāṇaṃ.*”

4. The first three verses in the *sutta* state how one gets to the *Sotāpanna* stage by getting to the *Ariyakanta sīla* (unbreakable moral conduct). That is when one will have *aveccappasāda* (unbreakable faith in the Buddha, Dhamma, Saṅgha). That is discussed in detail in the post, [“Sotapatti Anga – The Four Qualities of a Sotāpanna.”](#)

- Then by cultivating *mettā*, one can gradually get rid of *kāma rāga* and get to the *Sakadāgāmi* and *Anāgāmi* stages.
- However, this is an excellent *sutta* to listen to and to recite even before getting to the *Sotāpanna* stage. It is better **to recite Pāli verses with an understanding of the meaning of those verses. The sound itself is beneficial, especially when pronounced correctly, as done by the Thero in the recording below.**
- It is also good to play the recording in the background while doing other things or during meditation. In Asian countries, this is one of the *suttā* being played in the mornings, while everyone is getting ready to go to school or work.

5. A recital of the *sutta* by Waharaka *Thero* is below:

[WebLink: Karaniya Metta Sutta in mp3](#)

11.13 10. Attaining the Sotāpanna Stage via Removing Diṭṭhāsava

The top 10 posts in this section describe the fundamentals of Buddhist meditation. The rest of the posts in this section are on possible meditation subjects. They can be used to clarify unresolved questions, and to gain *samādhi*. The first 11 posts should be followed in that order, at least initially.

July 30, 2015: I have re-written the two posts #10 and #11 (previously titled, “10. Magga Phala and Ariya Jhānā via Cultivation of Satta Bojjhaṅga” and “11. How to Select and “Grow” Meditation Procedures for Magga Phala”) that were written some time back with different titles. Over the past two months, I have been able to clarify some subtle issues in both my own experience and in technical details. **Revised August 5, 2017; September 19, 2018 (updated links).**

- First, the order of things: *samādhi*, *magga phala*, and then *Ariya jhānā* in that order; see, [“Possible Outcomes of Meditation – Samādhi, Jhāna, Magga Phala.”](#)
- Thus *jhānā* (*Ariya* or *anāriya*) are not necessary to attain the *Sotāpanna* stage; see the posts in the [“Sotāpanna Stage of Nibbāna”](#) section for details on this and many other aspects.

1. First, it would be challenging to get to even a state of *samādhi* if one is not keeping up at least the “conventional” five precepts: abstaining from killing, stealing, sexual misconduct, lying, and using drugs or getting intoxicated. Those things make the mind restless and makes it hard for the mind to focus attention (the five hindrances “cover the mind”). Just strictly obeying the five precepts may not be effective if one’s mind is full of jealousy, extreme greed, hate, etc.; see, [“The Five Precepts – What the Buddha Meant by Them.”](#)

- Just like one cannot see the bottom of a well if it is highly contaminated, the mind (and the body) will not “feel anything” even in a formal meditation session if the mind is “highly contaminated.” And there is no point in trying to take out the “small defilements” (such as abstaining from taking a glass of wine) if one is engaged in immoral activities.
- With the “big defilements” are removed, one starts seeing a little bit further down the well; similarly, one’s mind will become lighter, with less stress, even when not in a formal meditation session. When one sits down in a quiet place, it will become easier to get to some state of “*samādhi*,” or tranquility.
- The Buddha said that “*kusala sīla*” leads to tranquility of the body and mind, which in turn leads to *samādhi*. The “*kusala sīla*” accomplished via gaining *Sammā Diṭṭhi* (to some extent) is all that is needed to attain the *upacāra samādhi* needed for the *Sotāpanna magga/phala*. All three *saṃyojana* removed at the *Sotāpanna* stage (*sakkāya diṭṭhi*, *vicikicchā*, *sīlabbata parāmāsa*) are associated with the wrong vision or *diṭṭhi*.

2. Many people have the idea that one needs to “get to *samādhi*” using a separate meditation technique such as the conventional breath meditation. Even though one could do that, it would be a waste of time. One can get to *samādhi* just by listening or reading attentively to CORRECT dhamma.

- There is not even a single reference in the *Tipiṭaka*, where the Buddha asked anyone to do a “*Samatha Bhāvanā*” first and then to “*vipassana bhāvanā*.” When one comprehends Dhamma, one’s mind get calm, and through that *Samatha* state, one can get to *magga phala*.
- After attaining the *Sotāpanna* stage, one can get to *Ariya jhānā* by focusing on that “state of cooling down” that one has already achieved to some extent, to get to *jhānā*.
- One really needs formal meditation techniques to attain **higher magga phala**, i.e., above the *Sotāpanna* stage; the reason will become clear shortly. However, it is fine to do formal meditation even to attain the *Sotāpanna* stage. In the following, I will describe what I actually went through.

3. To get to *samādhi*, contemplating Dhamma concepts will make it easier and faster. Also, one will be able to stay in “meditation” for a longer time. Different names used are, insight meditation (*vipassana*), many forms of “*anupassanā*,” and cultivating the “*dhamma vicaya*” *sambojjanga*. Concomitantly, one needs to do the correct version of “*Ānāpānasati*” at all times.

- In principle, working towards the *Sotāpanna* stage does not require any formal meditation techniques even though meditation can help; there have been countless people who attained the *Sotāpanna* or even higher stages of *Nibbāna* just by listening to a Dhamma discourse.
 - It is quite essential to understand this point. Many people have one or more of the following misconceptions about reaching the *Sotāpanna* stage: (i) Giving up all worldly possessions, (ii) Become a *bhikkhu* or live in seclusion, (iii) One needs to do many types of meditation techniques.
 - To clarify this issue, let us examine what is actually involved in attaining the *Sotāpanna* stage.
4. Removal of cravings for worldly pleasures or *āsavas* (*āsavakkhaya*) leads to *Nibbāna*; see, “[Āsava, Anusaya, and Gati \(Gathi\)](#).”
- Out of the four *āsavās* that we have, only one goes away at the *Sotāpanna* stage: **dittasava or the craving for wrong worldviews**. In the *Sabbasava Sutta*, this is referred to as removal by clear vision (“*dassanena pahātabbā*”, where *dassanena* is vision and *pahātabba* is removal).
 - The other three *āsavas* of *kamasava* (craving for sense pleasures), *bhavasava* (desire to live somewhere in the 31 realms of this world), and *avijjasava* (ignorance of *anicca*, *dukkha*, *anatta*) go away at the higher stages of *Nibbāna*; see the above post.
5. The critical point is that one does “*apāyagāmi apuññābhisaṅkhāra*” (or strong immoral deeds that makes one eligible to be born in the lower four realms) only when one has wrong worldviews. Contrary to most people’s beliefs, one does not need to lose the craving for sense pleasures to attain the *Sotāpanna* stage. *Kāma āsava* is reduced in stages in the *Sotāpanna* and *Sakadāgāmī* stages and is removed only at the *Anāgāmī* stage.
- That is why learning dhamma concepts and getting rid of “*diṭṭhis*” or “wrong views” is key in attaining the *Sotāpanna* stage, as I emphasized in several posts; if you enter “*diṭṭhi*” in the Search box on the top right, you will see many relevant posts.
 - We all have many *diṭṭhis*. These can be removed only via learning the true nature of this world, i.e., by learning Dhamma.
 - One meaning of *Sotāpanna* (“*sota*” + “*paññā*”) is “one who has cultivated wisdom by listening to Dhamma”; in the days of the Buddha, that was how one learned Dhamma, by listening.
6. Even before meeting my teacher *Thero*, I had been thinking about dhamma concepts for 3-4 years and had been trying to get a consistent picture in my mind. Even at that time, I could quickly get to *samādhi* because my mind was focused.
- When I “got stuck” trying to figure out what a particular concept means concerning others, I would look through books and also listen to *desanās* (discourses) on the internet. It is at this stage that I realized that most of the explanations did not make sense, and of course, were not consistent with other key concepts.
 - To give an example, I had a hard time explaining the rebirth stories by so many children. If “being born human” is so difficult as explained in many *suttā* (see, “[How the Buddha Described the Chance of Rebirth in the Human Realm](#)”), then how can all those children remember their recent past lives? Furthermore, there were “gaps” from the time they died in the previous life to the time they were born in this life.
 - Once I met my teacher *Thero*, I was able to clarify that issue along with numerous others: Birth is different from “human *bhava*”; see, “[Bhava and Jāti – States of Existence and Births Therein](#).” Also, when one dies and has energy left in the “human *bhava*,” one becomes a *gandhabba* and has to wait until a suitable womb becomes available; see, “[Mental Body – Gandhabba](#).”
 - Thus rebirth in the human realm does not happen instantaneously. One could in the *gandhabba* state for years before being directed to a suitable womb. And one can be born in the human realm many times before the *kammic* energy for that “human *bhava*” is exhausted.

7. However, I was able to get to *samādhi* even before resolving many of these issues. I was making steady progress with the concepts I could quickly grasp. I would sit at the desk and contemplate and I could feel my body getting lighter and mind becoming calm. It was much better than just wasting time doing “breath meditation.”

- If I sat in a quiet place and meditated (contemplated about a Dhamma concept), my mind would “latch on to it,” and I could get to possibly an *anāriya jhānic* experience. That started about a year before I learned the true meanings of “*anicca, dukkha, anatta*.”
- It started with “tingling sensations inside my brain”; I could feel things happening there. And then I could feel “needle pricks” all over the body and my body would start “freezing,” mostly the upper body. These “symptoms” are not common to all.
- Learning Dhamma is a critical part of “*kusala sīla*,” especially for the *Sotāpanna* stage. *Kusala sīla* automatically leads to *samādhi*, as discussed in the “[Na Cetanākaraṇīya Sutta](#).”

8. After I heard the “true meanings of *anicca, dukkha, anatta*,” I made progress very quickly. When I look back now, I may have attained the *Sotāpanna* stage while listening to that very first *desana*. However, it took me some time to realize it and to convince myself. One needs to look back at the progress one has made, and see that one is now incapable of committing immoral deeds that would make one eligible for rebirth in the *apāyā*.

- I was over-joyed with being able to comprehend the “foundation of Buddha Dhamma.” It does not make sense to struggle to seek more worldly pleasures and possessions. That is guaranteed to be a failure in the long run. One spends one’s whole life making money to enjoy such “pleasures” and before one realizes, one come to old age. I would call or e-mail my friends and tell them that they needed to listen to *desanas* by those *Theros*.
- It took me a little while to realize that most of them could not figure out what I was excited about. Now, looking back, I realize that their minds were not ready. They were too busy making “more money.” For me, who had been struggling seriously for a few years, it was a revelation. But most people who just spent a bit of their time reading, critical concepts do not “connect.” **Reading Dhamma should not be done the same way as reading a newspaper or a novel; one needs to be engaged.**
- Anyway, after getting the true meaning of “*anicca, dukkha, anatta*,” I spent the next few months scouring the internet for the *desanas* of those *Theros*. After five months, I made a trip to Sri Lanka and brought back more material to listen to. It was so fulfilling and exciting; I was learning at a very rapid pace. At that time I didn’t even think about *jhānā*, but I could feel “*jhānic* effects,” i.e., my *samādhi* was getting intense, even though I was not trying to cultivate them.
- **September 19, 2018 update:** For the past few years, I have been listening to only those *desanas* by Waharaka Thero. They are available only in the Sinhala language at “[සදහම් ද මේන](#)”; also see: “[Parinibbāna of Waharaka Thēro](#).”

9. Even though I had an inkling about reaching the *Sotāpanna* stage soon after listening to that *desanā*, I developed the *jhānā* some months later. However, **those turned out not to be *Ariya jhānā* though, since they can be attained only by an *Anāgāmi***; see, “[11. Magga Phala and Ariya Jhānā via Cultivation of Satta Bojjhaṅga](#).”

- These and other aspects of *Ariya* and *anāriya jhāna* are discussed in the section: “[Samādhi, Jhāna \(Dhyāna\), Magga Phala](#).”
- Once I finished investigating and “filling the gaps,” the *jhānā* came almost automatically. The meditation experience that I described in #7 became much stronger; I could close my eyes and “feel the change in the head and the body” within minutes (and nowadays within seconds).

10. The above is what I mean when I say, “feel the results of meditation.” **One can feel it in the body as well as in mind.** Let us first discuss the reasons for the “body effect” and then the “mind effect.”

- We have a very complex nervous system that the brain uses to control various body parts and also to communicate with the five physical senses. There is a “duplicate nervous system” associated with the *manomaya kāya*, and as we grow up, those two systems get somewhat displaced. The displacement becomes more prominent when we start enhancing all types of bad habits; they go “out of sync.”
- When we start learning Dhamma and stay away from most egregious acts, the two nervous systems try to get to the ideal overlap positions, and one could feel that. That becomes noticeable during meditation. Some people may feel aches and pains, sweating, etc. That is why I had said in other posts that things MAY look worse before getting better. In a way, such “body signals” are a good sign; it means the body is starting to respond.

11. Now to the “mind effect.” Many people tell me that they cannot keep the mind focused on even the breath for too long. That is a *sansāric* habit that we have; the mind does not like to stay in one place. It wants to “know” about everything that is happening not only in the vicinity, but it also randomly thinks about past events or future plans too.

- **The only way to remove this “bad habit” is to get into the habit of thinking about Dhamma concepts slowly. And that cannot be forced either.** Unless and until the mind sees the benefits of learning Dhamma, it can be a “chore” to some people. But once one gets some traction, one starts enjoying the “taste of Dhamma”, and then it is easy to stay focused.
- The key here is that when one learns Dhamma, “*diṭṭhāsava*” (or craving for wrong worldviews) starts to dissolve, initially slowly, but picks up speed as one starts grasping concepts.
- The two critical components of *pancanivarana* (*kāmacchanda* and *vyāpāda*) are reduced as *diṭṭhāsava* is reduced. That in turn, lead to the reduction of the other three components of the *pancanivarana* as well. This process goes all the way to the *Sotāpanna* stage.

12. Of course, I did not realize until after meeting my teacher *Thero* (online) that what I had been doing all along was a crude version of the *Satta Bojjhaṅga Bhāvanā*. The critical part of that is *dhamma vicaya* (contemplating on Dhamma concepts). [*vicaya* :[m.] investigation.]

- That is how one cultivates the “*anicca saññā*” which is the key to removing defilements permanently. See, “[What is the only Akusala Removed by a Sotāpanna?](#)” and “[How to Cultivate the Anicca Saññā.](#)”
- The formal *Satta Bojjhaṅga bhāvanā* is discussed in the next post, “[11. Magga Phala and Ariya Jhānā via Cultivation of Satta Bojjhaṅga.](#)”
- It is also important to realize that even an *Arahant* will not lose the sense of taste; one increasingly will lose CRAVINGS for them; see, “[Kāma Guna, Kāma, Kāma Rāga, Kāmaccandha.](#)”

13. **November 11, 2016:** I get many questions on this topic, i.e., how to verify one is making progress towards the *Sotāpanna* stage. The new section, “[Living Dhamma](#),” provides a systematic way to achieve that goal, in addition to providing guidelines on how to check one’s progress.

- **January 23, 2020:** The new section on “[Origin of Life](#)” is an attempt to start “at the beginning” and to get to more in-depth concepts of anicca, dukkha, anatta. The deeper I get into the fundamental concepts, I realize that there is much more! **However, basic comprehension becomes more natural too.** I may need to go back and revise many of the old posts. So, I would encourage everyone to read the new series written with my deeper understanding.

11.14 11. Magga Phala via Cultivation of Satta Bojjaṅga

The top 11 posts in this section describe the fundamentals of Buddhist meditation. The rest of the posts in this section are on possible meditation subjects and can be used to clarify unresolved questions, and to gain *samādhi*. The first 11 posts should be followed in that order, at least initially.

Revised August 5, 2017; September 19, 2018; revised April 24, 2020

Introduction

1. There are many ways to get to *magga phala*. What I have followed is *Bojjaṅga Bhāvanā* and *metta Bhāvanā*. As explained in the previous post, I first did a crude version of the *Bojjaṅga Bhāvanā* for a few years without even realizing that it was effectively a *Bojjaṅga Bhāvanā*.

- Now I practice *Bojjaṅga Bhāvanā/Ariya Metta Bhāvanā* in sitting meditation and *ānāpānasati* (and *satipaṭṭhāna*) during other times, i.e., suppressing any thoughts/speech/actions that should be discarded and cultivating the opposite. Nowadays, It has become a habit and the moment something not appropriate comes to the mind, I become aware of it. As I keep saying, cultivating good habits (*gati*) is the key to progress.

Ānāpānasati Bhāvanā Comes First

2. *Ānāpānasati* (and *Satipaṭṭhāna*) helps one to get rid of bad habits/cultivate good habits, and thus change one's *gati* and *āsava*; see, "[9. Key to Ānāpānasati – How to Change Habits and Character \(Gati\)](#)", and "[Is Ānāpānasati Breath Meditation?](#)".

- *Bojjaṅga Bhāvanā* helps the mind to get to *samādhi* while also cultivating the *Bojjaṅga dhamma*. *Satta Bojjaṅga* (Seven Factors of Enlightenment) are listed in the "[37 Factors of Enlightenment](#)"; a brief description is given below.
- The other part of my sitting meditation is *Ariya Metta Bhāvanā*; see, "[5. Ariya Metta Bhāvanā \(Loving Kindness Meditation\)](#)". This routine works well for me.
- Of course, there are many paths to *Nibbāna* (and to the *Sotāpanna* stage), and this is the one I took (almost inadvertently). **Still, it is critical to realize that attaining the *Sotāpanna* stage ONLY REQUIRES removing wrong world views or *diṭṭhi*, i.e., getting rid of *ditthāsava*.** But this may not be an easy step, because one needs to realize the *anicca* nature of this world.

What Are *Bojjaṅga*?

3. The word *Bojjaṅga* comes from “*Bodhi*” + “*aṅga*“.) Of course, “*Bodhi*” means “*bhava uddha*” or “Enlightenment” and “*aṅga*” means “part.”

- Thus, the seven factors in the *Satta Bojjaṅga* are seven factors (*satta* means seven) conducive to attaining *Nibbāna*.

4. The key here is that during the *Bojjaṅga Bhāvanā*, one only does “*āna*” or “taking in good things”; see, "[7. What is Ānāpāna?](#)". However, “*pāna*” or “removing the bad” happens automatically via wisdom gained, i.e., via enhanced vision or *sammā diṭṭhi*. One's mind is automatically focused on thinking about a Dhamma concept, and once one gets some traction, the mind will get “latched on to it”.

- In the early days, when I started contemplating a Dhamma concept I automatically got to *samādhi* (not *jhāna*), i.e., the mind became concentrated on that and the body and the mind both became lighter. I also experimented with breath meditation) at that time.
- This habit of contemplating on dhamma concepts naturally got established as cultivating *dhamma vicaya* in *Satta Bojjaṅga Bhāvanā* once I met my teacher *Thero*.

The necessity to Comprehend *Tilakkhaṇa*

5. I was able to make real progress only after learning the true meanings of *anicca*, *dukkha*, *anatta*; see, "[10. Attaining the Sotāpanna Stage via Removing Ditthāsava](#)".

- Waharaka Thero has explained how to systematically cultivate the seven *Bojjhaṅga dhamma*. That involves first establishing *sati* (moral mindfulness) based on those correct interpretations of *anicca*, *dukkha*, *anatta*. See, "[Anicca, Dukkha, Anatta](#)", and the follow-up posts.
- Of course, one must remove the ten types of *micchā ditthi* before being able to comprehend *Tilakkhaṇa*. See, "[Micchā Ditthi, Gandhabba, and Sotāpanna Stage](#)."

The Seven *Bojjhaṅga*

6. The seven *Bojjhaṅga Dhamma* are *sati* (mindfulness), *dhamma vicaya* (investigation of *dhamma* concepts; pronounced "dhamma vichaya"), *virīya* (effort), *pīti* (joy), *passaddhi* (tranquility), *samādhi* (one-pointedness), and *upekkhā* (equanimity). I will have a post on this later, but I have discussed most of these terms in other posts.

- It is important to again clarify what *sati* is. Many people think *sati* is "concentration" or just "paying attention". It is much more than that. It is "paying attention" WITH a frame of mind based on some understanding of *anicca*, *dukkha*, *anatta*: One has contemplated on the "big picture" of the Buddha with 31 realms and a rebirth process that has led to much suffering in the long run.
- Even though one may be enjoying life right now, one knows that it will be of negligible duration compared to the *saṃsāric* (or *saṃsāric*) time scale. This is the theme of this website, and there are many posts that one can read.

Sati Comes First

7. **During the whole time of the *Bojjhaṅga Bhāvanā*, *sati* must be there**; that frame of mind must be there. *Dhamma vicaya* is a critical evaluation of a given *dhamma* concept. One can choose a topic or two for a given session and then contemplate on it. **One could do this not only in a formal way, but also just while reading a web post or a book on the subject.** Each individual is different, so one needs to figure out which is more suitable.

- One can compare the concept with one's own life experience, and also others' that one can see. For example, when contemplating on *anicca*, there are several video clips on various posts giving visuals on the inability of anyone to maintain anything, including one's own body, to one's satisfaction in the long run. Also, one can contemplate on the rebirth process and see whether it makes sense, one can contemplate on different applications of *Paṭicca samuppāda*, etc.
- When one comprehends a given concept, that leads to the cultivation of the *pīti* (pronounced "peethi" or "preethi" in Sinhala) *sabbojjaṅga*. This is part of *nirāmisā sukha* that I have talked about; one starts feeling happiness or a "lightness" making the mind serene. I am sure at least some of you have experienced this while reading posts. This gives one confidence that one is on the right path, and thus one will be motivated to make more effort, i.e., it cultivates the *virīya sabbojjaṅga*.

First Phase – Learning and Contemplation

8. Thus *dhamma vicaya*, *pīti*, and *virīya sabbojjaṅga* are cultivated together (of course *sati* must be there too). At some point though, the mind and especially the body (head) may get tired. If one is making a lot of progress, one may start to experience some pressures in the head or body; not headaches, but just pressure. Some feel like "ants crawling in the head"; the brain and the body (including the nervous system) are adjusting and there is nothing bad about this.

- When this happens one is making progress; the body feeling the effective meditation. Not only our minds but our bodies have been contaminated too, and the nervous systems have been distorted with respect to that in the *manomaya kāya*. Some of the “pressures” that one feels are due to the “twisting back” of the nervous system to the proper place. **These effects may be minimal for some people; this is what I experienced.**
- And this burning of defilements leads to the generation of contaminants that need to be expelled and cleansed, via proper breathing (this is not “*ānāpāna*”). We should not focus on the breath like in the mundane “breath meditation”. We are just getting rid of certain “*utuja rūpa*” that had been in the body due to defilements of greed, hate, and ignorance.
- At this point one should stop the contemplation process and start breathing in and out to cleanse the body; sometimes the body itself automatically gets rid of those things via a long out-breath. This will lead to *passaddhi* (tranquility) of both the body and the mind, and one gets to *samādhi* gradually. One needs to think about the lightness of the body and the mind (*passaddhi*) and the *nirāmisa sukha* (from *samādhi*) that results. One also should think about *upekkhā* (equanimity) too.
- When the body and the mind calm down enough and when one feels relaxed, one should go back to cultivating the previous three *sambojjhaṅga*, i.e., start on the contemplation process of *dhamma vicaya*.

Second Phase – Relaxation

9. Thus one should go back and forth between the two routines with three *sambojjhaṅga* each. The *sati sambojjhaṅga* must be there all the time. This is called the two-step cultivation of *Bojjhaṅga dhamma*.

- The Buddha compared this process to the washing of dirty cloth by hand. One needs to apply soap and wring the cloth to release the contaminants. But then one needs to soak it in clean water and remove the dirt that came out. After that, if the cloth is still dirty, one applies soap again, and then again wash it. This process needs to be repeated until all the dirt is gone and the cloth becomes clean. And one needs to do it with mindfulness: if there is a stubborn stain left in one place, one may need to use a different chemical to get rid of that spot (i.e., use the appropriate *Bhāvanā*: *asubha Bhāvanā* to get rid of sense cravings, *metta Bhāvanā* to get rid of hateful thoughts, *dhamma* concepts to get rid of *micchā diṭṭhi*, etc) and wash in clean water again. Thus one needs to be mindful (*sati*) during the whole process.
- In the same way, one goes back and forth between the two routines with *sati*. Time takes to get to *magga phala* depends on the individual. *Ariya jhānās* can be attained only after getting to the *Anāgāmi* stage; see, “

Continuing With *Ānāpānasati Bhāvanā*

10. The *Bojjhaṅga Bhāvanā* is formal meditation. As we have seen, one needs to sit down comfortably in a quiet place and contemplate.

- However, *Bojjhaṅga Bhāvanā* cannot be done in isolation. One needs to do the *Ānāpānasati Bhāvanā* at all times to get rid of bad habits and to cultivate good habits, and to live a moral life.
- Once one gains some traction and sees some benefits, one will become motivated.

Alternating Between the Two Phases

11. Initially one should focus on *anicca*, *dukkha*, or *anatta* as the *dhamma vicaya* subject. Then once some understanding is gained, one’s mind attains certain overall cleanliness. After that, like using different kinds of chemicals to get rid of coffee stains or a tar stain, one needs to choose different types of topics (or even meditation techniques) to broaden the understanding/to remove a certain obstacle. Buddha Dhamma is all about cleansing the mind via wisdom, via understanding the true nature of this world.

- Also, it really helps to do the *metta Bhāvanā* as a part of daily routine. The Buddha stated that If done properly (i.e., with understanding of *anicca, dukkha, anatta*), the *metta Bhāvanā* can lead to the *Anāgāmi* stage; see, “[5. Ariya Metta Bhāvanā \(Loving Kindness Meditation\)](#)“.
- If one has too many cravings, one could use the “*asubha anussati*”; if one tends to procrastinate, one could cultivate the “*maranānussati*”. We will talk about these in the future.
- But first, it is important to focus on *anicca, dukkha, anatta*. At the same time, it may be a good idea to get some idea of the “big picture”, i.e., the rebirth process, the 31 realms, etc and then some idea about *kamma, saṅkhāra, Paṭicca samuppāda*, etc. All these are pieces of a puzzle; even though it may look daunting at the beginning when the big pieces are in place, one starts to get a better idea as for where small pieces may fit in. *Anicca, dukkha, anatta* are the biggest pieces.
- Thus contemplating *anicca, dukkha, anatta* is a key topic for *dhamma vicaya*. I still do it every day, at least for a short time. **It is said that one really understands *anicca* nature of this world only at the *Arahant* stage.**

Attainment of the *Phala* Moment

11. The *Sotāpanna* stage (*magga/phala*) is attained in two consecutive *citta*. However, it is not noticeable at that time. One realizes that with time, mainly by realizing that one's outlook on life has changed. In particular, the tendency to socialize is likely to be reduced, but there may be exceptions; one realizes how important it is to spend the remaining little time in this life on making spiritual progress and to enhance the “cooling down”.

- In trying to attain the first *Ariya jhāna*, one could start with the *Satta Bojjhaṅga Bhāvanā* with the frame of mind of the unfruitfulness of anything in this world in the long run (*anicca, dukkha, anatta*); then all mundane thought objects (based on greed and hate) are suspended from the mind. Then one can think about the peacefulness of *Nibbāna* (the partial effect one experiences upon attaining the *Sotāpanna* stage), i.e., the change in one's state of mind.
- I use the phrase, “*etaṃ santam etaṃ paṇītam yadidaṃ sabbasaṅkhārasamatho sabbūpadhipaṭinissaggo taṇhākkhayo virāgo nirodho nibbānan'ti*. ([WebLink: suttacentral: Mahāmālukya Sutta \(MN 64\)](#)). I emphasize that I have not yet attained the first *Ariya jhāna* yet, as of August 5, 2017. It is not possible to attain the first *Ariya jhāna* until one completely removes *kāma rāga*, as I have realized recently; see, “[Dasa Samyojana – Bonds in Rebirth Process](#)“. Whatever *jhāna* that I had must be *anāriya jhāna*.
- Here is a recording of the Pāli verse by the Venerable *Thero* (you need to set volume control at your computer):
[WebLink: Listen to verse on Ethan santhang ethan panithang](#)
- One could say in English, “It is peaceful, it is serene, the expelling of all *saṅkhāra*, breaking of bonds, removing greed and hate; *Nibbāna*”, OR “This is peaceful, this is excellent, that is achieved by calming all *saṅkhāra*, breaking all bonds leading to rebirth, *ceasing of all attachments, stopping of the saṃsāric journey, cessation of all causes*, which is *Nibbāna*”.
- What matters is not the actual words, but the understanding one has in one's mind. **It is best to recite the Pāli verse and recall the meaning while chanting.**

Attainment of *Jhāna* Is a Possibility

12. It is important to realize that one could attain *anāriya jhāna* while working towards the *Sotāpanna* stage (or even higher stages of *Nibbāna*) by contemplating on the true version of *anicca, dukkha, anatta*.

- *Jhāna* are mental states corresponding to *rūpāvacara brahma* realms, which are realms in this world. They can be attained by either SUPPRESSING or REMOVING *kāma rāga*, which correspond to *anāriya* and *Ariya jhāna*. Either way, one will get to the SAME *jhānic* state.

- Since even to get to the first *Ariya jhāna* by REMOVING *kāma rāga*, one would have to be an *Anāgāmi* to attain the first *Ariya jhāna*. **That is easy to verify for oneself, since one would lose the craving for any sense pleasures, including sex.**
- These and other aspects of *Ariya* and *anāriya jhāna* are discussed in the section: “[Samādhi, Jhāna \(Dhyāna\), Magga Phala](#)”.
- It is also important to realize that even an *Arahant* will not lose the sense of taste; one increasingly will lose CRAVINGS for them; see, “[Kāma Guna, Kāma, Kāma Rāga, Kāmacchanda](#).”

13. **November 11, 2016:** I get many questions on this topic, i.e., how to verify one is making progress towards the *Sotāpanna* stage. The new section, “[Living Dhamma](#)”, provides a systematic way to achieve that goal, in addition to providing guidelines on how to check one’s progress.

- **April 24, 2020:** I recently finished a long discussion at a deeper level in the new “[Origin of Life](#)” section. This is a bit more advanced section.
- These are just different ways of trying to understand the Buddha Dhamma. It is a vast subject.

11.15 12. Key Factors to be Considered when “Meditating” for the Sotapanna Stage

November 13, 2015

1. **First**, one needs to understand what is meant by the *Sotāpanna* stage of *Nibbāna*. Many people start meditating without any idea of the goal: It is fine to do breath meditation, if one is only needing to calm down. There are others who are doing procedures that are needed to attain the *Arahant* stage, and those will not work either because one needs to understand the concept of *anicca* first, i.e., learning the key concepts comes first (*dassanena pahatabba*).

- If one's goal is to attain the *Sotāpanna* stage, then one should first read the posts in the “[Sotāpanna Stage of Nibbāna](#)” section to get an idea of what is meant by a *Sotāpanna* and what is involved to get there.
- There are many misconceptions about the *Sotāpanna* stage, and those posts could clarify them. I spent a lot of time doing unnecessary things, so I just wanted to make it easier for those who are just starting or who have been doing the wrong things to get there. Of course one should decide for oneself whether what I say is consistent with Buddha Dhamma.

2. I must also point out that there are many who have been “brainwashed” to think that the *Sotāpanna* stage is an impossibility to achieve at this time. It is disheartening to see even some “*mahā Theros*” in Sri Lanka have given up striving for even the *Sotāpanna* stage (presumably because they had used the wrong concepts for many years and could not make any progress). But the Buddha clearly stated that his *Buddha Sāsana* will be there for 5000 years, and we are only halfway through. There will be numerous *Arahants* also in the near future.

- There are many who have attained the *Sotāpanna* stage and beyond within the past few years, and that number is growing. Pure Buddha Dhamma that had been hidden, is out and is beginning to spread. Many who have reaped the benefits are trying their best to get the message out. Most of those efforts are taking place in Sri Lanka or in Sinhala language at this early stage.
- Even though it may not be possible for some (those with *dvihetuka* births) to attain the *Sotāpanna* stage in this lifetime, an all out effort will help at least in the future lives. Those who can make it (with *tihetuka* births) simply have done more in past lives. **By the way, if you come across any unknown Pāli words, just enter that word in the Search box and there will be relevant posts listed.**
- In any case, any efforts will have tangible outcomes in this life itself.
- The Buddha clearly stated that there were no language, race, cultural, caste barriers in attaining *magga phala*, or the four stages of *Nibbāna*. The critical thing is that one needs to follow the original, pure, Dhamma of the Buddha, and comprehend his message.
- The key message of the Buddha is that nothing in this material world (31 realms) can be maintained to our satisfaction in the long run (*anicca* nature), and thus through uncountable rebirths we mainly encounter suffering. Some of us may not be experiencing suffering in this life right now, but that does not mean it will be the same in future lives (or even at old age in this life).

3. **Secondly**, having a road map is NECESSARY to get to an unknown destination. Starting to meditate without having an idea of what to meditate on like just getting in the car and start driving without having a map showing where the destination is.

- Here again, the posts in the “[Sotāpanna Stage of Nibbāna](#)” section will be useful.
- The “map” to reveal *Nibbāna* is the comprehension of the key concepts like *anicca*. **When one reaches the *Sotāpanna* stage, it is like finding the correct map.** Then only one can start driving (i.e., use *kammattana* or “meditation recitals”) to reach the final destination. **Reciting things without understanding is fruitless.**

- Please contemplate on this aspect; I cannot emphasize it enough. Finding the map is the hardest and most important part.
- I have started a new section where a step-by-step process is described to follow; see, “[Living Dhamma](#).” It can also help one figure out where one is in the Path, and to clarify many fundamental issues.

4. **Third point** — related to the second point — is that we need to examine what is meant by “*bhāvanā*” (meditation) when striving for the *Sotāpanna* stage. **It is NOT a formal meditation technique (reciting a given *kammattana*) that is mainly needed here.**

- However, the Buddha said that even listening to a discourse is *bhāvanā*. One could attain the *Sotāpanna* stage just by listening to a discourse. When listening attentively, one’s mind gets focused on it, comes to *samādhi*, and can get to *magga phala* via *upacara samādhi*.
- What is needed to get to the *Sotāpanna* stage is contemplation on the key Dhamma concepts, in particular *anicca*, *dukkha*, *anatta*, but also to try to get an understanding of the Buddha’s world view, with 31 realms of existence, beginningless rebirth process, infinite number of planetary systems (*chakkawata*), *paṭicca samuppāda*, etc. This is the way to “find the correct map” mentioned in #3 above.
- As explained in those posts in the “[Sotāpanna Stage of Nibbāna](#)” section, this meditation (*bhāvanā*) involves mainly the contemplation (*citta*) and examination of dhamma concepts (*dhamma vicaya* and *vīmaṃsā*). In fact, the four bases of mental power (*chanda*, *citta*, *virīya*, *vīmaṃsā*) are very helpful to be cultivated; see, “[The Four Bases of Mental Power \(Satara Iddhipāda\)](#).”
- In the above, “*chanda*” is the liking to attain *Nibbāna* and that is cultivated by learning and forming a desire to learn more Dhamma. I can assure that there is no other pleasure like the “pleasure of knowing the truth, the pleasure of discovering true Dhamma”. From the comments I receive, I know that many of you have found that to be true.
- Formal meditation techniques are needed mainly after the *Sotāpanna* stage, as described in the sub-section **Key Points from the Sabbasava Sutta** under the post, “[The Sotāpanna Stage](#).” **However, it is good to do a few *kammattana* while striving for the *Sotāpanna* stage and I will discuss those in the next post.**

5. **Fourth** is to have a clear idea of the priority items to get done regarding *sīla* (moral behavior). In one of the early posts on meditation I made the point that one needs to sort out the “big problems” to take care of, before tackling smaller problems. If a vessel is leaking due to multiple holes, one needs to seal the big leaks first. It is a waste of time to spend the precious time in trying to plug smaller holes, when the water is pouring out through the big holes.

- In the following I will address the fact that many people have misconceptions about the relative weights of *kamma*. Please bear with me and read carefully, because some of these ideas go against some established and common wrong views. I have discussed some in, “[How to Evaluate Weights of Different Kamma](#).”

6. For example, many people are afraid of even accidentally killing a mosquito, but do not have any problem making plans to hurt another human or spread rumors about another.

- Then there are others who think taking an occasional alcoholic beverage is immoral, but spend hours thinking about other sense pleasures. **By the way, it is not the sense pleasures that is the problem, it is constantly thinking about them; this is a subtle but important point;** see, “[Assāda, Ādīnava, Nissarana – Introduction](#).”
- Of course, killing any living being should be avoided, and it is best to avoid drinking alcohol (especially if one tends to get drunk; the problem with drinking is, it makes the mind more exposed to the *panca nivarana*; one’s ability to think clearly is diminished when drunk).

- My point is that hurting another human will have much more potent *kamma vipāka* compared to killing many mosquitos or taking an occasional drink.

7. We can get some ideas on these issues by looking at the *vinaya* rules for the *bhikkhus*. These are the rules of conduct for the *bhikkhus*. There are 227 rules for fully ordained monks (*bhikkhus*) and 311 for nuns (*bhikkhunis*).

- These rules are called *patimokkha* (“*pati*” is getting bonded and “*mokkha*” or “*moksha*” in Sanskrit is “*Nibbāna*”), because they help staying out of trouble and stay on the path to *Nibbāna* for the *bhikkhus*. Remember that in the *Satipaṭṭhāna sutta*, “*mukha*” in “*mukha nimitta*” also means *Nibbāna*.

These rules are categorized according to their importance (or the severity of consequences for breaking them). **The top four belong to the class called “*parajika*” meaning a *bhikkhu* who breaks any one of the four has been “defeated” and thus needs to leave the monastic order.**

1. **Sexual intercourse:** any voluntary sexual interaction between a *bhikkhu* and a living being, except for mouth-to-mouth kissing which falls under the *sanghadisesa* (next level below the *parajika* level).
2. **Stealing:** the robbery of anything worth more than 1/24 troy ounce of gold (as determined by local law).
3. Intentionally bringing about the **death of a human being**, even if it is still an embryo — whether by killing the person, arranging for an assassin to kill the person, inciting the person to die, or describing the advantages of death.
4. **Deliberately lying to another person that one has attained a superior state**, such as claiming to be an *arahant* when one knows one is not, or claiming to have attained one of the *jhānā* when one knows one has not.

8. The next level is the *sanghadisesa*. The thirteen *sanghadisesa* rules requiring an initial and subsequent meeting of the *saṅgha* (communal meetings). If the monk breaks any rule here he has to undergo a period of probation or discipline after which, if he shows himself to be repentant, he may be reinstated by a *saṅgha* of not less than twenty monks.

- Like the *parajikas*, the *sanghadisesas* can only come about through the monk's own intention and cannot be accidentally invoked. However, if the *bhikkhu* does not go through this absolve him/herself, then the consequences will be even more harsh. These thirteen rules are not relevant to our discussion here, but you can read them at: [WebLink: WIKI: Patimokkha](#)
- There two more layers called *aniyata* and *Nissaggiya pacittiya* that pertain to *bhikkhus* and are again not relevant to our discussion. They are even less potent and can be overcome by just confessing to another *bhikkhu* and making a determination not to repeat.

9. **The last set of rules are the “weakest”, i.e., with the least consequences compared to all others.** They are the 92 “*pacittiya*” rules, which are minor violations and can be overcome by just confessing to another *bhikkhu* and making a determination not to repeat. The ones relevant to our discussion are:

- 10. *Should any bhikkhu dig soil or have it dug, it is to be confessed (to avoid killing small animals/insects).*
- 51. *The drinking of alcohol or fermented liquor is to be confessed.*

10. Many people think “life is a life”, but that is not so. Here digging soil is not allowed for *bhikkhus* because many lifeforms (insects, worms) are killed in that process. But this act is listed under the very last section of the *vinaya* rules (with least consequences).

- We know that killing an *Arahant* or one's parents is an “*anantariya kamma*,” a very potent *kamma* that will send one to the *apāyā* in the very next birth.

- And as we saw in #7 above, killing or giving advice to kill even a fetus is a *kamma* that makes a *bhikkhu* lose his/her ordination. Killing of small insects (inadvertently) by digging soil is a much less potent *kamma*, as listed in #9 above.
- Human life is precious because only a human can strive and attain *magga phala*, AND it is very difficult to get a “human *bhava*.” But even among humans, there is great variation: an *Arahant* or one’s parents are ranked way higher. The importance of parents is related to the fact that it is extremely hard for a *gandhabba* to find a suitable womb. I will discuss this in detail later.
- We also see that drinking alcohol is also a minor offense even for a *bhikkhu*, as it is listed in #9 above. *Bhikkhus* do not drink alcohol anyway, but this rule came about because of a particular incident at the time of Buddha.

11. It can be also deduced that stealing is a misdeed with harsh consequences, since it is included as a “*parajika*” for the *bhikkhus*.

- We need to realize that stealing has many subtle forms too, in addition to “taking something that belongs to another without permission”. In a society, not doing one’s own part is also a form of stealing, for example. One is benefitting from others’ work, without contributing to it.
- We also become indebted automatically to our parents, teachers, friends, etc. Even though they may not expect a “payback”, it is our duty to “respond in kind” whenever an opportunity arises.
- More can be found in the post, “[Kamma, Debt, and Meditation.](#)”

12. Finally, I would like to point out that it is difficult to quantify the weight of a given *kamma* in a generic way. For example, “killing an animal” is a very generic statement and such an act has a very broad range of *kamma vipāka*.

- When you slap a mosquito that bit you while reading a book almost without realizing it, has very little *kammic* power associated with it. On the other hand, when one aims a gun at a deer and fires to kill, that will have much more *kammic* power.
- One way to easily figure out the difference between those two acts is to think in terms of “*javana* power” of a *citta*. This goes together with the “intention” and also “how bad one wants to get it done”. You can almost visualize the difference in the mindsets of killing a mosquito verses deer in the above example. For more details, see, “[Javana of a Citta – The Root of Mental Power,](#)” and “[What is Intention in Kamma?](#).”
- Hitting a person to cause minor pain is done with less *javana* in the *citta*. But hitting a person with an iron rod intending to kill has much more *javana* power, as you can imagine.

13. These are things one needs to contemplate on in order to truly understand the Buddha Dhamma; that is the real *vipassana* or insight meditation. Getting to the *Sotāpanna* stage requires learning about such basic things on one’s own, by thinking about real life.

- Buddha Dhamma is not a “set rules and rituals” to be blindly followed. That is exactly the reason that many people have not been able to make any progress and have even given up.
- When one starts thinking critically and attentively one develops the *satara iddhipāda* that we discussed in #4 above. Once one gets traction by understanding a few basic things, Dhamma will be the guiding force to generate *chanda* (desire) to investigate more and to find more. It is boring and fruitless to blindly follow precepts and rituals that will not get one anywhere.

14. **November 11, 2016:** I get many questions on this topic, i.e., how to verify one is making progress towards the *Sotāpanna* stage. The new section, “[Living Dhamma,](#)” provides a systematic way to achieve that goal, in addition to providing guidelines on how to check one’s progress.

11.16 **13. Kammattana (Recitations) for the Sotāpanna Stage****December 5, 2015**

1. There are two ways to look at the effectiveness of recitations. First, one could gain some benefit when LISTENING TO recitations (such as recorded chanting of *sutta*), even without understanding what is said in the *suttā*. However, that benefit will increase if one understood the content.

- The effectiveness of recitations in MEDITATION SESSIONS is somewhat similar. There are many people who have been practicing various types of recitations (*kammattana*) for 10, 20, 30, or more years without significant results (i.e., *magga phala*), even though they are likely to feel some calming effect.
- Reciting phrases (in any language) can be quite beneficial if the meanings of those phrases are understood in either of the above cases. Recitation in Pāli can be a bit more effective, since Pāli words tend to condense a lot of meaning. If one starts off with at least some understanding, recitation on a regular basis will help understand the concept at a deeper level.
- For example, the concept of *anicca* is understood gradually — with a glimpse of it grasped on the way to the *Sotāpanna* stage, getting a firm foothold at the *Sotāpanna* stage, strengthening at the *Sakadāgāmi* and *Anāgāmi* stages — and is fully comprehended at the *Arahant* stage.
- A systematic procedure to get to *sammā samādhi* to be able to comprehend *anicca*, *dukkha*, *anatta*, is described in the “[Living Dhamma](#)” section. It can also help one figure out where one is in the Path, and to clarify many fundamental issues. **It is not possible to comprehend *Tilakkhaṇa* until one's mind is purified to some extent. Then one's mind can easily grasp concepts rather than just memorizing them.**

2. A mundane example is learning the multiplication table. Some get it easier than others. But with practice anyone can master it. All one needs is to spend some time reciting and memorizing the table, even though only memorization may not be helpful in the final objective, i.e., solving a bit more complex problems.

- We know that this “learning process” can be speeded up by using what one learned in solving some problems. Rather than just memorizing the multiplication table, if one applied it to solve some multiplication problems, the learning time can be drastically reduced and also it is easier to keep in the memory for longer time.
- This is what the Buddha meant by “*bhavanaya bahuleekathaya.....*” *Bhāvanā* (or meditation) is **what one uses frequently; one needs to be thinking about it and examine it in many different situations as much as possible**. Then the concept starts to “sink in”. Formal recitations can be part of this process. [*bahulīkata*: [pp. of *bahulīkaroti*] took up seriously; increased. (adj.), practiced frequently.]
- Reciting a phrase repeatedly while contemplating on it (*kammattana*) is an excellent way to retain and comprehend a given concept, **once the concept is at least vaguely understood**.

3. Another important benefit of a good recitation session is in subsiding the five hindrances (*pañcanīvaraṇa*) that makes the mind agitated and not receptive; see, “[Key to Calming the Mind – The Five Hindrances](#).” When one is focusing on Dhamma — even by just reciting verses — those greedy, hateful, and irrelevant thoughts are at least temporarily subsided and the mind will not be lethargic or agitated.

- In this respect, just listening to *Pāli suttā* could be beneficial too. In many Buddhist countries, many people start off the day with chanting of *suttā* (*pirith*) in the background. When I was little, I used to wake up to the chanting of *pirith* on the radio (my mother used to do turn it on the first thing in the morning).
- If the *suttā* are recited the right way, just listening to them can make the mind calm. I have posted audio files of several *suttā* by my teacher *Thero* including a 75 minute session in the post: “[Sutta Chanting \(with Pāli Text\)](#).”

4. Yet another critical benefit is to make the conditions conducive to attract previous “good *kamma*,” and make the mind “tune into” receiving such merits. Each of us has done innumerable good and bad *kamma* in our previous lives, and they are waiting for “right conditions” to bring their results (*vipāka*).

- For example, there may be a good TV (or radio) program being broadcast. But if the television (or the radio) is not “tuned in” to the right station, one would not be able to watch (or listen to) the program.
- “Making the conditions right” can bring about both good and bad *kamma vipāka* too. If one associates with bad friends, that is making conditions for bad *kamma vipāka* to bring fruits. On the other hand associating with good friends and listening/reading Dhamma can make one’s life better. This is discussed in detail in the posts, “[Anantara and Samanantara Paccaya](#)” and “[Transfer of Merits \(Pattidana\) – How Does it Happen?](#).”
- I have mentioned in many posts that the effectiveness of absorbing material at this website can be much improved by reading them at a quiet time. In the same way, a meditation session can be made more effective by calming the mind by doing some well-planned recitations. That itself can be a meditation session. What I do is, in the middle of recitations contemplate about relevant Dhamma concepts or my own daily experiences, i.e., do insight meditation in the middle of the recitation itself.

5. One should tailor the recitation session to match one’s own personality and needs. For example, if one has a temper, one should spend more time doing *metta bhāvanā*; if one has excessive greed (for sense pleasures) one could spend more time doing *asubha bhāvanā* (unfruitful nature of things), which is basically to contemplate on the fact that ANY object that is providing sense pleasure is going to decay and destruct at the end.

6. I have thought a lot about how to present a “*kammattana* program”. But it is difficult to decide what *kammattana* to discuss because each individual is different, and has own preferences and needs. I may still do that in pieces in the future, and I have discussed basic features of some in other posts.

- Here, I think it is better to just provide an audio of recitation session that I go through each day. This is just to give an example of how it can be done, and I know that it helps me in calming my mind and making it more receptive and alert.
- This is somewhat modified compared to what I actually do, because I do some parts in Sinhala which most of you will not understand, and I have also tailored this for those who are seeking the *Sotāpanna* stage of *Nibbāna*.

7. It is best to do these recitations in a quiet room, sitting comfortably — but not too comfortably — so that one would not fall asleep initially. Once one gets used to it, one will never fall asleep. Also, it may be better to actually say the words initially to avoid the mind to wander around; one could just recite in the mind later on.

October 13, 2016: I have removed the audio file temporarily until I make a better one. After I started the “[Living Dhamma](#)” section, I realized a way to present material in a better way.

But I leave the pdf of the text file:

[WebLink: PDF File: Kammattana Example](#)

Notes:

1. I am assuming that anyone who is interested in these *kammattana* (i.e., those who have the desire to strive for the *Sotāpanna* stage) have already read the relevant key posts at [Sotāpanna Stage of Nibbāna](#). Now, let us discuss different sections of the [WebLink: PDF File: Kammattana Example](#).

- Also, the Search button on the top right is very useful for finding relevant posts for any given keyword or a phrase that is not clear.

2. In reciting precepts, instead of the “*Pānātipātā Veramani Sikkāhāpadam Samādiyāmi*”, which says “I promise not take another life of a living being”, it is more truthful to say, “I promise not to take another life with any liking for it” (*Pānātipātā pativirato hoti*), unless one is dedicating a day to strictly observe the precepts.

- For example, if one needs to apply a medication to a wound, that will kill many microscopic living beings; yet, one has to do that in order to heal the wound; **thus in day-to-day life, we may have to take actions like that we would not like to; this is what is meant by “pativirato hoti”, i.e., one would not do it unless necessary.** But if one is observing precepts, one could avoid applying the medication on that day.
- Same for the other four precepts.

3. Note the break in between “*itipi so bhagava...*”. Many people recite it as “*itipiso bhagava...*”, which has a very different and inappropriate meaning.

- I really need to discuss the meanings of these three phrases, and hope to get it done in the “Buddhist Chanting” section in the future.

4. The phrase, “*Natti me sanaran annan Buddhho me saranan varan*” means, “I have no other refuge than that of the Buddha”.

- “*etena sacca vajjena sotti me hotu sabbada*” means something to the effect of “may the truth in my refuge in Buddha, Dhamma, Saṅgha lead to my well being and success in **my** efforts”.
- “*etena sacca vajjena sotti te hotu sabbada*” means something to the effect of “may this truth lead to the well being and success in **others’** efforts”.

5. The next phrase (in Sinhala, I am unable to come up with a suitable English or Pāli phrase) means, “I will be truthful to myself, see things as they are, be pure in mind, and endeavor to generate only pure thoughts (*prabhasvara* or *pabasara citta*). I plan to write separate posts discussing some of these *kammattana*. Even a single phrase is so condensed that one could write many posts on each.

- For example, “*avanka*” comes from “*vanka*” or “bent” or “not straightforward”. If someone is not truthful, then that is “*vanka*”; “*avanka*” is the opposite of “*vanka*.”

6. The next three phrases are also very important. I recite it every day. The phrase, “*Kayena vaca cittena pamadena maya katan, accayam khama me Bhante bhuripanna Tathagata*”, means: “If I have done any wrong inadvertently (or due to ignorance) by thoughts, speech, or mind to the Buddha, may I be forgiven for that”.

- And then the same phrase directed to Dhamma and Saṅgha. For example, I always worry about inadvertently explaining some concept in a way which may not be quite right. Also, when dealing with people, we don’t know whether we inadvertently hurt their feelings or do something that they see as inappropriate (and it is possible that such a person may be a Noble person).

7. The next set of phrases are for cultivating *anicca saññā* and related other factors. The phrase, “*Aniccamupassi viharati, nicca saññā pajahati*” means “I will live my life cultivating the *anicca saññā* and reject that things in this world can be kept to my satisfaction (i.e., reject the *nicca saññā*)”. Similar meaning can be deduced for the following three phrases.

- In the phrase, “*Nibbidamupassi viharati, abhinandana pajahati*”, *nibbida* means “stay away from valuing sense pleasures” and *viharati* means “live accordingly”. *Abhinandana* means “valuing sense pleasures”, and *pajahati* means “avoid”.
- “*Nirodhanupassi viharati, samudayan pajahati*”, means stop the wheeling process and reject generating more “*san*” (“*san*” + “*udaya*” combines to give “*samudaya*”); see, “[What is ‘San’?](#)”
- “*Patinissagganupassi viharati, sambhavan pajahati*” means “I will endeavor to break all bonds to this world, and stop making new *bhava*.”

- The last three recitals in this section with “*Anissitoca viharati, na ca kinci loke upadiyati*” confirm one’s conviction that “it is unfruitful to stay in this world of 31 realms, there is nothing in this world that worth craving for (*upādāna*)”.
8. The set of three phrases that come next also help cultivate *anicca saññā*, and one could review or do insight meditation on *anicca, dukkha, anatta* right after that.
9. The next section is on *metta bhāvanā*. I normally recite this in Sinhala, but these English phrases give almost the same meaning. This is also discussed in the post, “[5. Ariya Metta Bhāvanā \(Loving Kindness Meditation\)](#).”
- The relevance to different types of *akusala citta* is discussed in the post, “[Akusala Citta – How a Sotāpanna Avoids Apayagami Citta](#).” The 12 types of *akusala citta* are discussed in, “[Akusala Citta and Akusala Vipāka Citta](#).”
10. The next phrase is the standard phrase to use when cultivating *jhāna*: see, “[11. Magga Phala and Ariya Jhānā via Cultivation of Saptha Bojjanga](#).” Even though it is supposed to be fully effective only after attaining the *Sotāpanna* stage, it can be used by anyone who has been exposed to the true meanings of *anicca, dukkha, anatta*, and is pursuing the *Sotāpanna* stage.
- One could get into at least some kind of *samādhi* by this time, and do some insight meditation here. Actually, at any of the above *kammattana* sections, one could do insight meditation related to that section. I normally do this and my sessions sometimes last for much longer times.
11. In the subsequent sections, we start giving merits to all living beings. The phrase, “*Idam me nati nan hotu Sukhita hontu natayo*”, means “May all my relatives (which does include all living beings in the through *samsāra*) attain peace and happiness due to these merits”.
- The next phrase, “*Idam vo nati nan hotu Sukhita hontu natayo*”, can have multiple meanings. If one is doing a group session, it could mean “relatives of others in the group”. If one is by oneself, it could mean “distant relatives”, who may even be in worlds far away from the Earth.
 - Thus when one recites both phrases, it does include all living beings.
12. The next section gives merits to *devas* (which include *brahmā* as well), *bhūta*, and *preta*, and then to all beings (*sabbe satta*). It is another way of giving merits as in #11.
- Then the next phrase in English is straightforward. I specifically included this so that anyone can use this with full understanding. If one had (even inadvertently) done a bad deed to someone that day, one could be thinking about that person and ask for forgiveness. This is a very effective way to calm the mind and reduce tensions, and I hope to write a post on this. If done sincerely, one should be able to see the effects in real life. You may notice that the tensions with that person automatically reduced.
 - What happens is that those strong *javana citta* that you generate can produce *cittaja rūpa* that can affect that person even over long distances. It is again related to what we discussed in #4 of the main section (above the current “Notes” section).
13. Then we end the session with the phrase “*Idam me puññan āsavakkhaya vahan hotu, sabba dukkha nirujjati*” that is recited three times. It means, “May the merits that I have acquired help remove my *āsava* (cravings), and lead to the end of all suffering”.
- It is to be noted here that “*asavakkhaya vahan hotu*” is really, “*asavakkhaya aham hotu*” or “may (these merits) be *hetu* for cleansing of **my** *asava*.” It just rhymes as, “*asavakkhaya vahan hotu*”.
14. Of course the above is an example of what one could do. One could use all the *kammattana* (and add more), or use only the ones that one likes. I don’t use them all in a given session, but do use some of them all the time. I just start the session with the first few and select phrases as I proceed. Sometimes, I get into insight meditation (contemplating relevant ideas, connecting with other concepts, etc) following a given phrase and just do that for the whole session.

15. **November 11, 2016:** I get many questions on this topic, i.e., how to verify one is making progress towards the *Sotāpanna* stage. The new section, "[Living Dhamma](#)," provides a systematic way to achieve that goal, in addition to providing guidelines on how to check one's progress.

11.17 **New Approach to Meditation**

This section has been moved to, "[Living Dhamma](#)." Please check there for the follow-up posts.

11.18 **Anussati and Anupassanā – Being Mindful and Removing Defilements**

April 16, 2018

Anussati and Anupassanā

1. *Anussati* and *anupassanā* are two Pāli words that have related but different meanings. It helps to understand the difference, because many people today incorrectly use various types of *anussati* themselves as *kammatthāna* (meditation subjects).

- If one understands *Ānāpāna* and *Satipaṭṭhāna*, these are basically another way of saying the same thing. They are all different angles of looking at the goal (*Nibbāna*) and how to get there, i.e., how to cultivate the Path.
- It is ALWAYS good to keep in mind that *Nibbāna* is attained via getting rid of greed, hate, ignorance (*lobha, dosa, moha*) from one's mind. The only other thing to remember is that, without comprehending *Tilakkhaṇa* that process cannot be completed. Everything else is just more details to how to get there.
- “*Anu*” can have two different meanings. One is “according to” or “via this process”. The other is “food” for bad *viññāṇa*, which are essentially “*keles*” or “*klesha*” or “defilements” (or *kilesa* in Pāli). But here it is the first meaning that is mainly relevant.

[*kilesa* : ‘defilements’, are mind-defiling, unwholesome qualities. Vis. M. XXII, 49, 65: **There are 10 defilements**, thus called because they are themselves defiled, and because they defile the mental factors associated with them. They are: (1) greed (*lobha*), (2) hate (*dosa*), (3) delusion (*moha*), (4) conceit (*māna*), (5) speculative views (*diṭṭhi*), (6) skeptical doubt (*vicikicchā*), (7) mental torpor (*thīna*), (8) restlessness (*uddhacca*); (9) shamelessness (*ahirika*), (10) lack of moral dread (fearlessness) or unconscientiousness (*anottappa*). For 1-3, s. *mūla*; 4, s. *māna*; 5, s. *diṭṭhi*; 6-8, s. *nīvaraṇa*; 9 and 10, s. *ahirika - anottappa*.]

[*upakkilesa* : ‘impurities’, corruptions, imperfections (a frequent rendering by ‘defilements’ is better reserved for *kilesa*, q. v.) . A list of **16 moral ‘impurities of the mind’** (*cittassa upakkilesa*) is mentioned and explained in M. 7 & 8 (WHEEL. 61/62) : 1. covetousness and unrighteous greed (*abhijjhā-visamālobha*), 2. ill will (*byāpāda*), 3. anger (*kodha*), 4. hostility (*upanāha*), 5. denigration (*makkha*), 6. domineering (*palāsa*), 7. envy (*issā*), 8. stinginess (*macchariya*), 9. hypocrisy (*māyā*), 10. fraud (*sātheyya*), 11. obstinacy (*thambha*), 12. presumption (*sārambha*), 13. conceit (*māna*), 14. arrogance (*atimāna*), 15. vanity (*mada*), 16. negligence (*pamāda*).]

- Now we can see the origins of those two words (*pada nirukti*).

Buddhānussati, mettānussati, asubhānussati, maranānussati

2. **First let us first discuss *anussati***, which comes from “*anu*” + “*sati*.” Of course, *sati* is mindset (with the *Tilakkhaṇa* in the background); therefore, *anussati* means the mindset that is focused on attaining *Nibbāna*.

- There are several types of *anussati*, but four are lumped together as “***caturarakkha***” or “**Four Protections**” that one should try to keep with oneself all the time that will help one to stay out of trouble.
- This is expressed in the following verse (I have not found the source in the *Tipiṭaka*):

“*Buddhānussati metta ca, asubham maranānussati; iti ima caturarakkha, Bhikkhu bhaveyya silava*”

Translated: “*Buddhānussati, mettānussati, asubhānussati, maranānussati*; these are the **Four Protections** for a *Bhikkhu* cultivating *sīla* (moral behavior)”.

- These are basically four things that one should ALWAYS keep in mind, in order to protect one’s mind from getting defiled.

3. We already know that “*Buddha*” comes from “*bhava*” + “*uddha*,” or uprooting *bhava*, i.e, stopping the rebirth process in order to eliminate future suffering. So, *Buddhānussati* basically means keeping that key message in mind all the time.

- *Asubha* means “unfruitful” and even “harmful”. Getting attached to sense pleasures is harmful in the long run, just like a fish biting on a tasty worm on a hook will be subjected to suffering. So, *asubhānussati* means always to be mindful of the bad consequences of material things that are appealing at the first sight.
- *Mettānussati* is to keep in mind always that all living beings are in the same boat, suffering in the long run, and thus to have compassionate thoughts about all of them. Of course, that can be implemented at various levels depending on one’s progress (mundane *mettā* to *Ariya mettā*).
- Especially when one becomes aware of the true meanings of *Tilakkhaṇa*, one realizes not only the fruitlessness of seeking happiness in this world, but one becomes AFRAID of possible future suffering. When that realization comes, one will make an accelerated effort to cultivate the Path, because death can come at any time.

4. Therefore, essentially these four types of *anussati* are basically four types of “mindfulness” that one should always keep in mind. Not only when meditating, but even more importantly when interacting with the society.

- These Four Protections, with practice, will help enormously in maintaining *Satipaṭṭhāna* or *Ānāpāna* while interacting with others.
- For example, if someone says something nasty, instead of getting mad and retaliating, one should immediately recall that one’s goal is “*bhava uddha*,” and that requires seeing the *asubha* nature, cultivating *mettā*, and that one may not have much time left to get this done (*maranānussati*).

5. As is the case in many cases, those Four Protections have mundane meanings too. These could also be helpful. Following are the mundane meanings.

- *Buddhānussati* is to contemplate on the nine supreme qualities of the Buddha. This is of course a good thing to do.
- *Asubhānussati* as contemplating the “foulness for the body”. That is a misinterpretation. One could do *asubha bhāvana* to contemplate on the real nature of the body. A given male or female body can be enticing when the body is young, but they will both degrade with time.
- *Mettānussati* as keep repeating ” May all beings be happy and healthy”. Again, not a bad thing to do.
- *Maranānussati* as reciting “*jeevitam aniyatan, marana niyatam*” or “this life is impermanent, death is a certainty”. While the statement is true, that recitation by itself cannot do much to remove defilements and to purify the mind.

Aniccānupassanā, Dukkhānupassanā, Anattānupassanā, Asubhānupassanā

6. **Now let us discuss anupassanā.** In contrast to *anussati*, *anupassanā* is more relevant to formal meditation.

- “*Passa*” means to “get rid of”, as we mentioned while interpreting “*assa passa*,” in discussing *anapāna bhāvana*.; see #3 of “[7. What is Ānāpāna?](#).”
- Therefore, *anupassanā* means getting rid of defilements according to whatever the prefix that is used in front.

- While there are four types of *anupassanā* and three are associated directly with *Tilakkhaṇa*: *aniccānupassanā*, *dukkhānupassanā*, *anattānupassanā*, and the fourth is *asubhānupassanā*. [See; [WebLink: suttacentral: Patisambhidāmagga Paññāvagga 3.9. Vipassanākathā](#) for *aniccānupassanā*, *dukkhānupassanā*, *anattānupassanā* and [WebLink: suttacentral: Itivuttaka 85 Asubhānupassīsutta](#) for *asubhānupassanā*]
- Normal humans take this world to be of *nicca*, *sukha*, *atta*, and *subha* nature. The key to *Nibbāna* is to realize the true nature: *anicca*, *dukkha*, *anatta*, and *asubha*.

7. Thus, *aniccānupassanā* means, getting rid of defilements by contemplating on *anicca* nature.

- Similarly, *dukkhānupassanā* and *anattānupassanā* mean getting rid of defilements by contemplating on *dukkha* and *anatta* nature.
- We have not discussed *asubhānupassanā* up to this point. This becomes more important for a *Sotāpanna* to get to the *Sakadāgāmi/Anāgāmi* stages by contemplating on the bad consequences of sense pleasures that appear so enticing.

8. Therefore, for one who is trying to get to the *Sotāpanna* stage, the first three *anupassanā* are more important. However, *asubhānupassanā* cannot hurt (and even could be beneficial) because that helps calm the mind.

- We need to remember that the *tāpa* (or burning or “excitedness of the mind”) comes from *kāmacchanda* and *vyāpāda*: greed and hate. Both arise due excess greed or “blindness due to excess desire for sense pleasures”; see, “[The Cooling Down Process \(Nibbāna\) – How Root Causes are Removed](#)” and “[Kāma Guna, Kāma, Kāma Rāga, Kāmaccandha](#)”.
- For anyone interested in meditation, such basics need to be understood: “[Living Dhamma – Fundamentals](#).” I can see from the discussion forum that many people worry too much about “deep concepts” WITHOUT having a proper understanding of fundamentals.

Understanding Dhamma: A Step-by-Step Process

9. We also need to keep in mind that one cannot just start doing formal meditations on these *anupassanā*. It is a step-by-step process. Obviously, one needs to have some understanding of *Tilakkhaṇa* (*anicca*, *dukkha*, *anatta*): “[Anicca, Dukkha, Anatta](#).”

- Even before that, one needs to get rid of the 10 types of *micchā diṭṭhi* by cultivating the mundane eightfold path: “[Buddha Dhamma – In a Chart](#).”

The reason for that was discussed in the recent post, “[Buddha Dhamma for an Inquiring Mind – Part I](#).” **If one has either of the following two views, then it is NOT possible to comprehend *Tilakkhaṇa*:**

- The next life is going to be forever, in the heaven or hell.
- This life is all one has. When one dies, it is over. No rebirth or hell or heaven.

10. There are many reasons why those two views will block the Path to *Nibbāna*. Following are a few key reasons:

- Neither of the above views can accommodate the laws of *kamma*: That one’s actions WILL have consequences, and those consequences are much more complex than just leading to hell or heaven (and then getting stuck there forever).
- It is not possible to have a consistent picture (world view) without getting rid of wrong views like there is no rebirth process, or that *gandhabba* concept is wrong; see, “[Micchā Diṭṭhi, Gandhabba, and Sotāpanna Stage](#).”

- If one has above views, then one cannot comprehend the *dukkha* nature. The fact that most future suffering is in the *apāyās*, and that one needs to stay away from *dasa akusala* done with powerful and immoral *javana citta* that “power-up” such births in the *apāyā*.

Conclusions

11. I know that I keep repeating some things. But I can see that many people seem to skipping essentials because of their desire to get there quickly. I admire their enthusiasm, but do not want people to have false hopes. On the other hand, “just learning concepts” is not enough either, so one MUST put all this to practice, i.e., stay away from *dasa akusala* (and keep in mind that *micchā diṭṭhi* is the worst of them; see the post mentioned in #10 above).

- The bottom line is, if one can truly see the *anicca* nature, one will have the *anicca saññā* and will avoid *dasa akusala* with a high degree of fear of the *apāyā*: “*dukkham bhayattena*.”
- Thus one will automatically have *Buddhānussati*, the desire to reach *Nibbāna*.
- Furthermore, it will sink into the mind that those enticing things in the world are in fact of *asubha* nature (*asubhānussati*). One will also realize that all living beings are in the same boat, and thus will have *mettānussati*.

12. Finally, one will also have *maranānussati* established in one’s mind: that one needs to make haste and cultivate the path before death comes, the timing of which is totally unknown.

- If one reads the [WebLink: dhammatalks.net: Maranasati Sutta \(AN 6.19\)](http://dhammatalks.net/Maranasati_Sutta_(AN_6.19)), it is clear that the Buddha advised *bhikkhus* to be keenly aware that death can come at any time and thus to CULTIVATE THE PATH without delay, and that *maranānussati* was not a specific *kammatthāna*.
- A fairly good English translation of the *sutta* is at: “[WebLink: suttacentral: Mindfulness of Death](http://suttacentral.net/Mindfulness_of_Death).”

Discussion of this post at, “[WebLink: Anussati and Anupassanā – Being Mindful and Removing Defilements](http://Anussati_and_Anupassanā_-_Being_Mindful_and_Removing_Defilements).”

11.19 Myths about Meditation

Early post; revised September 11, 2018; December 17, 2019

Nibbāna Is Not Possible With Rituals

1. Once I attended a meditation retreat. Everyone was sitting down on the floor with crossed legs, but after a while, many people “could not endure the pain” and were stretching their legs out or were fidgeting. It was apparent (to me) that many people could not think about anything else but their pain due to the uncomfortable posture. This went on for two days. Other than those who were long-time meditators, and were comfortable with the lotus position, I do not believe the others enjoyed the retreat that much.

- Such nonsensical “rituals” are part of the set of wrong views that one needs to remove before attaining the *Sotāpanna* stage. This particular practice is a “*silabbata paramasa*” or engaging in “set procedures.” Such practices do not make sense if one does not understand the reasoning for doing it. Sitting in the lotus position is not a requirement for meditation.

We Need to Know What to Meditate On!

2. It is helpful to think about the goal of meditation. The ultimate goal is to remove greed, hate, and ignorance from our minds and to attain *Nibbāna*. One needs to understand the fundamental concepts of Buddha Dhamma first.

- But even for those who are just interested in achieving some “cooling down” from everyday stresses, it is the same fundamental idea that is at work: We need to keep greedy, hateful, and ignorant thoughts from arising in our minds. The more we do that, the more relaxed our minds will become. Many people automatically associate “breath meditation” with “Buddhist meditation” and spend years on it, and end up discouraged; see a person account, “[WebLink: PDF-file: Meditation-Experience-of-Paññobhāsa-Bhikkhu.](#)”
- The correct *Ānāpānasati Bhāvanā* is NOT breath mediation; see the posts at, “[Bhāvanā \(Meditation\).](#)”
- Purification of the mind is the way to achieve temporary relief to the mind as well as to attain the *Arahantship*. There is no one else monitoring one’s progress; it is one’s own mind that is keeping tabs on one’s progress.
- When one does a “formal meditation”, one should sit in a comfortable position. It could be the lotus position for those who have practised it. One could be in the lotus position for several hours when one gets good at it. For most people, it is just sitting in a chair; one that is not too comfortable that one may fall asleep!

Bad Idea to Remove ALL Thoughts

3. Getting rid of evil thoughts can be and should be done ALL THE TIME. The Buddha said, “*bhāvanāya bahuleekathāya*”, or “meditate as much as possible, whenever possible.” And it is done in all possible postures: sitting, standing, walking, and lying down.

- Ven. Ānanda is the only known person to attain the *Arahanthood* while not in any of those four postures. He was making an all-out effort to become an *Arahant* before the first *Dhamma Sangāyanā* (Buddhist Council.) Only *Arahants* were able to attend. But since Ven. Ānanda was the only one who had memorized the whole of the sutta piṭaka, it was essential that he attended the *Sangāyanā*. The night before the *Sangāyanā*, he had been exhausted by the effort, but he was still thinking about a dhamma concept while getting into the bed. He sat down on the bed and raised his legs, to lie down. Before his head touched the pillow, that particular point came clear to him, and the “*Arahant phala citta*” was realized.

- Another story from the *Tipiṭaka* that is also relevant to #1 above is about a minister of King of Kosala, named Santati. He attained the *Arahanthood* while listening to a single verse by the Buddha: “[WebLink: tipitaka.net: Dhammapada Verse 142](http://tipitaka.net: Dhammapada Verse 142).”

Removing ALL Thoughts Lead to Births in the *Asaññā* Realm

4. I have seen many meditation programs that describe *Nibbāna* as removing perception or *saññā* from the mind.

- Many people wrongly advise that one needs to remove ALL THOUGHTS from one’s mind to attain *Nibbāna*. One time a *Deva* expressed the same idea to the Buddha: “Isn’t *Nibbāna* attained via removing all thoughts?”. The Buddha said, “No. *Nibbāna* is realized by removing greedy, hateful, and ignorant thoughts.” That account is in the *Manonīvaraṇa Sutta* (SN 1.24).
- Some others say that when a thought comes to the mind (about a loved one, a place, or anything material), to say “that does not exist,” and to forget it. Just because the Buddha said everything changes at a rapid pace, he did not mean phenomena did not exist. Things do not exist for eternity either, because they are continually changing. This is the same argument that we discussed in the “Concept of a Life-stream”: the Buddha rejected both “self” and “no-self”. *Paṭicca Samuppāda* explains all phenomena. They arise due to causes and would not occur if such reasons are absent.
- If one cultivates *asaññā* meditation (by removing all thought that come to the mind), may be born in the realm of *asaññā brahmā*. In that realm, no thoughts arise in mind. One would stay there for a very long time, only to come back to the human plane and start the rebirth process all over.
- **All the above meditation techniques are dangerous. As one develops them, one may become forgetful; *saññā* or perception is a critical mental factor associated with recognition of external objects. If one starts losing memory, that will be a sign that one is on the wrong path.**

Nibbāna is the Removal of Greed, Anger, and Ignorance

5. An *Arahant* has not removed the capacity to generate thoughts OR perceptions. **An *Arahant* has removed greed, hate, and ignorance from the thoughts that arise.** Thoughts arise in him/her with *saññā*, i.e., he/she can identify people or things. They can experience the whole world just as any other human: they can see, hear, taste, smell, touch, or think about any place.

- The only difference is that they will not generate any greedy, hateful, or ignorant thoughts about anything that is experienced.
- The concept of *Nibbāna* is very simple: “*ragakkhayo Nibbanam, dosakkhayo Nibbanam, mohakkhayo Nibbanam*”. (Extinction of greed (or desire), hatred (or aversion, anger), ignorance (or delusion) gives rise to *Nibbāna*.)

Nibbāna Is Approached With the Removal of Greedy, Angry, and Unwise Thoughts

6. And one CAN experience the “cooling down” as one makes progress on removing greed, hate, and ignorance, even before the *Sotāpanna* stage. Instead of becoming forgetful, one’s mind will actually become more sharp and alert. One will be able to remember things BETTER, not less. One will become happier, not gloomy or depressed. **It is hard for normal people to fathom how much stress is associated with a mind that is contaminated with greed, hate, and ignorance.**

- The constant stress in an average human mind arises due to greed, anger, and ignorance. That is why people seek sense pleasure, basically to get some relief. But the problem is that any such relief is temporary. Furthermore, many people do immoral things to get such pleasures. So it can make things much worse: not only that one does not get permanent relief, but one will have to pay for the bad kamma that were accumulated by such immoral acts (lying, stealing, sexual misconduct, etc.).

- This is why one can feel the relief right away when one starts living a “clean, simple life”. That should be the “base” for beginning meditation. It is not possible to make any progress, no matter how much time one allocated to “meditation”, if one is engaged in immoral behavior; one needs to start reducing the BIG EIGHT.
- What the Buddha prescribed was simple yet profound. As one clears the mind of the five hindrances (*pañcanīvaraṇa*) via living a clean life AND start doing the proper *Ānāpānasati bhāvanā*, the progress will accelerate with time, because one’s mind start being able to see more clearly. One will be able easily grasp the real meaning of *anicca, dukkha, anatta*.

Do All Things “Appear, Destruct in a Moment, and Re-Appear”?

7. Another series of “*desanā*” that I listened to described how an advanced meditator can actually “see” the “formation/breakup” of the material world. That person says that one could see the “impermanence” described in the “[The Grand Unified Theory of Dhamma](#)” post. He explained how he got so afraid when the “world disappeared” momentarily before re-formation!

- A *citta* never arises as a single unit. It appears in a *citta vīthi* (series of *cittā*) which normally have 17 *citta* if the *citta vīthi* occur due to an external sensory input coming through one of the five physical sense inputs (eyes, ears, nose, tongue, and body). And that there are many billions of thought moments per second. **However, only a Buddha can actually “see” such a fast time scale.**
- The Buddha described to Ven. Sariputta such minute details in summary form, and it took Ven. Sariputta and his immediate followers hundreds of years to finalize a detailed description of mental/physical phenomena based on such information provided by the Buddha. They were able to complete the *Abhidhamma Piṭaka* only by the third *Dhamma Sangāyanā*.
- Even in many textbooks on *Abhidhamma*, sometimes it is said that “.. ***rūpa* is very short lived – it endures only for 17 conscious moments.** What is formed is almost instantly gone”. This is wrong! That is the lifetime of a “*hadaya rūpa*.” A *hadaya rūpa* is generated in the *hadaya vatthu* by a sense event through one of the five physical senses. The lifetime of a *hadaya rūpa* is the time taken to experience that external sense event, i.e., 17 thought moments. (During that short time, the mind grasps an impression of the external *rūpa*); see, “[Does any Object \(Rūpa\) Last only 17 Thought Moments?](#).”

Fake Teachings Are Not Restricted to *Mahāyāna*

8. The problems with Mahayana teachings have become apparent due to the advances made in science and technology. See, “[Key Problems with Mahāyāna Teachings](#)” and “[Saddharma Pundarika Sutra \(Lotus Sutra\) – A Focused Analysis](#).”

- However, some of the “fake teachings” that I mention in this post originated in *Theravāda* countries, in particular in Sri Lanka. That is why it is critically important to learn pure *Dhamma* before or, at least, while one is doing meditation.
- How can one follow the path of the Buddha without knowing the actual path? “*Bhāvanāya pahāthabbā*” (or removal of defilements via meditation) comes AFTER “*dassanena pahāthabbā*” (or removal of defilements due to wrong views via understanding the true Dhamma.) This is also why *Sammā Diṭṭhi* is first and *Sammā Samādhi* is last in the Noble Eightfold Path.
- I highly encourage everyone to read as many posts as possible to learn Dhamma. Regardless of one’s familiarity with Buddha Dhamma, one should read those posts in the “[Moral Living and Fundamentals](#)” section at least once, because they provide the foundation. I know from experience the following. It is harder to comprehend the related advanced material if one does not get the basics right.

“Feeling Better” Does Not Necessarily Indicate That One Is on the Correct Path

9. In “weeding out” the bad approaches, a key point to understand is that there are many ways to “feel better”. A drug user can instantly get into a “relaxed state of mind” by taking a drug. We don’t do that because, (i) we know it is a temporary solution, AND (ii) it has terrible consequences.

- Getting “addicted to” *anāriya* (non-Buddhist) meditations like breath or *kasina* meditation is only somewhat better. Many get addicted to them because they not seem to have any adverse consequences in this life. Even though that may be true, they do have harmful implications for the long term because one is wasting one’s precious time in this human life on something that does not help in avoiding rebirth in the *apāyā*.
- Just because one starts feeling better using a particular technique does not mean it is the THE solution. This is why one needs to look at the UNDERLYING BASIS of that approach. I have come across several groups where they are convinced of their “technique” because they “feel better” with what they do. As we just discussed, a “good experience” does not rule out a “better experience” with the correct approach.
- **The only way to make a sound judgement of “any theory” or “approach” is to critically examine it and see whether it can explain the realities that we see around us.** Can it explain why people are born different? Similarly, why some live relatively better compared to others, why do only some people get horrible diseases, why do animals experience pain but still cannot do anything about it (i.e., why they have limited minds)? Only pure Buddha Dhamma can explain all these and more.

Formal and Informal Meditations

10. Finally, once one looks at the evidence and decides on the Path, meditation can be “formal” or “informal”. In formal meditation, one allocates a time and place, and it could be any of the following:

- Conventional sitting or walking meditation session. But this is not the only formal way to meditate.
- Listening to a Dhamma discourse delivered by an *Ariya* (one who has grasped *anicca, dukkha, anatta*) is an excellent formal meditation session.
- **Reading (and contemplating) on a Dhamma concept, say *anicca*, is also formal meditation.** If one reads/listens when the mind is calm, one will grasp more.

11. Informal meditation is possible at any time, anywhere.

- **Merely thinking about a Dhamma concept or trying to clarify a Dhamma concept is meditation.** That can happen at any time. While lying in bed trying to fall asleep, waiting at the doctor’s office, riding a bus or subway, etc. Instead of day dreaming or generating greedy, hateful, or useless thoughts, one could spend that time contemplating Dhamma.

Suppression or Removal of Five Hindrances Lead to *Samādhi*

12. In all these cases, one can experience a calming effect due to the suppression of the five hindrances. That can lead to even deeper *samādhi* if one’s mind becomes focused on the Dhamma concept. One could develop a habit of doing informal meditations. **But avoid doing that while driving or even when concentrating on a task at work! That WILL have terrible consequences. One needs to use wisdom (being mindful of consequences) while cultivating understanding.**

- Five hindrances discussed at, [“Key to Calming the Mind – The Five Hindrances.”](#)

Next, [“Is Suffering the same as the First Noble Truth on Suffering?”](#),

11.20 A Simple Way to Enhance Merits (Kusala) and Avoid Demerits (Akusala)

Revised February 28, 2019; revised May 17, 2019

1. This is an important post that should be read carefully. Grasping the basic concept here can prevent many akusala kamma (unmeritorious deed) and also boost the power of a *kusala/puñña kamma* (meritorious deed). In addition, it shows the consistency and universality of Buddha Dhamma.
2. The potency of a kamma (good or bad) depends on two key factors. First we need to clarify some basic ideas.
 - Any action or speech originates as a “thought”. As described in the Abhidhamma section, a citta is of duration much less than a BILLIONTH of a second. Such fast thoughts do not even register in our minds. Once in a while a burst of citta on a given object gets latched on and stays long enough to register in our minds. Then we consciously think about it and make a decision.
 - For example, when I walked to the kitchen to make a tea this afternoon, it started as what seemed to be a thought of “having a tea”. In reality that “thought” itself was due to billions of citta going through my mind; the initial “vague idea of having a tea” very quickly got built-up by numerous follow-up citta until I had to get up and walk to the kitchen.
3. Most such “initial thoughts” just do not cascade into strong enough thoughts to make us to move physically or even to speak out. If the “impulse of the thought” (or ‘*javana*’) is not strong enough, we just disregard it.
 - If you think about it, you will realize that there are thousands, millions of stray thoughts that pass our minds each day. When we ride a bus just staring out of the window, we see zillion things go by and each thing seen is a thought. We do not remember most of it afterwards.
 - On the other hand, some impactful thoughts prompt us to instantaneous action or speech. Sometimes, we just stay on that stream of thoughts: some people laugh out loud just thinking about a happy event. Other times, if a thought about a hated person comes to the mind, one’s face getting dark and muscles get tightened.
 - A mother hearing her child cry out is literally lifted out of her seat instantaneously. But what happens there is, she hears the cry in a series of “*citta vīthi*” of “thought streams” coming through the ear-door. Subsequently millions of “mind-door” *citta vīthi* run within a fraction of second identifying that it is a crying sound, and it is coming from her child. Subsequently, millions more *citta vīthi* start running trying to analyze what could be the problem, and then more *citta vīthi* will prompt her to get out of the seat and move towards the source of that sound. All this happens within a fraction of second, without her consciously aware of it.
4. Not all thoughts on the same subject have the same *kammic* power.
 - If some insects get killed while someone is walking on the ground or while cleaning the house, that will have no *kammic* consequences; because the intention associated with those actions was not to kill any living being.
 - As we will see below, **several key things contribute to the *kammic* power: the intention, what kind of knowledge is behind that intention, and whether one does the act enthusiastically are all key factors.**
5. Now let us take an example to see how these different factors contribute to the strength of a kamma. Suppose a person who does not know that stealing is a bad thing to do and that it will have bad consequences, steals something from a shop. Since **he does it with wrong vision (*micchā ditṭhi*) he does not have any remorse for it.** Thus the *kammic* strength is very high.
 - But if he does it on the urging or prompting by another, then it will have less strong *kammic* consequences, since he did not think about doing it on his own, and thus the “*javana*” or the “impulse power” of the citta is less strong.

- Now, if he comes up with the idea of stealing by himself, AND enjoys doing it, that is the worst.

6. So, now we can see different levels of *kammic* strengths associated with the SAME ACT of stealing:

- 01 If done with wrong vision, with pleasure, and without prompting will have the highest strength (of course this will be highest BAD strength).
- 02 If done with wrong vision, with pleasure, and with prompting will have the next lower strength.
- 05 If done with wrong vision, with neutral feeling, and without prompting will have the next lower strength.
- 06 If done with wrong vision, with neutral feeling, and with prompting will have the next lower strength.
- 01 *Somanassasahagataṃ diṭṭhigatasampayuttaṃ asaṅkhārikam ekaṃ.*
- 02 *Somanassasahagataṃ diṭṭhigatasampayuttaṃ asaṅkhārikam ekaṃ.*
- 05 *Upekkhāsahagataṃ diṭṭhigatasampayuttaṃ asaṅkhārikam ekaṃ.*
- 06 *Upekkhāsahagataṃ diṭṭhigatasampayuttaṃ asaṅkhārikam ekaṃ.*

Now in the next four cases, the same act was **done by person who did know that it was a bad act** and it will have bad consequences would do it with at least some hesitation, and thus the “*javana*” or the “impulse of the thought” would be less, and consequently the *kammic* power will be less. So, now we have the last four cases:

- 03 If done WITHOUT wrong vision, with pleasure, and without prompting will have the next highest (GOOD) strength.
- 04 If done WITHOUT wrong vision, with pleasure, and with prompting will have the next highest strength.
- 07 If done WITHOUT wrong vision, with neutral feeling, and without prompting will have the next highest strength.
- 08 If done WITHOUT wrong vision, with neutral feeling, and with prompting will have the least strength.
- 03 *Somanassasahagataṃ diṭṭhigatavippayuttaṃ asaṅkhārikam ekaṃ.*
- 04 *Somanassasahagataṃ diṭṭhigatavippayuttaṃ asaṅkhārikam ekaṃ.*
- 07 *Upekkhāsahagataṃ diṭṭhigatavippayuttaṃ asaṅkhārikam ekaṃ.*
- 08 *Upekkhāsahagataṃ diṭṭhigatavippayuttaṃ asaṅkhārikam ekaṃ.*

7. Thus it is clear that just having an understanding of Dhamma (that it is unfruitful to gain anything at the expense of other beings) will automatically make the *kammic* power less potent; but this “knowledge” is not the “book knowledge”; it is not effective if one has read about it but the mind has not really grasped it. Wisdom and “book knowledge” are two different things.

- If you think about it deeply, it should become clear that it is the comprehension of *anicca, dukkha, anatta* that leads to true knowledge (*paññā*) and helps get rid of *avijjā* (ignorance). It is understanding the true nature of this world, and that one’s actions are bound to have consequences.
- It works in the other way too. Good actions will lead to good results.

8. Thus the same kind of reasoning is true for meritorious acts (*kusala/puñña kamma*). There are eight levels depending on whether one does meritorious act with/without knowledge, with joy/with neutral feeling, and without/with prompting just like in the case of the greed-based *akusala citta*. Let us take the case of someone making a donation to build a shelter for homeless people.

- This *kusala kamma* (meritorious deed) done with knowledge, with joy, and without prompting has the highest merit.

- And THE SAME *puñña kamma* done WITHOUT knowledge, with neutral feeling, and with prompting has the LEAST effectiveness.
- Thus the same deed done without comprehension of *Tilakkhaṇa* is a *puñña kamma*. The same deed done with comprehension of *Tilakkhaṇa* is a *kusala kamma*.
- The intermediate six are just analogous to the ones for the greed-based *akusala kamma*.

9. Let us examine how these categories play out in the real world for the above mentioned meritorious act of building a shelter for the homeless:

- If someone understands the value of giving, does it out of the kindness felt for those homeless people, does it without wishing for anything in return, will be doing it with knowledge. And thus it will be done without prompting and with natural joy in the heart realizing that one is making a difference for many people's lives. This is the highest merit.
- If a person did the same deed, but initially it took some prompting from others or even him/herself, it was not spontaneous and thus will have somewhat less "*javana*" in the thought process.
- Those two scenarios without joy would have even less "*javana*" in the thought process. Here one may write a check and may not think much about it afterwards. But in the above two cases, the person may stay engaged with the act of building the shelter and gains joyful feeling everytime he/she thinks about it.
- Now, those four cases can be repeated for a person who does not understand the true impact of that act. The *kammic* power will be reduced accordingly. Thus a person who does not have an understanding of *kammic* consequences, the true nature of this world (i.e., that we all may go through such hard times or worse in other lives, etc), just writes a check out of necessity, may be even with the intention of getting some votes (i.e., prompting by oneself after seeing the benefits for one's political career) will have the least benefits.
- Thus understanding Dhamma (true nature of the world) leads to spontaneous meritorious actions done with a joyful heart; this leads to *saddhā* (true faith) , *citta pasada* (joy), and *adhimokkha* (resolve) to get the maximum impact of the impulse *kammic* power (*javana*). *Adhimokkha* (resolve) is a key factor in the *kusala-mūla paṭicca samuppāda*, see, "[Kusala-Mūla Paticca Samuppāda.](#)"

Notes:

1. There are two *akusala kamma* rooted in hate and two rooted in ignorance. The way to sort those are different. I will write another post on them.
2. This above description is a simpler version of a post that I did recently: "[Javana of a Citta – The Root of Mental Power.](#)" It may be a good idea to read that too.
3. The eight types of *akusala citta* are also discussed in "[Akusal Citta and Akusala Vipāka Citta.](#)"

11.21 Pañca Indriya and Pañca Bala – Five Faculties and Five Powers

1. These are included in the 37 factors of Enlightenment; see, [“37 Factors of Enlightenment”](#).
2. “*Indriya*” means leader; a leader has power or “*Bala*”. Thus these two sets of five factors each are very important in following the Noble Eightfold Path.
 - The five mental faculties (*indriya*) are *saddhā* (faith), *virīya* (effort), *sati* (mindfulness), *samādhi* (concentration), and *paññā* (wisdom), and there are five corresponding powers (*Bala*).
 - Eye, ear, nose, tongue, and the body are the five physical faculties (*indriya*). They are leaders in providing access to seeing, hearing, smelling, tasting, and touching. The *pañca indriya* are the “mental” leaders helping with comprehending Dhamma.
3. Let us first discuss the five faculties.
 - *Saddhā* is foremost; without faith (*saddhā*), one does not have the conviction to follow the Path. However, faith has to be based on wisdom (*paññā*), i.e., one’s faith is built upon seeing the truth of Buddha Dhamma, at least partially.
 - *Saddhā* comes from “*sath*” or truth and “*dhā*” meaning “*dhāranaya*” or “grasp”. Thus one will have *saddhā* when one grasps the true nature of this world (*tilakkhana*) at least to some extent.
 - Blind faith is actually a hindrance to progress, since one will be following the wrong path. Furthermore, blind faith will not last long, since it is on a shaky foundation. *Saddhā* of a *Sotāpanna* is unshakeable, and will never be lost or even reduced.

Thus we can see the *saddhā* and *paññā* need to progress together.

4. When *saddhā* and *paññā* is developed to a certain extent (before the *Sotāpanna* stage), one realizes the fruitlessness and the dangers of the *sansāric* journey. Thus one is motivated to make an effort (*virīya*).

Furthermore, one realizes that one needs to be mindful in one’s actions, and thus *sati* (mindfulness) starts to build. One realizes that one has to act with *yoniso manasikara*.

At the same time, one realizes that when the mind is not calm, one can make bad decisions; thus one starts working on calming the mind and to attain a level of concentration (*samādhi*). Concentration is not really a good translation for *samādhi*; one does not need to force concentration; rather *samādhi* comes about when one takes precautions to not to get into “bad situations”; see, [“What is Samādhi? – Three Kinds of Mindfulness”](#).

5. **Different people have the five faculties developed to different degrees (developed in this life AND also carried from previous lives), and normally one could stand out.** The Buddha has shown the following way to identify the predominance of different faculties in a person.

- If someone has a relatively more developed *saddhā*, that person is likely to be peaceful and helpful to others with a kind heart. He/she will have no trouble in following the first precept of not harming any other being.
- Then there are people who can easily bear hardships and are very determined; they have a developed *virīya* (effort) *indriya*. They can easily keep the second precept (not taking what is not given), and be satisfied with one earns by one’s hard work.
- Those who do not pursue sense fulfilment aggressively have less *kāmachanda* and are not likely to have any problems with the third precept. They are likely to have a developed mindfulness (*sati*) faculty.
- When the *samādhi* *indriya* is strong, that person is likely to be quiet and does not like to engage in idle chatter; thus keeping the fourth precept on right speech will be easy for them.
- Someone with *paññā* (wisdom) will be able to comprehend *anicca*, *dukkha*, *anatta* easily and thus to realize the fruitlessness and the dangers of the *sansāric* journey. Such a person will be able to keep the

hardest fifth precept on controlling the mind; see, "[The Five Precepts – What the Buddha Meant by Them](#)".

6. **Once one identifies the strong faculty, one should try to exploit that to move forward; the other faculties always pitch in to help, so they will grow too.** It is important to cultivate all five faculties until they become powers (*bala*), **but one needs to exploit the predominant one.**

- If someone tells a child, “this is not your actual Mom; she is somewhere else”, the child will not only refuse to believe that but will run to the mother and give a hug just to show how confident he is. In the same way, *saddhā* based on *paññā* can only make one's resolve be strengthened by obstacles.
- For example, when one does not have *saddhā*, one can be influenced to change the course by an outside influence. But if *saddhā*, built on *paññā*, is strong no matter how strong the influence is one's faith will not be shaken.
- The Buddha gave a simile to understand the how *indriya* can become *bala* to overcome difficulties: When a river runs into an obstacle like a large boulder, it splits and goes around it, and merge together after the obstacle. But the *indriya* needs to be strong enough to do that.
- When *indriya* (faculties) are strengthened, they become *bala* (powers).

7. When the faculties are being cultivated, it is important to try to balance them, while utilizing the predominant faculty's power.

- Some people have *paññā* and may say, “it is useless to take precepts or chant “*Tisarana*” or chant/listen to *suttā*; it is better to learn Dhamma”. But those activities do help in getting the mind to be receptive to Dhamma; see, "[Buddhist Chanting](#).”
- On the other hand, just reciting those verses is not enough. In order to recite them with understanding, one needs to learn Dhamma and cultivate *paññā*.
- Normally, *saddhā* and *paññā* go together and needs to be balanced. Similarly, *virīya* (effort) and *samādhi* (concentration) need to be balanced. For example, **when doing formal meditation, too much of an effort can be a drawback for samādhi.** As the Buddha told Sona the musician, the strings on a violin need to be just right, not too tight and not too loose.
- *Sati* (mindfulness) must be leading and must always be there.
- *Sati* can be compared to the steering wheel of a car; *saddhā* and *paññā* can be compared to one set wheels, and *virīya* and *samādhi* can be compared to the other set of wheels. The wheels must be in balance and the steering wheel must be kept at correct position all the time for the car to go forward. If the wheels are not balanced, the car will just go in circles; if the steering wheel is not managed, the car will go off the road.

8. These five (*saddhā*, *virīya*, *sati*, *samādhi*, *paññā*) are *cetasika* (mental factors). They help define one's character (*gati*) for the better, and these five are important ones to “take in” or “āna” in *ānāpāna sati*.

9. **The five faculties exercise control in their respective domains: *saddhā* in the domain of *adhimokkha* (decision or resolve), *virīya* in *paggaha* (exertion), *sati* in *upatthāna* (awareness), *samādhi* in *avikkhepa* (non-distraction), and *paññā* in *dassana* (view or vision). When they become *bala* (powers), they become unshakable by their opposites – indecision, laziness, negligence, agitation, and delusion or ignorance.**

- It is important to realize the value of *citta pasāda* (joy) and *adhimokkha* (resolve) that results from *saddhā* based on true understanding: *adhimokkha* is an intermediate step in *Kusala-mūla paṭicca samuppāda* on the way to Nibbāna, see, "[Kusala-Mūla Paṭicca Samuppāda](#).”
- Also, *citta pasāda* and *adhimokkha* that arise in doing meritorious acts with joy in the heart are key to optimizing the merits; see, "[A Simple Way to Enhance Merits \(Kusala\) and Avoid Demerits \(Akusala\)](#),” and "[Javana of a Citta – The Root of Mental Power](#).”

10. The five *indriya* become five *bala* and are well balanced only for an *Arahant*. We can reap many benefits even before reaching that ultimate goal by cultivating them, making sure to try to keep them balanced.

- Even for an *Arahant*, there are some leftover “imperfections” even though they are not defilements; these are some “hard-to-get-rid-of” quirks in personal behavior. For example, there is this story about a very young *Arahant* who had the habit of jumping over puddles instead of going around them; he had been born a monkey for many lives in the recent past and had carried that habit over to this life.
- Only a *Sammā Sambuddha* (like Buddha Gotama) is perfect in every respect. This is why he is called “*tatagatha*” (“*thatha*” for “what should be” or the “real nature”; pronounced “*thathagatha*”).

11.22 Possible Outcomes of Meditation – Samādhi, Jhāna, Magga Phala

Revised May 30, 2018; February 10, 2020

Introduction

1. As we discuss in the “Bhāvanā (Meditation)” section, meditation is of two types.
 - One is done at all times, being “morally mindful.” Then the other type is the formal meditation where one contemplates on a given “procedure” while sitting down or walking.
 - In Buddhist meditation, the first is more important than the second.
2. Then there are three possible outcomes of meditation: *Samādhi*, *jhāna*, and *magga phala*.
 - One gets to *samādhi* by focusing the mind on one thing. Frequently a mind jumps incessantly from one thing to another. A sound pulls the mind one way, a sight another way, smell, etc., and the mind itself likes to jump around.
 - When one is thinking about a greedy or angry thought, the “scatteredness” of the mind is intensified.
 - Regardless of the cause, this makes the mind tired.

What is *Samādhi*?

3. *Samādhi* (“*sama*”+“*adhi*” where “*sama*” means “equilibrium” and “*adhi*” means “dominance”) means turning the mind towards an equilibrium state away from distractions (especially greedy, angry, or foolish thoughts.)
 - The opposite of the Pāli word “*sama*” is “*visama*.” When either the body or the mind gets “away from equilibrium,” that is “*visama*” and we become uncomfortable. [*sama* :[adj.] even; equal; level; similar. (m.), calmness; tranquillity. *visama* : [adj.] uneven; unequal; disharmonious.]
 - A good analogy is the following. We become restless if our environment becomes too hot. Then we try to find a way to cool ourselves. We get very uncomfortable if we are in a “too cold” environment also. Then we try to be warm by turning on a heater or wrapping ourselves with blankets.
 - However, if the room temperature is moderate and away from both those extremes, then we feel comfortable. We feel contented.
 - A similar effect takes place when the mind stops going to the extremes. A greedy or angry mind is in a “*visama*” state and is away from *samādhi*.
 - However, if the focus is a *dhamma* concept, then the mind moves toward “equilibrium.”

Getting to *Samādhi*

4. Unless one has experienced *Samādhi*, or especially *jhāna*, one may not even realize that one’s mind is always under stress. Of course, when a deadline approaches and the mind goes to overdrive, we notice that. One can truly appreciate this only after experiencing the tranquility of a focused mind. The mind gets “sensitized” as one gets to *Samādhi*.
 - Most people do not realize how “inherently stressed” our minds are. We get used to things and do not feel even hardships. Only when we get to a “better state,” we feel the difference, and then it is hard to go back to the “lower state”.
 - For example, one who has lived a life of poverty has gotten used to it. However, if one is able to upgrade the lifestyle to a higher level, then one can FEEL the difference and now it will be very tough to go back. One becomes “sensitized”. We will encounter this word “sensitized” in many cases when we discuss the *Satipaṭṭhāna sutta*.

5. There are three kinds of *Samādhi* when categorized according to morality, i.e., what the focus is on. There is *micchā Samādhi* and two types of *Sammā Samādhi*, one mundane (for living a better life) and one supermundane (focusing on *Nibbāna*).

- A suicide bomber who is assembling a bomb must focus on his task. Otherwise, he will blow himself up. He gets into a *micchā samādhi*.
- Most people meditate to get some “peace of mind”, to get some relief from the pressures of hectic life by focusing on the breath. That is a form of *samādhi*. When one focuses on a neutral object, like breath, one gets to such a “neutral kind of *samādhi*”.
- The best kind of *samādhi* is attained when one focuses on a *dhamma* concept, which takes the mind off *pañcanīvaraṇa*. See, “[Key to Calming the Mind – The Five Hindrances.](#)”
- There is a post on different types of *samādhi*: “[What is Samādhi? – Three Kinds of Mindfulness.](#)”

Jhāna* Is a Deeper Level of *Samādhi

6. *Jhāna* is a deeper level of *samādhi*, where the mind really gets absorbed in the object (*ārammaṇa*). Then the tranquility is optimized, and there are eight levels of *jhāna*. The first four are the ones experienced by beings in the 16 realms of the *rūpa loka*, and the last four in the 4 realms of the *arūpa loka*.

- *Jhāna* CANNOT be attained via *micchā samādhi*.
- The *jhāna* attained via *Sammā Samādhi* are two types, corresponding to *Ariya jhāna* and *anāriya jhāna*; see, “[Power of the Human Mind – Anariya or Mundane Jhāna](#)” and “[Power of the Human Mind – Ariya Jhāna.](#)”
- Even though one can get to *anāriya jhāna* by just focusing on the breath, it does require one to live a moral life. One who is not at least following the conventional five precepts will not be able to cultivate them; see, “[Jhānic Experience in Detail – Sāmaññaphala Sutta \(DN 2\).](#)”
- Of course, the uniqueness of Buddhist meditation is the supermundane *Sammā Samādhi*, leading to *Ariya jhāna*, and the four stages of *Nibbāna*.
- **However, one could be distracted from attaining a *magga phala* if one starts enjoying *anāriya jhāna*.** Therefore, it is best NOT to attain *anāriya jhāna*. However, some people can easily get to *anāriya jhāna* if they had cultivated *jhāna* in recent previous lives.

Permanent Removal of Suffering Attained Only With *Magga Phala*

7. Thus the highest levels of “peace of mind” are at the four stages of *Nibbāna* or *magga phala*: *Sotāpanna*, *Sakadāgāmi*, *Anāgāmi*, and *Arahant*. However, it is not necessary to PRACTICE *Ariya jhāna* to attain *magga phala*.

- For example, one could attain the *Sotāpanna* stage without practicing *jhāna*. What is needed for achieving the *Sotāpanna* stage is *upacāra/anuloma samādhi*; see, “[Citta Vīthi – Processing of Sense Inputs.](#)”
- Furthermore, unless one has practiced it before, a *Sotāpanna* cannot automatically get into a *jhāna*. However, it will be easy for a *Sotāpanna* to attain *jhāna* with practice.
- We need to remember that *jhāna* are mental states of higher-lying *Brahma* realms. They still belong to the 31 realms of “this world.” One needs to lose cravings for *jhanic* pleasures to attain the *Arahanthood*.

Jhāna* Not Necessary to Attain *Magga Phala

8. What is required to attain *magga phala* is *samādhi*. *Jhāna* are NOT necessary to achieve *magga phala*.

- We know that there are *jāti Sotāpannas* born in the human realm. But if a *jhāna* were REQUIRED to attain the *Sotāpanna* stage, then that person WOULD NOT be born in the human realm, but in a *Brahma*-realm corresponding that *jhāna*. Waharaka Thero emphasizes that in the following *desanā*:

[WebLink: PureDhamma: Are Jhāna Required for Magga Phala](#)

- Furthermore, just by listening to correct Buddha Dhamma and/or attaining *jhāna* does not make one become a *Sotāpanna*. The *Thero* points out that Devadatta ended up in an *apāya*, even though he had not only cultivated *jhāna* but had supernormal powers (*iddhi*) too. Devadatta listened to many discourses from the Buddha but was not able to attain the *Sotāpanna* stage of *Nibbāna*.

Getting to *Ariya jhānā* – Only After *Anāgāmi* Stage

9. One gets to *anāriya jhāna* by SUPPRESSING *kāma rāga* and *paṭigha*. One gets to *Ariya jhāna* by REMOVING *kāma rāga* and *paṭigha*. See, “[Power of the Human Mind – Ariya Jhānā](#).” **But before one can use this technique to attain *Ariya jhānā*, one needs to attain the *Anāgāmi* stage.**

- One sits down in a quiet place and first contemplates on *anicca, dukkha, anatta nature*. One then keeps repeating the following (or the English translation; what matters is one has to have the understanding.) “*Etam santam etam paṇītam, yadidaṃ sabbasaṅkhārasamatho sabbūpadhipaṭinissaggo taṇhākkhayo virāgo nirodho nibbānan’ti.*” That means, “It is the only peace, the only happiness: prevent *saṅkhāra* from arising (via) eliminating *taṇhā* and excess greed and thus stopping the arising of defilements, which is *Nibbāna*.” [*‘etam santam etam paṇītam yadidaṃ sabbasaṅkhārasamatho sabbūpadhipaṭinissaggo taṇhākkhayo virāgo nirodho nibbānan’ti*, which means, “It is peaceful (*santam*), it is supreme (*paṇītam*), which is the calming of *saṅkhāra* and breaking of bond (*upadhi*) via eliminating *taṇhā* and excess greed (*rāga*), and thus stopping the arising (*nirodho*) of defilements (*saṅkhāra, upadhi, taṇhā, and rāga*), which is *Nibbāna*.” AN 9.36 *Jhāna Sutta upadhi* : ‘substratum of existence’ or bond. In the Com. there are enumerated 4 kinds : the 5 groups (*khandha*), sensuous desire (*kāma*), mental defilements (*kilesa*), *kamma*.]
- The reciting of a certain phrase (meaningfully, with understanding) is called a “*kammatthāna*.” A given meditation technique is also called a *kammatthāna*.
- Two important points. (1). One can either say it out quietly or say it in one’s mind, (2) This is not chanting; just saying the words will be just a waste of time. One needs to comprehend, to some extent, what is meant by *anicca, dukkha, anatta, i.e.*, some idea of what *Nibbāna* (or “cooling down” is).
- If one has experienced any kind of “cooling down,” it is best to recall that while saying the above phrase. For example, if one does not flare up like one used to, or if one has less attachment to things, that is the best to recall.
- Unlike the *Sotāpanna* stage, it is relatively easy to confirm the attainment of *Ariya jhāna*. One must have REMOVED *kāma rāga* (craving for sensual pleasures, including the urge for sex) even to attain the first *Ariya jhāna*.

Summary

10. Thus reaching *magga phala* and *Ariya jhānā* REQUIRE the understanding of *anicca, dukkha, anatta*, the Three Characteristics of existence. Without the “correct vision” or *Sammā Dīṭṭhi* at some level, the mind does not see the unfruitful nature of sense pleasures or the “superiority” of *nirāmisā sukha*.

Next, “[Are you not getting expected results from meditation?](#)”,

11.23 What is Samādhi? – Three Kinds of Mindfulness

Revised May 16, 2019

1. *Samādhi* (“*sama*” + “*adhi*” where “*sama*” means “same” and “*adhi*” means “dominance”) means the object becomes the priority. Then the mind gets focused on it. As we discussed in many posts, when the mind becomes focused on one object (*ārammaṇa*), the *ekaggatā cetasika* takes over and make the mind latched “on to it.”

- This is how one gets to not only *samādhi* but also *anāriya jhāna* using breath meditation, just by focusing the mind on the breath.
- One gets to *samādhi* on whatever the activity one gets absorbed.
- Being mindful depends on the situation. The kind of mindfulness needed while driving a car is different from the mindfulness required to design something (or read a book). And the mindfulness required to attain a *jhāna* needs to be different from those two.

2. There can be numerous kinds of *samādhi*. Here we distinguish three types of *samādhi* or mindfulness:

- Momentary mindfulness (*khaṇika samādhi*)
- Access mindfulness (*upacāra*, pronounced “*upachāra*,” *samādhi*)
- Absorption mindfulness (*appanā samādhi*)

Let us discuss each type separately.

3. We should always have the **momentary mindfulness or *khaṇika samādhi***. Here we frequently change the focus from one object to another based on the need.

- We can use momentary mindfulness during the day when we are active. When we talk to someone, we should be mindful about what we say. The more one practices, one will be able to control one’s speech by being mindful. It is the same with any physical activity too. When we are about to cross the street, we should be mindful of the traffic, etc.
- Many people take this the wrong way, and use it as a formal meditation. It is kind of silly to do the wrong “walking meditation” by saying “lifting the foot,” “putting it down,” etc. like a robot. This is what happens when Buddha’s teachings get distorted.
- For example, when driving, we need to pay attention to the road and then to apply brakes if the car in front gets too close. We need to keep an eye on the traffic and be prepared to take quick action. Focusing the mind on the job at hand here translates to shifting the focus to different tasks in an optimum way to drive the car safely.

4. **Access concentration (*upacāra samādhi*)** is more focused. While reading an exciting book, one gets absorbed in it. One cannot be thinking about other things while reading.

- On the supermundane (*lokuttara*) side, when listening to a Dhamma discourse or reading about a Dhamma concept, one can get into access concentration or *upacāra samādhi*. **Reading a web post on a Dhamma concept, if done at a quiet time, can calm one down. If read with understanding and focused mind, it is possible to get into a somewhat deeper *samādhi*.**
- All following activities involve access concentration. A programmer writing computer code, a surgeon doing surgery, an architect designing a building, a scientist thinking about a new theory, etc. These are all mundane *Samādhi*. But one can still feel a kind of in a trance if one gets absorbed in any task.

5. ***Appanā Samādhi* or absorption in mindfulness** can lead to a *jhānic* state with practice. Here one needs to find a quiet place and need to close one’s eyes and concentrate on just one object.

- In *Ariya* meditations, the focus is something related to *Nibbāna*. It could be a Dhamma concept or *Nibbāna* itself. *Ariya Metta bhāvanā* is another.

- In *anāriya* meditations, this object is usually either a *kasina* object or the breath or the falling/rising of the stomach.

6. Now let us look at some general features of the three types.

- It is possible, for someone with practice, to get into *appanā samādhi* (*jhāna*) very quickly. Thus the difference between the three types of *samādhi* is not in the time scale. Instead, it is on the goal or the situation at hand.
- Workplace or home accidents happen when one loses momentary mindfulness. If one loses attention on the task at hand, one can pull the wrong switch, cut oneself while chopping vegetables, or even tripping while walking.
- One can be reading something for hours and not get anything in, if the mind wanders off. One can be sitting in meditation for hours and not get into *samādhi* if the mind wanders off.

7. In all these three types, achieving mindfulness comes naturally if the five hindrances are not covering the mind; see, "[Key to Calming the Mind – The Five Hindrances.](#)"

- If one has greedy or hateful thoughts (*kāmachanda* and *vyāpāda*), it is challenging to do any of the three.
- Even a simple task can become aggravating and frustrating under the following conditions. One's mind is lethargic (*thina middha*), one is agitated by being high-minded or low-minded (*uddhacca kukkuccha*), or does not have a clear idea of the task (*vicikicchā*).

8. Thus it helps to live a moral life, i.e., avoid the ten immoral acts as much as possible. And it pays off to make preparations ahead of the time.

- Especially for the *upacāra* and *appanā samādhi*, one could make sure to get other tasks out of the way beforehand. Then meditation does not have to be interrupted in the middle. Simple things like going to the bathroom and making sure one does not have full stomach before sitting down to meditate, can make a difference.
- Preliminary procedures such as reciting precepts or offering flowers or incense to the Buddha before a formal meditation session is also a part of "getting the mind ready". As we will discuss later, attaining "*citta pasāda*" or a "joyful mind" has a valid reason behind it.

9. *Samādhi* is the endpoint of being mindful (*sati*).

- *Samādhi* is a synonym for the *cetasika* (mental factor) of *ekaggatā*, i.e., having a focus. One can cultivate it by being mindful the correct way, i.e., via *sammā sati*.

10. Finally, it is also possible to get into *micchā samādhi*, the opposite of *sammā samādhi*. A master thief plotting a grand robbery can get focused and be absorbed in that immoral activity. The same is true for a serial killer planning a killing.

- Thus there are three kinds of *samādhi* when categorized according to morality. One is *micchā samādhi*. The other two are *sammā samādhi*: one mundane (for living a better life) and one supermundane (focusing on *Nibbāna*).

11. One could get into *upacāra samādhi* by reading this post paying attention to the material. One may need to read related posts or other material to absorb the material. When the mind gets "absorbed in the issue," it is in a state of *samādhi*. Of course, that is possible only if the material is interesting for oneself.

- If correctly done, one will have a lower heartbeat, and a calmer and peaceful mind, by the time the reading session. People have attained even *magga phala* by attentively listening to Dhamma discourses.

11.24 **Getting to Samādhi via Formal Meditation Sessions**

March 25, 2016; revised December 1, 2017

1. It does make sense to do formal meditation even at the very beginning when one decides to follow the Path of the Buddha, but AFTER one has at least read about the correct interpretation of “[Anicca, Dukkha, Anatta](#).” In the following I will discuss the importance of a daily (or few days a week) formal meditation session.

- When one starts seeing the dangers of staying “in this world” (*anicca* nature), one needs to reassure the mind that there is an alternative, i.e., *Nibbāna* or *Niveema*. Thus, simultaneously with contemplating *anicca* nature, one needs to encourage the mind to taste the *nirāmisā sukha* that results from it by cultivating *samādhi*. A formal meditation session provides that.
- The Buddha gave a simile to explain this effect. In the old days, when people took to the oceans to look for new lands, they took caged birds with them. When they were lost and wanted to find whether they were close to land, they released a bird and shoed it away frightening it. The bird would fly around looking for safety (i.e., land) but will be forced to come back to the ship if no land is found; but if it can see land, it will not come back to the ship. When the mind starts seeing the dangers of *amisa sukha* or “worldly pleasures”, we need to encourage it to enjoy the *nirāmisā sukha*, i.e., that there is a better alternative.

2. Even before one gets to *jhānā*, one can experience “cooling down” when one engages in regular formal meditation. Looking back to my early days, I remember getting to some sort of *samādhi* while sitting at the desk and contemplating on a Dhamma concept. The body became light and breathing became slow due to the calmness of the mind.

- It is hard to feel “*samatha*” or “*samādhi*” if one is not sitting down or lying down.
- Furthermore, it gives one confidence that one is making progress if one can see the “improvement” in being able to stay in “*samādhi*” for longer times with practice. To emphasize, this *samādhi* does not need be a *jhāna*. It is just being able to stay in one place with a focused mind and with palpable lightness in the body and the mind.

3. Many people who do breath meditation say that it is a *samatha bhāvanā* to calm the mind BEFORE doing *vidassana* (insight) meditation. But that is a waste of time. One can get to *samatha* by doing *vidassana* (*vipassana*) or insight meditation.

- As I have discussed in other posts, one should find a quiet place and sit comfortably. One could start the session with *Tiratana vandana* to calm the mind; see, “[Buddhist Chanting](#).” One could make the room dark and light a candle and/or incense to “set the background”. Those activities help some people to get into the proper mindset.
- Then one could just start contemplating on a Dhamma concept. One could either listen to part of a *desanā* or read part of an essay and then start contemplating on that. This is insight meditation.
- Some people who do breath meditation have difficulty in maintaining their focus on the breath; other random thoughts start creeping in. However, if one starts seeing the value of Dhamma and becomes truly interested in learning Dhamma, it will become easier to concentrate on a Dhamma concept. **Thus one initially should pick a topic of interest to oneself.**

4. With time, it becomes easier to get to *samādhi* by gradually purifying the mind. But it is important to figure out which areas to focus on in order to gain maximum benefits.

- First, it is important to realize that there are two main categories of “bad deeds” that can have negative consequences; see, “[Lobha, Dosa, Moha versus Raga, Patigha, Avijjā](#)” for details.

- Those done with *lobha* (excess greed), *dosa* (hate), and *moha* (covered mind) can lead to birth in the *apāyā* (four lowest realms). Permanent reduction of *lobha*, *dosa*, *moha* to *rāga*, *paṭigha*, *avijjā* happens when one attains the *Sotāpanna* stage.
- Those done with *rāga* (craving for sense pleasures), *paṭigha* (friction), and *avijjā* (ignorance) can only lead to rebirth in the higher realms in the *kāma loka* (human and *deva* realms), and in *rupi* and *arupi brahma loka*. Thus one can concentrate on those after getting to the *Sotāpanna* stage, but one can start thinking about them too in order to help comprehend the *anicca* nature as discussed further below.

5. Therefore, our main goal should be to avoid those actions that can lead to rebirth in the *apāyā*, i.e., avoid those actions done with *lobha*, *dosa*, *moha*.

- In simplest terms, this means getting rid of *micchā diṭṭhi* and comprehending *anicca* nature. One of the strongest kind of *micchā diṭṭhi* prevalent today is materialism: One believes that at death one ceases to exist, i.e., one believes that the mind is a byproduct of the body (brain), and thus when the body dies, that is the end of story. This is also called *vibhava taṇhā*.
- It is a good idea to review the relevant posts on *micchā diṭṭhi* to make sure one understands them. The ten types of *micchā diṭṭhi* are discussed in “[Three Kinds of Diṭṭhi, Eightfold Paths, and Samādhi.](#)” There are also many posts on “[anicca, dukkha, anatta.](#)”
- Starting on the Eightfold Path for a *Sotāpanna Anugami* begins with getting rid of *micchā diṭṭhi*, comprehending *anicca*, and thereby comprehending first stage of *sammā diṭṭhi*; see, “[Buddha Dhamma – In a Chart](#)” and the post in there.

6. By sorting out priorities (the order of things to be done), we can save a lot of time in getting to the *Sotāpanna* stage.

- One has the potential to be born in the *apāyā* if one has remnants of *gathi* suitable for those four realms; there are many posts on *gathi*, *bhava*, and *jathi* at the site to read and contemplate on.
- It is imperative to be mindful and avoid actions compatible with “*apāya gathi*.” In the meditation sessions, one could think back to the previous few days and see whether there were any such instances and make a determination to not to repeat such acts. Once it becomes a habit, one can even catch oneself doing it and stop right then.
- For example, if someone does something bad to you, and if you start thinking about “how to get back” in retaliation, that is done with hate and need to be stopped. However, it is OK if one “gets mad” momentarily at such an unprovoked, harsh act by someone. It is only at the *Anāgāmī* stage that one will automatically stop “getting mad”. Even then there may be some annoyance at that person. Only an *Arahant* has perfect *upekkha* and will not be bothered to the slightest by ANY provocation.
- Another example is extreme greed (*lobha*) where one tends to do “whatever it takes” to get what one wants, and also wishing that others should not get those things. Enjoying sense pleasures (*kāma rāga*) that are acquired through legitimate means is not a hindrance to attain the *Sotāpanna* stage. Thus engaging in sex with a spouse is done with *kāma rāga*, but that with another’s spouse or a child, for example, is done with *lobha*.
- A successful meditation program goes hand in hand with a moral lifestyle. They feed on each other.

7. It is also very important to be aware of the *dasa kusala*, *dasa akusala*, and also *puñña kriya*; see, “[Kusala and Akusala Kamma, Puñña and Pāpa Kamma,](#)” “[Ten Immoral Actions \(Dasa Akusala\)](#)” and “[Puñña Kamma – Dāna, Sīla, Bhāvanā.](#)”

- *Puñña kriya* help one attain the right mindset for meditation. Also, *puñña kriya* increasingly become stronger *kusala kriya* as one’s understanding of *anicca*, *dukkha*, *anatta* grows.
- A *Sotāpanna* has COMPLETELY removed only *micchā diṭṭhi* from the *dasa akusala*. Only an *Arahant* is completely free from *dasa akusala*; see, “[What is the only Akusala Removed by a Sotāpanna?](#).”

- Of course, the tendency to do *dasa akusala* start decreasing from the time one starts on the mundane eightfold path, even before the Noble Eightfold Path; see, “[Buddha Dhamma – In a Chart.](#)”
- In terms of Abhidhamma, the *apāyagāmī* strength of all *dasa akusala* will be removed at the *Sotāpanna* stage due to the removal of the 4 *diṭṭhi sampayutta lobha citta* and the *vicikicchā sampyutta moha citta*; see, “[Akusala Citta – How a Sotāpanna Avoids Apayagami Citta.](#)” Thus if a *Sotāpanna* commits any of the remaining 9 *akusala kamma* their strength would be much reduced, because one has removed *gathi* suitable to be born in the *apāyā*, mainly by getting rid of *micchā diṭṭhi*.

8. Many people worry about sense pleasures way too early. It is not necessary to forcefully suppress normal sense desires before the *Sotāpanna* stage, even though it may happen to some extent automatically. *Kāma rāga* (and *paṭigha*) are removed via the *Sakadāgāmī* and *Anāgāmī* stages.

- If a vessel is leaking due to multiple holes, one needs to fix the bigger holes first. Trying to plug small holes which are leaking slowly, while water is draining rapidly through gaping big holes, is a waste of time.

9. On the other hand, contemplating on the bad consequences of sense pleasures can lead to a better understanding of *anicca* (unfruitfulness of worldly things) and the First Noble Truth. In addition to the suffering due to obvious causes such as an ailment or a headache, we are not even aware of most of the suffering that we endure.

- In fact, in a twisted way, **we perceive most of our sufferings as enjoyments.** It is a “made-up” enjoyment and is called “*assāda*” (***āsvāda* in Sinhala**).
- This is also a good “meditation topic”, and could help one to get to *samādhi*. However, this should be done when one can come to a stage where one starts to comprehend such concepts. Each person is different, so one should keep trying different options.

10. For example, we enjoy eating, especially if the food is tasty. But why do we have to eat? This seems like a foolish question, but there are beings (*brahmā*) who do not need to eat anything. They are sustained by their *kammic* power (previous good *kamma*). *Devas* have to consume *amurtha* to sustain themselves, but that is a very fine food and there is no residue (i.e., they do not defecate or even sweat).

- On the other hand, we have to work hard to make money to buy food, spend time and energy to cook, and then “enjoy a meal” that lasts may be half an hour.
- But all that suffering (working to make money, going to grocery store, cooking, etc) is masked by “made-up mind pleasures” or *assāda*: We look forward to that meal and forget about all that suffering!
- On the way back from work we may start getting hungry, but that will be masked because we will be thinking only about the meal that is waiting for us.
- Is this any different from a cow who pulls a heavy cart, but forgets about all that suffering because it is focusing on a bundle of hay dangling in front of it?

11. Let us consider another type of hidden suffering that is associated with cleaning ourselves. In the morning, we brush our teeth, take a shower, shave, apply all kinds of fragrances and go to work very happily. We don’t even notice the hidden suffering associated with all that work!

- One could experience another facet of that suffering if one can skip a day or two of doing those things. It will be very uncomfortable even for ourselves let alone for the others.

12. In fact, most of the things that we do in a given day are done to just maintain our bodies, our houses, our environment in a presentable condition. Yet, we do not see the suffering associated with all those activities. That is another way to comprehend *anicca* nature.

- **One may think that thinking about such things could make one depressed. That is certainly possible if one did not know about the *anicca* nature, and also that by following the 37 Factors of Enlightenment one can be released from that suffering.**

- The comprehension of the true (*anicca*) nature of this world, and the hidden sufferings associated with it gives one “*anuloma shanthi*.” This is the joy that comes from grasping the true nature of this world.
- Then by realizing that there is a way to REMOVE future suffering (by following the 37 Factors of Enlightenment), provides one with “*sammatta niyama*.”
- Thus as one makes progress, it is a good idea to think about specific cases where one has gained a “peace of mind”. That itself can lead to *samādhi*. One needs to realize BOTH the dangers of the rebirths process (*anicca* nature) AND the benefits of following the Path (*Niveema* or cooling down).
- When one starts experiencing BOTH *anuloma shanthi* and *sammatta niyama*, one becomes a *Sotāpanna Anugami*, which inevitably leads to the *Sotāpanna* stage; see, “[Sotāpanna Anugāmi and a Sotāpanna](#).”

13. Finally, I want to emphasize the importance of trying to extend the duration of the formal meditation session gradually.

- At some point one will start feeling body sensations. And then the mind will “switch over” to a different state. When that first happened to me a few years ago, I was startled. At that point one could let the mind “take over”, i.e., stop contemplating and let the *samādhi* “grow” and possibly lead to *jhānā* (it is easier for those who have the *sansāric* habit; but *jhānā* are not necessary for *magga phala*). Now one has attained a higher level of *samādhi*. One could of course continue with insight meditation.
- This is when one starts feeling enhanced *nirāmisā sukha*. It is not really a “pleasurable feeling” in the sense of what you experience in eating a nice meal, listening to a favorite song, etc. It is rather a calmness of an unburdened mind. **Until one experiences it, one is not aware of the real stress that our minds are normally under. One comes out of the meditation session refreshed and alert.**
- I would say it is possible that one could start experiencing some kind of benefit when the session is naturally lengthened to half an hour or may be an hour. I am just basing this on my own experience. If people are willing to share their experiences, I can update this post in the future (or even present someone’s experience in a separate post). That could help motivate others.

11.25 Are you not getting expected results from meditation?

Revised December 1, 2017

Some people try to attain Nibbānic bliss by trying to “give up all attachment to this world” in their minds during meditation. However, until the mind truly realizes the dangers of this world (the rebirth process), it is unable to give up those attachments.

- One has to attain at least the *Sotāpanna* stage by “seeing the true nature of this world” before one’s mindset becomes amenable to “giving up”. This is the hardest part to understand.
- Even before that one needs to get rid the 10 types of *micchā diṭṭhi* as discussed below.

1. During the time of the Buddha there was a *bhikkhu* named Potila, who was well-versed with deep Dhamma concepts and was a well known teacher; he had developed *abhiññā* powers as well, but had not attained even the *Sotāpanna* stage. His *desanās* (discourses) were deep and only those at the *Anāgāmī* stage (at least *Sotāpanna* stage) could follow them and get to *Arahanthood*. One day he went to see the Buddha, paid respects, and told the Buddha that he had been a Dhamma teacher during the times of several earlier Buddhas too, and helped many to attain *Nibbāna* (*Arahantship*). [**Bhikkhu Potila - see, Poṭṭhilaṭṭhera Vatthu - Dhammapda verse 282**]

- The Buddha asked him whether he has attained any *magga phala* and Bhikkhu Potila admitted that he had not. The Buddha just commented: “*Thucca* Potila” and turned his attention to other matters; *thucca* (pronounced “thuchcha”) in Pāli means despicable or “lowly”.

2. So, *bhikkhu* Potila, who had expected praise from the Buddha for helping others, realized that he needs to work on his own salvation before helping others. He strived by himself and could not make any progress; he was trying very hard to “give up all attachments”, following the same instructions he was giving others. But no matter how hard he tried, he could not succeed.

- When he sought help from other *bhikkhus*, they were reluctant to become his teacher because everyone knew he was very knowledgeable in Dhamma. Eventually, he went to this very young *Arahant*, who was well-known for his teaching abilities, and sought help. The young *Arahant* agreed to help, only if *bhikkhu* Potila agreed to carry out everything as instructed, and Potila agreed.
- The young *Arahant* decided to use an unusual *kammatthana* (instructions). He took Potila to a large area covered by mud, and asked him to wade into the mud and keep going until told to stop. Potila started wading in mud and kept going until he was told to stop when the mud was all the way up to his chin; he was barely able to move at this point because mud was heavy.

3. The *Arahant* told him that, “if someone is stuck in mud like that any knowledge about cleaning oneself by taking a bath is not going to help. One needs to get out of the mud first”.

- Then he asked Potila to come back. Potila had great difficulty in moving forward initially, since he was all the way up to the chin in thick and heavy mud. While dragging himself out of the mud with great difficulty, Potila realized what the young *Arahant* was talking about. It is not possible to get out of mud until one realizes that one is stuck there, and getting out of mud required sheer will power. Similarly, he had not realized that he was stuck at a much lower moral level; he needed to cleanse his mind first.
- The “giving up” part comes with a mind that has removed the wrong visions (*micchā diṭṭhi*) and also excessive greed for sensual pleasures. These cannot be removed **just by** reading or listening about that.

4. Of course one can remove some of it by reading, listening, **and contemplating** on the validity of the reasons that the Buddha has given, especially on *micchā diṭṭhi*. One has to realize that *kamma* (or one’s actions) are likely to have their results either in this life or the next, and thus the rebirth process must be valid. Remaining types of *micchā diṭṭhi* are also related to *kamma* and rebirth. The 10 types of *micchā diṭṭhi* are discussed in “[Micchā Diṭṭhi, Gandhabba, and Sotāpanna Stage](#)”.

- The second level of removal of *micchā diṭṭhi* comes via comprehending *anicca, dukkha, anatta*; ; see, “[Micchā Diṭṭhi, Gandhabba, and Sotāpanna Stage](#)”.

5. The simile can be made even better by looking at what happens to ants who get stuck in honey. Here unlike mud, the sense pleasures are appealing and there is no incentive to get out either. Those ants who get stuck in honey, would not even try to get out because they are too busy enjoying the honey. **Even when they are barely stuck, and can move out of honey, they would not because they like the taste of honey.** Just like that, any living being, whether a human or even the lowly worm, likes to indulge in the sense pleasures, and thus gets stuck.

- **And even when one realizes that one needs to get out of “the honey pot” it is hard, at least initially.**
- For that one needs to see the perils of staying in this rebirth process, where birth in lower four realms will lead to unimaginable suffering. Even if one can strive to be born in higher realms, that will not last long. **This is “anicca“: no matter how hard we try to find refuge in the 31 realms it is not possible to do so in the long run.**

6. With much effort, Potila slowly made his way up to the waist level, and started feeling the lightness of being free of mud. He could now move faster too. He felt the relief when he was out of the mud, and was asked to go and take a shower. Now, cleaning up with soap could be done; but while stuck in mud, there was no use of soap and water. Just like that the deep Dhamma that he had memorized was of no use to him while he was still stuck in mud.

- Eventually, when one comes out of the mud that is like the *Sotāpanna level*. One is still covered with mud, i.e., one still likes to enjoy sense pleasure. But now one KNOWS that one needs to take a shower, use soap and shampoo, and remove all that mud.

7. What Potila was doing was to give discourses on deep Dhamma that could help an *Anāgāmī* attain the *Arahanthood*. Most of those who benefited from *bhikkhu* Potila's discourses were, ironically, *Anāgāmīs*. Potila was just reciting the Dhamma without real comprehension but those who benefited were capable of comprehending the true meanings. After that *kammatthana*, Potila was able to attain the *Sotāpanna* stage and soon became an *Arahant*.

(By the way, one cannot attain the *Sotāpanna* stage by taking instructions from an *Anariya*, i.e., one who had not attained at least the *Sotāpanna* stage. But once one attains the *Sotāpanna* stage, one can learn by himself or from anyone else and get to the higher stages. This is why it was only *Sotāpannas* or above (mostly *Anāgāmīs*) who could benefit from *bhikkhu* Potila's discourses).

- I believe this actual incident involving *bhikkhu* Potila highlights a very important point. No matter how much one reads on deep concepts of Dhamma, it is hard to get the idea to sink in unless one's mind is purified to a certain extent. It is critical first to break through the heavy fog of being covered by many wrong concepts and strong attachments. When one breaks through that initial “wall of resistance”, then it is easier to comprehend deeper concepts; see “[Lobha, Dosa, Moha versus Raga, Patigha, Avijjā.](#)”

8. One needs to make progress in a systematic way. Just like it is not possible to learn high school math without learning basic addition/subtraction, one MUST understand the basic concepts first. If one is engaged in killing, stealing, sexual misbehavior, lying, gossiping, getting “drunk” with alcohol, drugs, power, beauty, money, etc, it is not possible to calm the mind to a basic level. **And this is the hard part.** One is stuck in mud (more like honey, because it feels good to be stuck there).

- And while stuck in mud (or honey), no matter how much meditation one does, it is not possible to get LONG TERM relief. One may be able to go to a meditation retreat and be away from all those “honey-filled” attractions and enjoy some sense of calmness; but that goes away soon after coming back to “real life” with all those temptations.
- One needs to slowly work one's way through the mud (or honey, because that is how it seems initially first). This is the HARDEST part. No matter how much one READS, that is not going to make much difference until one sets up the stage for the mind to see the reality.

- By the way, this is also why those who meditate on “there is no self” (there is no ‘me’) cannot make any progress either. One needs to comprehend the “pointlessness in striving to accumulate material things for oneself” first. **If one could tell a full blown lie, hurt someone else, sexually misbehave, etc, then isn’t that done to gain something for “me”?**

9. Here is a rough step-by-step I would recommend (this is of course not for everyone; just for those who know they are stuck in honey):

A. If one is hurting others to get sense pleasure, that should be stopped first. It is double jeopardy; one is not only “getting stuck” due to excess greed, but also going to suffer consequences of harming others. One is not only getting attached to “pleasurable things” but also accumulating bad *kamma* by hurting others.

- For example, if one is killing animals for fun (sport), stealing valuables from others, having sexual relationships with other married people or young children, planning to hurt someone (even for retaliation), or spreading rumors about someone just to get some pleasure out of it, getting drunk and verbally/physically abusing others, all those would be included here.
- **Such immoral activities are the worst, and are called “*pāpa kamma*”. Both *lobha* and *dosa* (*dvesha*) are involved here and one’s mind is said to totally covered with ignorance (*moha*); see, “[Lobha, Dosa, Moha versus Raga, Patigha, Avijjā](#).”**
- Thus someone in this stage is deeply in mud all the way up to the chin.

B. One notch lower is being capable to do things (of course not always) with EXTREME greed, even if it does not hurt others directly; here one is only up to waist to shoulder level in mud. These are normally the things one does to seek “perceived happiness” by going to extremes.

- When one cannot get “high enough” with alcohol one tends to try drugs, because one has been “de-sensitized”. We all know of many movies stars etc. who get into this trend and end up committing suicide because nothing at the end can bring more pleasure to a highly “de-sensitized” mind.
- Another indication of extreme behavior is living beyond one’s means. This is of course relative. If one is living a small (but comfortable) house and wants to move in to a bigger house just for the sake of that **by stretching one’s resources**, that is a sign of extreme greed. If one is already living in a mansion that one has inherited or earned, and there is no financial burden, then there is nothing wrong with that since that will not burden the mind. However, in general, the more fancier the item is, whether a house or a car or anything else, it normally takes more time and effort to “maintain”, and inevitably there is a degree of attachment because of the perceived value.
- Such extreme greed could also lead to actions of hate, when someone else gets in the way. Then one may do “*pāpa kamma*” here as well; it is possible that actions of hate gets one to the higher level.

It is not possible to discuss all possibilities, but one should be able to figure out many such cases. No one else can decide these for anyone. Only each person knows about one’s own status of mind. However, any sensible person can make some kind of a judgement for oneself, but not for others.

C. If one is at stage A or B above, one should read those posts in the “[Moral Living and Fundamentals](#)” section. It could be helpful to go back and read those as one makes progress, and see that one understands more things than previously. This is hard to explain, but is true. A clear mind sees things much more easily.

- For those who are in stage A or B should read posts #1 through #3 below first.

D. Once one gets to the B stage, one should start reading the posts on the “[Key Dhamma Concepts](#)” and in particular learn and comprehend *anicca*, *dukkha*, *anatta*.

This is the real key step, to get started on the next stage. Once one gets some traction, there is nothing there to hold back someone from attaining the *Sotāpanna* stage. It had been hard for hundreds of years only because the correct concepts were hidden. Once one gets some traction, one can start doing any of the *bhāvanā*.

- As Carl Sagan said, “..think about all those emperors and kings who committed unmentionable atrocities just to have a sense of superiority and power for maybe 50 years. They are all gone”; see, “[The Pale Blue Dot.....](#)” Even though Dr. Sagan did not know, that is another way to state what *anicca* is.
- All those emperors and kings will be stuck in the animal or lower realms for billions of years to come. On the other hand, a peasant who lived within his/her means and led a moral life could be living in a *deva/brahma* realm for billions of years.
- The main point here is that there is no point in trying to seek sense pleasures or accumulate wealth for 80-100 years maximum, because at the end we will not be able to KEEP ANYTHING to our satisfaction. We may have a billion dollars, but if our bodies are worn out, will we be able to get ANY sense pleasures? Will we be able to keep any part of our bodies to our satisfaction? Many people try to “beat the aging process” by using temporary fixes such as botox, but any such effect will also will be temporary.
- It is not possible to really grasp the meaning of *anicca*, *dukkha*, *anatta*, if one is stuck in mud or honey.

E. When one comes out of the mud and start walking (with mud on the body), that is like the *Sotāpanna* stage. Now one does not even need anyone's help, even though that can help expedite the process; one can figure things out by oneself.

- There are many who know many *suttā* by heart or abhidhamma concepts, but nowhere close to the *Sotāpanna* stage.
- We need to understand that Buddha Dhamma is not about JUST LEARNING concepts (even though learning plays a big part), **it is all about using what is learned for purifying the mind**. As the mind becomes clear, one will start seeing the reality better. In the Buddha's days, illiterate people were able learn Dhamma just by listening, and even attained Arahant hood.

E. The final stage is to realize that even birth in such *deva/brahma* worlds will be temporary. At some point in the future, they are all going to commit some bad deed and end up in the four lower realms for long times; that is just the nature of this world, where sense pleasures can lure anyone to commit bad actions. But there is no point in talking about that stage, until one gets above the A and B stages, and become a *Sotāpanna*.

F. The series of posts that I am writing on the *Satipaṭṭhāna Sutta* goes through this process too, from stage A. Therefore, it may be a good idea to read those posts from the beginning as well. The first introductory posts are full of Pāli words, but just go through them briefly even if you do not fully understand. They WILL become clear later, if not now.

- **When one starts following the Path, one is bound to break the trend once in a while. A child learning to walk will fall many times. Many people get discouraged when they do an immoral act occasionally; but just to realize that one did a mistake, and that it bothers one's mind, means one HAS MADE PROGRESS. That is why one needs to have the perseverance to get back up with a renewed determination. Just like a child WILL learn to walk, one WILL get better with time.**

G. Of course I do not know the level of each person coming to the website. Only each person knows where he/she is relative to the above steps.

- If one truly can purify one's mind and comprehend *anicca*, *dukkha*, *anatta*, that is all it takes to attain the *Sotāpanna* stage.
- There is material ranging from the basic level to very advanced levels and even more will be posted in the future. This is for the sake of completeness, and also to make sure that any scholar or interested person can gauge the depth of Buddha's true teachings.
- There are also people who really start comprehending Dhamma and start enjoying finding about further details; no other type of “pleasure activity” can match the “enjoyment of Dhamma”. Buddha Dhamma is the ultimate “book of nature”.

- Furthermore, reading widely on different topics will help build *saddhā* (faith), which is NOT blind faith but faith built on understanding. When one sees how little modern science knows in comparison to the Buddha, it helps build faith. **And *paññā* (wisdom) and *saddhā* grow together.**

Next, “[1. Introduction to Buddhist Meditation](#)”,

11.26 How to Attain Samādhi via “Vipassana Pubbanga Samatha” Bhavana

1. *Anariya bhāvanā* methods (which include breath, stomach rising/falling, or just repeated recitation of a passage, such as “May all beings be happy and healthy”) can suppress the five hindrances and can lead to mundane samādhi. But the effects are temporary, as anyone participated in meditation retreats knows; it feels really good at the retreat, but after coming back and getting into the normal hectic life, that feeling of calmness fades away with time.

2. The Buddha compared such meditation techniques to riding a mule. His most recommended method was “*vipassana pubbanga samatha*”, which he compared to riding a race horse.

- *Vipassana* means “sort out and get rid of undesired thoughts that come to the mind”, *pubbangama* means precedes, and *samatha* is calming the mind or attain *samādhi*.
- Thus in “*vipassana pubbanga samatha*” meditation, when one does the *vipassana bhāvanā*, it automatically leads to *samatha* or *samādhi* and (*Ariya*) *jhānā*.

3. In the *Ariya bhāvanā* or the “*vipassana pubbanga samatha*”, one’s mind is constantly working to GET RID OF the defiled thoughts, not merely to suppress them as in the *Anariya* version. As one cultivates this *Ariya bhāvanā* over time, the five hindrances are slowly REMOVED from the mind and the mind gradually shifts towards a permanently calm state. Thus, it becomes easier and easier to attain *samādhi*, since the five hindrances are gradually removed.

- We talked about a contaminated water well in “The Basics in Meditation” post above. In *Anariya bhāvanā* what is done is basically let the dirt to settle to the bottom of the well by not further stirring the water. The water eventually becomes relatively clear, but in a new session one needs to do it all over.
- In contrast, in the *Ariya* version, one is constantly REMOVING dirt from the well. Therefore, session after session dirt is removed, and eventually there will be very little dirt to remove and thus the mind will get to *samādhi* very quickly.

4. In the beginning, it is better to do formal meditation sessions. As one gains practice, one could do it while waiting in the doctor’s office or riding a bus.

- First, sit in a quiet place as described in the “The Basic Formal *Ānāpānasati* Meditation” post. Close your eyes and let the mind relax. Thoughts will invariably start popping up. Disregard any neutral thoughts and immediately get rid of any greedy or hateful thoughts as they start coming up.
- It will be helpful to contemplate the negative consequences of such thoughts.
- For example, if thoughts about an unkindly deed someone did to you comes to the mind, think about the bad consequences of “doing tit for tat”: that will only enhance and cultivate defilements in YOUR mind. We do not have control over what others do; but we can control our minds. The more your mind becomes free of any hateful thoughts, the chances of having to face such adversary situations will diminish. You may be surprised, but that is true. Just have perseverance for a few weeks.
- In another example, if you start thinking a greedy thought, say for a tasty, high calorie snack, think about the bad consequences (gaining weight, getting addicted to such impulsive thoughts, etc), and also think about being able to have the confidence of self-control.

5. Do not try to remove all thoughts that come to the mind. This is very dangerous advice that some meditation teachers give. We need to remove ONLY those thoughts that have greed, hate, or ignorance associated with them.

- If any good, meritorious thoughts come to the mind, cultivate them; think further along those good thoughts. It could be a good deed that you did like helping someone, or an alms giving that you participated in, etc.
- If neutral thoughts come to the mind, let them just pass by. Do not cultivate them, but do not try to suppress them either.

6. It could be hard to do this in the beginning. But if you really want to make progress (*chanda*), can have the determination (*citta*), make the effort (*virīya*), and actively engage in looking at the bad consequences of bad thoughts and the possible benefits of good thoughts (*vīmaṃsā*), you WILL make progress, AND it will get easier with time. These four *iddhipāda* will also be cultivated on the way; see the post on “[The Four Bases of Mental Power \(Satara Iddhipāda\)](#)”.

7. When you actively suppress *kāmachanda* (excess greed) and *vyāpāda* (hate) by this procedure, the other three hindrances (*thina middha*, *uddhacca kukkucca*, and *vicikicchā*) will automatically reduce. Thus all five hindrances will be gradually removed and your mind will become “free of gunk”. See the post on “[Key to Calming the Mind – The Five Hindrances](#)”.

8. As you make progress, your mind will gain a calmness, a relief, that is permanent. It will get easier and easier to “get to *samādhi*”. The Buddha compared the relief gained by this *bhāvanā* as follows: paying off a big loan that had been a burden to the mind, being released from jail, recovering from a major disease, gaining freedom from slavery, and reaching safety after crossing a dangerous desert. If someone has all those five experiences at the same time, the Buddha said, that is the kind of relief one gets by removing the five hindrances.

- This is the *nirāmisa sukha* that one gains, when one approaches *Nibbāna* or *Nivana*; see the post, “[How to Taste Nibbāna](#)”. *Nibbāna* is “cooling down”, it cannot be matched by any sense pleasure, and it is permanent. One can experience it in varying degrees as one cultivates this *Ariya* meditation.

12.1 Abhidhamma – Introduction

Revised January 9, 2019; August 4, 2019; September 8, 2019

1. “*Abhi*” means “higher” or “deeper.” Thus *Abhidhamma* is a more in-depth, fundamental description of Buddha Dhamma.

- The result is the same when compared with the material in the *suttā*, but *Abhidhamma* provides a “bottom up” description of the existence, starting with 82 “most basic units” within the four ultimate entities of *citta*, *cetasika*, *rūpa*, and *Nibbāna*. This was a monumental task, and that is why it took almost 250 years to finalize it at the third Buddhist Council.
- The 81 “basic units” that make up this world are one **pure *citta***, 52 *cetasika*, and 28 types of *rūpa*. Depending on the combinations of *cetasika* that arise with *citta*, there will be 89 (or 121) types **contaminated *citta*** (or *viññāṇa*) that can occur. That will become clear as we discuss further.

2. In the *suttā*, the Buddha explained the Dhamma concepts using everyday language. **And most people can attain *Nibbāna* without knowing anything about *Abhidhamma*.**

- However, one could study *Abhidhamma* and see for oneself WHY Buddha Dhamma is not a religion but is the ultimate explanation of nature, the Grand Unified Theory. That can lead to a “faith-based understanding” of Buddha Dhamma. It has a thousand-fold more explanatory power than modern science. And for those who like to “get to the bottom of understanding something,” *Abhidhamma* will bring joy to the heart.

Let us take the example of making a cake:

- All one needs to know are the ingredients and how to mix them and proper procedures to bake it. That is analogous to *suttā*.
- *Abhidhamma* approach is comparable to starting at the atomic level of the ingredients. Then one can describe how those fundamental entities combine to make flour, oil, eggs, etc. Furthermore, one would know the choice of those ingredients, and WHY the cake needs to be baking at a specific temperature.
- It is mind boggling what *Abhidhamma* can accomplish.
- **However, instead of being a boring “recipe book,” learning *Abhidhamma* can be a delightful experience if one starts with an understanding of the basics. Furthermore, one can get a much deeper understanding of the Dhamma concepts.**

3. *Abhidhamma* provides the complete, consistent description of the whole existence (encompassing the 31 realms). With this description, there can be no unexplained phenomena at any level. A logician like the late Dr. Kurt Gödel could have a great time with it; see, “[Gödel’s Incompleteness Theorem](#).”

- The scope of *Abhidhamma* is somewhat comparable to what the scientists are trying to do with a Grand Unified Theory to describe the behavior of inert matter. Einstein devoted the latter part of his life to developing one and failed, and the scientists are still far from achieving it. And even if accomplished, it will be able to describe ONLY the behavior of inert matter, not of living beings.

4. *Abhidhamma is the Grand Unified Theory of the Buddha*. I gave an introduction to it in the post, “[The Grand Unified Theory of Dhamma](#).” In this *Abhidhamma* section, I will try to provide further details. My goal to is to describe it in an easy-to-grasp simple manner.

- When I taught physics to undergraduate students, I told them not to memorize anything, but to grasp the essence of the material. Many students (and adults) try to memorize descriptions of a concept but have no idea how to apply the concept. I used to give them all the complex equations and any other hard-to-memorize material in the tests; what they needed to do was to apply them in solving problems.
- My approach is the same here. For example, in the “[Tables and Summaries](#)” post, different types of *cittā* (loosely-speaking “thoughts”) are listed. There is no need to memorize them. One should understand a

given Dhamma concept starting from the basics: for example, which *cittā* are immoral and can lead one to rebirth in the *apāyā* and WHY.

5. For example, a key concept in Buddha Dhamma is *saññā* (translated to English as “perception”). But it is much more complicated than “knowing and identifying an object”; see, “[Saññā – What It Really Means.](#)”

- One of my first goals in the Abhidhamma section is to describe *saññā*, and the critical role played by the brain. For that we first need to understand the connection between the brain and the mind (they are NOT the same).
- Abhidhamma can make one addicted to it, as I have become addicted to it. When one starts to grasp how this complex world really works, understanding even a bit more of it can bring joy to the heart.

6. However, I must say that even if one can understand the whole of the *Abhidhamma* theory, one MAY NOT understand the Buddha's message. **One must understand the true meanings of *anicca*, *dukkha*, *anatta*.**

- I had so many unresolved questions on parts of *Abhidhamma* until I listened to the first *desanā* from one of my two teacher *Theros* almost a year ago, on July 30, 2013, on *anicca*, *dukkha*, *anatta*. It was like lifting a fog, and by the end of that *desanā*, I knew I will be able to “fill-in-the-blanks” to make my understanding much better.
- *Abhidhamma* can solidify and “fill-in-the-blanks” of Buddha Dhamma from the *suttā*, which can be exhilarating.

7. Following is a brief background on how the *Abhidhamma Piṭaka* of the *Tipiṭaka* was developed over roughly 250 years by the lineage of *bhikkhus* started with Ven. Sariputta. Of course, Ven. Sariputta was one of the two chief disciples of the Buddha: While Ven. Moggallana excelled in supernatural powers, Ven. Sariputta excelled in Dhamma. He was only second to the Buddha in Dhamma knowledge.

- The minute details on the structure of a *citta vīthi* (a series of *citta*) of 17 thought moments, with each *citta* lasting sub-billionth of a second, can be seen only by a Buddha. The Buddha described such minute details to Ven. Sariputta. Then Ven. Sariputta and his group of *bhikkhus* (and their subsequent lineage) completed the monumental task of making a complete description of Dhamma theory starting with the fundamental entities.
- As I mentioned earlier, that is a million times more complicated task than putting together a Grand Unified Theory to explain the behavior of inert matter, (as scientists are attempting to do today). Because a living being has an inert body, but a complex mind which makes that inert body “alive”.

8. At the First Buddhist Council just three months after the *Parinibbāna* of the Buddha, only a framework of the theory was recited. More was added at the second Council, and the task was completed only at the third Council. It was this completed *Tipiṭaka* that was written down in 29 BCE at the Fourth Buddhist Council.

- A false statement in many books is the following statement. *Abhidhamma* was “invented” by *bhikkhus* after the *Parinibbāna* of the Buddha. The minute details of the very fast *citta vīthi* are discernible only to the mind of a Buddha.
- Those who make such statements have not either studied *Abhidhamma*, or have not been able to understand the in-depth analyses in *Abhidhamma*. The minute details of the very fast *citta vīthi* are discernible only to the mind of a Buddha.
- It is essential to realize that hundreds of *Arahants* at the Fourth Council wrote the whole *Tipiṭaka*. That included the complete *Abhidhamma Piṭaka*.

9. The absence of *Arahants* (in significant numbers) started around the second century CE, and coincided with the rise of Mahāyāna and the “contamination” of *Theravāda* which culminated in the *Visuddhimagga* of Buddhaghosa; see, “[Historical Timeline of Edward Conze.](#)”

- As we discuss more topics, it will become clear that only *Arahants* with superior mental power can accomplish a complex of completing the *Abhidhamma Piṭaka*. It was compiled in the absence of an easy way of recording, let alone having access to computers.
- I have given a breakdown of the *Abhidhamma Piṭaka* in the post, “[Preservation of Dhamma](#).”

10. **August 12, 2015:** I have brought the subsections on “[Mind and Consciousness](#)” and “[Manomaya Kāya](#)” from “Dhamma Concepts” to the “Abhidhamma” section since it is imperative to understand those basic concepts first. It is a good idea to read those subsections (and “[Citta and Cetasika](#)”) before reading further in the *Abhidhamma* section.

- It is not necessary to understand the material in all those essays. But the more of those basic concepts one understands, it becomes easier to grasp the content in subsequent articles.
- Also, we all keep increasing our understanding as we learn Dhamma. I learn new things every day and try to update the posts as much as possible. The more one learns, the more one can “see the inconsistencies” in other versions of “Buddhism,” and possibly in my essays; some of these posts date back to 2014. Please don’t hesitate to point out any inconsistencies on this website. I would be grateful. There is a “Comments” tab under each post.

11. **September 8, 2019:** I have written a series of posts in a new subsection to introduce fundamental concepts in Abhidhamma at “[Essential Abhidhamma – The Basics](#).”

REFERENCES

1. “[A Comprehensive Manual of Abhidhamma](#),” by Bhikkhu Bodhi (2000); this is a revised and updated version of Ref. 2 below.
2. “[A Manual of Abhidhamma](#),” by Narada Thero (1979).
3. “[Buddha Abhidhamma – Ultimate Science](#),” by Dr. Mehm Tin Mon; this is a very good FREE publication (click the link to open the e-book).

Unfortunately, some concepts in all three references are not correct. In particular, almost all existing *Theravāda* texts (except the *Pāli Tipiṭaka* of course) have the incorrect interpretations of *anicca*, *dukkha*, *anatta*. **Also, in all three references, *kasinas* and breath meditation are presented as Buddhist meditation.** I will try to point out such problems in relevant posts.

12.2.1 Amazingly Fast Time Evolution of a Thought (Citta)

August 23, 2018; revised (#18 added) September 12, 2018; January 6, 2019; May 16, 2020

Introduction

1. Even though only one word in the English language (“thought”) is used to describe “a unit of cognition” or “a thought,” the Buddha explained that such a “thought” arises as a *citta*, and goes through nine stages of “contamination” to become *viññāṇakkhandha*. What we actually experience is this *viññāṇakkhandha* of the “aggregate of *viññāṇa*.” See, “[The Five Aggregates \(Pañcakkhandha\)](#).”

- However, even a contaminated *citta* is still called a *citta* for convenience even in the *suttā*. So, one needs to determine what is meant depending on the context. One needs to have an idea of those nine stages.
- Some of these terms in the nine stages are used interchangeably to as “a thought” in many textbooks and internet sites on Buddhism (e.g., *citta*, *mano*, *viññāṇa*), and that is NOT correct.

2. I will make this a post simple because everyone must get the basic idea of how a thought is “contaminated” within a split second.

- It is not possible to stop the contamination of a *citta* within such a short time. I have seen even some well-known and respected Dhamma teachers say that **one can willfully** keep a “*pabhassara citta*” (uncontaminated *citta*) from being contaminated.
- I hope this post will make it clear that such a thing is not possible. **One’s *cittā* are contaminated depending on one’s *gati* and the sensory input (*ārammaṇa*) in question. The key to STOPPING *cittā* from getting contaminated is to change one’s *gati* over time.**
- That is done by following the Noble Path, and specifically by practicing the correct *Ānāpāna* and *Satipaṭṭhāna Bhāvanā*. **Not by the “fake breath meditation.”** That will become clear be the end of the post.

Nine Stages of a Thought (*Citta*)

3. Those nine stages of contamination during the lifetime of the fundamental unit of cognition (within a billionth of a second) are: *citta*, *mano*, *mānasā*, *hadayaṅga*, *pandaraṅga*, *mano manāyatanaṅga*, *manāyatanaṅga* (or *manindriyaṅga*), *viññāṇa*, *viññāṇakkhandha*. [*Yaṃ cittaṃ mano mānasā hadayaṅga paṇḍaraṅga mano manāyatanaṅga manindriyaṅga viññāṇaṃ viññāṇakkhandho...*] A *Tiṭṭhaka* reference is given in the post, “[Pabhassara Citta, Radiant Mind, and Bhavaṅga](#).”

- Amazingly, these nine steps occur within a split second, and the Buddha said there are billions of *citta* arising within the blink of an eye. Each *citta* has three stages: *uppāda*, *ṭhiti*, *bhaṅga* (rising, stability, dissolution), and these nine steps occur before it comes to the *bhaṅga* or the termination stage.
- It may be hard to believe, but we can prove this to be true with the following example.

4. Suppose three people A, B, C are sitting in a small coffee shop. They are all facing the door, and person X walks in. Suppose that person X is a close friend of A, worst enemy of B, and that C does not know X at all. We will also assume that all are males.

- So, let us see what happens within a split second. A recognizes X as his friend, and a smile comes to his face. B recognizes X as his enemy and his face gets darkened.
- On the other hand, C's mind does not register anything about X, and X is just another person to him. He immediately goes back to whatever he was doing.

5. **That is an example of a “*cakkhu viññāṇa*,” a “seeing event.”** It is over within a split second, just like taking a photo with a camera takes only a split second, where the image is captured on the screen instantaneously.

- **However, something very complicated happens in a human mind when a “seeing event” occurs.**
- It is critically important to go slow and analyze what happens so that we can see how complicated this process is (for a human mind) to capture that “seeing event.” It is much more complicated than just recording “a picture” in a camera.

6. Within that split second, A recognizes X as his good friend, and pleasant emotions arise in his mind, and he becomes happy. B recognizes X as his worse enemy, and bad emotions arise in his mind, and he becomes angry. On the other hand, C identifies X as a man or a woman, and no feelings occur in him.

- We don't think twice about these observations usually. But if one carefully analyzes what happens, one can easily see that this is an amazingly complex process.
- How does the SAME “seeing event” (seeing X) lead to all these very different changes in the minds of three different people? (and the emotions even show up on their faces!)
- No one but a Buddha can see this fast time evolution of a *citta*.
- The Buddha has analyzed this process in minute detail. We will discuss only the critical basic features here.

Nothing Faster in the World Than the Arising of a *Citta*

7. Buddha said it is hard to find any phenomena in this world that change faster than the mind: “[WebLink: suttacentral: Aṅguttara Nikāya \(1.48\)](#).”

The short *sutta* says: “*Nāhaṃ, bhikkhave, aññaṃ ekadhammampi samanupassāmi yaṃ evaṃ lahuparivattaṃ yathayidaṃ cittaṃ. Yāvañcidaṃ, bhikkhave, upamāpi na sukarā yāva lahuparivattaṃ cittaṃ*”ti.”

Translated: “I consider, *bhikkhus*, that there is no phenomenon that comes and goes so quickly as *citta*. It is not easy to find an analogy (a simile) to show how quickly *citta* can change.”

Three Features of a Seeing Event (*Cakkhu Viññāṇa*)

8. **The “seeing event” has three essential features:**

- One definitely gets into an emotional state (pleasant, unpleasant, or neutral, which is called *sukha*, *dukkha*, and *upekkha* in Pāli), and that is called *vedanā*.
- One recognizes the object, and that is called *saññā*.
- Based on *vedanā* and *saññā*, one also generates other mental characteristics such as anger, joy. Those are none other than *saṅkhāra*.
- Of course, this holds for all six types of *vipāka viññāṇa*.

9. ***Viññāṇa* is the overall sense experience encompassing all those three:** *vedanā*, *saññā*, *saṅkhāra*.

- But ***viññāṇa* can be more than the sum of those three.** See, “[Viññāṇa – What It Really Means.](#)”
- We can safely say that *viññāṇa* (or more correctly *viññāṇakkhandha*) is the overall sensory experience, INCLUDING one's expectations based on that sensory experience. That is why one's facial expressions may change too, according to such expectations.

10. So, we can see that those three people, A, B, and C will have three different “states of mind” upon that seeing event.

- That “mindset” with a set of *vedanā*, *saññā*, and *saṅkhāra* is called a *viññāṇa*.
- *Viññāṇa* is the overall sensory experience that includes all those. And that takes place within a split second.
- There are six types of *viññāṇa* corresponding to the six sense faculties. See, “[Viññāṇa – What It Really Means.](#)”

11. Several key important basic features come out from this simple example.

- **There is no single entity called “*viññāṇa*.”** When we hear something a “*sota viññāṇa*” arises, when we taste something a *jivhā viññāṇa* occurs, etc. Altogether there are six types of *vipāka viññāṇa* that are associated with the six sense faculties we have. Those are *cakkhu* (see), *sota* (hear), *ghāṇa* (smell), *jivhā* (taste), *kāya* (touch), and *mano* (mind).
- **Any of those will lead to the following outcomes:** *Sukha*, *dukkha*, or *upekkhā vedanā* arise. One recognizes what type of picture, sound, etc., and that is (*saññā*.) Then other types of *cetasika* arising (called *saṅkhāra*) depending on the *ārammaṇa* (sound heard etc.) AND the “nature” of the person (**character/habits or *gati***).
- This last one, the “nature” of a person, is called that person's *gati* (sometimes written as *gathi*). Each person has a unique (but changing) set of good and bad *gati*. I am not going to discuss this here, but there are many posts on the website on *gati*.

Dependence on the “Thought Object” (*Ārammaṇa*)

12. Let us take a different scenario: Let us assume that X is B's girlfriend — who is not in good terms with A — and that C is a young male who has never seen X.

- Now, we see that the moods of A and B will reversed. A will be instantaneously unhappy to see X, and B will be happy to X.
- Regarding C, the situation could be different than before. If X appears attractive to him, C may instantaneously form a lustful state of mind.

13. So, we see that the type of *cakkhu viññāṇa* depends on primarily two things. It depends on the particular person experiencing it, and the sense object in question (it is called an *ārammaṇa* in Pāli).

- In the above two cases, A and B experienced different types of *vipāka viññāṇa* (seeing something “good” or “bad”.) But their experiences reversed when the sense object changed (situation in #4 versus that in #12.)
- In the case of C seeing an attractive woman, even though he had no prior contact with her, lustful *viññāṇa* arose in C, due to his “lustful” *gati*.
- If C were an *Arahant*, C would only generate an *upekkhā viññāṇa* when seeing the X. An *Arahant* has removed all *gati*; one needs to learn about *gati* to fully understand this point.

14. Now we see that for a given person, there is no **permanently set good or bad *viññāṇa***. What kind of *viññāṇa* arises depends on the *gati* of the person and the sense object.

- We usually call someone a “good person” based on his/her overall character, i.e., if that person displays more “good character” than “bad character” over time. But only an *Arahant* can be called a “definitely a moral person,” acting 100% morally all the time.
- Even though this is a complex subject, the basic features are those mentioned above. One needs to analyze different situations in one’s mind to get these ideas firmly grasped. That is real *vipassanā* meditation!
- One needs to understand how the mind works to make progress on the Path. The Buddha said that his Dhamma has never been known to the world. And it has the MIND in the forefront. Furthermore, the mind is the most complex entity in the world.

Simple Explanation of the Nine Steps

15. The first stage, *citta*, is just awareness that comes with the “uncontaminated” *vedanā* and *saññā* and five other universal mental factors (*cetasika*): *phassa*, *cetanā*, *manasikara*, *ekaggatā*, and *jivitindriya*. One is just aware that one is alive and is experiencing something.

- At the “*mano*” stage, the mind has “measured” what the object is (මැනීම [mānīma or Measurement] in Sinhala). For example, whether it is a tree or a human or a bird.
- In the next “*mānasam*” stage, the mind is can distinguish among different species. For example, whether it is just a woman or one’s own mother or whether it is a parrot or a humming bird. That is the “pure and complete awareness”: one sees the external world as it is. An *Arahant*’s mind will not be contaminated beyond this stage.

16. At the next “*hadayan*” (හදාය වීම [hāda vīma or Trouble shooting] in Sinhala) phase, the mind gets attached to the object (or repulsed by it) based on one’s prior experiences and *gati*.

- This attachment gets stronger in the next several stages and by the time reaches the *viññāṇa* stage, it can be fully “corrupted.”
- Finally, that *viññāṇa* or the *viññāṇakkhandha* gets incorporated to the aggregate of *viññāṇa* or the *viññāṇakkhandha*. With each thought, the *viññāṇakkhandha* grows.

17. One crucial observation is that C’s mind stopped at the “*mānasam*” stage in the first example above. (That is only partially correct, but we don’t need to get to details here). However, in the second example, it got contaminated.

- Of course, an *Arahant*’s mind will never get contaminated beyond the “*mānasam*” stage for ANY sense object.
- Specifically: no *lobha*, *dosa*, or *moha* will arise in an *Arahant* regardless of what the sense input is.

18. Hopefully, the above basic description will clarify how a *citta* gets contaminated automatically according to one’s personality (*gati*) and the sense object.

- The critical point is that we do not have control over those initial *citta* that arises automatically at the first exposure to the sense object.
- **However, when we become aware of this initial response, we CAN control our subsequent *citta* by being mindful.** That is the key to *Ānāpāna* and *Satipaṭṭhāna* meditations and is a different topic. For details, see “[Bhāvanā \(Meditation\)](#)” and “[Living Dhamma](#)” and “[Paticca Samuppada](#)” sections.

19. Finally, another critical point is that the six types of *viññāṇa* that we just discussed are all *vipāka viññāṇa*. These arise due to past *kamma*, i.e., as *kamma vipāka*.

- Then there are *kamma viññāṇa* that we create ourselves; see, “[Kamma Viññāṇa – Link Between Mind and Matter](#).”

- When the Buddha said that we need to stop defiled *kamma viññāṇa* from arising, he was referring to the *kamma viññāṇa*. We have control over them. We have control over *kamma viññāṇa*. But we do not have control *vipāka viññāṇa*, which are due to past *kamma*.
- Details on *kamma viññāṇa* in the post "[Do I Have "A Mind" That Is Fixed and "Mine"?](#)". One's state of mind at a given moment depends on one's own *gati* (character and habits) AND the external sense object.

12.2.2 The Amazing Mind – Critical Role of Nāmagotta (Memories)

September 6, 2018; revised September 7, 2018; October 7, 2019; March 10, 2020

Nāmagotta Are Memories

1. Here we will discuss the critical importance of *nāmagotta* (our memory records). Even though I had written it as "*nāma gotta*" previously, I noticed that in some *suttā* it is written as "*nāmagotta*," one word.

- Let us take person X. If someone shows X an apple, he will say, "that is an apple, and I know how it smells and tastes." Suppose X loses all memory right after that. Now, will X be able to identify that as an apple? Of course not.
- This is another amazing thing about the mind. It can search one's previous experiences with a given object (in this case, an apple) and remember what an apple looks like, tastes like, etc., i.e., all the distinctive properties of an apple. And it can do that in a billionth of a second!
- We discussed this in detail at: "[Amazingly Fast Time Evolution of a Thought \(Citta\)](#)."

Without Memories There Would Be a Zombie (or Like a Robot)

2. **Think carefully about the following:** If X loses all memories, he will not know what to do with a plate of food put in front of him; he would not identify that as a pizza, a sandwich, etc.

- If he is at work when the memory loss happens, X will not know how to go home. X would not know even what is meant by "home" and that he is supposed to go home at a particular time.
- If he gets the urge to go to the bathroom, X will not know what he is supposed to do in the bathroom or where the bathroom is.
- You can think about the zillions of things that we take for granted every day, that X will not be able to do. X will not be able to function at all!

3. This is why a baby of a few months of age does not recognize anything and does not have any control over "bathroom functions".

- A baby's brain is not developed and thus cannot make contact with the *mano loka*, where memories are; see, "[Nāmagotta, Bhava, Kamma Bija, and Mano Loka \(Mind Plane\)](#)" and "[Recent Evidence for Unbroken Memory Records \(HSAM\)](#)."
- Thus a baby is TOTALLY dependent on parents until about a year old until the brain is developed to some extent.
- It is the *manasikāra cetasika* that helps put together memories based on the "*rūpa*" received from the brain.

Perception or Identification (*Saññā*) Requires Memories

4. Now, suppose that person X, who has lost all his memories, takes a bite of the apple. Of course, he will taste the sweetness, but he will not be able to IDENTIFY that as "apple taste."

- Furthermore, X may not even generate a liking or the desire to take another bite unless he is hungry.

- This also proves that the CRAVING for the taste of apple was not in the apple. Cravings are associated with one's *āsava*. And those *āsava* cannot come to the surface as *anusaya* unless one's memories are intact.

5. With his memories lost, X's *vedanā* and *saññā* will be pretty close to "uncontaminated" *pabhassara citta*. He will experience a taste (without identifying it as a taste of apple). But he will not generate any *sobhana* or *asobhana cetasika* based on any type of attractive or repulsive sense input.

- But of course, he has not attained the *Arahant* stage. His *āsava* will be with him, just as newborn baby will have all its *āsava* with it.
- If X lost his memory due to brain damage, his *āsava* would not resurface until the next birth if the brain is permanently damaged.
- Details at, "[Āsava, Anusaya, and Gati \(Gathi\).](#)"

The Real Story of Patient H.M.

6. That has happened to a person, and his story is in the book, "Patient H.M. : A Story of Memory, Madness, and Family Secrets" by Luke Dittrich.

- Here we must remember that our memories that in the *nāma loka* can be recalled only by the *mana indriya* in the brain. See, "[Namagotta, Bhava, Kamma Bija, and Mano Loka \(Mind Plane\)](#)," "[Memory, Brain, Mind, Nama Loka, Kamma Bhava, Kamma Vipāka](#)," "[Gandhabba Sensing the World – With and Without a Physical Body](#)," and "[Brain – Interface between Mind and Body](#)." One needs to spend some time to clarify this key concept.
- The surgeons had inadvertently removed part of the brain of "patient H.M." that contained the *mana indriya* (surgeons were trying to stop regular seizures that the patient was experiencing by removing tiny parts of his brain).
- With more studies in the future, we may be able to identify the location of the *mana indriya* in the brain.

The brain is Required to Capture the External Sensory Object

7. That is why a new-born baby (within a year or so from birth) has a minimal capability for perceptions. The brain has not developed to be able to process all the information that comes through the sense faculties.

- Therefore, a new-born baby's brain cannot transfer anything useful to the *hadaya vatthu* for it to identify objects or match each with the set of *āsava/anusaya* and to generate cravings or dislikes for that sensory input.
- A baby's hidden *āsava* will not show up until its brain develops. The brain function attains the full capacity around seven years of age, according to the Buddha: One can even attain *Arahanthood* if one is over seven years of age.
- The role of the brain is discussed at: "[Brain – Interface between Mind and Body](#)."

The Difference Between an Arahant and Patient H.M.

8. We can get a good idea of how the mind of an *Arahant* works by considering a person X discussed in #1 through #5 above (or patient H.M. IN #6) who has lost all his memories. The only difference is that in the case of X or H.M., all *anusaya* are intact, but they cannot be "triggered."

- For an *Arahant*, all *gati* and *āsava/anusaya* have gone away via cultivating *paññā*.
- But an *Arahant* will have all his memories intact. If he has developed *abhiññā* powers, he will be able to recall memories not only from this life but many, many lives in the past.

Habits/Cravings (and Thus *Gati* and *Āsava/Anusaya*) Change With Time

9. Most of our cravings are associated with our past habits and desires. Each person has a set that is unique to him/her, AND that set of habits/cravings will change over time.

- All *gati* and *āsava/anusaya* arise or — are with oneself — because of the inability to get rid of evils due to ignorance of the real nature of this world: *anicca, dukkha, anatta, asubha*, etc.
- When one is on the Path, one will gradually get rid of “bad *gati*” and cultivate “good *gati*.” Then, at some point, one will be able to comprehend *the anicca* nature, and one’s *paññā* will grow, and one’s *anusaya* will be PERMANENTLY removed in four stages of *Nibbāna*.
- One should read up on those Pāli terms if one does not understand them. **It does not make sense to translate those terms to English, because no single English word will convey the same meaning as a Pāli word.**
- That is NOT memorization. One should comprehend what is MEANT by a Pāli word, not memorize it.

10. Suppose X is a young male. When X — if he has lost his memories — sees an attractive woman, he will see her as an attractive person. But he will not generate any lust for her, no matter how beautiful she is. It is just “seeing” for him.

- That “picture,” which comes to mind, cannot match it with X’s past experiences with women. *His kāma rāga anusaya is still there, but not awakened.*
- Similarly, X will not generate any angry thoughts when seeing “an enemy”; he just does not have any recollection of the past encounters with the person.
- In the same way, X may touch a red-hot iron, because he has no idea that it can burn.
- That is also why little babies touch or even try to eat anything and everything. They have no prior experience that some of those could be harmful.

“Live in Just the Present Moment”?

11. These days, there are many “philosopher-types” (such as Eckhart Tolle or even Buddhist teachers), who say “forget the past and live in the moment”.

- That is utter nonsense.
- One CANNOT forget the past AND live in the present. What the Buddha said is **to live the present moment mindfully**, making sure not to make bad decisions.
- The Buddha had a perfect memory. He could remember things as far back as he wished. Often he would give accounts of what had happened in past lives and teach people how to learn lessons from the past.

An Example from the *Tipiṭaka*

12. Finally, in the beginning of the “[WebLink: suttacentra: Mahāmālukya Sutta \(MN 64\)](#),” the Buddha points out this fact that *sakkāya diṭṭhi* cannot arise in a new-born baby. That is exactly because what we discussed above. There is no way to trigger the hidden *anusaya* in that baby.

- To quote the above translation: “**For a young tender infant lying prone does not even have the notion ‘identity,’ so how could identity view (*sakkāya diṭṭhi*) arise in him?**”
- The Pāli verse is: “*Daharassa hi, mālukyaputta, kumārassa mandassa uttānaseyyakassa sakkāyotipi na hoti, kuto panassa uppajjissati sakkāyadiṭṭhi? .*”
- I had forgotten the name of the *sutta*. Thanks to reader Siebe for pointing this out at the discussion forum.

12.2.3 State of Mind in the Absence of Citta Vithi – Bhavanga

September 23, 2018

1. We have what we can call “**an active mind**” in the following two cases:

- When we are experiencing sense inputs (seeing, hearing, smelling, tasting, and touching), especially when those are of sufficient interest. In these cases *pañcadvāra citta vīthi* with 17 *citta* results, as we discussed in the post, “[Amazingly Fast Time Evolution of a Thought \(Citta\)](#).”
- We also generate “active thoughts” when we are remembering a past event, contemplating on a *Dhamma* concept or learning some subject like mathematics. Here we have *manodvāra citta vīthi* which can have 10-12 *citta* normally, but in some special cases may have large numbers of *manodvāra citta* running continuously.

***Bhavaṅga* – State of Mind**

2. On the other hand, there are many times where we just have some kind of “**mindset**” (joyful, sad, angry, etc.), without even generating thoughts (*citta*).

- For example, many people get into a “state of sorrow” after hearing about the sudden death of a parent, spouse, etc. Even when they are not thinking about that person, they may be just sitting somewhere with very clear features of sadness on their faces.
- Sometimes people get very scared and it shows in their faces, but they cannot even think. They are too scared to think or to speak: “frozen in fear”.
- Same thing happens when one gets very angry: They may not say anything but we can see the anger in their faces. They themselves may not do what to do.

3. So, there are many such cases where we just get into a certain state of mind, which can be called “**a temporary existence or bhava**”: the above three examples correspond to “sad *bhava*,” “scared *bhava*,” and “angry *bhava*” respectively.

- Such a “temporary *bhava*” or “temporary state of mind” can last many minutes or even days. **These may be denoted by B_T , compared to one’s natural *bhavaṅga* state, which we can denote by B .** After some time the B_T state will slowly fade away to fall back to the natural B state.
- Active *citta vīthi* may run during such a B_T (or B) state, but then they fall back to that B_T (or B) state.
- This natural *bhavaṅga* state (B) is the mindset grasped at the *cuti-paṭisandhi* moment; see below.

Connection of “*Bhava*” to *Gati*

4. We can see right away that “angry *bhava*” comes easily to those who are easy to get angry. Such people can be “triggered” easily; just saying some wrong words can make them angry.

- Same is true for other types of “temporary *bhava*.” Some can be easily frightened. Some can be easily tempted with sense pleasures.
- The tendency to easily get into such “temporary *bhava*” will be reduced when one makes progress on the Path. I know that by experience.
- When one finally gets to the *Arahant* stage, one will not get into any “temporary *bhava*”; one has lost all such *gati*. One will have what is called “an unshakable calm state of mind”.
- Thus, for an *Arahant*, only the natural *bhavaṅga* state (B) will be there until death.

5. An important extension of the idea discussed above is that the *bhavaṅga* that we have for “the current human *bhava*” was grasped at the last *cuti-paṭisandhi* moment: When we exhausted the *kammic* energy for the last *bhava* that we were in, and grasped this human *bhava*.

- Since a human *bhava* is grasped with a “good *nimitta*” that was associated with a “good *gati*” we had AT THE MOMENT that we did that good deed (or the “good *kamma*”), our current *bhavaṅga* reflects that *gati*.
- **However, that “natural *bhavaṅga*” (unlike any “temporary *bhava*”) is hard to see, especially by oneself.** It is like we cannot see our own eyes (we can only see a reflection of it by a mirror).

6. But the fact that it is easier for some to grasp concepts than another comes from whether one's *bhavaṅga* is “better” than that other person's. In other words, one with a *tihetuka* birth will have a better natural *bhavaṅga* (B) compared to one with a *dvihetuka* birth.

- The point is that even if one has a “not so good *bhavaṅga*” (which may not be possible to verify anyway), one is better off as a human than uncountable beings in lower realms. We really need to make use of this rare human *bhava*.
- I had written a post about *bhavaṅga* sometime back (which describes it from another angle), which you may want to read now to “seal in” your understanding: [“*Bhava and Bhavaṅga – Simply Explained!*”](#)

Analogy for Switching from *Bhavaṅga* to Active Mind

7. Now we are in a position to see how the mind switches back and forth between *bhavaṅga* states (B or B_T) and active states (with *citta vīthi*).

- However, it is important to note that NO ONE will be actually “see” or “discern for oneself” how this switching happens. Such fast processes can be seen only by the mind of a Buddha.
- But we can see for ourselves that these minute descriptions are indeed consistent with our experiences. That is what builds confidence in Buddha Dhamma.

8. Before proceeding further, we need to remember that *citta* arise in the base of mind (*hadaya vatthu*) which is located in the mental body (*gandhabba*).

- The *gandhabba* is totally shielded from the outside by the dense physical body. All sense inputs come through the six “doors” in the body (eyes, ears, nose, tongue, body, and the *mana indriya* in the brain).
- If you need to refresh memory, this is discussed in [“*Our Mental Body – Gandhabba*”](#) and other posts.

9. I have read the following nice analogy somewhere, but have forgotten where it was. In this analogy, a man is sitting in the middle of a totally enclosed small hut with six windows. He is sitting at a desk in the middle of the hut, but can easily look up and see any of the six windows.

- The mental body (*gandhabba*) trapped inside the physical human body is like the man sitting at the table in the hut.
- When the mind is totally focused on the *bhavaṅga* state, that is comparable to the man totally absorbed in reading a book sitting at that table. He is not aware of what is happening outside the hut at all.
- In the same way, the *gandhabba* in the *bhavaṅga* state has no awareness of what is going on outside the human body. It is focused on the *bhavaṅga* (the *nimitta* grasped at the beginning of this *bhava*).

10. The man in the hut could be distracted from the book if a disturbance happens at one of the windows. For example, someone could come to a window and knock on it. Then the man would look up from the book at the window where the disturbance was.

- This is like a sense signal from one of five physical sense doors coming to one of the five *pasāda rūpa* around the *hadaya vatthu*. The *hadaya vatthu* — surrounded by the five *pasāda rūpa* — is like the man sitting in the hut with six windows.

- The only difference is that signals for the *mana indriya* come directly to the *hadaya vatthu*, instead of coming through a sixth *pasāda rūpa*.

Components of a *Citta Vīthi*

11. When a signal comes to one of the five *pasāda rūpa*, the *hadaya vatthu*'s attention to the *bhavaṅga* state will be disturbed. Then three *citta* will rise to break away from the *bhavaṅga* state.

- Those three *citta* are called *atita bhavaṅga* (*atita* means “old” or “past” in Pali or Sinhala), *bhavaṅga calana* (*calana* — pronounced “chalana” — means move or vibrate), and *bhavaṅga ucceda* (*ucceda* means to “cut-off”).
- Just like it would take the man in the hut a few moments to become aware of the disturbance at the window and to look up, it will take those three *cittā* to pass before the *hadaya vatthu* “breaks away” from the *bhavaṅga* state. Then it will investigate what the disturbance is.

12. Now, *hadaya vatthu* will look to see which of the five *pasāda rūpa* is disturbed, with another *citta*. That *citta* is called the “*pañcadvāravajjana citta*,” where *pañca dvāra* means “five doors” referring to the five physical senses.

- If it turns out that the signal is coming through the *ghāṇa pasāda rūpa* (i.e., a smell), then the mind will turn to that door. Then a *ghāṇadvāra citta* arises. That will be the fifth *citta* in the *citta vīthi*.
- Now the mind will “accept” that signal; this is called a “*sampaticcana citta*.”
- Then it will fully realize what that signal is with another *citta*: “*santirana citta*.”
- Up to this point, there have been three *bhavaṅga citta*, a *pañcadvāravajjana citta*, a *ghāṇadvāra citta* (or any one of the five *pañcadvāra citta*), a *sampaticcana citta*, and a *santirana citta*; seven *cittā* in all. All these are *vipāka citta*.

13. The eighth *citta* in the *citta vīthi* is called a “*vottapana citta*.” This is a very important *citta*, where one's mind decides to take action based on the sense input that it received.

- How to respond to a given sense input is automatically decided by the mind, based on one's *gati* (*gathi*). We have discussed this before: see, for example, “[The Law of Attraction, Habits, Character \(Gati\), and Cravings \(Asavas\)](#),” “[How Are Gati and Kilesa Incorporated into Thoughts?](#),” “[Cetasika – Connection to Gathi](#),” and “[Gathi \(Gati\), Anusaya, and Āsava](#).”
- Depending on the sense input and one's *gati*, the mind may decide to ignore the sense input or to take action if gets gets attracted to the sense input.
- Possible actions will include one or more of the following: Thinking along the same lines to oneself/ talking out about it (with *vacī saṅkhāra*), and possibly taking bodily actions (with *kāya saṅkhāra*).

14. Then, such actions are implemented with 7 *javana citta*; see, “[Javana of a Citta – The Root of Mental Power](#).”

- Any and all *kamma* are generated in those 7 *javana citta*. This is where *vacī saṅkhāra* and *kāya saṅkhāra* are generated. Then those are implemented by the brain, as needed.
- After those 7 *javana citta*, the *citta vīthi* ends with two *tadārammana* (T) or *bhavaṅga* (B) *citta*, as we discuss next.

15. Now we can represent a *pañcadvāra citta vīthi* as follows:

“AB BC BU PD CV Sam San V J J J J J J T T”

- This is discussed in detail in the post, “[Citta Vīthi – Processing of Sense Inputs](#).”

Two *Tadārammana* or *Bhavaṅga Citta*?

16. If the sense input was a particularly strong one (like a death in family), that is a special case. Then those last two *cittā* will be *tadārammana* (T) as shown in #15 above. The sense input is registered in the mind temporarily and “that state of mind” can linger for some time. That time duration can range from a few minutes to several days.

- Such a very strong *citta vīthi* is called an ***atimahantārammana* (very strong) *citta vīthi***. The sense event “sinks into the mind” and the mind stays in that state for a while before settling back to the natural *bhavaṅga* state.
- For example, if one gets frightened by a chasing dog, that agitated and frightened state may last for a many minutes. If a parent or a child dies, the resulting sadness may last for several days.

17. However, if the impact of the sense input is not that strong, but enough for one to think about it, say something, or to take some action, then the 7 *javana* will still flow. However, it will not register in the mind as a *tadārammana* (which basically means “a strong thought object”).

- In that case, the last two *citta* will fall back to the natural *bhavaṅga* state, B, so now the *citta vīthi* is: “AB BC BU PD CV Sam San V J J J J J J B B”.
- Such a *citta vīthi* is called a ***mahantārammana* (strong) *citta vīthi***.

18. If the sense input is not strong enough to generate an interest in the mind, no *javana citta* will be generated.

- Such *citta vīthi* are called ***parittārammana* (weak) or *atiparittārammana* (very weak) *citta vīthi***. *Parittārammana citta vīthi* are involved in dreaming. *Atiparittārammana citta vīthi* are involved in breathing. Obviously, we don’t even notice those *citta vīthi* of the last and weakest type.
- For more details, see; “[Javana of a Citta – The Root of Mental Power.](#)”

12.2.4 Bhava and Bhavanga – Simply Explained!

January 19, 2018; revised February 5, 2018

1. There is much confusion about these two key Pāli words: *bhava* and *bhavaṅga*. By clarifying what is meant by them, it would be much easier to comprehend many concepts in Buddha Dhamma; for example, how laws of *kamma* are enforced by nature via *Paṭicca Samuppāda*.

- Even in current Theravada texts, there is confusion about the difference between *bhava* and *jāti*. If you have not read the post, “[Bhava and Jāti – States of Existence and Births Therein](#)”, I recommend reading that first.
- Please do not be discouraged by the Pāli terms. There are no suitable English terms for some of them, and it is better to learn them. Read through first even if you don’t get the full meaning. It will become clear. I will make it simple in this post.
- I will make one or two more posts on this subject to include references from the *Tiṭṭaka*.

2. Basically, *bhava* means “the potential for existence” in EITHER **one of the 31 realms of possible existence** (we can see just the human and animal realms) OR as **some specific state of mind within the current life**.

- **In the first category**, there is human *bhava*, animal *bhava*, *Tusita deva bhava*, *peta bhava*, *abhassara brahma bhava*, etc.: existence in one of the 31 possible realms. As we will see below, many such “potential *bhava*” exists for each living being, and at the end of the current *bhava*, a new one will grasped based on the relative energies for various *bhava* (*kamma bīja*) that one has cultivated in one’s past.
- Even during this lifetime, we “live under different existences” based on significant life events. **This is the second category**. For example, a normally “good person” may become violent for a short time upon

seeing his wife in bed with another man, or one will live in a “state of sorrow” for many days upon the death of a loved one.

- Both those are “*bhava*”, states of existence.

3. *Bhavaṅga* (“*bhava*” + “*aṅga*”, where *aṅga* means “part”) therefore means a “state of the mind” that is inseparable for a period of existence.

- When not disturbed by a strong external sense input (via the five physical senses or the *mana indriya*), a human mind is in its natural *bhavaṅga* state received at the beginning of this human *bhava*. Each person’s *bhavaṅga* state is different (it is based on the sense object taken in at the *paṭisandhi* moment), and it feels kind of “neutral” to each person. For example, when one is in deep sleep or “just staring out into space”, one’s mind is likely to be in **one’s natural *bhavaṅga* state, which we can denote by B.**
- On the other hand, when one’s mind is deeply affected by some event like in the examples we mentioned above, then the mind goes into a “**temporary *bhavaṅga* state**” corresponding to that event (“state of rage” when really angry or “state of sadness” upon the death of a loved one). **We can denote this by B_T.**

4. Now, this “state of mind” (whether it B or B_T) could be interrupted by a *citta vīthi* triggered by an external sense input coming through one of the the five physical senses or the *mana indriya*.

- For example, when another loved comes to pay respects to the dead loved one (who is in a “sad B_T”), one’s mind may become happy just for a few minutes upon seeing that person. Then they may recall a past event about the dead person and both may get sad again. That “sad temporary *bhavaṅga* state” (B_T) may not go away for several days. And then the mind will gradually fall back to the natural *bhavaṅga* state, B.
- For less strong life events, that temporary state mind may last only minutes or hours.
- For example, if one sees an old friend on the street, one’s mind may become happy while they talk excitedly, and when the friend departs after talking for a while, that B_T state may linger for a little while more, but then could be suppressed when another thought process based on remembering a task that one needed to get done urgently.

5. Therefore, within a given day, one’s mind could get into several B_T states. But unless a B_T state is triggered by a significant life event like the lost of a loved one, the mind would fall back to the natural B state by the time one wakes up next morning.

- For the reasons discussed above, the natural *bhavaṅga* state, B, could be called the “*uppatti bhavaṅga*”, and those temporary *bhavaṅga* states, B_T, could be called “*pavutti bhavaṅga*”.
- However, such labels are not used either in the *suttā* or in *Abhidhamma*. I just mention that to make the connection better.

6. Please read the above discussion again. That should help one get the basic ideas about what *bhava* and *bhavaṅga* are. **It is important to note that *bhavaṅga* is a state of the mind, not *citta vīthi* (thoughts).**

- Another way to describe a *bhavaṅga* state is to say that while the mind is in that state, one has corresponding *gati* (*gathi*). This is also an important aspect.
- For example, when one gets into a B_T state of anger, then one of course has predominantly “angry *gati*” during that time. Furthermore, one who generally has cultivated “angry *gati*” is also likely to get into B_T state easily.
- By the way, the Sinhala word for *bhava* is just *bava* (බව). For example, when one sees an eye-catching thing and generates a “*lobha bhava*” at that moment: 

7. Another important aspect is the when one is in an “angry B_T state”, it is easier to generate more angry thoughts. This is due to the “[Annantatra and Samanantara Paccaya](#)”: That “state of the mind” is receptive to more angry thoughts. This is why it is important to try to get the mind away from the angry state to focus on something entirely different.

- It is a good idea to contemplate on the above basic ideas with examples from one's own life. For example, when one is angry at someone, it is easier to recall more such bad past experiences with that person, and to suppress any past good experiences coming to the mind.

8. When one is having a calm state of the mind when reading/listening to Dhamma, it is easier to generate compassionate thoughts about others. Therefore, it is important to “set the background” when one is starting on an important task.

- This is why in the old days people went to a temple and offered flowers, etc and chanted *gāthā*, before sitting down to listen to a *desanā* by a *bhikkhu*. The state of mind is very important. One cannot comprehend deep *Dhamma* if the mind is in an angry state or even in an excited state (like thinking about a sick child at home, for example).
- This is why it is a good idea to at least recite the qualities of the Triple Gem (Buddha, *Dhamma*, *Saṅgha*) before starting a formal meditation session; see, “[Buddhist Chanting](#).”

9. Another important application of the “[Annantatra and Samanantara Paccaya](#)” relevant to this case is that while in a human *bhava*, only *kamma vipāka* that are “compatible” with the human *bhava* and human *gati* (and thus human body) can bring in *vipāka*.

- Even if one has *kamma bīja* suitable to bring harsh *vipāka* experienced in the *apāyā*, they will not be able to bring *vipāka* as long as one is with a human body. In the same way, any highly pleasurable *vipāka* have to wait until one is born in a *deva bhava* with a fine body suitable to experience such good *vipāka*.
- An animal always lives with fear for its life; that is part of *bhavaṅga*. Similarly, a *tihetuka* human has a natural pleasant demeanor; an *ahetuka* human (handicapped, etc) has a weakened mindset. A *dvihetuka* is in between.

10. Yet another is the state of the mind at the dying moment, when the grasping of a new *bhava* is getting close (if *bhava* energy is to run out at death, i.e., if there are no more *jāti* left in the current *bhava*).

- Here the *kammic* power will start bringing various thoughts to the mind via the *mana indriya* that are compatible with the strongest *kamma bīja*. For example, one who is about to grasp a new life in the hell (*niraya*) may start recalling some fear-generating events (even from previous lives), and one's mind could be bent to a “fearful temporary *bhavaṅga* state (B_T)”. Then more and more such fearful events will start coming in to the mind.
- This is why some dying people's fear can be seen in their eyes, even if their bodies have become non-responding.
- Some people start to yell with fear when they see an especially unpleasant *bhava* coming their way. Flashes of the existence awaiting will come to their minds, for example, burning in hell, or being cut by sharp weapons, or just seeing others engulfed in flames.
- On the good side, some people will remain calm with a pleasant look on their face, even if the body is becoming non-responding. Some smile when they see a scenery of the happy environment that they are going to.
- There are many things like that, which can be explained this basic knowledge.

11. For those who are familiar with *Abhidhamma*, *bhavaṅga citta* are called “*dvāramutta citta*” or *citta* that arise without needing a sense door. Let me clarify this in simple terms.

- When we hear something, what happens is that the sound comes through our ears, and many *citta vīthi* will be generated at the *manodvara* (mind-door) after that initiating *sotadvāra citta vīthi*. Then a seeing event may be started by a picture seen with eyes, etc.
- This is a very fast process. For example, when we watch a movie we get sense inputs to the ears and eyes very rapidly. But *citta vīthi* flow so fast that the mind will fall to a *bhavaṅga* state (B or B_T) even in between those rapidly incoming *citta vīthi*.
- Therefore, what we see, hear, taste, smell, or body touches are all due to *citta vīthi*. Even our thoughts generated by the mind (coming through the *mana indriya*), are due to *citta vīthi*.

12. In contrast, a *bhavaṅga* state (B or B_T) DOES NOT come though any of the five physical senses (eyes, ears, nose, tongue, body) or the *mana indriya* in the brain. That is why it is called “*dvāramutta citta*” or “*citta* that arise without the need for a sense door”.

- Therefore, *bhavaṅga* is sort of a “stationary state of the mind” that it falls back to when there are no running *citta vīthi*.
- Note that the *mana indriya* — where concepts and memories come to the mind — is unknown to scientists; see, “[Brain – Interface between Mind and Body.](#)”
- *Bhavaṅga* (B or B_T) is just a state of the mind with a corresponding *gati*. There are no associated *citta vīthi*. But of course, some *bhavaṅga citta* can appear in a *citta vīthi*; see, “[Citta Vīthi – Processing of Sense Inputs.](#)”

13. It is also important to note that *citta* do not run without break. It is the kammic energy that runs without a break during *samsara*.

- For example, when one is born in the *asanna* realm, there will be no *citta* generated for 500 *maha kalpa*. Remember that a *maha kalpa* is the age of our Solar system, which lasts about 15 billions years!
- During that whole time, the body of that being in the *asanna* realm is kept alive by the *kammic* energy for that *bhava*, and the *bhavaṅga* is active during that time. As we emphasized above, *bhavaṅga* is a state of mind.

14. Please keep in mind that it is not necessary to learn the material in #11 and #12 above. If one can grasp the basic idea of what is meant by *bhava* and *bhavaṅga* that is enough to grasp important concepts at a bit deeper level.

- We will continue this discussion in one or more upcoming posts.

12.2.5 Citta Vīthi – Processing of Sense Inputs

Revised April 26, 2018; revised May 30, 2018; October 17, 2019; February 24, 2020

1. Thoughts (*citta*) do not arise as individual *cittā*; see, “[Amazingly Fast Time Evolution of a Thought \(Citta\).](#)”

They arise in the mind due to sense inputs from the five physical senses (*cakkhu*, *sota*, *ghāṇa*, *jivhā*, and *kāya indriya* corresponding respectively to eye, ear, nose, tongue, and body) and also by the *mana indriya* (located in the brain see, “[Brain – Interface between Mind and Body.](#)”).

- Each of our sensory inputs coming in though any one of the five physical senses is received and analyzed by the mind in a “*citta vīthi*” (series of *cittā*) with 17 *cittā*. These are called *pañcadvāra citta vīthi*. *Pañcadvāra* (“*pañca*” + “*dvāra*” where “*pañca*” is five and “*dvāra*” is door) means five (physical) doors. See the post, “[What is Mind? How do we Experience the Outside World?.](#)”

- *Vīthi* is pronounced “veethi”; in fact, the actual Pāli (and Sinhala) term is *veethi* (meaning “road”), since, like a road, the flow is continuous. But *vīthi* has become the established English word, just like “*pīti*” for the actual word “*preethi*.” And, *citta* is pronounced “chiththā.”
- The convention for spelling Pali words is different from “standard English.” See, “[“Tipitaka English” Convention Adopted by Early European Scholars – Part 1](#)” and “[“Tipitaka English” Convention Adopted by Early European Scholars – Part 2.](#)”
- When we THINK ABOUT those external sensory inputs, that involve only *manadvāra citta vīthi*, and those normally have 10-12 *cittā* in them.
- Here we will describe both types of *citta vīthi*.

2. According to *citta niyama* (or Law of *Cittā*), a *pañcadvāra citta vīthi* proceeds in a standard way for an object with great intensity (*atimahantārammaṇa citta vīthi*). That means the object is of high interest and also the conditions for the object to be grasped are optimum; for example, if it is a visual object, that visual object is of high interest and also the light conditions for seeing that object are good.

The sequence of *cittā* in a *pañcadvāra citta vīthi* is as follows:

Pañcadvāra Citta Vīthi

| # in the Series | Citta Type | Symbol |
|-----------------|--|--------|
| 1 | Atīta Bhavaṅga (Past Bhavaṅga) | AB |
| 2 | Bhavaṅga Calana (Vibrating Bhavaṅga) | BC |
| 3 | Bhavaṅga Upaccheda (Arrest Bhavaṅga) | BU |
| 4 | Pañcadvāravajjana (Sense-door adverting consciousness) | PD |
| 5 | Cakkku Viññāṇa (eye-door perceiving consciousness) - for example | CV |
| 6 | Sampaṭicchana (Receiving consciousness) | Sam |
| 7 | Santīraṇa (Investigating consciousness) | San |
| 8 | Votthapana (Determining consciousness) | V |
| 9-15 | Javana | J |
| 16, 17 | Tadārammaṇa (Registering consciousness) | T |

3. When the mind is not dealing with a *pañcadvāra citta vīthi* or a *manadvāra citta vīthi*, it is in a “dormant state” called the *bhavaṅga*. *Bhavaṅga* (“bhava” + “aṅga” where “aṅga” means “part of”), thus represents the particular “bhava” of the living being, in this case, a “human bhava.” The conventional English term is “life continuum”, but we will use *bhavaṅga*.

- The meaning of *bhavaṅga* is further explained in, “[State of Mind in the Absence of Citta Vīthi – Bhavaṅga.](#)”
- The *bhavaṅga* state is conventionally represented by the following series as if they are a series of *bhavaṅga citta*:

..B B B B B B B

- When the mind is in the *bhavaṅga* state, we do not “feel” anything. Just like an eye cannot see itself, the mind cannot “see” its own state. This is the “dormant state” in-between sense inputs. When one is in deep sleep or unconscious, one is fully in the *bhavaṅga* state.

- The mind is normally at the *bhavaṅga* state. It comes off the *bhavaṅga* state when an object of interest comes through one of the five physical senses (*cakkhu*, *sota*, *ghāna*, *jivhā*, or *kāya indriya*.) A “*dhammā*” coming to the “*mana indriya*” can do that too.
- As we will see later, the mind is in the *bhavaṅga* (B) state most of the time even if the mind feels very active. Even during watching a movie, the mind is mostly in the *bhavaṅga* state (in between various types of *manodvāra* and *pañcadvāra citta vīthi*). Yet our brains are stressed to the limit since it needs to analyze the sights and sounds from the movie. See, “[Vision Is a Series of “Snapshots” – Movie Analogy.](#)”

4. We can represent the *pañcadvāra citta vīthi* in the above Table as follows:

B B B B B “AB BC BU PD CV Sam San V J J J J J J T T” B_T B_T B_T B_T.....

It must be noted that this is the strongest *citta vīthi*. There are many variations WITHIN this *citta vīthi* where some do not have T or even J *citta*. Different types of *pañcadvāra citta vīthi* are discussed in detail in “[A Comprehensive Manual of Abhidhamma](#)”, by Bhikkhu Bodhi (2000).

- In the above case, the *bhavaṅga* is temporarily changes to B_T due to the strong sensory input. For details, see, “[State of Mind in the Absence of Citta Vīthi – Bhavaṅga.](#)”
- In the above example, we took a “*cakkhu viññāṇa*” event, i.e., what happens when a picture is presented to the mind via the “*eye indriya*” and the mind investigating that picture.
- First, the “mind is released from the “*bhavaṅga* state”, and that takes three thought moments of AB (*atīta bhavaṅga*), BC (*bhavaṅga calana*), BU (*bhavaṅga upaccheda*). Here “*atīta*” (or “*atheetha*”) means “past”, “*calana*” (or “*chalana*”) means “move” or “vibrate”, and “*upaccheda*” (or “*upachcheda*”) means “stopped”.
- Then the mind looks at the “five physical senses or *pañcadvāra* (PD)” and determines through which of the five sense input is coming through, and then picks the relevant door, which in the present case we assumed to be *cakkhu viññāṇa* (CV).
- Then it investigates what that “picture” is, with the *Sampatticcana* (Sam) *citta* and decides what type (like, dislike, etc) with the *Santirana* (San) *citta*. Based on those, the *Votthapana* (V) *citta* determines what actions to take.
- The all-important 7 *javana citta* arise based on that determination made with the *Votthapana citta* (V). This is where potent *kamma* are done by the mind.
- The *votthapana citta* is the same as *manodvāra citta* (MD) where the decision is made (see below in *manodvāra citta vīthi*).

5. In the last two *Tadārammaṇa* (T) *cittā*, the mind takes in the “flavor” or the “essence” of the sense object and then falls back to the *bhavaṅga* state at the termination of the *pañcadvāra citta vīthi*. Only the very strong (*mahantaārammaṇa*) *citta vīthi* have them, and such strong impressions are “retained in one’s memory” for a period of time (i.e. one will not forget immediately).

- Until one loses that “temporary memory” it becomes one’s “temporary *bhavaṅga*.” For example, when one hears about the death of a parent, one will become sad and that “sad state of mind” will be there for days.
- That is explained in detail in the post, “[State of Mind in the Absence of Citta Vīthi – Bhavaṅga.](#)”
- Of course, ALL happenings are recorded as *nāma gotta*. Even unimportant events are recorded. The ability to recall events and what detail depends on one’s capabilities. Sometimes, such limited capabilities become possible due to “*puñña iddhi*” for even average humans. See, “[Recent Evidence for Unbroken Memory Records \(HSAM\).](#)”

The Simile of Tasting a Mango

1. A *pañcadvāra citta vīthi* is the procedure by which the mind experiences an external object (sight, sound, taste, etc.). The following analogy is given in the commentaries to the *Tipiṭaka*.
2. Suppose a weary traveler is asleep at the foot of a mango tree. This state of being asleep is analogous to the *bhavaṅga* state. Now a ripe mango drops to the ground near the traveler. This event is similar to the striking of a visible object of very great intensity at the “eye door”.
3. The falling of the mango awakens the traveler and causes him to raise his head. This event is similar to the appearance of the visible object at the eye door causing the *bhavaṅga* to vibrate twice and become arrested; now he is not asleep anymore.
 - The traveler opens his eyes and looks around to inquire what the disturbance was. This is similar to the *pañcadvāravajjana* (PD) *citta* adverting the mind towards the sense object.
4. The traveler sees the fallen mango. This is analogous to the eye-consciousness seeing the object (CV). Now the man picks up the mango, which is similar to the *sampaṭicchana* (Sam) *citta* receiving the *cakkhu viññāṇa*. **By the way, *sampaṭicchana* comes from “san”+“paṭicca”; you can contemplate on this to get the basic idea; see, “[What is “San”?](#)”.**
 - Then the man inspects the mango to see whether it is suitable for eating. This is similar to the *santīraṇa citta* (“san” + “tirana” or “theerana,” where “theerana” means “decide on whether the sense object is good or bad”) investigating the sense object.
 - Then the man decides that the mango is good and edible. This is similar to the *votthapana* (“votta” + “pana” meaning “deciding on what to do” or in Sinhala, “*pana denava*” or “energize”). *Vottapana* is pronounced “voththapana”. If it was a rotten mango, one would decide to throw it away.
 - Most Pāli terms can be understood well if one understands Sinhala. As I have mentioned before, it is the Sinhala language that is close to Pāli and not Sanskrit.
5. The man bites the mango seven times eating and enjoying the taste. This is similar to the occurrence of seven *javana cittā* enjoying the taste of the sense object. These are really the “actions corresponding to the decision made with the *votthapana citta*”; if the mango was bad, here the mind will generate appropriate *javana citta* to throw the mango. We will discuss such complex processes later.
 - Then the man gathers the remnants of the fruit and the juice sticking on the teeth with his tongue and swallows twice. This is similar to the two *tadārammaṇa* (T) *cittā* following the *javana cittā*.
 - Task completed, the man falls back to sleep. This is similar to the resumption of the *bhavaṅga* state.
6. **However, according to the *Tipiṭaka*, three *manodvāra citta vīthi* will follow each *pañcadvāra citta vīthi*.** The *javana cittā* in those three *citta vīthi* become increasingly strong, and it is *javana cittā* of the last *manodvāra citta vīthi* that instructs the brain to get the body to act (and initiate speech).
 - We will discuss this in detail in the future posts. But it takes three more *manodvāra citta vīthi* to complete the sequence of a thought process initiated by a *pañcadvāra citta vīthi*. In fact, when one gets “absorbed” (for example, keeps looking at an attractive picture), one may be generating numerous of such “one plus three processes” with the mind falling back to the *bhavaṅga* state repeatedly in between.
 - It will be easier to visualize this process by understanding what happens when we look at an object, for example, in scientific terms; see, “[Citta and Cetasika – How Viññāṇa \(Consciousness\) Arises](#)” (especially starting with #4 of that post).

Now let us look at a typical *manodvāra citta vīthi*.

Manodvara Citta Vīthi

| # in the Series | Citta Type | Symbol |
|-----------------|------------|--------|
|-----------------|------------|--------|

| | | |
|--------|--|----|
| 1 | Bhavaṅga Calana (Vibrating Bhavaṅga) | BC |
| 2 | Bhavaṅga Upaccheda (Arrest Bhavaṅga) | BU |
| 3 | Manodvāravajjana (Mind-door adverting consciousness) | MD |
| 4-10 | Javana | J |
| 11, 12 | Tadārammaṇa (Registering consciousness) | T |

1. We can represent the *manodvāra citta vīthi* in the above Table as follows:

B B B B B “BC BU MD J J J J J J J T T” B B B B B.....

- Here it takes only two thought moments to be released from the “bhavaṅga state”: BC (*bhavaṅga calana*), BU (*bhavaṅga upaccheda*).
- The mind already knows the *ārammaṇa* (thought object).
- The 7 *javana citta* arise, and then the *citta vīthi* ends with the two *Tadārammaṇa* (T) *cittā*.
- Just like in the case of a *pañcadvāra citta vīthi*, here also we considered an object with high intensity as an example. We will discuss the variations when handling signals of lower intensities as the need arises. However, this discussion is sufficient to get an idea about how the two types of *citta vīthi* function in the cognitive processes.

2. Now we can write the complete sequence of *citta* for a sense event initiated by a *pañcadvāra citta vīthi* as:

B B B B B “AB BC BU PD CV Sam San V J J J J J J T T MD J J J J J J T T MD J J J J J J T T MD J J J J J J T T” B B B B B.....

- As mentioned above, three *manodvāra citta vīthi* will run following the initial *pañcadvāra citta vīthi*. The object is recognized only after those four *citta vīthi*. But that happens within a billionth of a second.

3. On the other hand, *manodvāra citta vīthi* can arise just by themselves.

- Furthermore, even though the length of a *manodvāra citta vīthi* is normally 10-12 *cittā* for average people, a single *manodvāra citta vīthi* can have many *javana citta* while in a *jhāna*.
- In a *jhāna*, such long *manodvāra citta vīthi* are interrupted by *pañcadvāra citta vīthi* that arise in between. This is why one could hear external sounds while in a *jhāna*.

4. But in a *jhāna samāpatti*, a single *manodvāra citta vīthi* goes on uninterrupted for long times, with *javana citta* arising unceasingly :

B B B B B “BC BU MD J J J J J J J J J J ”

- Thus there is no way to get back to the *bhavaṅga* state, or for a *pañcadvāra citta vīthi* or another *manodvāra citta vīthi* to arise, and one becomes unaware of what happens in the outside world. Before getting into the *samāpatti*, one makes a determination on how long to stay in the *samāpatti*.
- This is why the real power of *javana citta* can be truly displayed by people who can get into *jhāna samāpatti*.
- This can be visualized crudely as follows: Suppose one is trying to light an oil lamp (oil-soaked wick) with the light of a matchstick. If one is not holding the lighted matchstick steady and the light moves in and out of the vicinity of the wick, it will not light. But if one can hold the light steady, it will light up quickly.

- That is probably a too crude an analogy. A better one may be given for those who are familiar with lasers. One can drill holes in a metal plate using a laser beam. But the metal spot will not heat up and evaporate unless the laser beam is held steady at that spot. Being in a *jhāna samāpatti* is like holding a laser beam quite steady on one spot for long times.

It is important to realize that a *citta vīthi* always starts with an external sensory input due to a past *kamma*, i.e., due to a *kamma vipāka*; see, "[Avyākata Paticca Samuppāda for Vipāka Viññāna.](#)"

Citta Vīthi for Attainment of Magga Phala

B B B “BC BU MD P U A G Pa Fr Fr” B B B

B B B “BC BU MD U A G Pa Fr Fr Fr” B B B

First is the *magga phala citta vīthi* for a normal person; the second is for one with “higher wisdom”.

- B, BC, BU, MD are, as discussed above.
- Then it goes through the *Parikamma* (P), *Upacara* (U), *Anuloma* (A), *Gotrabu* (G), Path (*magga*) (Pa), and Fruit (*phala*) (Fr).
- **As you can see, there is no connection to *jhāna*.** In particular, the *magga phala citta vīthi* does not go through a *jhāna citta*. Also, the *Gotrabu* (change of lineage) *citta* for *magga phala* is COMPLETELY DIFFERENT than that in the case of a *jhāna citta vīthi*. **The change of lineage here is to become an Ariya or a Noble Person.**

Citta Vīthi for Attainment of Jhāna

B B B “BC BU MD P U A G Jh” B B B

B B B “BC BU MD U A G Jh” B B B

First is the *jhāna citta vīthi* for a normal person; the second is for one with “higher wisdom”.

- B, BC, BU, MD, P, U, A, G are, as discussed above.
- Then it goes through a *Jhāna* (Jh) *citta*.

12.3 Mind and Consciousness

[What is Mind? How do we Experience the Outside World?](#)

[What is Consciousness?](#)

[1. Thoughts \(Citta\), Consciousness \(Viññāna\), and Mind \(Hadaya Vatthu\) – Introduction](#)

[2. Viññāna \(Consciousness\) can be of Many Different Types and Forms](#)

[3. Viññāna, Thoughts, and the Subconscious](#)

12.3.1 What is Consciousness?

Revised July 16, 2020

1. Philosophers through the ages have struggled to figure out how consciousness arises in a human being. For “materialists” everything that makes a human being originates in the body, and they have been trying to explain consciousness in terms of something that comes out from the workings of the brain.

- For the “dualist” consciousness is totally distinct from the material body, and falls into the realm of theistic religion (related to a “soul”).
- According to the Buddha, consciousness, together with the body, are two of the five “aggregates” that a human being consists of. **And Consciousness does not arise from the body, but arises with the body at the conception.**

2. First of all, let us define consciousness.

- The Buddha said that being conscious is “being aware,” but with feelings and perceptions, and the ability to “recall the past.”
- There are several definitions of consciousness in modern science, but the general consensus among the scientists and philosophers is that the state of being conscious is a condition of being aware of one’s surroundings as well as one’s own existence (or self-awareness).
- Therefore, we could say that science and Buddhism are attributing similar the same meaning to the word “consciousness”.
- However, the Buddha’s definition of consciousness takes into account the critical roles played by the *vedanā* (feelings), *saññā* (perceptions), and the *manasikāra cetasika* among 52 other mental factors (*cetasika*), which combine to produce the *viññāna* which can be roughly translated as consciousness.

3. As to the origins of consciousness, we have three “theories”:

- Contemporary science is totally matter-based: the universe started with the “big-bang” which created all existing matter, and all living beings “evolved” from this inert matter, and thus consciousness also evolved by some (yet unknown) manner.
- The theistic religions believe, of course, that humans were created with built-in consciousness by an Almighty-God, and animals were also created (sans consciousness).
- The Buddha’s is different from both above: It states that living beings (humans and animals) with built-in consciousness are different from inert matter, but they were not created. Rather, there is no traceable beginning to sentient life; life always existed, and it will exist forever (until *Nibbāna* is attained). Everything has a cause, so does life.

4. Consciousness is more than registration of a visual event, or an auditory event, for example. It has associated a variety of mental factors such as *saññā* (perception) and *vedanā* (feelings).

- A camera captures an image of a cat, but it is not aware of the presence of the cat. On the other hand, a dog sees a cat and becomes aware of its presence. It not only sees the cat, but knows exactly where it is and can try to catch it.
- Have you ever thought about how we can not only see things, but know exactly where they are? Without this ability, we can not even walk without bumping into things. How do we know that the person in front of us is only a few feet away? Consciousness is associated with a sentient being with a MIND. Science cannot yet explain this capability.

5. There is also the issue of the phenomenal quality of the conscious experience: qualia, subjective feelings, the redness of red, the warmth of warmth, etc. How do these arise in a being made up of inert atoms? There are basically two approaches to solve this problem in modern philosophy and science:

- One is that it arises as an emergent property in the neuronal activities in the brain. The other is the proposal of duality by Rene Descartes in the 17th century that persists to the present; see, for example, David Chalmers, “The Character of Consciousness”, (2010).
- A subset of these scientists believe that consciousness is associated with the microtubules in a cell (for example, see “The Emerging Physics of Consciousness” Ed. by Jack A. Tuszynski (2006) and John Smythies, “Brain and Consciousness: The Ghost in the Machines”, Journal of Scientific Exploration, vol. 23, No. 1, pp. 37-50, (2009)). Despite much research, the question of how qualia and subjective feelings arise from dead matter remains a mystery.
- Just because a cell responds that does not necessarily mean it has consciousness; the cell can expand and contract (chemical reactions) in response to environmental stimuli. In a way, something similar happens when a plant turns towards sunlight; of course, plant life is not sentient. Thus, just because an entity responds to outside influence does not necessarily mean the entity is “mentally aware” of the outside influence, i.e., that it is conscious.

6. Therefore, all these scientists and philosophers are a long way off of solving the issue of the four mental aggregates of feelings, perceptions, volitional formations (*sankhāra*), and consciousness that make up the mental aspects of a human being. They are mainly focusing on consciousness and perception at this early stage, and even then are totally disregarding the intrinsic mental nature. It will be interesting to see what progress they can make by just taking a totally materialistic approach.

7. There is evidence, though, that some leading scientists are beginning to suspect that a complete “world view” cannot be achieved without taking into account the mental aspects. This trend started with the invention of quantum mechanics at the beginning of the 20th century, and is gaining traction slowly. Some interesting ideas are discussed in a number of books including “Wholeness and the Implicate Order” (by David Bohm, 1980), “Quantum Enigma” (by Bruce Rosenblum and Fred Kuttner, 2006), “Biocentrism” (by Robert Lanza, 2009).

- However, attempts to explain the mind as a manifestation of quantum phenomena will also fail, because it is the mind that precedes matter; see, “[The Double Slit Experiment – Correlation between Mind and Matter?](#).”

8. Consciousness (*viññāna*) discussed in this section does NOT take account the fact that consciousness of any living being (other than an *Arahant*) is contaminated by defilements. This our awareness is not pure; it is like looking through a foggy window. This is discussed in the “[Viññāna \(Defiled Consciousness\)](#)” and “[Expanding Consciousness by Purifying the Mind.](#)”

Next, “[1. Thoughts \(Citta\), Consciousness \(Viññāna\), and Mind \(Hadaya Vatthu\) – Introduction](#)”,
.....

12.3.2 1. Thoughts (Citta), Consciousness (Viññāṇa), and Mind (Hadaya Vatthu) – Introduction

It will be beneficial to read this post even if one is not interested in learning *Abhidhamma*.

1. After writing a few posts in the *Abhidhamma* section, I realized that it is a good idea to write introductory posts on English meanings of some *Pāli* key words related to the mind. **In the end, words do not matter and what matters is grasping of the concepts involved.** But conveying the concept correctly REQUIRES the use of right words.

- This is a bit of a problem because there are no words in English that truly conveys the meaning of some *Pāli* key words when talking about the mind (like *mano* and *viññāṇa*). Thus what I need to do is to write several introductory posts describing such keywords (like what I did for *anicca*, *dukkha*, *anatta*).
- More details will be given in the *Abhidhamma* section, but the posts that appear in this section provide just the basics.

2. A *Citta* (pronounced “chiththa”) is widely translated as a “thought”, *viññāṇa* as “consciousness” and *mano* as “mind”. **I am going to keep using the former two, but am going to use “hadaya vatthu” as the *Pāli* word for mind.** Let us first discuss the reason for using this term for the mind.

- *Hadaya vatthu* is where *citta* (thoughts) arise; thus it is appropriate to call it the mind or even more appropriately “seat of the mind”. ***Hadaya vatthu* is the “link” between the “*mano loka*” (mind plane) and the “material plane” whether it is in *kāma loka*, *rūpa loka* or *arūpa loka* (i.e., anywhere in the 31 realms).** Mind or the *hadaya vatthu* is a very fine *rūpa* (matter); in technical terms, *hadaya vatthu* is formed at *paṭisandhi* as a *vatthu dasaka*.
- By the way this *hadaya vatthu* is the only trace of matter associated with a living being in the *arūpa loka*. It is much smaller than an atom; only a form of “*suddhāshtaka* [*suddhaṭṭhaka*]” in the form of a “*dasaka*.”
- For example, if a *cuti-paṭisandhi* transition occurs from a cat to a human, then the “cat *hadaya vatthu*” dies and a “human *hadaya vatthu*” is formed and the very next *citta* arises in the “human *hadaya vatthu*” or the “human mind” in the “human *gandhabba*”; see, “[Cutī-Paṭisandhi Transition – Abhidhamma Description](#)”. With that in mind, let us discuss the ultimate “primary elements”.

3. In the absolute sense (*paramatta*), there are four entities: *citta*, *cetasika* (pronounced “chetasika”), *rūpa* (pronounced “rūpa”), and *Nibbāna*. The last one, *Nibbāna*, does not belong to “this world” of 31 realms. Therefore, there are only *citta*, *cetasika*, and *rūpa* that are in anything and everything in this world.

- *Citta* and *cetasika* are “*nama*” and all tangible things are made of “*rūpa*”.
- There are 89 (or 121) types of *citta*; 52 kinds of *cetasika*, and 28 kinds of *rūpa*. These are all listed in the “[Tables and Summaries](#)” section.

4. A *citta* (thought) does not arise by itself, but arises with a number of *cetasika* (mental factors). There are 7 *cetasika* that arise with ANY *citta*, and normally there are other *cetasika* that arise in addition to those seven. This is discussed in “[Cetasika \(Mental Factors\)](#)”.

- There are “good” and “bad” *cetasika*. The familiar ones are *lobha*, *dosa*, *moha* and *alobha*, *adosa*, *amoha*, but there are many others. These determine whether a given *citta* is a “good” (*kusala*) *citta* or a “bad” (*akusala*) *citta*. There are only good or bad *cetasika* in a given *citta*; they do not mix.

5. Even though a *citta* arises and perishes within less than billionth of a second, it gets contaminated during its lifetime. Starting as a “pure *citta*” (“*pabāsvara citta*” which is also called “*prabāsvara citta*” in *Sanskrit*) with those 7 universal *cetasika*, it gradually degrades by incorporating many other *cetasika* into a “contaminated *citta*” or *viññāṇa*. Without going into details, the nine steps are:

- *citta*, *mano*, *manasan*, *hadayan*, *pandaran*, *mana indriyan*, *manayatan*, *viññāṇa*, *vinnanakkhandho*. [*Yaṃ cittam mano mānasam hadayaṃ paṇḍaram mano manāyatanaṃ*]

manindriyaṃ viññāṇaṃ viññāṇakkhandho...] But this happens during the life of the *citta* itself (in billionth of a second) according to the “*gathi*” that we have. **This is why we cannot control our initial thoughts; but as those initial thoughts turn to speech and bodily actions, we may have time to control them.**

- But we still use the term “*citta*” to denote the final outcome; in order to differentiate the one that the sequences started off, we call it a “pure *citta*” or a “*pabasvara citta*.”
- What we end up is basically what we call *vinanakkhandha*, and all this happens within a billionth of a second. This “contamination process” cannot be controlled willfully at that early stage; it happens automatically based on one’s “*gathi*.” **The only thing we can do is to change our “*gathi*.”**

6. We can use the following analogy: If we start off with a glass of pure water that can be compared to a pure *citta* with just the 7 universal *cetasika*. If we add a bit of sugar (*mano*), salt (*manasan*) it gets a bit contaminated but we cannot see the contamination. Now we add a bit of brown sugar and we can see the water turning to brown; this is like the *hadayan* stage. Then we keep adding chocolate, milk, etc, the water gets really contaminated; but it is still mostly water. A contaminated *citta* is like at the *viññāṇa* stage; it is a *citta* that is contaminated.

- The *citta* of an *Arahant* does not contaminate beyond the *manasan* stage (While in the “*Arahant phala samapatti*” enjoying *Nibbānic* bliss, an *Arahant* has the *pabasvara citta* or the pure *citta*). All others get to the *viññāṇa* stage, but of course the “level of contamination” is much lower even by the time one gets to the *Sotāpanna* stage, because one has gotten rid of any “*gathi*” associated with the *apāyā*.
- As we can see, it is not possible to control such a fast process by sheer will power; it is a matter of “cleansing the mind” progressively of the contaminants of greed, hate, and ignorance.
- Now we can see why “*mano*” cannot be the mind. “*Mano*” is just a bit “contaminated” *citta*. It gets progressively contaminated and by the time it comes to the “*viññāṇa*” step it has captured all relevant *cetasika* for that *arammana* or the “thought object”.
- **At the last step, a very profound thing happens.** The *manasikara cetasika* brings in to play all relevant past *viññāṇa* (which are fixed as “*nama gotta*”) as well as one’s “hopes and dreams” for the future that are relevant to the “event in question”. For example, if the thought occurs due to seeing a nice house, one may compare that house with houses like that one has seen before AND one’s “dream house” that one is hoping to build one day. Therefore, in the “final version”, a *citta* is a very complex entity that reflects not only the “nature of the object seen” but also one’s own likes/dislikes for it.
- This last stage of the *citta* or *Viññāṇa* is the “composite awareness” for that particular event, which also has one’s own likings, dislikings, etc for that particular event; see, “[Citta, Mano, Viññāṇa – Stages of a Thought.](#)”

7. And we do not, and cannot, just perceive a single or even a few *vinanakkandho*; rather what we “feel” as a “thought” is the sum of many such *vinanakkandho*, and we still call that a “*citta*” or a “thought”; see, “[What is a Thought?](#)” and “[Citta and Cetasika – How Viññāṇa \(Consciousness\) Arises](#)”.

- We also alternatively call such sense experiences “*citta*,” “thoughts,” “consciousness,” and “*viññāṇa*.”
- Thus it is critical to understand that what we mean by *viññāṇa* in general is the sum total of many *cittā*; in *paṭicca samuppāda*, at the “*avijjā paccayā viññāṇa*,” *viññāṇa* means this sum total of many *cittā* or even more accurately the sum total of many of *vinanakkandho*.

8. Now I would like to point out a few important conventions:

- It is important to remember that a thought can have many meanings even in English: [WebLink: WIKI: Thought](#)
- Normally “*citta*” is used to denote a thought, and “*viññāṇa*” is used to denote the “awareness” associated with a thought. It is fine to do that most of the time, but if a discussion gets technical one could come back to this post and refresh memory as to the details.

- And as you can imagine, such an “average of thoughts” may have many type of cognitions and underlying “awarenesses”, and we will talk about the different types of *viññāṇa* in the next post, “[2. Viññāṇa \(Consciousness\) can be of Many Different Types and Forms](#)”.

12.3.3 2. Viññāṇa (Consciousness) can be of Many Different Types and Forms

1. *Viññāṇa* is unique to sentient beings. Plants are alive but have no *viññāṇa*; they respond to the environments but are not capable of “thinking”. Sentient beings are aware that they are alive and just that basic awareness of “being alive” is not really a *viññāṇa*.

- This purest level of *viññāṇa* (the awareness of being alive) is called the “*citta*” (pronounced “chiththa”) stage.
- A *citta* arises with 7 concomitant “mental factors” (*cetasika*, pronounced “chetasika”), and this is described in “[Citta and Cetasika – How Viññāṇa \(Consciousness\) Arises](#)”. To emphasize, a pure *citta* arises with those universal *cetasika*; a *citta* always has those 7 *cetasika*.

However, the *citta* of a sentient being gets “contaminated” by other *cetasika* as soon as it arises. Within the lifetime of a *citta* (which is less than a billionth of a second), it progressively gets contaminated by “good” or “bad” *cetasika*, and this happens in nine stages! This was discussed in the previous post: “[Thoughts \(Citta\), Consciousness \(Viññāṇa\), and Mind \(Hadaya Vatthu\) – Introduction](#).”

2. As discussed in “[Citta and Cetasika – How Viññāṇa \(Consciousness\) Arises](#)”, it is those additional *cetasika* that provide “color” to a *citta*: if a set of “good *cetasika*” arise with the *citta* it becomes a “good thought” or a “good *viññāṇa*”; if it is a set of “bad *cetasika*”, then the thought or the *viññāṇa* is bad (those *cetasika* do not mix). Also, there are neutral thoughts or neutral *viññāṇa* that are neither good nor bad.

- *Viññāṇa* can be experienced in many different ways; since it is hard to come up with different names for each case, they are all bundled together as *viññāṇa*. Words like *citta*, *viññāṇa*, *mano*, as well as *cakkhu viññāṇa*, *sota viññāṇa*, etc and *vipāka viññāṇa* are used in different contexts and that can be confusing to many regardless of whether their native language is English, Chinese, or even Sinhala, which is the closest language to Pāli. But each term has its own “subtle identity” and as we discuss more, those subtle differences will become clear.

3. *Viññāṇa* is often translated as “consciousness” but *viññāṇa* can be used in many different contexts like “subconscious” or “layers of consciousness”.

- The same problem is encountered by those who speak *Sinhala*, because there the word “*sitha*” is used in many occasions to represent the Pāli words *citta*, *mano*, and *viññāṇa*. Similarly, in *Sinhala* “*yati sitha*” is used to denote the subconscious.
- This “subconscious” in English (as introduced by Sigmund Freud) or “*yati sitha*” in *Sinhala* is not a separate *citta* (there can be only one *citta* at a time). But, each *citta* can have “layers of consciousness”; the *manasikara cetasika* plays a big role here.
- For example, at a given time we may have several “subconscious” *viññāṇa*: **we may have plans to buy a certain car, getting ready to go on a trip next week, in the process of building a house, etc; all these are in the subconscious, and in each *citta***. If we see a car on the road that looks like the car we are interested in, the *viññāṇa* alerts you to it, and you take a good look at it.
- As the Buddha advised *bhikkhus*, what really matters is to convey the meaning. Just like in the case of *paṭicca samuppāda* or *taṇhā*, it is best to use the Pāli words and comprehend their meanings; those key words convey deep meanings that may take several words or even sentences in any other language to get the idea across.

Types of Viññāṇa associated with Kamma and the Sense Doors

Viññāṇa is complex and can be presented in various different types and forms. We will start by looking at “two categories” of *viññāṇa*.

1. First, we can categorize them according to *kamma* (or *saṅkhāra*) associated with the *viññāṇa*: ***Kamma viññāṇa, vipāka viññāṇa, and kiriya (or kriya) viññāṇa.***

Let us describe in plain English what these terms mean.

- We can put *viññāṇa* into three categories in relation to *kamma*: Those *viññāṇa* that arise while doing a *kamma* (*saṅkhāra*) is called a *kamma viññāṇa*. For example, when one steals something, one has an awareness of that; that is the “*viññāṇa* that one is stealing”.
- Then there are those that arise as *kamma vipāka*, and thus we do not have much control over them; they just happen to us and are called *avyakata viññāṇa* or *vipāka viññāṇa*. I like the term *vipāka viññāṇa* than *avyakata viññāṇa* because then it is easy to differentiate those two kinds. For example, when one is walking on the road and sees something valuable on the roadside; that is a *cakkhu viññāṇa* (seeing something) and also a *vipāka viññāṇa* (due to a *kamma vipāka*).
- The third type in this category are called *kiriya (kriya) viññāṇa*, and they are not connected to *kamma*. When we think, talk, or do something that does not involve *kammically* “good” or “bad”, those are done with *kiriya viññāṇa*. For example, when we think about the cleaning chores for the day, or ask someone what time it is, or walk to the kitchen to get a drink, all those are done with *kiriya viññāṇa*.

2. When we are travelling by a vehicle and are looking out of a window, we see many different things out there. But most of it we do not pay any attention, even though we are “aware” that we are seeing things. Those are *vipāka viññāṇa*, they are “presented to us”, but most of them may not interest us.

- Then all of a sudden we see something that “piques our interest”, say a nice house by the roadside. Then we fix our attention on that and even may keep looking at until it moves out of our range. That is a *vipāka viññāṇa* that triggered a “*gathi*” in us; it was of interest. And it could put us in a position to acquire more *kamma* by initiating a *kamma viññāṇa*.
- For example, if we really got interested in that house, we may start thinking about how nice would it be if we could build and live in a house like that. Now we are making *saṅkhāra* (i.e., generating *kamma*) based on that “seeing event”. Thus such thoughts (or *viññāṇa*) that followed the initial *vipāka viññāṇa* of “seeing the house” are *kamma viññāṇa*.
- Our life experiences belong to basically one of those three categories.

3. All those *viññāṇa* may also be described in another totally different form; they can be differentiated into six categories, this time based on the sense door: thus we have *cakkhu viññāṇa* (vision consciousness), and *sota* (sound), *ghāṇa* (smell), *jivhā* (taste), *kāya* (touch), and *mano* (mind) *viññāṇa* (consciousnesses).

- In the previous example, the three types of *viññāṇa* were all initiated by *cakkhu viññāṇa*, a “seeing event or consciousness”. At the *kamma viññāṇa* stage, they became *mano viññāṇa*, because those thoughts about acquiring a house originated in our minds.
- Then if another passenger touched us, we would turn and look at that person, because now we had a *kaya viññāṇa* (which was also a *vipāka viññāṇa*).
- If that touching turned out to be done by accident, we just let go of it, and it was just a neutral event of seeing someone (*kiriya viññāṇa*).
- However, if it was someone with whom we had a romantic relationship in the past, then we may start generating *kamma viññāṇa* (*mano viññāṇa*). In the same way, if it was someone with whom we have had a bad relationship, we may start generating another type of *kamma viññāṇa* (*mano viññāṇa*).
- Thus if you contemplate a bit on this, you can see that ALL our experiences can be put into either of those two “divisions”, i.e., we can analyze them to be in *vipāka viññāṇa, kamma viññāṇa, and kiriya viññāṇa* categories or the sense consciousness categories.

4. There are other types of *viññāṇa* that we will talk about later, but for now let us discuss something that is really important to *paṭicca samuppāda*.

- The *paṭicca samuppāda* cycle starts with “*avijjā paccayā saṅkhāra*”, and “*saṅkhāra paccayā viññāṇa*”. This *viññāṇa* is NOT a *vipāka viññāṇa* or a *kiriya viññāṇa*, but only a *kamma viññāṇa*.
- When we see something, hear something, etc., those are things that HAPPEN to us. Thus there is no *avijjā* (or ignorance) initiating that consciousness. There is no *paṭicca samuppāda* cycle associated with such a consciousness (*viññāṇa*).
- However, if we now decide to act on it (say, take another look at it because we like it), then we may be initiating a *saṅkhāra (kamma)* event: now this new event initiates a (*pavutti*) *paṭicca samuppāda* cycle with “*avijjā paccayā saṅkhāra*”, which leads to, “*saṅkhāra paccayā viññāṇa*”, i.e., this *viññāṇa* was initiated by a *saṅkhāra*; thus it is a *kamma viññāṇa*.

5. Usually, what happens in our lives is that we are bombarded with sense inputs via all six senses. We tend to turn our attention to as many as we can because we are afraid that “we may miss out on something”. This is the root cause for the lack of “peace” in our minds, because we are constantly moving our attention among the six senses, going back and forth. If we have too many “likings” our mind will be pulled in all different directions trying to follow all those sense inputs.

- By avoiding busy environments (i.e., by going to a secluded place) we can reduce this effect. **But, we still cannot “turn off the sixth sense input”, i.e., the mind, unless we purify our minds.** This is the key to meditation. It is not possible to have a “peace of mind” if the mind is burdened with greed, hate, and ignorance (wrong vision or *micchā diṭṭhi*).

6. Thus an *Arahant* can have a peaceful mind even when in the busiest place. A *Sotāpanna* can do that to a certain extent too.

- Even before any of the “*magga phala*” are attained, one can easily get to *samādhi* and then to *jhānā*, by gradually getting rid of the defilements associated with “wrong vision” just by learning Dhamma (mainly *anicca, dukkha, anatta*).
- Then the number of different types of *viññāṇa* going through the mind will be reduced (“Sounds like my neighbor’s car leaving, I wonder whether she is going to the mall?”, “I wonder what (my enemy) is up to today?”, “I wish I could have a body like that!”, “How come I don’t have a nice house like that?”; these are all types of *viññāṇa* that we burden our minds with unnecessarily.
- And it is important to realize that it is not easy to just turn those off; they WILL BE turned off automatically when we purify our minds first by learning Dhamma (“What is the use of thinking about unnecessary things? There are better things to think about that provide lasting happiness”).

Next, “[3. Viññāṇa, Thoughts, and the Subconscious](#)”,

12.3.4 3. Viññāṇa, Thoughts, and the Subconscious

Revised February 25, 2020

***Cetasikā* (Mental Factors) Determine the Nature of a *Citta* (Thought)**

1. A thought (*citta*) arises based on a specific thought object (*ārammaṇa*), say thinking about buying a car or going for a walk. There is only one *citta* at a time, but each lasts less than a billionth of a second. The word *citta* is pronounced “chiththa.” See, “[“Tipitaka English” Convention Adopted by Early European Scholars – Part 1.](#)”

- *Cittā* (plural of *citta*) flow at a very fast rate. We do not experience individual *citta*, but the overall effect of billions of *cittā* that arise in a second.
- Each *citta* has many *cetasika* (mental factors) in it, including the all-important *saññā, phassa, manasikāra cetasika*.

- Then there are “good” and “bad” *cetasika* in a *citta* that describes the “quality” of the *citta*.
- When someone is angry, most *cittā* **at that time** will have anger/hate (*paṭigha* and/or *dosa cetasika*.) When the same person is feeding a hungry person his/her *cittā* **at that time** will have the benevolence and/or loving-kindness *cetasikā*.
- The good and bad *cetasikā* do not mix, i.e., one either has a good thought or a bad thought. For discussion on *cetasika*, see, “[Cetasika \(Mental Factors\)](#)“.

What Is *Viññāṇa*? – Role of *Cetasikā*

2. Even though we simply think about a “thought,” a thought is really a complex entity, that goes through nine stages within a billionth of a second. It ends as *viññāṇa* or *viññāṇakkhandha*. See, “[Citta, Mano, Viññāṇa – Stages of a Thought](#).” *Viññāṇa* represents the overall experience of “thought” and is largely described by the *cetasikā* in those *cittā*.

- Of course, no one experience a *viññāṇa* due to a single *citta*; rather what one experiences is the average of millions or billions of *cittā*. A bunch or a heap is called *khandha* in Pāli or Sinhala. Thus what we experience is a *viññāṇakkhandha* or the overall effect of a bunch or a heap of *cittā*.
- *Viññāṇa* is complex and multifaceted. But they are primarily of two types: *vipāka viññāṇa* and *kamma viññāṇa* See, “[Viññāṇa – What It Really Means](#).”
- We can look at those two types in a simple way as follows.

3. The *manasikāra* and *saññā cetasika* are in each and every *citta*, and they can incorporate all past memories, habits (*gati*) and cravings (*āsavā*) to a given *citta*. It is the *cetanā cetasika* that “puts it all together.” Only the mind of a Buddha can “see” such amazing details. It all happens within a billionth of a second!

- Our *gati* and *āsavā* (plural of *āsava*) may not be displayed in each *citta*. Rather, they lie dormant, waiting for a “trigger” to come up. For example, greedy thoughts arise only when a “pleasing thought object” is in play, as in seeing a tasty dish or an attractive person.
- Therefore, the way we think (*viññāṇa*) depend on our *gati* (habits/character,) *āsavā* (cravings,) AND the particular “thought object” or *ārammaṇa*.
- Of course, we can get rid of certain *gati/āsava* and cultivate new ones.
- The main goal of *Ānāpāna* and *Satipaṭṭhāna* meditations is to remove bad *gati/āsava* and to cultivate good *gati*. See, “[Is Ānāpānasati Breath Meditation?](#)” and “[9. Key to Ānāpānasati – How to Change Habits and Character \(Gati\)](#).”

Vipāka Viññāṇa and *Kamma Viññāṇa*

4. The mind is directed to a new thought object (or *ārammaṇa*) with a *vipāka viññāṇa* that may come through **any of the six sensory inputs**. For example, we may be walking down the street, but an attractive item in a shop window may catch our attention.

- Now, if we like that item, we may start thinking about buying it. That is a *kamma viññāṇa*. Now we have generated a new *viññāṇa* with a desire to buy that item. A *kamma viññāṇa* has an expectation. We may not buy it at that time. But if we go home and again start thinking about it (generating *vacī saṅkhāra*,) then we build up that *viññāṇa* via “*saṅkhāra paccayā viññāṇa*” step in *Paticca Samuppāda*. Therefore, a *kamma viññāṇa* **arises only in the mind**.
- Without getting deep into the issue, we can just say that a *kamma viññāṇa* is an expectation. Once formed, a *kamma viññāṇa* will stay with us at least for a while. It will grow only if we keep thinking, speaking or doing things (with *vacī* and *kāya saṅkhāra*) related to that expectation.

Kamma Viññāṇa Come Back as *Vipāka Viññāṇa*

5. When we build such an expectation, the memory of that can come back as a *vipāka viññāṇa* at a later time.

- For example, the memory of that item in the shop window in #3 above may come back to the mind via one of the six senses later on. For example, we may hear about it on the radio, we may hear someone else talking about it, etc. It may even “pop into the mind” too.
- That item in the shop window is a “thought object” or a *ārammaṇa*.
- Then if we keep thinking, speaking, doing things related to that *ārammaṇa*, that associated *viññāṇa* will grow.

What is Subconscious?

6. Such *vipāka viññāṇa* are waiting in the background to bring their fruits. There may be many types hiding beneath the surface. **This is what Sigmund Freud called the “sub-conscious”.**

- When I am paying for my groceries, my thoughts stay focused on that transaction. But there can be many types of *viññāṇa* lurking “in the background”. I may be building a house, studying for an exam, planning a trip, planning a birthday party for my child, etc. and all those “*viññāṇa*” are working in the background even though I am not thinking about any of them at the time I am paying for my groceries.
- However, any of those, and even some things that I had not been thinking about for a long time, can be there in the “subconscious”. But there is no separate “subconscious” as such.
- All these different types of *viññāṇa* cannot be there in a single thought (*citta*), and there is only one *citta* at a time; see, “[What is a Thought?](#)”. Then how is it possible for many types of *viññāṇa* to be lurking in the background? That is what we discussed in #2, #3 above. Based on the particular *ārammaṇa*, the *cetanā cetasika* “transforms” a pure *citta* to the “contaminated” *viññāṇa* stage in several steps.

7. The more one does something repeatedly, there starts a *kamma viññāṇa* for that particular event or behavior. For example, when one starts smoking, a *viññāṇa* starts building, and the more one smokes, the stronger the *viññāṇa* gets. This is called “feeding the *viññāṇa*” by doing it again and again. In other words, habits are formed via repeatedly feeding the *viññāṇa* for that habit.

- When a certain *viññāṇa* is pleasing to the mind, that *viññāṇa* tries to get fed frequently. When someone has the habit of smoking the *viññāṇa* for that tries to deviate his/her attention to smoking at every possible opportunity. For example, if a smoker sees an advertisement for smoking, that “triggers” the liking or the *viññāṇa* for smoking that was in the subconscious.

8. But it works the same way for a *viññāṇa* that got established with a dislike also. For example, if someone did something really awful to you in the past, the hearing of his/her name will bring back that *viññāṇa*.

- This is why we get “attached” (*taṇhā*) to things we like as well for things we dislike and is the meaning of *taṇhā* (get bonded via greed or hate); see, “[Tanhā – How We Attach Via Greed, Hate, and Ignorance](#)”.

Viññāṇa Are Not Permanent

9. Not all *viññāṇa* keep accumulating in the background. Those weaker ones, especially if don’t get fed, diminish and disappear.

- For example, suppose I had planned an overseas trip and had been making preparations for it. The more preparations I make and the more thoughts I have of the trip, those are “food for that *viññāṇa*”, and it grows. If I see a new article with that country’s name, I would immediately read the article. But suppose, a major war breaks out in that country before my trip; then I would cancel that trip right away. I will no longer be planning for the trip and my mind will “not be interested” in it anymore. Since that *viññāṇa* for “visiting that country” is not going to get fed anymore, it will be gone in a short time.

- We don't even need to actually physically do the activity to "feed the *viññāṇa*" or make a habit stronger. There are studies that show that one could improve the game of basketball, for example, by just visualize practicing, and getting the ball mentally. These are called "*mano sañcetanā*". Focusing attention on a given task can be very powerful.
- One's associations strongly influence which of those different types of *viññāṇa* will grow by "getting fed" frequently. If one starts associating with people who drink regularly, one's *viññāṇa* for "getting drunk" will grow as one keeps feeding that *viññāṇa* by drinking frequently.

Summary

12. A built-up *viññāṇa* can form a habit (*gati*.) As the habit or the *gati* gets stronger, it can be carried over to the next life, possibly in two ways.

- If a human dies and has time left in the "human *bhava*" then when he/she is reborn as a human most of the previous *gati* will be there.
- A really strong habit could lead to a "*paṭisandhi viññāṇa*" at the dying moment and can lead to a corresponding "*bhava*" based on that particular *gati*. For example, an extremely greedy person, may acquire a "*peta bhava*" at the dying moment and be born as a "*peta*" or a hungry ghost.

13. Thus *viññāṇa* is very complex. It is not just "awareness." *Viññāṇa* also has one's "hopes and dreams" as well as "likes, dislikes, and habits". It also includes the "subconscious." It is a complex combination of the 52 *cetasikā*.

- Of course, not all *cetasikā* are involved in a given *citta* or in our thoughts. *Sobhana* (good) *cetasikā* do not arise with *asobhana* (bad) *cetasikā* in a given *citta*.
- See, "[Cetasika \(Mental Factors\)](#)" for a discussion on *cetasikā*.

12.4 Citta and Cetasika

[Citta and Cetasika – How Viññāna \(Consciousness\) Arises](#)

[What is a Thought?](#)

[Javana of a Citta – The Root of Mental Power](#)

12.4.1 Citta and Cetasika – How Viññāna (Consciousness) Arises

Revised February 17, 2020

Necessary Background

1. It is a good idea to read the posts, [“Amazingly Fast Time Evolution of a Thought \(Citta\)”](#) and [“Viññāna – What It Really Means”](#) first.

- It may be a good idea to read at least the introductory post on the *manomaya kāya* before reading this post: [“Gandhabba \(Manomaya Kāya\) - Introduction.”](#)
- When one learns *Abhidhamma*, one can see why the Buddha rejected both “self” and “no-self” concepts. A “living being” is a momentarily changing entity. It is not possible to say “it does not exist,” because it does exist. It is just that it continuously evolves ON ITS OWN PATH determined by “*gati*” at each stage. There is a “dynamic self,” which has its own identity or personality or “*gati*” (which also evolve.)

Citta and Cetasika Arise Together

2. The name *citta* came from “*chitra*,” the name for a painting in Pāli or *Sinhala*. A pure *citta* has only seven mental factors (*cetasika*). *Cetasika* provide “colors for the picture,” so to speak.

- But the seven *cetasika* that are in every *citta* (universal *cetasika* or “*sabba citta sadharana cetasika*”) may be considered “colorless.” A pure *citta* is like a blank sheet of paper on which these “snapshots” painted.
- There are a set of 14 “bad *cetasika*” and a set of 25 “good *cetasika*.” For a rough visual, we may think of the “bad *cetasika*” as dark colors (black, brown, etc.), and the “good *cetasika*” as pleasant colors such as green or yellow. Then there are six other “occasionals” (i.e., appear only in some *cittā*) that are also “colorless,” and those can arise with either good or bad *cetasika*; see, [“Cetasika \(Mental Factors\).”](#)
- *Cetasika* arise with a *citta*, decay with a *citta*, and take the same thought object (*arammana*) as the *citta*. But a given *citta* has either good OR bad *cetasika*; they do not mix.
- And a *citta* is of very short duration; it lasts much less than a billionth of a second; see, [“What is a Thought?”](#) in the next post.

Sensory Experience Comes in “Snapshots”

3. A living being experiences the “world out there” in a series of very fast “snapshots”; it grasps the “world” in a snapshot called a *citta* (pronounced “chiththa”) that lasts much less than a billionth of a second. As soon as the mind sees that “snapshot”, it is gone. But the mind gives us an illusory sense of a permanent “world.” It

does that by making that “snapshot” meaningful. That requires incorporating our memories as well as our hopes for the future. Let us see how this process as described in *Abhidhamma*.

- The mind does this with the help of a *cetasika* (pronounced “chethasika”) in that *citta* called *manasikara*. We will discuss this later, but I am just trying to get across the basic idea.
- Pāli words are spelled differently compared to “Standard English” spelling. See, “[“Tipitaka English” Convention Adopted by Early European Scholars – Part 1](#)” and “[“Tipitaka English” Convention Adopted by Early European Scholars – Part 2.](#)”

4. **Therefore, we can visualize each “moment of awareness” of the outside world by the mind like a snapshot. As soon as it comes, it is gone.**

Then how does our mind see the outside world as “permanent?” Also, how does it decide a given situation as ‘good’ or ‘bad?’ Often, two people look at the same thing and perceive it differently (one may perceive it as “good” and the other as “bad.”)

- Two of the universal *cetasika* (*manasikāra* and *cetanā*.) are responsible for such variations.
- As we discussed in other posts, a record of the “snapshot” that decays is permanently recorded in the mental plane, and these records are called *nāma gotta*; see, “[Difference Between Dhamma and Saṅkhāra \(Saṅkhata\).](#)”
- In the same way, our hopes and visions for the future are also in the mental plane. Of course, the past *nāma gotta* are permanent while the imprints for the future keep changing. The *manasikāra cetasika* brings in memories from the past and hopes for the future into the current *citta*, thus a “permanent like” view of the world is composed of the *cetanā cetasika*, which is responsible for “putting together a *citta*.”
- Furthermore, in one person, “good” *cetasika* may arise due to a sensory input, but if the “*gati*” of the other person is opposite, a set of “bad” *cetasika* may arise in the other person. The *cetanā cetasika* combines them to form a “good” or a “bad” awareness.

How Do We See?

5. It is basically the same kind of process happens when we see, hear, taste, smell, touch, or think. Let us explain the concept of vision.

- The basic sequence of events in capturing any “input” via the five physical senses was described in “[Gandhabba \(Manomaya Kāya\) - Introduction.](#)”
- If we keep looking at a picture on the wall, nothing changes because it is a static picture.
- Now let us think about what happens when we look at a water fountain. The water fountain looks like a sort of a solid object. But in reality, there are trillions of water particles rising and falling each second. We do not “see” individual water particles but just the appearance of a “sort of solid object with a certain shape.”
- In a “thought” (*citta*), the *manasikāra* and *cetanā cetasika* help the mind put together a “composite” of what is happening to give a more or less “solid appearance.”
- Same thing happens in seeing a continuous “ring of fire” when one swirls a light in a circular motion. At a given moment, the light is at a fixed position, but if we move the light fast enough, only see a “composite picture” in the shape of a continuous ring of light.

The Movie Analogy

6. Another example is a motion picture. When making a movie, many many static pictures are taken and then play them back at fast enough speed. If the playback speed is too slow, we can see individual pictures, but above a certain “projection rate,” it looks like real motion. Here is a video that illustrates this well:

[WebLink: YOUTUBE: Animation basics: The optical illusion of motion](#)

Our Sensory Experience Is Very Similar to the “Movie Analogy”

7. When we see the outside world, what happens is very similar to the above. At the end of the video it is stated that the “movie” we see is an illusion. **As the Buddha explained, that holds for real life as well.** In real life when we see someone coming towards us, what we actually see is a series of “static pictures” or *citta* projected at a very fast rate in our minds. That gives us the illusion of a “movie like experience.”

- In the above video, it is suggested that all the information from the “previous static frames” were put together by the brain. However, that is true only to a certain extent.
- The brain does put together the individual frames. But it is the mind that incorporates past memories and IDENTIFIES who is in the picture.
- **We not only “see” the video, but we also RECOGNIZE what is seen. We identify a given actor, we can even remember previous movies with that actor, we KNOW all about the scenes in the background, etc. It is not possible for the brain to have access to all those memories. This is a point that needs a lot of thought.**
- What happens according to *Abhidhamma* is the following. The brain periodically sends packets of acquired data put together by the cortex in the brain to the *hadaya vatthu*, which is basically the seat of the mind. *Citta vūthi* arise in accepting that information from the brain, and it is the mind that does all the compiling (**with the help of the *manasikāra* and *cetanā cetasika***) and that is how we EXPERIENCE it.
- I will go into more details later, but those are the key points.

8. We need to keep in mind that all animals have this capability too. A dog basically sees its environment just like we do and instantly recognizes the objects in the picture. Even an ant does too, even though its “world” is much more limited.

- Think about how a tiny ant can process all that information that allows it to move in a reasonable fast pace in hunting for food. It knows its territory, certain smells, and also remembers how to get back to its nest. All that information is NOT in that tiny body of an ant. More things to think about!

Brain Is Very Fast Computer

9. In the above video, it is shown that the slowest projection rate where the brain seems to process data is about 20 frames per second; this correspond to a data packet of about 50 millisecond duration. This is consistent with a recent findings from MIT that says the *minimum* time needed is about 20 milliseconds: [WebLink: Detecting Meaning in Rapid Pictures-Potter-2014.](#)

- This is consistent with the *Abhidhammic* picture of the brain capturing segments of visual data and transmitting that information to the *hadaya vatthu*, which is the “mind door.” That takes place via the *cakkhu pasāda* that is located on the *manomaya kāya* close to the *hadaya vatthu*.
- *Abhidhamma*, of course, does not mention how long the brain captures visual data for a “seeing event” before sending it to the *hadaya vatthu*. But it does say that this information is now converted by the brain to a format suitable for transmission to the *hadaya vatthu*, and is sent there via a “ray system” (*kirāṇa*.) I assume that this encoded information is sent at the speed of light. Thus, the information gets to the *hadaya vatthu* almost instantaneously. Note that the *hadaya vatthu* is located on the *manomaya kāya*, but is close to the heart

But The Mind Is Faster

10. Of course we not only see things, but we also hear, smell, taste, touch, and think other thoughts all at the SAME TIME, it seems.

- The mind processes the information sent by the brain in a billionth of a second, much faster than the brain can process. So, the mind is mostly idle, “waiting for data from the brain.”
- Therefore, the “sensing rate” is limited by the relatively slow processing speed of the brain. According to current scientific studies mentioned above, brain processing happens at the millisecond time scale, a thousand-times slower than the mind. However, it is still more than fast enough for us to experience simultaneity in all sensory inputs.

Science Helping to "Fill-in-the-Blanks"

11. The scientific studies on the “minimum duration of a detectable event” are still at early stages (see #9 above.) We may be able to put together a more precise sequence of events in the future. Yet we have enough data to put together a qualitative picture of what happens.

- This is an excellent example of how science can help us “fill in the blanks” of the overall picture that the Buddha provided. Of course, such a scientific background was not there 2500 years ago.
- Once the Buddha was in a *Simpāsa* forest near *Kosambi*, and he took a few leaves into his hand and told the *bhikkhus*, “what I have taught you compared to what I know is like these few leaves compared to the leaves in this forest. But what I have taught you is more than enough for you to attain *Nibbāna*.”
- Thus modern science can provide us with details about the “big picture” of the Buddha, and we should be grateful to all those scientists for that knowledge. However, we should use that knowledge wisely and should not get carried away in spending too much time on such details.

Next, “[What is a Thought?](#)”,

12.4.2 What is a Thought?

Revised January 24, 2019

There are many confusing terms in *Abhidhamma* like *citta* and *mano* which have been differently interpreted in different books. In order to clarify these concepts, I am writing a few posts in the “Dhamma Concepts” section under “Mind and Consciousness” starting with: “[1. Thoughts \(Citta\), Consciousness \(Viññāna\), and Mind \(Hadaya Vatthu\) – Introduction](#).” I highly recommend reading those, and especially, “[3. Viññāna, Thoughts, and the Subconscious](#).”

1. In Buddha Dhamma, a thought or a *citta* is the briefest moment of awareness experienced by a sentient being. *Citta* is pronounced “chiththa.” There are well over billion of *cittā* (plural of *citta*) in the blink of eye.

- Let us keep in mind that a *citta* takes much smaller than a billionth of a second. What we experience is the cumulative effect of millions of *cittā*.

2. A pure *citta* only has seven *cetasika* (*phassa, saññā, vedanā, cetana, ekaggata, jivitindriya, and manasikara*) in it; see, “[Cetasika \(Mental Factors\)](#).” Thus it is the purest form a “thought”, but it is too brief for anyone to experience.

- **The first thing to note is that one will never be able to experience a single thought if we mean by a thought to be a *citta***, even though we say, “I just had a thought”. **The briefest awareness that we actually experience** is probably a fraction of a second; Scientists say it is about 10 milliseconds. But that 10 millisecond time is mostly spent by the brain in processing the sense input; once that is done, a series of *citta* with 17 *cittā* flow in a very brief time (less than a billionth of a second), and that is what is registered in the mind. We will discuss this later in detail.
- This series of *citta* with 17 *cittā* is called a *citta vūthi* (pronounced “chiththa veethi”); see below.

3. Even a single *citta* has three phases: *uppada* (rising), *thiti* or *thithi* (reached peak but still changes), and *bhanga* (dissolution). Thus a *citta* arises and fades away very fast.

- **Only a Buddha can see such details as I pointed out in the Introduction.** Even people with highest *abhiññā* powers (attained via *jhānā*) cannot even come close to seeing such details.
- This is why *Abhidhamma* is a special section of Buddha Dhamma that needs to take “as is”, i.e., we just have to believe what the Buddha said. We cannot hope to verify these details by our own experience (for example that there are a certain number of *citta* in a *citta vīthi* as discussed below). Yet, *Abhidhamma* is very valuable in clarifying any issue down to the minute detail.

4. A pure *citta* with 7 *cetasika* does not last. Even though it starts as such a pure *citta*, within the duration of the *citta* itself (less than a billionth of a second), it gets contaminated by either a set of bad *cetasika* like *lobha* (greed), *issa* (envy) or a set of good *cetasika* like *saddhā* (faith) and *sati* (mindfulness).

- Before it starts decaying, it goes through NINE STAGES to become *viññāṇakkhandho* (this is NOT the aggregate as in the common usage of *viññāṇakkhandha*; rather, here the mind has coupled the information in the previous stages of this *citta* with past *viññāṇa* and future *viññāṇa* that are in the mind and has made a “composite”).
- **However, the convention is to call this whole process still a *citta*.**
- All this happens in less than a billionth of a second! This process keeps repeating in the *citta* to follow and the process is cumulative, i.e., as more and more *citta* flow by, the awareness of the event gets stronger, and we actually begin to feel it.
- It may be a good idea to read about *citta vīthi* before proceeding: [“Citta Vīthi – Processing of Sense Inputs.”](#)

5. **Thus what we experience is the cumulative effect of numerous *citta vīthi*.** That is why the Buddha talked about *kandhas* (which means “heaps” in Pāli or Sinhala) as in “heaps” of feelings (*vedanākkhandha*), perceptions (*saññākkhandha*), volitions (*saṅkhārakkhandha*), and consciousness (*viññāṇakkhandha*); those are the “heaps” that we actually experience in a “thought”.

- If *cittā* fly by that fast, and captures six kinds of possible “inputs” (through the five physical senses and the mind itself), how do we “experience” seeing, hearing, etc “at the same time” but still sort them out?

6. This is because the mind is the most powerful entity in this world. All five physical senses just provide traces of inputs (“memory imprints”), and billions of them arise and perish each second. The mind keeps a record of all past events and MAKES A COMPOSITE SENSE EXPERIENCE moment-by-moment.

- For example when we hear someone say “apple”, even the letter “a” is comprehended by the mind via billions of *citta*; then “p” is captured, and by that time “a” sound is gone from the ear.
- We speak (and are able to understand) about 150 words/minute. The minimum “packet of information” **that the brain (not the mind) can process** is estimated to be about a hundredth of a second (10 milliseconds) by the scientists. This comes about 1-2 letters in such a “packet”.
- When it has captured the whole word “apple”, the mind automatically matches that with all the past memories and instantly produces an awareness or a mental picture of an apple; **past memories, as well as hopes for future, are recalled by the *mansikāra cetasika* and the *citta* is “put together” by the *cetanā cetasika*.**

7. The mind can do this because it can process billions of *citta vīthi* per second!

- But there is a “bottleneck” at the brain, which takes a relatively long time to process. The brain takes a relatively long time to process a “packet” of information that comes in.
- **Therefore, the mind falls back to the *bhavaṅga* state in between the comprehending of information packets.** For example, right after receiving the letter “a”, it falls to the *bhavaṅga* state and waits until the next packet with “p” comes.

8. Furthermore, the mind is capable of processing multiple inputs (received via the five senses) that are coming in mixed up.

- For example, after hearing the letter “a” that comes through the ears, the mind may get a “packet” with information about the smell of the apple. But the mind is capable of “sorting out” these different inputs.
- It is also able to carry out its own mental processes (thinking and coming to conclusions about what is perceived through the five senses by comparing it with past memories) such a fast speed, that it appears to be done in “real-time”.
- There is nothing that is faster than the mind in this world; see, “[Amazingly Fast Time Evolution of a Thought \(Citta\)](#).” Also, see the previous post, “[Citta and Cetasika – How Viññāna \(Consciousness\) Arises](#).”

9. Now the mind “knows” what that person was referring to, and has a mental image of an apple.

- If someone hears the word, “lemon”, one could even feel the sour taste of lemon; the mind brings it back from the past memories.
- Even if we see just the outline of a familiar person at a distance, the mind “fills in the blanks” and flashes an image of that person in your mind so you know who it is.

10. One sensory “event” does not happen in one *citta*. A sensory event from one of the five physical senses is captured by a single *citta* (say, *cakkhudvāra citta* for a seeing event), but that information is processed by a string of *cittā* with 17 *cittā* in it; this “string of *cittā*” is called a *citta vīthi* (pronounced “chiththa veethi”). A *citta vīthi* for ‘seeing’ is referred to as a *citta vīthi* at the “eye door” or the eye, one for ‘hearing’ occurs at the “ear door” or the ear, etc.

- When one *citta vīthi* provides a sensory input, that information is then processed by three *citta vīthis* that involves only the mind; this *citta vīthi* “at the mind-door” is variable; it has around 12 *citta* normally. But in a *jhāna samāpatti*, which is solely a mind door process, there can be a very large number of *citta* without interruption.
- Thus there are two types of *citta vīthi* involved in processing a sensory input: a long one with 17 *citta* to CAPTURE an input from one of the five physical senses (*pancadvara*) AND three *manodvara citta vīthi* (at the mind-door) with about 12 *citta*. Both types are thus involved in cognition (awareness) processes; there are other processes by the mind that we will discuss later.
- Only one *citta vīthi* runs at a given time; they do not overlap.

11. Thus it is mind-boggling if we try to imagine the frantic pace the mind works at. At this point, it may be a good idea to look at an analogy to simplify things a bit.

- A movie is generated by a series of static pictures. When a movie is projected on a screen, static pictures are projected at a rate of about 30 frames a second, and we see the movie as a continuous progression of events; if the projection rate is low, we can see it frame by frame or as “packets of information” separately. When we watch the movie, we do not perceive those static pictures or “packets of information”, but we perceive a continuous progression without any gaps.
- This was described in #4 of the previous post, “[Citta and Cetasika – How Vinnana \(Consciousness\) Arises](#).”

12. In the same way, when we perceive that our mind is hearing a word, but in reality that word is the result of many *citta vīthi* originated at the ear door; and the scene that appears simultaneous is the composite of many *citta vīthi* coming through the eye door and none of it happens “at the same time”.

- Just like the movie projected at 30-50 frames a second, *citta vīthi* are generated at many frames a second. (I had previously mentioned billions of *cittā* and that is not correct; the flow of *citta vīthi* is subsided by the processing time of about 10 milliseconds needed by the brain to process each each sense input). Thus we feel that we are watching, hearing, tasting, smelling, touching, and thinking all at the same time.

- **To repeat for emphasis:** Our minds processes probably less than 100 *citta vīthi* per second. However, each *citta vīthi* with 17 *citta* (for five sense inputs) or about 10 *citta* (for mind inputs) and each of those *citta vīthi* take less than billionth of a second. Even though it takes the brain to process a sense input about 20 milliseconds or so, that information is grasped by the mind in less than a billionth of a second.
- While the brain is processing a sensory input, the mind falls back to the *bhavaṅga* state.

13. Just like a movie reel, there is actually a tape (not a physical one) that is recorded in the “mind plane”; this is the origin of the “*nama gottā*” discussed in, “[Difference Between Dhamma and Saṅkhāra](#).” That tape is there forever, and allows one with *abhiññā* powers to look back to any time in the past; see, “[Recent Evidence for Unbroken Memory Records \(HSAM\)](#).”

- Therefore in order to verify rebirth or to look at really old memories, all one needs to do is to develop *abhiññā* powers! And there are people, including my teacher *Theros*, who can do this today.

14. A *citta* evolves into *viññāṇa* and that is actually what we experience; see, “[Amazingly Fast Time Evolution of a Thought \(Citta\)](#)” and “[Viññāṇa – Consciousness Together With Future Expectations](#).”

- There is only one *citta* at a time. But there is a memory, as we just discussed. And that memory is normally hidden because the mind is covered up by the defilement, and when one develops *abhiññā* powers what one is really doing is to clean up the mind so everything becomes clear.
- One who develops *abhiññā* powers through *anāriya jhānā* just let the gunk settle at bottom and see just the upper layers; but one who has developed *abhiññā* powers through *Ariya jhānā* is doing that by “cleaning up” the gunk so a much more penetration to deeper past is possible; see, “[Solution to a Wandering Mind – Abandon Everything?](#).”

15. Thus any of individual sense experiences are VERY BRIEF (the duration of a *citta vīthi*). **It is the mind that puts everything together and presents us with a “movie- like” experience.** This is what the Buddha meant when he told Bahiya Daruciriya in the *Bāhiya Sutta (Udāna 1.10)*. From that *sutta*, “*diṭṭhe diṭṭhamattaṃ bhavissati, sute sutamattaṃ bhavissati, mute mutamattaṃ bhavissati, viññāte viññātamattaṃ bhavissati’ tī*” or “seeing is just a trace of seeing, hearing is just a trace of hearing, enjoying is just a trace of enjoyment, experiencing is just a trace of experience”.

- It is the mind (specifically the *viññāṇa khandha* or the aggregate of consciousness) that put everything together and present it as a smooth movie-like experience.
- Here, *diṭṭa*, *suta muta*, *viññāta* mean “seeing, hearing, enjoying (with smell, taste, and touch), and consciousness respectively; “*mantan*” means “a *mātra*” in Sinhala or “a trace” in English. Thus “seeing” is just trace of a visual event lasting only a billionth of a second. Then it passes away and a new one comes in. It is like taking a series of pictures with a camera. It is the mind that makes everything appear solid, permanent, and stable. This is the deeper meaning of that verse.

16. If all this appear too technical, do not worry about it. It took me a long time to figure it out. I got the final details worked out recently by also combining information from recent scientific studies. The Buddha could not use today’s technical terms, but what he said in summary form is completely compatible with science. But science is still way behind in terms of the bigger picture.

Next, “[What is in a Thought? Why Gathi are so Important?](#)”,

12.4.3 What is in a Thought? Why Gati are so Important?

Revised March 1, 2020

There are many confusing terms in *Abhidhamma* like *citta* and *mano* which have been differently interpreted in different books. In order to clarify these concepts, I am writing a few posts in the “Dhamma

Concepts” section under “Mind and Consciousness” starting with: “[Thoughts \(Citta\), Consciousness \(Viññāna\), and Mind \(Hadaya Vatthu\) – Introduction.](#)”

1. In the previous post, we saw that a thought (*citta*; pronounced “chittha”) lasts much less than a billionth of a second. The more surprising part is that each *citta* has structure! Each *citta* “contains” multiple *cetasika* (mental factors.) Actually it is more accurate to say that each *citta* rises with a number of *cetasika* and they all perish together within a billionth of a second.

- Of course, a *citta* does not arise by itself. It is in a *citta vīthi* involved in “sensing the outside world.” That can occur via one of the six senses. Such a *citta vīthi* has either 17 *cittā* (for those sensing events involving the five physical senses) or about 10 *cittā* in *citta vīthi* involving only the mind. In between those, the mind is at the “*bhavaṅga*” state, which is commonly described as “*bhavaṅga citta*.”
- The *citta* (including those “*bhavaṅga citta*”) flow CONTINUOUSLY within a life and then start a new stream at the next life; there is no break in between the two lives.
- The stream of thoughts we have, has been running non-stop since the beginning-less time; see, “[What Reincarnates? – The Concept of a Lifestream](#)”.
- However, we do not “feel” all the *citta*. There are “gaps” in between *citta vīthi* mainly with the mind in the *Bhavaṅga* state.

2. The *cetasika* (mental factors) provide different qualities to each *citta*. A *citta* is moral (*kusala*), immoral (*akusala*), or neutral (*kriya*) depending on the what type of *cetasika* rise with it.

A complete description of 52 *cetasika* are given in, “[Cetasika \(mental factors\)](#)”. A brief summary:

- There are 7 universal *cetasika* that rise with ANY *citta*.
- Six others CAN appear in any *citta*, i.e., only some of them may be in a given *citta*.
- There are 14 *asobhana cetasika* (non-beautiful mental factors) that appear only in *akusala citta*.
- There are 25 *sobhana cetasikā* (beautiful mental factors.) Nineteen *sobhana cetasikā* appear in each and every *kusala citta*, and thus, those 19 are called beautiful universals.

3. Let us first discuss the 7 universal *cetasika*. These arise with ANY *citta*. A *citta* with just these is called a “*pabhassara citta*” because it is the “purest form” of a *citta*. It becomes a “*viññāṇa citta*” as it develops in time within a billionth of a second! See, “[Citta, Mano, Viññāna – Stages of a Thought.](#)”

- **What we actually experience are “*viññāṇa citta*,” as *viññāṇa khandā* (aggregate of *viññāṇa* or a “heap of *viññāṇa*”).**

The 7 universal *cetasika* that arise with any *citta* are:

- *Phassa* (contact), *saññā* (perception), *vedanā* (feeling), *cetana* (intention), *ekaggata* (one-pointedness), *jīvitindriya* (life faculty), and *manasikara* (memory).

4. The *phassa* (contact) *cetasika* is what makes contact with the “object of the *citta*” whether it is sense input from one of the five physical senses or a concept that makes contact with the mind.

- In *Paṭicca Samuppāda*, this is the *phassa* in the step “*saḷāyatana paccayā phasso*”. Of course, *saḷāyatana* are the six senses. Thus it is *phassa* that makes it possible for the mind to make contact with the world.
- *Saññā* (perception) identifies the object by working with *manasikāra* (memory), and *vedanā* (feeling) arises.
- Depending on the object, one will generate good, bad, or neutral feeling, and also different types of *cetasika* (greed, shame, compassion, etc) can arise; *cetanā* (intention) puts it all together and “prepares” the *citta*. Based on the types of *cetasika* in the *citta*, it could be a good or bad thought. This is why *cetanā* can be good or bad, and the Buddha said: “*cetanā* is *kamma*.”

- *Ekaggatā* is the ability to keep the mind on one object. *Jīvitindriya* maintains life in the current life (keeps the body alive) until death. And *manasikāra* is the all-important memory. *Manasikāra* has ALL memories (or *nāma gotta*) from the beginning-less time; see, “[Difference between Dhamma and Saṅkhāra](#)” for a discussion on *nāma gotta*.
- This is why the present *citta* is the precursor to the next *citta* and that next *citta* is NOT totally different from the previous *citta*; *manasikāra*, for example, just keeps building up on the past *citta*. “Cause and effect” is at work from *citta* to *citta*, maintaining the “personality” or “*gati*” of the given life-stream. This is why the Buddha rejected the notion of a “no-self”, as well as a “self”.
- Yet it is important to realize that “*gati*” can change even in a *citta*, for example, one attains the *Arahanthood* with a single *citta* (of course with billions of *citta vīthi* making gradual progress towards it).

5. So, we can see the basic working of a *citta* with these 7 universals; they carry out the most fundamental and vital functions of recognizing the object, matching it with old memories and figuring out what it is, and also *sukha*, *dukha*, or neutral feeling arise because of that recognition.

- Yet all that does not happen in a single *citta*. When an “input” comes through one of the six senses, it is captured by a *citta vīthi* containing 17 *citta* for a physical sense input and about 10 *citta* for a mind input as we discussed in the previous post. Then that “captured event” is discerned and analyzed by three follow-ups “*manodvāra citta vīthi*”, i.e., by the mind.
- Even then we actually experience only the “net result” of millions of such *citta vīthi*, as we mentioned in the previous post. But due to the extreme rapidity of these processes, we feel like we are using all six in real time. We are not. The mind is always analyzing a set of events that have already gone by. This is discussed in the [Bāhiya Sutta \(Ud 1.10\)](#), “*diṭṭhe diṭṭamattaṃ bhavissati*”. What we experience NOW is what has already transpired.

6. But invariably other *cetasika* (other than the 7 universal) arise as the *citta* develops in time, and the *citta* becomes *kusala citta*, *akusala citta* or a *kriya* (neutral) *citta* depending on the *cetasika* that arise with the *citta*.

- *Sobhana cetasika* arise with *kusala citta* and *asobhana cetasika* arise with an *akusala citta*.
- These *cetasika* types do not mix, i.e., no *sobhana cetasika* arise with an *akusala citta* etc.

7. Now the question arises: If *citta* arise and fall and go by so rapidly, how do we willfully stop *akusala citta* from arising? Especially when exposed to a tempting external object like an eye-catching figure.

And the answer lies in a very simple concept that I have discussed in many posts:

- This is where one’s character qualities (*gati*) and *āsava* come into play. **One automatically responds with the “set of values” one has.**
- By changing one’s habits one can change one’s character (*gati*) and eventually change one’s deep-rooted cravings (*āsava*). Even though the answer is simple, it takes a long time to get rid of bad habits and cultivate good habits, at least initially.
- The with time, as that *gati* loses its power, one will be less and less tempted when subjected to the same sensory input. For example, this could be the sight of an attractive figure or an enemy.

8. The key to reducing such bad *gati* is to forcefully suppress that bad-thought as soon as you become aware of it. Even though a bad thought arises automatically, one becomes aware of it after a few seconds.

- As soon as you become aware of a bad thought you should think about the bad consequences and forcefully stop that thought stream. Just start thinking about something good or start doing something that needs your full attention.
- When you keep doing this for a while, that tendency will slowly reduce, i.e., that bad *gati* will lose its power.

- For example, if one needs to quit smoking, as soon as one starts lighting a cigarette one should think about the bad consequences of smoking and throw it away. Keep some mints handy and pop one in your mouth. Finding a “replacement activity” always helps to break a bad habit.
- If it is hateful thought, one could stop it and start thinking about something good. Recalling something pleasant, say a picture of the Buddha, can help. Always have a “replacement” ready.
- One needs to keep doing this faithfully in order to make the old habit weak.

9. When one gets rid of bad habits and cultivates good habits, the neural connections in one's brain get rewired. The brain changes gradually and that is how the thoughts change. This is the an easy answer to using the modern science.

- But there is a deeper analysis. Not only the physical brain changes but also our *manomaya kāya* is transformed. Eventually, that is what controls the brain; see, the couple of posts on *manomaya kāya* and also, “[Neuroscience says there is no Free Will? – That is a Misinterpretation!](#)” for details.
- **This idea of gradually changing one's habits** holds the KEY in making progress on the Path or even on achieving mundane goals, as I have discussed in other posts.

10. Therefore, initially one responds with one's current set of values or *gati*. **But after a few moments, one CAN think about the consequences and make corrections to the initial automatic reaction.**

- This is further explained in terms of the instant reaction coming from the limbic system in the brain and the “reasoned out” corrective action coming from the neo-cortex or “the thinking brain”; see, “[True Brain – How the Mind Rewires the Brain via Meditation/Habits.](#)”
- And that is how we slowly change our *gati*, by willfully making corrections to the initial “auto-response”. This is what makes us different from animals. Animals do not have this ability, at least not to our level.
- **The more you “catch” such “inappropriate auto-responses” and stop them, the more effectively we can get rid of bad habits, cultivate good habits and change our *gati* (character) in the right direction. This is “*ānāpāna sati*”, i.e., one keeps good thoughts and gets rid of bad thoughts willfully; see, “[What is Ānāpāna?](#)” in the Meditation section.**

11. As mentioned above, *cetasikā* present in a given *citta* determines the quality and/or the function of the *citta*.

- An immoral (*akusala*) *citta* have one or more immoral roots; *avijjā* (delusion *cetasika*) is in any immoral *citta*.
- A moral (*kusala*) *citta* will always have non-greed and non-hate *cetasika*. Wisdom (*paññā*) *cetasika* rises only in *citta* with all three roots (*tīhetuka citta*).
- We have come across many of the *cetasika* in the posts on various topics: the five hindrances are of course included in the 14 *asobhana cetasika*.
- The four bases of mental power (*satara iddhipāda*) are four of the *sobhana cetasika*, i.e., *chanda*, *citta*, *virīya*, *vīmaṃsā*. Here *citta* means “thinking about the goal” and thus is *sammā saṅkappa* when fully cultivated. *Vīmaṃsā* is another name for *paññā* and becomes *sammā diṭṭhi* when fully cultivated; see, “[37 Factors of Enlightenment.](#)”
- Some of the factors in the Noble Eightfold Path are directly in the set of *sobhana cetasika*, for example, *sammā vācā*, *sammā kammanta*, and *sammā ājīva*. Other *cetasika* like *sati* and *paññā*, when cultivated become *sammā sati* and *sammā diṭṭhi*.
- Similarly, *ekaggatā* in the universal *cetasika* set becomes *sammā samādhi*, and *virīya* and *vitakka* in the set of particulars become *sammā vāyāma* and *sammā saṅkappa* when cultivated.

12. As we noted, we can control a bad series of thoughts like planning a robbery or even making a quick plan to steal an item from a store. **There is enough time to think about the consequences of such a bad action and deliberately stop such thoughts. But one needs to be in a fairly stable “state-of-mind” to be able**

to do that. When the mind is agitated, the mind cannot see “right from wrong”. The five hindrances are covering the mind.

- Sometimes people commit horrendous crimes in the spur-of-the-moment. One can get into a rage and shoot someone with a gun that is close by. How do we stop such quick reactions? By being mindful to control that bad *gati*, which is the tendency to get mad at the slightest provocation. See #10 above.
- When one keeps reducing one’s “bad *gati*,” those really dangerous *gati* — which could lead to rebirth in the *apāyā* — will be permanently eliminated when one becomes a *Sotāpanna*. With that achieved, that mindset persists even in future lives. As we saw, a *paṭisandhi citta* in the new life arises based on the *cuti citta* of the past life, so it has all the “*gati*” from a past life. Changing to a “*gati*” of a *Sotāpanna* is a change in the lineage (*gotrabhu*.) One becomes an *Ariya* or a Noble person forever.

Next, “[Why Do People Enjoy Immoral Deeds? – Ditthi Is Key](#)”,

12.4.4 Cetasika – Connection to Gati

Abhidhamma can be a very useful tool to clarify various concepts given in the *suttā*, especially if different people try to interpret *suttā* in different ways; see, “[Sutta – Introduction](#).” Furthermore, it provides minute details on how the human mind gets the physical body (which is just a “shell” made out of inert matter) to do any and all bodily tasks.

1. In the introductory posts in *Abhidhamma* we saw that there are **seven universal *cetasika* (mental factors)** that arise with each and every *citta* (loosely translated as a thought); *citta* is pronounced “chiththā” and *cetasika* pronounced “chethasikā”.

- Those 7 universal *cetasika* are essential in forming any kind of *citta*, whether it is an immoral (*akusala*) *citta*, a moral (*kusala*) *citta* or a *citta* that does not do any *kamma*. For the moment, let us concentrate on the 54 types of *cittā* in the *kāma loka*.
- The rest of the *cetasika* provide “character” to *cittā*. Whether a given *citta* is good or bad depends on whether a “good” or “bad” set of *cetasika* arise with it; see, “[Citta and Cetasika – How Viññāna \(Consciousness\) Arises](#).” They are listed in the post “[Cetasika \(Mental Factors\)](#)” and you may want to print it out for reference when reading this post. There is no need to memorize them. With time, one may even know them by heart.
- Out of the 54 *cittā* in the *kāma loka*, there are 12 *akusala citta* and 8 *kusala citta*. Other 34 are *vipāka citta* and *kriya citta* that do not generate *kammic* power.
- It may sound confusing all these terms, but you will get used to them! Try to get the essence.

2. Then there are six *cetasika* called **particulars (also called occasionals)** or *pakinnaka* that **MAY** appear in any type of *citta*. Therefore they do not determine the PURPOSE of the *citta*, but they HELP with any type of purpose that was intended.

- For example, *virīya cetasika* could be in a *kusala citta* and it can also be in an *akusala citta*. In either case, the *virīya cetasika* will HELP intensify the effort with that *citta*.

3. Out of a total of 52 *cetasika*, the other 39 (= 52-7-6) *cetasika* determine whether a given *citta* will be an *akusala citta* or a *kusala citta*.

- There are 14 *cetasika* (called *asobhana* or immoral or bad *cetasika*) that could be present in an *akusala citta*; out of those, 4 ALWAYS are present in any *akusala citta*; those 4 are *asobhana universals*.
- The other 25 *cetasika* (called *sobhana* or moral or good *cetasika*) can be present only in *kusala citta*, and 19 of those are ALWAYS in any given *kusala citta*; those 19 are *sobhana universals*.
- Therefore, 11 *cetasika* (7 universal plus 4 universal immoral) arise with each and every *akusala citta*. There may be other immoral and particular *cetasika* as well.

- There are 26 *cetasika* (7 universal plus 19 universal moral) arise with each and every *kusala citta*. Thus there are only 6 more moral *cetasika* that do not arise with each and every *kusala citta*.

4. Therefore, it is those *sobhana* and *asobhana cetasika* that determine the *kammic* nature of a *citta*. **If we want to get rid of all *akusala citta*, what we need to do is to remove the 14 *asobhana cetasika* from our minds (they come up automatically with our *gathi* and *āsavas*).**

- **In other words, our *sansāric* habits (“*gathi*”) and cravings (“*āsavas*”) are embedded in those 14 *asobhana* (and *sobhana*) *cetasika*, such as *lobha* and *dosa*. For example, one may have dominant “*lobha gathi*” (excess greed) or “*dosa gathi*” (strong hate); but normally, we have a mixture of many different inter-mixed *gathi*.**
- In the same way, cultivating good “*gathi*” and “*cravings*” (basically for moral deeds) leads to “good *cetasika*.”
- As we follow the Noble Eightfold Path, those 14 *asobhana cetasika* are reduced. When reaching the *Sotāpanna* stage, the two *asobhana cetasika* of *diṭṭhi* and *vicikicchā* are REMOVED, and all others are reduced to some extent. In particular, *lobha* is reduced to *rāga* level and *dosa* is reduced to *paṭigha*. This why a *Sotāpanna* will never be born in the *apāyā*.
- *Raga* has 3 components: *kāma rāga*, *rūpa rāga*, and *arūpa rāga*, corresponding to attachment to the *kāma loka*, *rūpa loka*, and *arūpa loka* respectively. At the *Sakadāgāmī* stage, *kāma rāga* and *paṭigha* are REDUCED to the level that one will never be born at or below the human realm.
- At the *Anāgāmī* stage, both those (*kāma rāga* and *paṭigha*) are REMOVED and thus all bonds to the *kāma loka* are broken and one will never be born again in the *kāma loka*. Of course other remaining *asobhana cetasika* are reduced too.
- All *asobhana cetasika* are removed at the *Arahant* stage.

5. Thus we can see that this is yet another way of looking at what is involved in attaining *Nibbāna*. All these different ways of explaining are fully inter-consistent. There are more, but I am providing links to a few below.

[Nibbāna – Is it Difficult to Understand?](#)

[The Way to Nibbāna – Removal of Āsavas](#)

[Key to Sotāpanna Stage – Ditthi and Vicikicchā](#)

[What Are Rūpa? \(Relation to Nibbāna\)](#)

6. We can easily see why **four immoral universal *cetasika*** arise with each and every *akusala citta*. These four are: *moha* (delusion or moral blindness), *ahirika* (shamelessness of wrong), *anottappa* (fearlessness of wrong), and *uddhacca* (restlessness).

- We do not realize, but when we get greedy or hateful enough, we can become morally blind. One loses any sense of decency just for a short time, but that is enough to commit an immoral act.
- Then we lose the fear of doing wrong and the shame of doing wrong because at that instant our minds are covered (it takes only a fraction of second to generate a thought and sometimes even to act on it if the *javana* is strong enough). This inevitably leads to a restless mind (*uddhacca*) too.

7. Now let us discuss the 7 pairs in the universal moral *cetasika list*, starting with the pair of *kayapassaddhi* (tranquility of mental body, which in turn lead to tranquility of the physical body itself); *cittapassaddhi* (tranquility of consciousness). All these 7 pairs are states of mind and body that correspond to some “cooling down”. When one is doing a *kusala kamma*, the body and mind both relax and “cool down”. This is the first glimpse of *Nibbāna* as one is already in the mundane eightfold path.

- This is why the Buddha said that the state of the mind does affect the state of the body. When one starts on the *lokuttara* eightfold path, these *cetasika* all get stronger, one starts feeling the “*nirāmisā sukha*,” and thus one becomes motivated to follow the Path.
- But it is important to emphasize (as I have stated many times), things COULD get worse before getting better. **When one is depriving the mind of things that it has gotten used to, it does not like that.** Until it clearly sees the benefits of staying in the Path, it may try to pull one strongly in the “wrong direction”. One needs to be persistent, and this is where the *satara iddhipāda* (*chanda, citta, viriya, vīmaṃsā*) need to be cultivated aggressively.

8. It is important to realize that the 19 universal moral *cetasika* can arise in ANYONE regardless of one’s religion or any other “label”. When doing a good deed (or speech or thought), these moral *cetasika* ALWAYS arise. They can arise when one is on the mundane eightfold Path (nothing to do with a religion *per se*); see, “[Buddha Dhamma – In a Chart](#).”

- Also note that *hiri* (shame of immoral deeds) and *ottappa* (fear of the consequences of immoral deeds) are the two that are opposed to the immoral ones of *ahiri* and *anattappa*. This means regardless of the religion, one has been able to sort out right from wrong (moral from immoral) in that instance.
- Then there is *saddhā* (faith) and *sati* (mindfulness), both of which grow even more after embarking on the Path. Here, *saddhā* is not the faith in Buddha, Dhamma, Saṅgha, but the faith that such a moral act will bring about good outcomes.
- And *sati* is NOT *Sammā Sati*, but just the mindfulness of being involved in a moral act. However, once one gets on the *lokuttara* eightfold Path, it can become ***Sammā Sati***.
- The other two familiar ones are *alobha* and *adosa cetasika*; they are of course opposite to the immoral ones of *lobha* and *dosa*. *Alobha* is not mere absence of *lobha*, but also embodies generosity. *Adosa* is not mere absence of *dosa*, but embodies compassion.
- Then there is *tatramajjhata* (neutrality of mind; “*majjhata*” means “in the middle”). This is not *upekkha*, which is one of the *saptha bojjanga*; see, “[37 Factors of Enlightenment](#).”
- Thus far, we have discussed the 19 universal moral *cetasika* in #7 and #8. Now let us discuss the 6 moral *cetasika* that arise only with some *kusala citta*.

9. It is easier to list those 6 moral *cetasika* that do not necessarily arise with each *kusala citta*. **These are the ones that NEED TO BE CULTIVATED with true comprehension of *anicca, dukkha, anatta*.**

- They are: ***Sammā Vaca*** (speech that is conducive to eliminate “*san*”), ***Sammā Kammanta*** (actions that are conducive to eliminate “*san*”), ***Sammā Ajiva*** (life style that is conducive to eliminate “*san*”), ***karuna*** (“*Ariya*” compassion), ***mudita*** (“*Ariya*” appreciative joy), and ***paññā*** (wisdom) which is the same as ***Sammā Diṭṭhi***.
- Of course those are developed to some extent when someone lives one’s life morally, but they will NEVER grow to higher stages until one understands *anicca, dukkha, anatta* at least to some extent.
- This is why *sammā vaca* is not just “good speech” or *sammā kammanta* is not just “good deeds”. *Sammā* (“*san*” + “*ma*”) means “with the intention of removing ‘*san*’”, i.e., done with an understanding of *anicca, dukkha, anatta*; see, “[Why is Correct Interpretation of Anicca, Dukkha, Anatta so Important?](#)”

10. However, ***amoha* does not mean wisdom (*paññā*)!** *Amoha* is not a *cetasika*, but is a root cause. It is in all *kusala citta* in the sense that the immoral *cetasika* of *moha* is not present at that moment, i.e., the mind is not “covered”.

- Some people interpret *amoha* to be *paññā*; not so. *Paññā* (wisdom) or *lokuttara Sammā Diṭṭhi* needs to be cultivated via comprehending *anicca, dukkha, anatta*, and starts when one is on the *Sotāpanna magga*; see, “[Buddha Dhamma – In a Chart](#)” and “[What is Unique in Buddha Dhamma](#).”

- The more *paññā* one has, it is more likely that one would be generating *amoha* thoughts more frequently!
- No matter how intelligent one is, one cannot start cultivating *paññā* until one hears about the correct interpretations of *anicca*, *dukkha*, *anatta*.

11. Now let us briefly revisit the 6 **particulars (also called occasionals)** or *pakinnaka* that we mentioned in #2 above. They are: *vitakka* (focused application), *vicara* (sustained application); *adhimokkha* (dominate), *virīya* (effort), *pīti* (joy); *chanda* (desire).

- As we can readily see, these six can be in *kusala* or *akusala citta* and make them stronger.
- This is why it is said that “*dhammo ha ve rakkati dhammacari*” or “dhamma will guide one in the direction of dhamma that one follows”, applies to both moral AND immoral paths.
- *Vitakka* (focused application of thoughts), when cultivated in the *lokuttara* Path, can become **sammā saṅkappa**. Similarly, *virīya* (effort) can become **sammā vayama**.

12. Therefore, *abhidhamma* helps us understand the connection between *cetasika* and *gathi*, and how “bad *gathi*” are removed at each stage of *Nibbāna* (see #4 above). We can also see from the above discussion how 8 of the *cetasika* (related to “good *gathi*”) turn to components of the Noble Eightfold Path when one starts on the *Sotāpanna magga*. Actually, we discussed only 7 above (they are highlighted in bold red). The eighth one is the universal *cetasika*, *ekaggata* (one-pointedness) that can become **sammā samādhi**.

- However, depending on one’s behavior and understanding, all these eight could be developed in the direction of the immoral (*micchā* eightfold path), mundane moral (*lokiya* eightfold path), or the *lokuttara* Noble eightfold Path; see, “[Three Kinds of Dīṭṭhi, Eightfold Paths, and Samādhi](#).”
- Looking from different perspectives there could be many types of *samādhi*. For a discussion on three other types of *samādhi*, see, “[What is Samādhi? – Three Kinds of Mindfulness](#).”

13. This world is very complex. And the Buddha has analyzed it in many different ways. But they are all self-consistent. If one can get some traction, there is no other pleasure better than the pleasure of finding out about this world, pleasure of Dhamma.

- It is said that, “*sabba rathin Dhamma rathin jinathi*.” Here “*rathi*” means “taste”, thus “from all tastes in the world, taste of Dhamma wins”. The “taste of Dhamma” optimizes for an *Anāgāmī*.
- However, when one attains the *Arahanthood*, it is said that one has lost all interest in all worldly things, including that of Dhamma. That is why the Buddha said, “A boat should be used just until one crosses a river; one should not carry it after crossing the river. Just like that even my Dhamma needs to be used only to find the true nature of this world, and then it should be discarded too”.
- When one reaches the *Anāgāmī* stage, one would have lost all cravings for worldly pleasures (in *kāma loka*), but one really likes to learn Dhamma at every opportunity. And there is no end to it. This is why the Buddha gave the above advice, especially for the *Anāgāmīs*.

12.4.5 Javana of a Citta – The Root of Mental Power

Revised July 15, 2020

Javana Cittā Are Associated with *Abhisāṅkhāra*

1. The power of the human mind has been discussed in several posts starting with “[Power of the Human Mind – Introduction](#).” There are different kinds of *cittā* and the powerful ones are called *javana cittā* (“*javana*” means an arrow in flight; it can be highly potent).

- Such *javana cittā* are responsible for *abhisāṅkhāra*, those *saṅkhāra* that are potent and will lead to (good or bad) consequences. *Puññābhisāṅkhāra* are the meritorious *abhisāṅkhāra* that will lead to

good consequences and *apuññābhisaṅkhāra* are the immoral *abhisaṅkhāra* that lead to adverse outcomes.

- *Javana citta* arise in both *pancadvara cittā vīthi* and *manodvara cittā vīthi* when the object is evident and strong; see, “[Citta Vīthi – Processing of Sense Inputs.](#)”

Vipāka Cittā Do Not Have Javana Power

2. Out of the 54 types of *cittā* in the *kāma loka* (the 11 lower realms including the human realm), 29 are *javana cittā*: 12 *akusala cittā*, 8 *mahā kusala cittā*, 8 *mahā kiriya cittā*, and the functional smile-producing *citta* (the latter nine *cittā* only for an *Arahant*).

- A *kusala citta* generates power for rebirth in human or above realms, AND also helps with progressing towards *Nibbāna* or “cooling down”.
- When one does an *akusala citta*, one is generating power to form *kammic* energy for rebirth in the *apāyā* (lowest four realms).
- Thus for average human beings, there are only 20 *cittā* out of 54 that are *javana citta*: 12 for doing evil deeds and 8 for good deeds (here deeds means thought, speech or bodily action).
- Thus, *vipāka citta vīthi* do not have *javana citta*. Therefore in the detection of any sense input (seeing, hearing, etc.), *javana citta* are absent. They are called *prittārammaṇa* (slight) and *atiparittārammaṇa* (very slight) *citta vīthi*. However, based on these *vipāka citta vīthi*, we MAY instantly initiate potent *atimahattārammaṇa* (very great) and *mahattārammaṇa* (great) *citta vīthi* that will have *javana citta* in them.
- Thus if we start making plans (buy that picture, re-listen to that song, etc) based on those visuals, sounds, etc., then those subsequent *citta vīthi* will have *javana citta* in them, and lead to *abhisaṅkhāra* (GENERATE *kammic* power).

Javana Power Depends on the Type of Citta

3. Not all *akusala javana citta* have the same power. Also see, “[How to Evaluate Weights of Different Kamma](#)” and “[12. Key Factors to be Considered when “Meditating” for the Sotāpanna Stage.](#)”

- Out of the eight greed-rooted *citta*, those four done with pleasure (*somanassa-sahagata*) are more robust than the four done with neutral feeling.
- Next, those associated with *micchā diṭṭhi* (or *diṭṭhi-sahagata*) are more powerful than the four generated without wrong vision (or *diṭṭhi-vippayutta*).
- The power of greed-rooted *cittā* depend on whether they arose spontaneously (sometimes erroneously labelled as *asaṅkhārika*) or occurred with the intention of receiving something in return, i.e., *sasaṅkhārika*.
- The two hate-rooted *akusala cittā* always arise with displeasure and are associated with aversion (dislike.) One that is spontaneous (unprompted) is stronger than the prompted.
- The two ignorance-rooted *akusala cittā* always arise with neutral feeling. The one that is based on *vicikicchā* is stronger than that based on *uddhacca*.

Javana Strength of Akusala Citta

4. The above list gives the order of strength of the *akusala citta*, and appear in that order in “[Conditions for the Four Stages of Nibbāna](#)”.

- Thus the first *lobha citta* that is “connected with the wrong view, accompanied by pleasure” or in Pāli, “*somanassa-sahagata, diṭṭhi-sampayutta citta*” is the strongest *akusala javana citta*.

- The last of the 12 *akusala citta* is “one accompanied by equanimity and associated with high-mindedness” or in Pāli, “*upekkha-sahagata uddhacca-sampayutta citta*.”

Javana Strength of *Kusala Citta*

5. The power of the human mind can work both ways, for the good or the bad. Now let us see how the eight *mahā kusala* (wholesome) *cittā* rank according to the *javana* power.

- Here again, there are four done with joyous heart (*somanassa-sahagata*) that take precedence over those done with neutral feeling.
- Next, those done with knowledge are called “*ñāṇa-sampayutta*” have higher power compared to those done without knowledge (*ñāṇa-vippayutta*). Here, knowledge could at two levels: understanding how laws of *kamma* work and an understanding of *anicca*, *dukkha*, *anatta* at a higher level.
- Finally, they are sorted by whether spontaneous (higher) compared to prompted.

6. Thus the most potent *kusala citta* is “one accompanied by joy, associated with knowledge” or in Pāli, “*somanassa-sahagata, ñāṇa-sampayutta citta*”.

Here one does a good deed with the full understanding of its benefits, and thus with a joyous heart. The action is spontaneous and joyful BECAUSE one is fully aware of its ethical consequences. Since it is automatic, the knowledge must be there in one's mind.

- The weakest *kusala citta* is, “one accompanied by the neutral mind, dissociated with knowledge, and for one's advantage” or in Pāli, “*upekkha-sahagata, ñāṇa-vippayutta, sasaṅkhārika citta*”. Here one may do a good deed without knowledge either on the prompting by others or after some deliberation. Such acts will bring benefits, but since they have less *javana* power, the benefits are less.

Some Examples of “Javana Power”

7. Let us take some examples for clarification.

- Some people are so deep in the wrong path, that they actually enjoy committing evil deeds. Or, they get into a mindset where such deeds become enjoyable. We have heard of instances of a person was killed by multiple stabbings with the body gruesomely mutilated. Such an act is the worst of the worst.
- It should be easy to imagine why the *javana* for *citta* associated with such “passionate” killings are very intense. The killer is absorbed in that act, and is generating potent mental power to carry out the physical act; by the way, any physical activity has origins in *citta*. The thoughts lead to actions. See, [“Neuroscience says there is no Free Will? – That is a Misinterpretation”](#).
- That is also why a *kamma* becomes a “*kamma patha*” or a “strong *kamma*” for bodily action. One needs a strong *javana* to carry out that task. If one is aware of the consequences of such acts (i.e., do not have *micchā diṭṭhi* or wrong vision), then even if one started stabbing, one may likely that one may catch oneself and stop.

8. On the other hand, even the smallest act of kindness can bring many benefits if it was done with full understanding and a joyous heart. Here the “mental power” or the *javana* comes through knowledge or understanding. We see these kinds of ‘small acts of kindness’ all the time, and we can even share in those merits when our hearts become joyful too.

- For a wealthy person, it is easy to write a check for a lot of money. If it was done just to get publicity, or due to “outside pressure”, it will not bring much benefit. If a poor person shares what he/she can with another person in a worse situation with joy, that will bring much more benefit.

Samvega – Indication of Javana Strength

9. High *javana* power can be expressed by the term “*sanvega*” (*san* + *vega*, where “*vega*” means fast.) See, “[What is “San”? – Meaning of Samsāra](#)” for the meaning of “*san*”. Therefore, “*sanvega*” (sometimes called “*samvega*”) depicts a potent emotional condition. If it is to the “good” one will be doing *puññābhi saṅkhāra* (meritorious acts), and a bad act done with “*sanvega*” will be a potent *apuññābhi saṅkhāra* (immoral acts).

- In the literature “*sanvega*” is commonly written as “*saṃvega*”; as with many other such words, replacing “*san*” with “*saṃ*” leads to distortion of the meaning of the word. Other such misspelled words are *saṃsāra*, *saṃvedana*, *saṃyoga*, *saṃvara*; see, “[What is “San”? – Meaning of Samsāra](#).”
- However, some words like “*sammā*” (“*saṃ*” + “*mā*”) are correct, because that is phonetically correct.
- In the Sinhala language, “*sanvega*” is commonly used to describe emotionally intense situations, mostly for sad situations. However, we can see that it should be apply to all “potent” emotional situations.

Emotions Felt Close to the Heart, Not in the Brain

10. The mind and the heart are in close contact. Even that person who derived pleasure by stabbing someone many times, will have a heavy heart until death, no matter how bad a person he/she is. It is in the human nature. Of course, when we do a meritorious act too, we feel the joy in our hearts.

- The reason that we “feel” at the heart is that *citta* arise in the “*hadaya vatthu*” that is located close to the physical heart. The *hadaya vatthu* is actually in the *manomaya kaya*, which is like a “energy-field” spread through the physical body. See, “[Manomaya Kāya and Physical Body](#)” and “[Ghost in the Machine – Synonym for the Manomaya Kāya?](#).”

Javana Strength Depends on the Level of Desire (Good or Bad)

11. The *javana* power makes a big difference in “how much engaged we are” in our thoughts. The potency of a good or an immoral *citta* critically depends on the strength of the desire to get it done. Three out of four bases of mental power, *chanda*, *citta*, *virīya*, originate due to this; see, “[The Four Bases of Mental Power \(Satara Iddhipāda\)](#).”

- And the fourth factor of *vīmaṃsā* (reasoning/investigation) is important because that is how one gains the all-important *ñāṇa* (wisdom); see #5,#6 above. When one truly comprehends *anicca*, *dukkha*, *anatta*, that is leads to the cultivation/growth of the *paññā cetasika* reducing ignorance (*avijjā*).

It Is Good to “Re-live” Past Good Experiences

12. Another thing that comes out of this analysis is that it is good to contemplate on the past good deeds and “re-live” that experience to gain *citta pasāda* or a joyful mind.

- Similarly, it is NOT good to do that for past evil deeds. It is better to forget them and get a new start. If something like that comes to the mind, think of an opposite good deed and focus the mind on a good deed.
- That is part of “*Ānāpāna*.” We need to keep and cultivate “good things” and “discard” bad things; see, “[7. What is Ānāpāna?](#).”
- Our thoughts are what ultimately matter, and they arise due to our character (*gathi*); the more we do “*Ānāpāna*” correctly, the more our “*gathi*” will change for the better.

13. Finally, These *javana citta* have the power to produce *suddhatṭhaka*, the fundamental building blocks of *rūpa*; see, “[The Origin of Matter – Suddhatṭhaka](#).”

Next, “[Cutī-Patisandhi – An Abhidhamma Description](#)”,

12.5 Gandhabba (Manomaya Kāya)

[Gandhabba \(Manomaya Kāya\) – Introduction](#)

[Does any Object \(Rūpa\) Last only 17 Thought Moments?](#)

[Hidden World of the Gandhabba: Netherworld \(Para Loka\)](#)

[Ghost in the Machine – Synonym for the Manomaya Kāya?](#)

[Manomaya Kāya \(Gandhabba\) and the Physical Body](#)

[Brain – Interface between Mind and Body](#)

[Manomaya Kāya and Out-of-Body Experience \(OBE\)](#)

[Cuti-Patisandhi – An Abhidhamma Description](#)

These posts complement some of the posts in the “[Udayavaya Ñāna](#)” section, which is important for the *Sotāpanna* stage of *Nibbāna*. All these are pieces of a complex puzzle, but they are all inter-consistent. So, don't worry if you do not understand it all; with time it will all make sense and will lead to unbreakable faith in Buddha Dhamma even through future lives. Faith comes via true understanding.

12.5.1 Gandhabba (Manomaya Kāya) – Introduction

Revised April 22, 2016

1. In most realms, beings are born fully formed (*opapatika* births). But in the human and animal realms, first the blueprint of that life form arises at the *cuti-paṭisandhi* moment. That is the *manomaya kāya* or a *gandhabba*. Once that *gandhabba* “descends” to a womb, the physical body starts growing.

- Once born a *gandhabba*, It can possibly make many new physical bodies in a given *bhava*. For example, a “human *bhava*” may last many hundreds of years. But a human body lives only about 80 years. Therefore a “human *gandhabba*” can make many “human bodies” during the existence as a human; see, “[Bhava and Jāti – States of Existence and Births Therein](#).”
- This is why in some cases of rebirth stories, there are resemblances of both mental and physical characteristics between the two lives.

2. Let us take the example of a being that was born many times as a cow making a transition to a human *bhava* at the end of the “cow *bhava*” (which is a very rare event).

- The transition from a cow to a human occurs in the last *citta vīthi* of the “cow life”. See, “[Cuti-Patisandhi – An Abhidhamma Description](#),” At the end of that *citta vīthi*, a human *gandhabba* comes out of the dead body of the cow. That *gandhabba* has a very fine body that cannot be seen, but it is a “blueprint” of the human body. But the “gross physical features” that will be partially determined by the parents of the new life.
- This *gandhabba* now awaits a suitable womb to be available. Of course, the *gandhabba* cannot decide on a womb; rather, when a suitable womb becomes available (i.e., matching the “*gathi*” of the *gandhabba*), then it will be pulled into the womb by the kammic energy.
- When a sperm fertilizes an egg in a womb, a single cell called a zygote results. But there is no life there until the *gandhabba* enters the womb and is incorporated with that zygote. Now the zygote becomes an embryo, then a fetus, and once out of the womb grows to a full-size human according to that blueprint in the *gandhabba*.
- More details can be found at, see, “What does Buddha Dhamma (Buddhism) say about Birth Control!?”

3. At the cow-human transition in the last *citta vīthi* of the cow life, some very important changes occur in that lifestream. The concept of a lifestream, which is really a very basic introduction, is discussed at, “[What Reincarnates? -Concept of a Lifestream.](#)”

- Of course, the biggest change is that now the lifeform has a mind that is at the human level, not at the animal level; the baseline “consciousness level” has shifted. This is expressed in several ways in the *manomaya kāya* or the *gandhabba*.
- At the *cuti-paṭisandhi* transition, the *kammic* energy creates three very fine *rūpa* called *vatthu dasaka*, *kāya dasaka*, and *bhava dasaka*. **We will discuss these in detail later, but they basically correspond, respectively, to the mind-door (or the mind), the blueprint for the human body, and dominant features including male or female character** (it is not just the sex type, since *rupi brahmā* also have *bhava dasaka*, but are gender-neutral).
- As the physical body grows, first inside the womb and then outside the womb, the fine body of the *manomaya kāya* expands with it when the physical body grows from the single cell. Thus overlapping the physical body that we see, there is a very fine body (*manomaya kāya*) of the *gandhabba*. *Gandhabba* means the same as the *manomaya kāya*.
- Therefore, the *gandhabba* is really like a “driver” driving or navigating the physical body; see, “[Ghost in the Machine – Synonym for the Manomaya Kāya?](#).”

4. The fine body of the *gandhabba* or the *manomaya kāya* basically has all key components as the physical body. However, it is in the form of very fine matter at the *suddhaṭṭhaka* level. It is an invisible “energy body.”

- The *gandhabba*, when outside the physical body can experience the world without eyes, ears, etc. The *gandhabba* sometimes comes out of the physical body in traumatic situations like during heart operations. Then it can see doctor operating on its own physical body! Such “out-of-body experiences” (OBE) have been reported; see, “[Manomaya Kāya and Out-of-Body Experience \(OBE\).](#)”
- The main thing to remember is that *hadaya vatthu* is the mind-door, and it is surrounded by the five *pasāda rūpa* (*cakkhu*, *sota*, *jivha*, *gandha*, and *kaya*) which correspond respectively to the five physical senses of eye, ear, tongue, nose, and touch.
- Thus all six sense actions actually take place away from what modern science believes they take place. Physical eye, ear, nose, tongue are of course in the head (those are the physical sensors), and the sense of touch is sensed physically via the nervous system. There is also a “*mana indriya*” located inside the brain, where the mind inputs (*dhamma*) come in. Just like our vision process starts at the eyes, our “external thought inputs” come through the “*mana indriya*” in the brain; see, “[What are rūpa? – Dhamma are rūpa too!](#)” and “[What are Dhamma? – A Deeper Analysis.](#)”

5. The physical body is really a “shell” that is controlled by the mind (*hadaya vatthu*). The physical body is there to be subjected to the *kamma vipāka*; this is especially true for animals because they do not have much control over what happens to them.

- We humans have an advanced mind. We have the ability to avoid bad *kamma vipāka* and steer our lives in the direction we want to. Let us see how the *gandhabba* uses the physical body to experience the outside world and also to control the body movements.

6. The world is experienced through the physical body, and this basic interaction is slow compared to the fast pace of the *citta*. The sensory data are collected by the five physical senses of eye, ear, nose, tongue, and the body. Then they are transmitted to the brain via the central nervous system, which takes time of millisecond scale.

- At the brain, data for a certain time interval (possibly around 10 milliseconds; see, “[Citta and Cetasika – How Viññāna \(Consciousness\) Arises](#)”) are processed and then converted to a format suitable for transmission to the five *pasāda rūpa* and the *hadaya vatthu*, via a fast “ray system” (called “*kirana*” in Pāli or Sinhala).

- Individual “packets of information” from each of the five senses are then transmitted to the corresponding *pasāda rūpa* and the *hadaya vatthu* are located on the *manomaya kāya*, which overlaps the physical body; information from the *mana indriya* are sent to the *hadaya vatthu*.

7. For example, let us consider a “packet of data” sent from the physical eye to the brain. This information is processed by the brain, converted to a “ray system” and is transmitted to the *cakkhu pasāda*. Now the *cakkhu pasāda* vibrates and hits the *hadaya vatthu* that is located close to it. The *hadaya vatthu* is surrounded by the five *pasāda rūpa*. That causes the *hadaya vatthu* to vibrate 17 times, much like a gong hit by an iron rod vibrating for a certain fixed number of times.

- The 17 vibrations of the *hadaya vatthu* correspond to the 17 *cittā* in a *citta vīthi*. Such a *citta vīthi* is called a *pancadvaravajjana citta vīthi* because it is initiated by one of the five physical senses or *pancadvara* (“*panca*” or five + “*dvara*” or “door”).
- Imagine a blade clamped at one edge and is hit by an object on the other edge; it vibrates for a certain FIXED number of times per second; that number is called frequency of vibration and is fixed for a given material. And one can see the blade vibrating. Pretty much the same thing happens when the *hadaya vatthu* vibrates when hit by one of the *pasāda rūpa*, and this “vibration” is called a *hadaya rūpa*, which thus has a lifetime of 17 *citta*. Thus the *hadaya rūpa* is not a physical *rūpa* but basically is a mode of vibration.
- The misconception that any *rūpa* has a lifetime of 17 thought moments arose because of not understanding that it is the *hadaya rūpa* that has a lifetime of 17 thought moments.
- In other words, this information packet is received and processed by the *hadaya vatthu* within those 17 *cittā*. The information is fully received by the fourth *citta* (vibration) and then the rest of the *citta* in that *citta vīthi* deal with this information. This “information processing” by the *hadaya vatthu* will not be completed until three more *citta vīthi* run by the *hadaya vatthu* itself. Such *citta vīthi* initiated by the mind itself is called a *manodvara citta vīthi*, where *manodvara* means the “mind door”.
- Information packets from the *mana indriya* are sent directly to the *hadaya vatthu*.

8. Thus we can see that there is a **huge difference** in time between the physical body acquiring senses data (time of the order of 10 milliseconds) and the mind processing that information within a billionth of a second using one *pancadvara citta vīthi* and three *manodvara citta vīthi*.

- Even if the five senses keep sending data continuously, the mind is “just sitting there” most of the time. Let us examine this in a bit detail: Suppose the brain keep sending data from the eye non-stop; since each “packet” takes, say 10 milliseconds, then in a second there will be 100 “data packets” of vision coming in. If the brain is going at full speed, it can send at most 500 (=100×5) “data packets” from all 5 physical senses in a second. Then the mind will be spending less than a millionth of a second in processing all that data, since it takes less than a billionth of a second to process one “data packet” (from previous bullet).
- During those gaps, the *hadaya vatthu* also interacts (both ways) with the *mana indriya*. **In particular, it gives instructions to the *mana indriya* on how to control the physical body in response to the sensory inputs.**
- Thus most of the time the mind is just sitting there, and this is called the “*bhavaṅga*” state of the mind. In this state, the mind is actually taking the object that came to the mind at the *paṭisandhi* (rebirth) moment in that last *citta vīthi* of the last life. *Bhavaṅga* (“*bhava*” + “*ṅga*” or associated) denotes that this state of the mind is characteristic of this new life, in the present case as a human. Just like the eye cannot see itself, **the mind cannot see this “*bhavaṅga*,”** it is the present mind itself.

9. In the example that we started with, the “cow mind” has now switched over to a “human mind,” It has the object taken at the *paṭisandhi* moment. But we do not become aware of what is in the *bhavaṅga*.

- You may remember that there are times when one just stares blankly “out into the space”, and if someone asked “what were you thinking about?”, we would be hard-pressed to recall anything that we

were thinking about. Here the mind was mostly in the *bhavaṅga* state; we are aware that we were alive, but did not have “actual thoughts” going through the mind.

- In reality, even when we think we are fully engaged, the mind is mostly in the *bhavaṅga* state. As we discussed in a previous bullet, it takes very little time for the mind to process data. Even if all five physical senses keep sending data about the outside world non-stop, the mind takes less than a millionth of a second to process those data coming in within a second!

10. However, the sixth sense or the mind (*hadaya vatthu*) itself is also initiating *citta vīthi* either to process information from the five physical senses, or to “think about those senses inputs”. **Furthermore, it also initiates *citta vīthi* to get the physical body to speak and to do any kind of work;** this information is relayed to the *mana indriya*, which in turn works with the brain to carry out those instructions.

- For example, if the mind gets interested in a sound, it can direct the body to walk towards the source of that sound. To do this, it sends the instructions to the *mana indriya* in the brain via the same “ray system” instantaneously. The *mana indriya* then decodes that information — and working with other parts of the brain — sends instructions to the muscles in the legs (via the nervous system) to move. These bodily movements take time because the mechanical motions are comparatively slow.
- Speech is done in the same way. The mind sends the information to the brain and the brain gets the vocal cords to move to produce the sounds. Here is a short video showing how the muscle movements give rise to sounds:

[WebLink: YOUTUBE: Inside the Voice](#)

11. Thus we can see that the brain is just a very fancy computer, carrying out the instructions given by the mind.

- Now the questions arise, “Why is nature going through all this trouble to give us a physical body that is sort of cumbersome and slow?”. The main answer is that this is to impart *kamma vipāka*.
- For example, a *deva* has a fine body that is not subject to aches and diseases as for humans; that was acquired by a good *kamma vipāka*. On the other hand, there are some *petas* (hungry ghosts) who suffer from hunger. They have large bodies, but a very small mouth.
- In the human realm, our individual bodies are “pre-designed” by *kamma vipāka* to impart varying degrees of suffering. That is why some people are relatively healthy, while some have health problems. There are of course ways to reduce or even get rid of such problems. One could make suitable conditions (eating well, exercise, etc.) for a healthy body.
- We do not realize the constant stresses that we are subjected to (both physical and mental) because we are used to it. By living a moral life, we can begin to experience the *nirāmisā sukha* achieved by “liberating the mind from the burdensome thoughts.” When one gets to *jhāna*, this is further enhanced, and at higher *jhāna* one sees quite significant relief from “dissociating from the body”. Then one makes a big jump in attaining the *Sotāpanna* stage.

It is possible that I may not have clearly explained some concepts. If you send me a comment referring to the corresponding item number, I can try to clarify it. Also, when you read other posts in this section, things will become more clear. This basic description is critical if one is really serious about learning *Abhidhamma*.

12.5.2 Does any Object (Rūpa) Last only 17 Thought Moments?

Revised October 29, 2015; updated April 5, 2016; revised August 18, 2019; February 18, 2020

Does Any Object Live Only For 17 Thought-Moments?

1. I have seen the following statement by many when discussing *Abhidhamma*: “Anything in this world lasts only a brief moment. Then it is re-formed, and the process continues ceaselessly.”
 - Here is a direct quote from a couple of sources, one of which is a popular book on *Abhidhamma*: “..a *rūpa* is very short-lived – it endures only for 17 conscious moments. **Whatever object formed is almost instantly gone**”. Thus it is a widespread misconception.
 - You can Google the following and see the sources for yourself” “*Abhidhamma*: “..a *rūpa* is very short-lived – it endures only for 17 conscious moments.”

The origin of Confusion

2. “Anything in this world” has a common name in Buddha Dhamma: a *saṅkhata*. [*saṅkhata* : [pp. of *saṅkharoti*] conditioned; prepared; produced by a cause.]
 - A *saṅkhata* arises due to causes and lasts until those causes are there. It is a bit more complicated, and is discussed in the section, “[Udayavaya Ñāna](#).”
 - The arising of a *saṅkhata* is due to *Paṭicca Samuppāda*. That is the “*udaya*” or “arise” part. Once formed, different *saṅkhata* will have different lifetimes. A *saṅkhata* will decay and cease to exist. That is “*vaya*.”
 - *Udayavaya* describes the formation and destruction of a *saṅkhata* (“*Udaya*” means to arise, and “*vaya*” means destruction). But a *saṅkhata* could last for a long time.
3. It seems to me that this misinterpretation comes from taking the life of a “*hadaya rūpa*” and applying that to ANY *rūpa*!
 - As we discussed in “[Gandhabba \(Manomaya Kāya\) – Introduction](#),” the lifetime of a *hadaya rūpa* or “vibration” of the *hadaya vatthu* (seat of the mind) is 17 thought moments. We will discuss that below.
 - First, let us clarify that the lifetime of a *saṅkhata* (ANY *rūpa*) CAN BE as long as billions of years!

Some *Saṅkhata* May Have Lifetimes of Billions of Years!

4. Different *saṅkhata* have different lifetimes. A fly may live for a few days, a human about 100 years, a building may last hundreds of years, the Earth will last about 4-5 billion more years, etc. However, a *saṅkhata* will be decaying gradually over time.
 - An inert object, like a building, will start slowly decaying. If a building lasts 1000 years, then each day, it will “decay” by a little bit, though the decay will accelerate towards the end.
 - From the present time to the final destruction (or until death in the case of a living being), any given *saṅkhata* will change. If we consider a baby born today, it will first grow to become a young person. Then it will gradually start weakening while becoming an older adult and eventually die one day. Therefore, the critical aspect is **not destruction, but change**. While the baby is growing, the cells in the body will multiply; but in an older person’s body, more cells will be dying.

A *Saṅkhata* Keeps Changing – Not “Appear and Disappear”

5. This constant change is not discernible to us on a real-time basis. A person does not age while we are watching him/her. But we can see the change over several years, especially if they are very young or over the middle age.
 - Mayflies have a lifetime of the order of a day (after the larval stage), and some live only several hours; here is a short video by the National Geographic channel:
[WebLink: NATGEOTV: 24-Hour Lifecycle](#)
 - Thus there is a HUGE difference in saying that a given material object CHANGES moment-to-moment versus saying that the object is “RECREATED” every 17 thought moments.

- During an *Abhidhamma* discourse that I listened to, the presenter was showing a pen and said that the pen is “destroyed and recreated” EVERY 17 thought moments! By extending that logic one could say that any entity (say, the Earth) is vanished and “recreated” within 17 thought moments! A complete misunderstanding of the *udayavaya* process of a *saṅkhata* .

A *Hadaya Rūpa* Has a Life of 17 Thought-Moments

6. So, where does this incorrect statement come from? “.. *rūpa* is very short lived – it endures only for 17 conscious moments. What is formed is almost instantly gone.”

- The confusion arises when one does not understand the concept of a *hadaya rūpa*. A *hadaya rūpa* is generated in the *hadaya vatthu* by a sensory event through one of the five physical senses. **The lifetime of a *hadaya rūpa* is the time taken to experience that external sense event. That takes 17 thought moments** (during which an impression of the external *rūpa* is made in mind by a *citta vīthi*.)
- **It is wrong to take this time to be the lifetime of the object in question.**

7. It is critical to understand the difference between ANY *rūpa* (*saṅkhata*) and a *hadaya rūpa* that lasts only for a blink of an eye.

The lifetime of a *hadaya rūpa* is just the time it takes for the mind to be AWARE of any *saṅkhata*. We experience outside material things (*saṅkhata*) in our world through our five physical senses. We see with eyes, hear with ears, smell with the nose, taste with the tongue, and touch with our body.

- During the lifetime of a *hadaya rūpa*, our minds only catch a very brief (a thought moments worth) of the seeing, hearing, etc. experience at a time. It is not that the object lives a short time; it is just that we sense it only for a brief moment at a time!
- Let us discuss that in detail for the case of seeing an object (*saṅkhata*.)

How Do We See an Object?

8. Each of these five senses events is accomplished via a thought, even though we may not perceive it that way. Details at “[Citta and Cetasika – How Viññāna \(Consciousness\) Arises.](#)” **I highly recommend reading that post before proceeding further.** The “movie analogy” discussed there provides a good idea of how the mind and the brain work together.

Here is a simple description:

- When we see an object, our eyes send the image of the object to the brain via the neurons. The brain process that image. Each image is of the order of 10 milliseconds (Buddha Dhamma does not provide these times; I am using the time that scientists have discovered).
- **But the brain does not feel anything.** It is the mind that feels sensations.
- The brain processes that information and transmits it to the location of the mind (called *hadaya vatthu*) which overlaps the heart, **but not in it.**
- Now, it takes the mind 17 thought-moments (or 17 *citta*) to process that information and identify the object and make decisions about it; this series of *citta* is called a “*citta vīthi*.” There will be many such *citta vīthi* before we “see it.”

The “Movie Analogy”

9. Many things happen during that *citta vīthi*. The mind recognizes the object, forms a like/dislike about it, decides on what to do, and lastly may do something about it. That is why there are 17 *cittā* in the series. Towards the end of the *citta vīthi*, seven *javana cittā* carry out the actions or speech about the object based on the decisions made earlier part of the *citta vīthi*. That is a very brief statement of what happens in that *citta vīthi*.

- Three more *manodvāra citta vīthi* run following each *pañcadvāra citta vīthi*. Of course, it happens so fast that we are not aware of these details. Only a Buddha can see such fast processes.
- When we are having a conversation with someone, we can see her and hear what she says “at the same time.” But it only appears that we are seeing and listening at the same time. The sights and sounds are received and processed by the brain in packets, as we discussed above. But the mind processes each packet in less than a millionth of a second in a *citta vīthi*!
- If we are eating popcorn while watching TV, that taste also comes in packets. The tongue sends about 10 ms worth of “taste information” to the brain and brain processes that information and transmits to the mind. The same thing happens with sounds and body touches. As those “information packets” continuously come in, we PERCEIVE that we are experiencing such sensations continually. Only one “data packet” is processed at a time, so there is at least a 10 ms delay between adjacent packets.
- The “movie analogy” in the post “[Citta and Cetasika – How Viññāna \(Consciousness\) Arises](#)” provides a good idea of how the mind and the brain work together.

10. Therefore, we can be using all five senses at the same time, and all that information processed in “10 ms packets”. Since there are 1000 milliseconds in a second, we can say that a maximum of about 100 such “information packets” are received by the mind each second.

- However, that is fast enough for us to PERCEIVE that we are experiencing all these sense inputs continuously. Now, the only part I borrowed from science is the estimated 10 ms duration for each information packet. Those studies have been published only recently.
- Science, of course, is not aware of the role of the mind. As far as science is concerned, the brain does everything, and the brain is the mind. However, I believe that scientists will have to change that theory in the future.

11. Therefore, what happens in mind is analogous to what happens when we watch a movie. We perceive that we are watching a continuous film. But in reality what happens is that the movie projector projects static pictures to the screen at a rate of about 30-60 frames a second. Here again, each static image is of 20-30 ms duration. But it is fast enough for us to perceive that we are watching a continuous movie.

- In the same way, our minds **perceive** that we are watching, hearing, smelling, tasting, and touching all at the same time. But each sensory event is brief lived. Each “information packet” sent by the brain is a 10 ms “time slice.” The mind processes that information in a *citta vīthi* lasting 17 *cittā*. And each *citta* lasts much less than a billionth of a second. **Thus each “snapshot” processed by the mind takes an unimaginably short time.**
- Then the mind takes all those “packets” of information and “put it all together” to provide a meaningful experience. **This is an amazing task, since inputs (sights, sounds, etc.) from all six “sensory doors” may be coming in.** This is why the Buddha said that “the mind is the fastest entity in the world.”

The Mind Is Idle Most of The Time

12. Now if one thinks carefully, it is apparent that the mind is idle most the time waiting for input signals from the brain. In a given second, there are only about 100 such “data packets” coming to the mind as we discussed above. The mind spends only 100 *citta vīthi* for processing that information, *which takes less than a millionth of a second for the mind!*

- The rest of the time, the mind is at what is called the “*bhavaṅga* state.” Thus the mind is mostly in the “*bhavaṅga* state.”
- **We can see that the mind is engaged in “experiencing the world” for short times.** Each perception event lasts only 17 thought moments, an unimaginably short time; see, “[Manomaya Kāya – Introduction.](#)”

The Critical Roles of the Seven Universal *Cetasika*

13. So, how does the mind perceive continuously, and take into account what happened in the past? It is done by several mental factors (*cetasika*) in each *citta*. In particular, the *manasikāra cetasika* brings old memories, *saññā cetasika* recognizes, etc.

- Each of the seven universal (*sabba citta sādharana*) *cetasika* plays a critical role in “capturing a given *ārammaṇa* (sensory input) and providing meaning to it based on prior experiences.” Different types of *cetasika* discussed in “[Cetasika \(Mental Factors\)](#).”
- Therefore, we can see that our experience of external objects is very, very brief. A snapshot of a picture, sound, etc. comes to the mind and is gone. The perception of a solid image, sound, taste, etc. is put together by the mind with the help of a set of *cetasika*, especially seven *cetasika* that are in any *citta*.

It is the “Detection Moment” (*Hadaya Rūpa*) That is Short-Lived

14. Now it should be apparent where the misconception in the statement, comes from: “.. *rūpa* is very short lived – it endures only for 17 conscious moments. Whatever object formed is almost instantly gone.”

- It is not that any *rūpa* (or the object) is short-lived. It is just that the duration of experiencing that object is extremely short. We think we are seeing, hearing, tasting, etc. all the time; but we are not. Just like we are only watching a series of static pictures while watching a movie, our mind is only experiencing a series of “snapshots.”
- The “*ghāṇa saññā*” or the “perception of solid and continuous experience” is an illusion created by the mind. That is an important point. If it is not clear, re-read the above.
- You are always welcome to point out inaccuracies or unclear instances. My goal is not to post essays but to make sure the content is understood. To comprehend Buddha Dhamma requires a lot of thought.

15. Therefore, objects around us do not necessarily change fast and not that fast. **It is just that our experience of “seeing” lasts less than a millionth of a second at a time. If we look at an object for 60 seconds, the mind sees it in about 600 static frames (per #9 above).** Out of those 60 seconds, the mind “sees” the object for less than a millionth of a second in total, but spread over the 60 seconds in “snapshots,” an unbelievably short time.

- For example, a gold bar is virtually unchanged during 17 thought-moments. A gold bar lasts millions of years, so the change in the gold bar in a thought moment is insignificantly small. **Even in a mayfly that lasts only a day, the change that happens within 17 *cittā* is unmeasurably little.** Thus the statement, “.. *rūpa* is very short lived – it endures only for 17 conscious moments. **Whatever object formed is almost instantly gone**” is **WRONG**.
- **It is the “sensing event” or the *hadaya rūpa* that lasts 17 thought moments;** see, “[Manomaya Kāya – Introduction](#).”

Diṭṭhe Diṭṭha Mattaṃ Bhavissati

16. Buddha Dhamma (i.e., the world) is complicated enough. We need to be careful not to make it any more complicated than necessary. Trying to imagine a person disappearing in a thought-moment and reforming back into full form is unrealistic. Trying to conceive the same for the Earth is mind-boggling, not to mention all those stars, galaxies, out there. Luckily that is not what happens.

- That is not what was described by the Buddha when he said, “*diṭṭhe diṭṭha mattaṃ bhavissati*.” It means, “what is seen is seen only for a brief moment.” *Mattaṃ* is “*mātra*” in Sinhala or Sanskrit or a “trace of something.”
- That famous verse, together with others below, is in the [Bāhiya Sutta \(Ud 1.10.\)](#)

- Even though we think we see a person all the time while we are looking at him, we see only several “snapshots” of him.

Sute Suta Mattaṃ Bhavissati

17. What about hearing? The Buddha said, “*sute suta mattaṃ bhavissati*” or “what is heard is heard only for a brief moment.” **The mind, with the help of *cetasika*, puts all those bits of sound together AND also incorporates past experiences to “compose a meaningful sensation.”**

- We usually speak 100 to 160 words per minute, which means we listen to the same rates. Thus we hear about two words per second. A word typically has less than ten letters, and thus each letter is comprehended in about 50 ms. Therefore, our rough estimate seems to hold. We indeed hear only one letter at a time, but we think we hear whole words or phrases.

Other Sensory Inputs Work the Same Way

18. Other sense inputs work the same way: The Buddha also said, “*sute suta mattaṃ bhavissati*”, “*mute muta mattaṃ bhavissati*”, and “*viññāte viññāta mattaṃ bhavissati*”, where “*suta*” means hearing, “*muta*” is a collective word for taste, smell, and touch, and “*viññāta*” is for *viññāṇa*. All our sensory inputs and our awareness are minuscule traces of sensations that flow, which the mind concocts as continuous and stable experiences. Think about the movie analogy again; a movie is a series of static “snapshots.” In the same way, our experiences are a series of “snapshots.”

- In *Brahma* worlds, there is only a “*manomaya kāya*” and no solid body like ours. There, the sense experience more or less continuous. There are some “hungry ghosts” (*petā*) who also have only the fine “*manomaya kāya*” that imparts endless suffering.
- Our physical body is there to give pain via various body ailments as well as “physical pleasures”; we will also discuss this critical point in the future. Nature has many varieties of “body structures” for imparting different types of suffering/enjoyment, according to *kamma vipāka*.
- That will become even more clear when we further discuss how the “*manomaya kāya* controls the physical body,” see, “[Ghost in the Machine – Synonym for the Manomaya Kāya?](#).”

Summary

19. There is a lot of information to be absorbed in this post. **Our lives are just a series of very brief sense experiences.** When the Buddha uttered those four phrases to the ascetic Bahiya Daruciriya, he contemplated on them right there and attained the *Arahantship*. He is considered to be the person who spent the least time in reaching *Arahantship*.

More on the formation and destruction of a *saṅkhata* in, “[Nirodha and Vaya – Two Different Concepts](#).”

Next, “[Ghost in the Machine – Synonym for the Manomaya Kāya?](#)”,

12.5.3 Hidden World of the Gandhabba: Netherworld (Para Loka)

February 18, 2016; updated April 5, 2016

1. I have discussed the fact that when a living being gets a “human *bhava*” it does not necessarily mean that it is born with a human body during all that time; see, “[Bhava and Jāti – States of Existence and Births Therein](#).”

- For example, when a human dies and still has *kammic* energy left for the human *bhava*, then it is very unlikely that it will be conceived as a human baby right away. At death a “human *gandhabba*” with a fine body leaves the dead body and has to wait in that state until a suitable womb becomes available. There are a large (uncountable?) number of such human *gandhabbas* waiting for a suitable womb.

- This is one reason that a mother and father are so revered. No matter how bad they may be in some cases, just the fact that they made it possible for a *gandhabba* to have a human body, makes them invaluable.
2. Beings are born as human because they crave the sense pleasures associated with the human body. The most valued are the tastes and the body pleasures. A *gandhabba* has a very fine body that we cannot see weighing much less than 0.01 g; see, “[Manomaya Kāya and Physical Body](#).” A *gandhabba* born at the *cuti-paṭisandhi* moment is much smaller than an atom in modern science. Some could inhale aroma (*gandha*) and get a bit more dense; thus the name “*gandhabba*” (“*gandha*” + “*abba*”).
- Thus a *gandhabba* is unable to taste solid food or experience physical touch. But they can see and hear very well. Thus their life is miserable, since they can see the normal humans engaging in “pleasurable activities”. That is what they crave too, but they are unable to experience them.
 - When a zygote is created in a womb as a result of intercourse (see, “[What does Buddha Dhamma \(Buddhism\) say about Birth Control?](#)”), there are a huge number of *gandhabbas* waiting to “get hold of that zygote”. But of course, they don’t have a choice; only the *gandhabba* matching the “*gathi*” of the father — and especially the mother — is pulled into the womb.
3. Therefore, even though a human “*bhava*” may last thousands of years, the actual time that one is “born with a human body” (human *jathī*) could be a fraction of that time. This is another reason why a “human birth” is so precious that it should not be wasted.
- The same is true for the “animal *bhava*.” There are an uncountable number of “animal *gandhabbas*” waiting for a suitable womb at any given time.
4. Both the human and animal *gandhabbas* can be said to live in “*para loka*” (“*paralowa*” in Sinhala). It is a world that a normal human cannot see, even though they can see us. Of course there is no English word for it, but “netherworld” or “the hidden world” seems to convey the idea.
- *Para loka* is not a distinct realm in the 31 realms. Just like human and animal realms co-exist, the *para loka* co-exists with the human and animal realms, but we normally cannot see those beings in the *para loka* (unless one develops *abhiññā* powers). One can imagine there being another world with human and animal *gandhabbas*. Thus *gandhabbas* are not *pretas*.
 - [WebLink: Listen to Pronunciation: “paralowa” or “para loka”](#)
 - Those with “human (or animal) *bhava*” spend their time either in “this world that we can see” or in the “*para loka*” or the “hidden world” (netherworld).
 - Many people are not even aware of the existence of “*para loka*,” because (like the concept of the *gandhabba*), it is not discussed in the *Visuddhimagga*. It is unfortunate that current *Theravāda* relies on *Visuddhimagga* (written by an *Anariya*) rather than the *Tiṭṭaka*.
 - *Gandhabba* is described in detail the *Tirokudda Sutta* in the *Khuddaka Nikāya*, where it is called “*tirokudda*” or “*tirokuddaya*,” instead of *gandhabba*.
5. The idea behind giving a special offerings (“*dāna*”) to the *bhikkhus* after the death of a person is mainly for the benefit of the *gandhabbas* (and also *pretas*). This is a common practice in Buddhist countries. Normally it is done after seven days and after three months etc of death, and I will discuss the reasons for those specific dates in a future post.
- Not all beings can receive merits. Especially those in the *niraya* (hell) are unable to do so because they don’t have the right mindset to receive merits (absence of *samanantara paccayā*). Those who can benefit most are the *gandhabbas* and *pretas*.
 - Also, note that *gandhabba* are totally distinct from *pretas* or hell beings in the *niraya*. Only *gandhabbas* live in “*para loka*” waiting for suitable wombs. *Pretas* and hell beings have instantaneous (*opapātika*) births, just like *devas* and *brahmā*.

6. It has been described how the Buddha saw human beings wander from life-to-life when he first comprehended the *cutupapada ñāṇa* during the night of his Enlightenment; “*cutupapada*” comes from “*cuti*” for death and “*upapada*” for birth.

- Thus *cutupapada ñāṇa* is the knowledge about the rebirth process. **But this particular description was restricted to births and deaths associated with a single human *bhava*.**
- *Cuti* is pronounced “chuthi”, and “*cutupapāda nāna*” is pronounced “chuthupapāda gnāna”.
- [WebLink: Listen to Pronunciation: “cutupapāda nāna”](#)

7. That description by the Buddha was not about the general wandering among the 31 realms, but is on how a being in a human *bhava* wanders from human birth to human birth with *gandhabba* states in between (i.e., going back and forth between “this world that we can see” and the “other world that we cannot see” or the *para loka*).

- The description is as follows: If one is situated in the upper level of a building at a four-way junction, he can see the street below. He can see many people wandering in the street (*gandhabbas* wandering around). Sometimes, one goes into a house and stays there for a long time. This is compared to a *gandhabba* entering a womb and making himself a physical body; that house is the analogy of a physical body.
- Then at the death of that physical body, the *gandhabba* comes out and starts wandering again (a person walking on the street); he may be wandering the streets for a long time before entering “another house”, i.e., to get a chance to go into a matching womb.
- Sometimes, he may enter a house and may come right out. This can be compared to an unsuccessful pregnancy. A *gandhabba* taking hold of a zygote, but for some reason cannot stay there and has to come out, mostly because it turns out to be a mis-match of “*gathi*” of the potential mother.
- Thus it describes a human being going back and forth between “this world” and the “other world” or the “netherworld” (“*para loka*”). Once the *kammic* energy of the human *bhava* is exhausted, a new “*bhava*” is grasped.
- If the new *bhava* is not human or animal, then one would be born instantaneously in another realm (*brahma*, *deva*, *asura*, *preta*, or *niraya*). There are no *gandhabbas* associated with those realms.
- Thus we can see that *bhava* and *jathi* mean the same in all the other realms. In those realms, *bhava* automatically leads to *jathi*. For example, one with *deva bhava* is always a *deva*.

8. When one studies the accounts of people (of mostly children) describing their rebirth stories, there are always “gaps” between births; see, the references (books) cited in “[Evidence of Rebirth](#).” For example, see, “Children Who Remember Previous Lives: A Question of Reincarnation”, by Ian Stevenson (2000).

- During those “gaps” in between successive human births, they had been in the *gandhabba* state, i.e., they were in *para loka*.
- When one dies in an accident especially at a younger age, it is more likely that their *kammic* energy for the human *bhava* had not been exhausted. Thus they are more likely to be in the *gandhabba* state, waiting for a suitable womb.
- This is why in most rebirth stories the previous life tends to have been terminated by an unexpected incident (killed by someone, a natural disaster, etc).
- This “memory from the past life” fades away as children grow, and that is why it is mostly children who provide these accounts. As they grow old, these memories disappear gradually.

9. A *gandhabba* changes with time (just like everything else). In fact, it is even possible that if a *gandhabba* properly receives merits from an almsgiving (*dāna*) mentioned in #5 above, he/she can gain a *deva* or *brahma bhava* and be born instantly in such a realm.

- On the other hand, another human *gandhabba*, who had been engaged in behavior appropriate for an animal (say, a dog) in the previous human life, could cultivate those “dog *saṅkhāra*” as a *gandhabba* and slowly transform into a “dog *gadhabbaya*” while in *para loka*.
- When we think about these possibilities we realize how complex life is, and why we need to be mindful of the consequences of our actions. Not only that, we need to avoid doing things mechanically and understand the reasons behind even meritorious actions like alms-giving. I have seen many almsgivings that are conducted in a “party-like” atmosphere. One needs to do it with the proper mindset with the *gandhabba(s)* in mind.

10. Another interesting bit of deduction is how the concept of a soul or “*athma*” came to be established by the ancient Hindu *yogis*. Even to attain higher *anāriya jhānā* (above the fourth *jhāna*) that enables one to acquire the ability to see previous lives, one has to have that “*gathi*” of cultivating *jhānā* through recent human lives. Therefore, such a *yogi* with powerful *abhiññā* powers can be expected to have had many recent human lives.

- Thus it is possible that such *yogis* would have been born human hundreds of times (with *gandhabba* states in between). When they looked at their previous lives, they could see that every time they died a *gandhabba* came out, and sooner or later took hold of another human body. Thus it is this *gandhabba* that they thought was the indestructible “*athma*” or “soul”. They could look back hundreds of lives and always see that they were born as human again and again.
- Thus, in the Hindu scripture *Bhagavad Gita*, getting hold of a new body is compared to discarding an old suit and wearing a new suit. As far as those *yogis* could see, it was the same *gandhabba* that came back in a different physical appearance! Thus for them it appeared that there was an unchanging entity coming back in a different form; this is why it is called “reincarnation”.

11. Our world is much more complex than we can ever imagine. The Buddha said that only a Buddha can truly comprehend the complexity of this world: “*loka visaya acinteyya*” for a normal human, i.e., a normal human, by himself, cannot grasp the true nature to the full extent.

- Even though we do not need to comprehend everything (and we cannot), it is beneficial to learn these concepts at least to some extent.
- If one can comprehend *anicca*, these in-depth analyses are not needed. But especially these days, humans do not have the ability to grasp *anicca* right away. So, learning Dhamma and appreciating the unmatched knowledge of the Buddha gives one the confidence to persevere in one’s efforts.

12.5.4 Ghost in the Machine – Synonym for the Manomaya Kāya?

Revised July 14, 2019

1. The “mind-body problem” has been a central problem of philosophy since Descartes formulated it over 350 years ago. René Descartes proposed that while the physical body is subjected to the physical laws, there is a soul associated with a human body which is normally called the “mind” and it is non-material; for him, having a mind amounted to having an immaterial soul, outside the physical space, whose essence consisted in thinking. This is the so-called “Cartesian dualism”.

- Here mind and body are on equal footing, each in its own domain.

2. Philosophers no longer take this “dualism” view seriously. Instead current philosophers have adopted a “material monism” that claim that our world is fundamentally material; this is materialism or physicalism. The only question they are debating on is how the “mental” arises from “material”, i.e., how thoughts arise in a material brain.

- We must note that the Buddha’s worldview is totally different from both the above. It is “**mental monism**”, i.e., that our world is fundamentally mental. This is why he said his Dhamma is “*pubbe ananussetu dhammesu*” or a Dhamma (or a theory on nature) that was not known to the world.

- This world view of the Buddha has been hidden for many centuries.
- This is of course a paradigm shift and a shocking one too at the first glance. But I hope to convince you with evidence gathered from various fields of study and illustrate the consistency across diverse disciplines.
- It must be mentioned that this monism is not the “mental monism” (or “idealism”) that a few philosophers have proposed. They say that material things are mere imagination. **On the contrary, the physical world is very real, it is just that it cannot provide any lasting happiness because of its transient nature.**

3. In 1949 Gilbert Ryle introduced the phrase “ghost in the machine” to ridicule the concept of Cartesian dualism in his book, “The Concept of Mind”. It is said that with that book, he put the final nail in the coffin of Cartesian dualism. Of course, the “ghost” is the soul or the mind and the machine is the body, in “ghost in the machine”.

- In Buddha Dhamma, it is not called a “ghost” but a “*gandhabba*”; see, “[Mental Body – Gandhabba](#).”
- And unlike in Decartes’ ghost, *gandhabba* has a trace of matter. Furthermore, even the basic building block of a physical body (cell) has origins in the mind. Therefore, mind and matter are inter-related and inter-dependent; see, “[Origin of Life – There is No Traceable Origin](#).”

4. I think the ghost in machine analog is actually a good one to describe a human or an animal. The body actually plays a secondary role, and the mind is the controlling entity. **But the “ghost” or the *manomaya kāya* is NOT all mental**; it has a fine form of matter even though it would not be detectable by current scientific instruments.

I must emphasize that this concept is NOT a version of dualism. Mind and body are interdependent: “*viññāṇa paccayā nāmarūpa*” and “*nāmarūpa paccayā viññāṇa*”; a *manomaya kāya* has both *nāmarūpa* and mind.

- This *manomaya kāya* is made by the last *citta vīthi* of the previous existence (*bhava*), which is called *cuti* (pronounced “chuthi”) *citta*; see, “[What is a Thought?](#)” in the *Abhidhamma* section. **Thus this fine material form was PRODUCED by the mind.** This is why it is said, “*mano pubbangamā dhammā.....*”, i.e., “the mind precedes EVERYTHING...”.
- You probably have seen pictures of a “misty ghostly figure” rising out of a physical body in literature on “astral projection” or “out-of-body experience”. That is a good visual, but of course only people with *abhiññā* powers can see them.
- Many people have, though, experienced this out-of-body experience usually under stressful conditions. Most common is the case when a patient undergoes an operation and is unconscious, but recalls later how he/she was able to see the operation from above. This seems to happen more often to women than to men; see, “[Manomaya Kāya and Out-of-Body Experience \(OBE\)](#).”

5. When one has cultivated *abhiññā* powers, one can bring out the *gandhabba* or the *manomaya kāya* out of the physical body. Then the body is lifeless, until the *gandhabba* comes back into the body. The “ghost” or the *manomaya kāya* can now see and hear without the aid of a physical ear or eye. Thus it can “focus” on events happening far away, and can see and hear what is going on at that place.

- All this may sound very esoteric but there is a lot out there that is not “captured” by our five physical senses; see, “The 4 percent Universe : Dark Matter, Dark Energy, and the Race to Discover the Rest of Reality” by Richard Panek (2011).
- Our eyes can see only an infinitesimally small part of the electromagnetic spectrum from 390 nm – 700 nm. The human audible range is commonly given as 20 to 20,000 **Hz**, though there is considerable variation between individuals. Modern scientific instruments can expand these, for example, to see in the infrared frequencies with infrared cameras, etc.
- The “ghost” does not need light to see, or a sound wave to travel in air to hear.

6. The *manomaya kāya* has all six senses in the sense that all five *pasāda rūpa* corresponding to the five physical senses and also the *hadaya vatthu* that is the “seat of consciousness”. **The *hadaya vatthu*, where *citta* (thoughts) are originated, lines up with the physical heart, not the brain. Thus we can say that mind is located close to the heart, and is not in the brain; brain is like a computer that helps run the physical body; see, “[Neuroscience Says there is no Free Will – That is a Misinterpretation!](#).”**

- The five *pasāda rūpa* in the *manomaya kāya* are also located close to the *hadaya vatthu*. Signals between the five physical sense faculties (eye, ear, etc) — called five *indriya* — and the five *pasāda rūpa*, and also between the (frontal cortex of the) brain and the *hadaya vatthu*, occur via a “ray system”, probably electromagnetic, and are thus very fast.
- However, the “eye” is not just the “eye ball” but includes associated processing units in the brain, which is the visual cortex. It is the visual cortex that sends the signal to the “*cakkhu pasāda*” located close to the *hadaya vatthu*. When the *cakkhu pasāda* receives a signal from the visual cortex (“eye *indriya*”), it hits the *hadaya vatthu* which in turn vibrates 17 times corresponding to a “*citta vīthi*.”
- The same process occurs for the other four physical senses. The “motor cortex” sends/receives signals from all body parts using the central nervous system, and sends “ray signals” to the “*kāya pasāda*.” I will discuss this in detail later.
- The five *pasāda rūpa* are located around the *hadaya vatthu* much like the five small balls (clappers) are situated around the “main clapper” in temple bells in Sri Lanka (I am not sure whether this true in other countries). Such a bell symbolizes the five *pasāda rūpa* around the *hadaya vatthu*.
- When the “ghost” is inside the physical body, it cannot see or hear without the aid of the physical senses of eyes and ears. Similarly, the mind cannot “think” without the aid of the brain.
- This is why the efficiency of all six senses degrade with time: Because the physical body degrades. As we get old, all six physical sense faculties of eyes, ears, nose, tongue, body (outer skin), and the brain degrade, and lose their effectiveness.

7. Thus in the visualization as a “ghost,” the *manomaya kāya* has all six senses. But it cannot use the *kāya pasāda* outside the physical body since not enough “matter” is in the *gandhabba* to “feel” the touching sensation. Similarly, the *manomaya kāya* (“ghost”) cannot taste or smell when it is outside the physical body.

- Thus the *gandhabba* can only see and hear when outside the physical body. And it can do those without any limitations imposed by physical eye or physical ear, i.e. it can see and hear things far away.

8. When a human dies, if there is still *kammic* energy left for the “human *bhava*”, i.e., the potential to be born as a human, then there is no *paṭisandhi citta* at death. A *paṭisandhi* (“patī” + “sandhi” = bind to a new life) happens when a transition to a “new *bhava*”, for example to a “*deva bhava*” or an “animal *bhava*”, happens. If the “*bhava*” remains the same and the next birth is also human, the *manomaya kāya* (“ghost” in this new terminology) or the *gandhabba* just comes out and waits until a suitable womb becomes available. The old physical body is now lifeless and just decays.

9. If the *kammic* energy for the “human *bhava*” is exhausted at death, then in the last *citta vīthi* the transition to a new “*bhava*” takes place. Then a new *manomaya kāya* for the new existence (*bhava*) is formed within that final *citta vīthi*, and at the end of that *citta vīthi*, the new *manomaya kāya* corresponding to the new life comes out of the dead body. If it is *deva*, then a new *deva* is instantly born in the *deva loka*. If it is an animal, say a dog, then a *manomaya kāya* (or *gandhabba*) that resembles the form of a dog comes out of the dead body and will wait until a suitable “dog womb” becomes available.

- As mentioned in other posts, births in 29 realms happen instantaneously, i.e, a fully formed figure is born at the very instant of death in the previous life. An intermediate “*gandhabba* state” with a *manomaya kāya* (a “ghost” in the current analogy) that needs to wait for a suitable womb is involved only for birth in human and animal realms.

10. There is another interesting facet: The *kammic* energy automatically prepares the “blueprint of the body” to deliver the *kamma vipāka* (consequences of previous actions). Thus the physical body has “built-in” defects and flaws that may become evident at birth or at different stages of life: for example a cancer may develop at latter stages of life. This is the reason why some people are born handicapped; some have healthy bodies, beautiful bodies, ugly bodies, and a healthy person may die suddenly too; the varieties are endless.

- Furthermore, the nervous system is also setup to induce various effects as *kamma vipāka*. The incessant “urge to do something” works at different levels for different people. This actually reveals a deeper meaning of the First Noble Truth of Suffering; if you are ready for a deeper analysis, see, “[The Incessant Distress \(“Pilana”\) – Key to Dukkha Sacca](#)”.

11. Therefore, the concept of a “ghost in the machine” may be useful to describe the *gandhabba* state or the separation of the *manomaya kāya* from the physical body in the cases of out-of-body experience (OBE), or with *abhiññā* powers. However, it must be kept in mind that in this case, the “ghost” does not depict an unchanging soul and also it is not totally “mental”; it has very fine material (*rūpa*) associated with it, that is invisible to the naked eye, but is visible to someone with *abhiññā* powers.

- Contrary to the idea of a soul, the *manomaya kāya* will keep changing even during an given existence and will make a huge transition at a new existence, for example when an animal is reborn a human or vice versa.

12. The main usefulness of this “ghost in the machine” concept is to accurately describe the physical body for what it really is: a temporary “residence” for the *gandhabba*. The “residence” decays with time and finally dies and then the *gandhabba* needs to find a new “residence”. The *gandhabba* derives its uniqueness or the “personality” via *sansāric* habits (*gati* and *āsavas*), and the *gandhabba* has the power to change those habits; see, “[Habits, Goals, and Character \(Gathi\)](#).”

- Further information can be found on several posts on the *manomaya kāya* and *gati* (or *gathi*). You can do a keyword search using the “Search” button on the top right.

13. Here is a recent article by the philosopher Colin McGinn on the current theories on the “mind body problem” (click to open the pdf):

[WebLink: PDF file: All machine and no ghost - McGinn-2012](#)

- Also see, Thomas Nagel’s book: “Mind & Cosmos: Why the Materialist Neo-Darwinian Conception of Nature is Almost Certainly False” (2012).
- Obviously, both of them have had no exposure to Buddha Dhamma. But I am very much impressed that they have come to the conclusion that mind MUST play a central role.

14. A *gandhabba* with a fine body cannot “seen” with our eyes, because they are “more energy than matter”. It is possible that the entities detected by “ghost detectors” are such *gandhabbas*.

- There are “ghost detector” apps made by many software companies that can detect “ghosts”; if you Google, “ghost detector” you can explore more on that. Even though right now this is done mostly for fun, it will be shown to be correct concept in the future. These detectors detect “packets of energy” that we cannot see with our eyes.
- Whether these ghost detectors actually can detect *gandhabbas* or not I am not sure. But the concept matches what is described in the *Tipiṭaka*.

July 14, 2019: I recently started a new subsection, “[Origin of Life](#)” to point out that not only the mental body (*gandhabba*), but also the physical body (which is a vast collection of cells), have their origins in the mind.

12.5.5 Manomaya Kāya (Gandhabba) and the Physical Body

Revised April 20, 2016; July 31, 2017; September 6, 2019

Introduction

1. *Manomaya kāya* means a “mental body”. We should not perceive the “mental body” in the same way as the physical body of ours. The mental body is mostly energy than matter. It is called a “body” more in the sense of a “collection”, as in a “body of water” or a “body of evidence.”

- The Pāli term for a physical body is *āhāraja kāya* or *karaja kāya*.
- The mental body or “*manomaya kāya*” is also called *gandhabba kāya* or simply *gandhabba*. The *manomaya kāya* is made of three parts called *utuja*, *kammaja*, *cittaja*.

2. Therefore, we have four types of bodies (*kāya*): *āhāraja*, *utuja*, *kammaja*, *cittaja*. The *āhāraja kāya* is the physical body. The other three are parts of our “mental body,” the *gandhabba*.

- It is easy to visualize a “person” to be consisting of two overlapping bodies. Those are the **physical body** that we see and the **gandhabba** with a light body (it is not a body in a sense we are used to but more like a “misty ghost”). **The fine body of the *gandhabba* “overlaps” the physical body.**
- The *gandhabba* makes the physical body “alive.” Without it, the physical body is like a piece of wood and is inert. If you touch a dead body you will feel the difference compared to touching a live person.
- The dead body can be compared to a metal wire without a current flowing through it. When a current flows the wire, it becomes “energized.”
- In the *Tirokudda Sutta* in the *Khuddaka Nikāya*, *gandhabba* is called a “*tirokudda*.”

3. The physical body (*karaja kāya*) that we see is built from the food we eat (*āhāraja kāya*). Starting with a single cell (zygote) in the womb, it grows by taking in food from the mother.

- The *gandhabba* consists of the other three *kāya*: *kammaja*, *cittaja*, *utuja*.
- Under stressful conditions (or with *abhiññā* powers), the misty *gandhabba* can come out of the physical body, and the physical body is no longer under the control of the *gandhabba*. But it is not dead because the *jīvitindriya* that maintains life is still there.
- Only at death, both the *gandhabba* and the *jīvitindriya* leave, and the body becomes inert like a log.

Kammaja Kāya is Primary

4. Let us follow the time sequence of making a *gandhabba* and a physical body in a new *bhava*. That happens via several steps per *Tiṭṭaka*: “*jāti sañjāti okkanti abhinibbatti khandhānaṃ pātubhāvo āyatanānaṃ paṭilābho*.” See, “[WebLink: suttacentral: Vibhaṅga Sutta \(SN 12.2\)](#).”

The basis of all the other four *kāya* is the *kammaja kāya*; it arises from the *kamma* seed responsible that particular *bhava* or existence at the *cuti-paṭisandhi* moment.

- A *kammaja kāya* has three components called “*dasaka*” or “ten units”. Those ten units are eight *suddhaṭṭhaka* and modes of rotation and spin. The three components are *vatthu dasaka* (*hadaya vatthu* or the seat of mind), *kāya dasaka* (blueprint of the final human body), and the *bhava dasaka*. The latter is loosely translated as man/woman nature, but it encompasses many other features related to one’s *gati* or *bhava*).
- More details at “[The Origin of Matter – Suddhatthaka](#)” and “[Gandhabba – Only in Human and Animal Realms](#).”
- **The formation of the *kammaja kāya* is called “*jāti*” moment of birth.**

5. Immediately following its birth, that *kammaja kāya* gives rise to a thought stream (*cittaja kāya*).

- Both *kammaja* and *cittaja kāya* start producing fine *rūpa* and immediately give rise to a very light physical form called the *utuja kāya*. At this stage, *cakkhu*, *sota*, *ghāṇa*, and *jivhā dasaka* are also present. **That is called the “*sanjāti*” moment of birth.**
- This subtle body with three *kāya* (*kammaja*, *cittaja*, *utuja*) is a *gandhabba*. Since all three types of *kāya* have their origin in mind, the *gandhabba* is a “mind-made body” or a *manomaya kāya*. But soon it will acquire a faint physical body by inhaling aroma (*gandha + abbha*), thus the name *gandhabba*. Therefore a *gandhabba* would have all four “bodies” (*kammaja*, *cittaja*, *utuja*, *karaja*).
- The five sets of *dasaka* (*kāya*, *cakkhu*, *sota*, *ghāṇa*, and *jivhā*) arrange around the *hadaya vatthu* (*vatthu dasaka*) in the subtle or “misty” body of the *gandhabba*. This *gandhabba* may exist in that state for a long time waiting for a suitable womb.
- That *manomaya kāya* or the *gandhabba* will now have to wait for a suitable womb to enter. That could take months or years.

Gandhabba Descending to a Womb

6. When a suitable womb becomes available, this fine *gandhabba* enters the uterus. At that time, it collapses to the size smaller than a single cell and merges with the single cell (zygote) formed by the union of mother and father. **This moment of entering a womb is called the “*okkanti* moment” of birth.**

- The physical body (*karaja kāya*) results from that single cell (zygote). It grows first by extracting food from the mother’s womb and then consuming regular food once born as a baby.
- The physical body grows according to the “blueprint” in the subtle body of the *gandhabba*. The subtle body of the *gandhabba* expands with it so that it overlaps the physical body. For example, there is a nervous system in the *gandhabba* that overlays the physical nervous system.
- **The initial growth stage of the fetus inside the womb is the “*abhinibbatti* stage” of birth.**

7. Then the fetus inside the womb starts developing and forms the physical senses and the brain over many weeks. During this time, the eyes, ears, nose, tongue, as well as the nervous system grow. Furthermore, the brain develops too. It will have processing units to analyze signals from those five physical senses.

- In Buddha Dhamma, the *cakkhu indriya* is NOT just eyes, but also includes the associated processing centers in the brain. Similarly for the other four *indriya*: *sota*, *ghāṇa*, *jivhā*, and *kāya*.
- Signals generated in these five *indriya* get to the five *pasāda rūpa* located around the *hadaya vatthu* (seat of the mind) as described in “[Gandhabba \(Manomaya Kāya\)- Introduction.](#)”
- **The “*khandhānan pātīlābho*” stage of birth is complete with the formation of all six sense faculties.**
- When that baby is born (i.e., comes out of the womb), that physical body can use all six *āyatana* (eyes, ears, nose, tongue, body, and the mind) to interact with the external world fully. **That is the final stage of the birth process: “*āyatana pātīlābho*.”**
- A better description of *āyatana* at “[Contact Between Āyatana Leads to Vipāka Viññāna.](#)”

8. Ven. Sariputta discussed that sequence of events when he analyzed the *Dhammacakka Pavattana Sutta* in detail to the bhikkhus in the [WebLink: suttacentral: Sacca Vibhanga Sutta \(Majjhima Nikaya 141\)](#): “*Katamā cāvuso, jāti? Yā tesam tesam sattānaṃ tamhi tamhi sattanikāye jāti sañjāti okkanti abhinibbatti khandhānaṃ pātubhāvo āyatanaṃ pātīlābho, ayaṃ vuccatāvuso: jāti.*”

- Those who do not believe in the *gandhabba* state (i.e., a *gandhabba*) need to contemplate that point. The *gandhabba* state is there only in human and animal realms.
- At death, if that human *bhava* has more *kammic* energy left, the *gandhabba* comes out of the dead physical body and waits for a new womb.
- If *kammic* energy for the human *bhava* is exhausted, then a *cuti-patisandhi* transition takes place, and the above discussed time sequence repeated. A brand new *gandhabba* in a new *bhava* emerges from

the dead body. For a technical analysis of this process, see, “[Cuti-Patisandhi – An Abhidhamma Description.](#)”

The *Manomaya Kāya*

9. We can get an idea of the fineness of the *manomaya kāya* from the following comparison. The average human weighs about 70 kg (70,000g) and has a body volume of about 70 L; the Density of a typical fog (that we can barely see) is approximately 0.1 g per cubic meter. Thus the weight “of the fog of volume equivalent of a human body” is about 0.01g.

- Thus a “human body made of fog” weighs only a tiny fraction of the average human weight.
- For another comparison, the weight of a mustard seed is about 0.002g.
- A *gandhabba* would have a “misty body” like a human figure made of fog, but will be MUCH SMALLER weight; it is immeasurable small. Sexual intercourse between a man and woman creates a zygote (a human cell) in the womb. Then a *gandhabba* descends to the uterus and takes hold of the zygote; see, “What does Buddha Dhamma (Buddhism) say about Birth Control?.”
- My late Noble teacher, Waharaka Thero, has seen how a *gandhabba* enters a womb. When getting closer to the mother, *gandhabba* rotates rapidly and loses all its body other than the *hadaya vatthu*, *jīvitindriya*, and *bhava dasaka*. So it becomes much smaller than an atom in modern science (at the *suddhaṭṭhaka* level). That tiny body (which would not be seen even by the most powerful microscope) is pulled into the womb through the mother’s body and gets attached to the zygote in the womb. I heard him describe this in a *desana*.
- So, a human body starts basically with two cells from the mother and father (which make the zygote) and an even smaller *gandhabba*. Thus virtually all the weight of a human comes from the nutrients. First from the mother’s body, and once comes out the womb from the food that it consumes.

10. We can easily see the role of the *manomaya kāya* with the actions by its three components:

- *Kammaja kāya* is the most important. It is the blueprint for that existence (*bhava*). It has the blueprint of the physical body too.
- *Cittaja kāya* is what we EXPERIENCE moment-to-moment. We see, hear, smell, taste, touch, and think about concepts with thoughts: *cakkhu*, *sota*, *gandha*, *rasa*, *phoṭṭhabba*, and *mano viññāna*.
- Those thoughts NORMALLY depend on our habits (*gati*), *āsava* (cravings), and *kamma vipāka*, all in the *kammaja kāya*; see, “[What is Mind? How Do We Experience the Outside World?](#).”
- If thoughts arise ONLY DUE TO our past *kamma* and the habits and cravings acquired through them, then *kamma* would be deterministic. And we will be like robots (and that is the case for many beings, like animals). **LUCKILY, we can THINK on our own (unlike animals), and change our destinies.**

11. **That last sentence summarizes the message of the Buddha.** Do not lose this opportunity to get out of this *sansāric* suffering when we have this precious human life, which will last only about 100 years.

- Even if we are reborn human, what guarantees are there that we will get to listen or read about Buddha Dhamma?

12. If anything is “transferred” from one existence (*bhava*) to another, those would be the “*gati*” and “*āsava*” of that life-stream. But they also keep evolving. If we do not act mindfully, we let our mind to “go with the flow.” Then our actions will be determined by our *sansāric* habits. That would only further strengthen such habits. That is why it is essential to identify bad habits and get rid of them, and ALSO to cultivate good habits.

- That is the process of mind purification called [Bhāvanā \(Meditation\)](#) detailed in *Satipaṭṭhāna* (see, “[Mahā Satipaṭṭhāna Sutta](#)”), *Ānāpāna sati* (“[6. Ānāpānasati Bhāvanā \(Introduction\)](#)”). I have also written about the *Sabbāsava sutta*: “[Habits and Goals](#),” and a bit more in-depth analysis in “Key Points in the *Sabbāsava Sutta*” at the end of the post, “[The Sotāpanna Stage.](#)”

- Also, see the post, "[The Importance of Purifying the Mind.](#)"

Living Beings in Other Realms Have Different “Bodies” and Different *Manomaya Kāya*

13. The above description is valid for humans and animals. In *brahma* realms, there are only *manomaya kāya* and no physical body. There are physical bodies In deva realms, but those are much less dense than human bodies.

- In other realms, different mechanisms (mainly *opapātika* births) operate; see, "[Gandhabba – Only in Human and Animal Realms.](#)"

14. in the post, "[What Reincarnates? – Concept of a Life-stream,](#)" we mainly talked about the *cittaja kāya*, the stream of thoughts, and the physical body. We saw that, If an animal dies and is reborn a human:

- The physical body in the animal realm is very different from that in the human realm.
- The *cittaja kāya* or the stream of thoughts associated with the animal existence (*bhava*) is also very different from the *cittaja kāya* of the human existence (*bhava*). That is what is meant by "*bhava paccayā jāti*" in the *Paṭicca Samuppāda*: the birth is according to the *bhava* that latched on at the moment of death, i.e., "*upādāna paccayā bhavo*"; see, "Akusala-Mūla Paṭicca Samuppāda."

15. Thus it is clear that both the physical body and *manomaya kāya* make “quantum jumps” (large instantaneous change) when switching from one existence (say an animal) to another (say a human).

- The *kammaja kāya* has all the *kammic* potentialities (*kamma* seeds) acquired up to any given time; see, "[Saṅkhāra, Kamma, Kamma Bīja, Kamma Vipāka,](#)" and "[Sansāric Habits and Āsavas.](#)" But one of those seeds becomes operative for the “new *bhava*,” and becomes the “*bhavaṅga*” for that life. The remaining *kamma* seeds all “tag-along” in the new *bhava* and one of those will rise to the next *bhava* or existence; the same “*gati*” are in all seeds. Thus, whether an animal or a human, the new life will display somewhat similar habits (*gati*) and cravings (*āsavā*).
- That is why “no-self” was not approved or rejected by the Buddha: the new life is not the same as the old life. But it is not completely different either, because those *gati* and *āsavā* propagate (but they all keep changing too). And similarly, the Buddha neither approved or rejected the idea of a “self.”
- A living being is a “life-stream” that changes even moment-to-moment based on cause and effect: *paṭicca samuppāda*. Even though there is no “unchanging entity” such as a “soul,” the life-stream has its characteristics (*gati* and *āsavā*), which also keep evolving.

More on the *Manomaya kāya* at: "[Manomaya Kāya and Out-of-Body Experience \(OBE\).](#)"

Next, "[Ghost in the Machine – Synonym for the Manomaya Kāya?](#)",

12.5.6 Brain – Interface between Mind and Body

April 22, 2016; revised September 22, 2019

The brain is Not the Mind

1. Contrary to what scientists believe, our minds are not in the brain (**this is another prediction from Buddha Dhamma that will be proven correct in the future**).

- The “mind door” where *citta* (or thoughts) arise is at the *hadaya vatthu* is not located in our physical bodies. It is in the *manomaya kāya* of the *gandhabba*; see, "[Gandhabba \(Manomaya Kāya\)-Introduction.](#)"

- The *gandhabba* has a subtle body and it is not a “body” in the sense we usually think about. It is more like an energy field that overlaps the physical body; see, “[Ghost in the Machine – Synonym for the Manomaya Kāya?](#).”
- The *hadaya vatthu* overlaps the heart in the physical body. When we hear traumatic news, we feel burning sensation close to the heart, and not in the head. We don’t say, “Oh, my head felt like burning when I heard the news.” It is the heart area that feels it. (Head may start hurting later, if one keeps thinking about the loss).
- On the other hand, when we overuse our five physical senses or when we think hard about a difficult problem, it is the head that hurts. Because in those situations, the brain has to do a lot of processing. While watching a movie, our brains work overtime to convert those sensory inputs from the eyes (*cakkhu indriya*) and the ears (*sota indriya*). When we think about a hard problem, the *mana indriya* in the brain has to work hard; see below.

Two Overlapping “Bodies” – Physical Body and *Gandhabba* (Mental Body)

2. A physical body is a temporary shelter or “shell” for the *gandhabba* subtle body. The *gandhabba* receives sense inputs from the outside world via the physical body. See, “[Body Types in Different Realms – Importance of Manomaya Kāya.](#)”

- Since a given physical body has a lifetime of around 100 years, we have to “build a new physical body” when the current one decays and finally dies. (That is if we have extra *kammic* energy for the human *bhava*); see, “[Bhava and Jāti – States of Existence and Births Therein.](#)”

3. Before entering the mother’s womb, the *gandhabba* has a very fine “body,” more like an “energy packet.” Thus, it cannot experience taste or touch, even though some can “digest odors” and become a bit denser.

- A *gandhabba* waiting for a womb usually is about the size of the fully-grown human, but it has very little “matter” that is visible to us. At the moment of “*okkanthi*” or entering the mother’s womb, he/she will enter THROUGH the mother’s body and collapse to the size of the zygote when taking possession of it; see, “[What does Buddha Dhamma \(Buddhism\) say about Birth Control?](#).”
- Thus a *gandhabba*, when outside waiting for a suitable womb, is just like a ghost shown in the movies. Of course, a human cannot see it even using technological advances. It is much smaller in mass than the first cell formed by the union of the mother and father, the zygote.
- The physical body grows starting with that single cell (zygote) using the nutrition from the mother. After the baby is born, it grows to the full size of an adult by consuming food.
- Thus it is useful to have this visual, where a very fine *gandhabba* trapped inside physical body of over a hundred pounds controls it.

Brain – Interface Between the Physical Body and *Gandhabba*

4. Once inside a physical body, *gandhabba* has to use the physical body to interact with the outside world. It is like being trapped in a solid shell. Initially, its mind will be in the *bhavaṅga* state (see, “[Citta Vīthi – Processing of Sense Inputs](#)”) and will not be conscious about its environment, except for body sensations.

- In a human, the brain first processes the signals coming through the “physical senses” (eyes, ears, etc.). The brain transmits the information to the five *pasāda rūpa* located in the *gandhabba*. Those *pasāda rūpa* then pass that information to the *hadaya vatthu* (seat of the mind) in the *gandhabba*; see, “[Gandhabba \(Manomaya Kāya\)- Introduction.](#)”
- That is how our minds receive information from the external world.

- Now the question arises: “How do the sense inputs coming through the eyes, ears, tongue, nose, and the body, are transmitted to the *pasāda rūpa* located close to the *hadaya vatthu*?” Note that the *hadaya vatthu* overlaps the physical heart.
5. It is the brain that acts as the intermediary between those physical sense inputs and the five *pasāda rūpa*. It processes the incoming information to a form that can be understood by the mind (*hadaya vatthu*).
- First, the sense inputs coming in to the physical body through the eyes, ears, tongue, nose, and the body go to specific regions of the brain. This has been well-researched by the scientists over the past hundred years. The following figure shows the specific areas of the brain that analyze the data from the five senses.

- Science is unable to explain how the mind comprehends the corresponding signals. For example, in vision, there is no “picture” formed in the back of the head; see “On Intelligence” by Jeff Hawkins (2005) for a helpful discussion.
6. The signals for vision, sounds, smells, and taste come into the body through specific body parts. In contrast, the touch sensations can come from anywhere in the body, and conveyed via an intricate system of nerves:

- These nerve signals go to the brain for processing (see the “touch and pressure” processing area in the figure in #5 above).

***Gandhabba* (Mental Body) Overlaps the Physical Body**

7. By the way, it is essential to note that the misty *gandhabba* has a similar “nervous system” that overlaps the physical nervous system shown above. Yes, that is extremely fine, more like an “energy field.” That is not entirely relevant to the present discussion, but physical body is there to impart *kamma vipāka* via body aches, diseases, and injuries.

- The physical nervous system has to align with the nervous system of the *gandhabba*. That alignment could change (due to *kamma vipāka*), which makes our body’s nervous system to go out-of-alignment for proper body function leading to aches and pains. See, #6 of “[11. Magga Phala and Ariya Jhānā via Cultivation of Saptha Bojjanga.](#)”

8. The signals from the other four senses go to specific brain areas (indicated in the figure in #5 above) via specialized neural pathways. For example, the optical nerve carries the visual signals to the brain:

- Once the brain processes those sensory inputs from the five physical senses, they are “transmitted” to the corresponding five *pasāda rūpa* in the *gandhabba* (*manomaya kāya*). See below.

Mana Indriya in the Brain

9. So far, we have identified five of *gandhabba*'s “windows to the outside world” from his/her “shell” or the physical body: eyes, ears, nose, tongue, and the body.

- What about the “*dhamma*” that are the finest *rūpa* (these are called *mano rūpa*) that interact with the physical body? That is how we think about “random things” out of the blue. For example, we may be washing dishes in the kitchen, and all of a sudden, thoughts about a friend or a relative may come to the mind.
- Thoughts about a friend — who may be thousand miles away — comes through the *mana indriya* in the head (inside the brain). Of course, science is not aware of that.
- We discussed this in a previous post: “[What are Dhamma? – A Deeper Analysis.](#)”

10. So, how do the signals processed in the brain due to incoming vision, sound, smell, taste, touch, and *dhamma* are passed to the five *pasāda rūpa* and the *hadaya vatthu*? Detail in “[Gandhabba \(Manomaya Kāya\)- Introduction.](#)”

- It is well-known that there are electromagnetic brain waves of different types (alpha, beta, theta, and gamma). I will write a post on this in the future. These waves are called “*kirana*” in the *Tiṭṭaka*.

The Origin of *Citta Vīthi*

11. When information comes to one of the five *pasāda rūpa*, it passes on that signal to the *hadaya vatthu* by impinging (hitting) the *hadaya vatthu*. That results in the *hadaya vatthu* vibrating 17 times, just like a clamped blade vibrates a certain number of times when hit by an object; see, “[Gandhabba \(Manomaya Kāya\) – Introduction](#)” and “[Citta Vīthi – Processing of Sense Inputs.](#)”

- That is the origin of a *citta vīthi* of 17 *citta*. Each *citta* in a *citta vīthi* corresponds to a single vibration of *hadaya vatthu*. This 17 thought-moment time period is the lifetime of a *hadaya rūpa* (vibrational energy) of the *hadaya vatthu*.
- It is a common mistake to take this to mean that **any *rūpa*** has a lifetime of 17 thought moments. **That is a terrible mistake**; see, “[Does any Object \(Rūpa\) Last only 17 Thought Moments?.](#)”
- It is not possible to describe these details in one or even several posts. One may need to look through other posts to clarify some concepts. The “Search” button on the top right is an excellent resource for this task.

12. Any of the five *pasāda rūpa* has to strike the *hadaya vatthu* to pass on its signal. However, signals from the *mana indriya* can exchange information with the *hadaya vatthu* directly.

- When the *mana indriya* interacts with the *hadaya vatthu*, that also results in *citta vīthi*. Such *manodvāra citta vīthi* do not have a fixed length.

- Still, only one of the six sense-signal can be in contact with the *hadaya vatthu* at a given time. But since the process is swift, billions of *citta vīthi* can run through the *hadaya vatthu* “in the blink of an eye”.

Two Inter-Dependent “Bodies”

13. Therefore, this whole process involves interaction between two overlapping systems. The physical body and the corresponding subtle “energy body” of the *gandhabba*.

- When the *gandhabba* escapes from the body under stressful situations, it can float above the physical body, and physical body. Then the physical body becomes inert until the *gandhabba* returns to it; see, [“Manomaya Kāya and Out-of-Body Experience \(OBE\).”](#)

14. Thus it is clear that the brain plays a significant role in shaping our future. Similarly, the five physical senses play vital roles too.

- If one of the five physical senses are damaged, we lose the corresponding “window to the external world”. We will not be able to see if both eyes are damaged. If the sensors inside the ears go bad, we will not be able to hear, etc.
- But the most critical is, of course, the brain. If the brain is damaged, sensory signals cannot be processed, and we will not be able to interact with the external world. Thus, being brain dead is virtually equivalent to being dead.
- However, if one’s brain becomes damaged due to an accident, for example, it will not affect the *gandhabba* inside. It is just that the *gandhabba* will not be able to communicate with the external world. And if damage to the brain results in the death of the physical body, the *gandhabba* will just come out of the dead body and will wait for a suitable womb.

Next Existence Determined by *Gati* and *Kamma Vipāka*

15. It does not matter whether one gets killed due to an accident or dies due to an illness or old age. The *gandhabba*’s future is determined by his/her *gati* (or *gathi*), past *kamma* (*kamma bija*), etc.

- If the physical body dies in an accident, the *gandhabba* will immediately come out of the dead body. Then it will wait for a suitable womb if there is still more *kammic* energy left for the human *bhava* (in an accident, that is likely).
- But if one gets to old age and dies or dies due to illness — and if one has exhausted *kammic* energy for the human *bhava* — then the *cuti-paṭisandhi* will happen at that time. If one is to become a *deva*, a *deva* will appear instantaneously in the corresponding *deva* world. If one is to become an animal, an animal *gandhabba* will emerge from the dead body and will have to wait for a suitable womb to become available.

16. It is also clear why we need to take good care of the body, our sense faculties, and of course, our brains. *Gandhabba*’s (our) ability to make decisions depends on all those faculties working in optimum condition.

- We have a short lifetime of around 100 years to get rid of our defiled (immoral) *gati*. We also need to cultivate good (moral) *gati*, and comprehend the real nature of this world (*anicca, dukkha, anatta*), and be free from future suffering.
- We need to try to get to the *Sotāpanna* stage of *Nibbāna* and be free from the four lowest realms (*apāyā*). At least, we must make progress towards that goal so that in a future life, we will have a *tīhetuka* birth that makes it easier to attain *Nibbāna*.
- To accomplish those things, we need to eat well, exercise well, and take care of our bodies to perform optimally. It is also necessary to stay away from drugs and alcohol. And to associate with those who have similar goals (and stay away from those with bad habits).

12.5.7 Out-of-Body Experience (OBE) and Manomaya Kāya

Re-written October 24, 2019; revised January 30, 2020

Two Types of Bodies – Physical Body and *Manomaya Kāya*

1. We humans have two “bodies.” *Manomaya kāya* is the “mental body” (with a trace of matter) born at the beginning of the human existence or human *bhava*. That *manomaya kāya* is pulled into a womb when a “matching womb” becomes available, and that is the start of a “physical body.” Within a human *bhava*, there can be many “human births (*jāti*)” with different “physical bodies.” See, [“*Bhava and Jāti – States of Existence and Births Therein*.”](#)

- More details on the two types of “bodies” at [“*Manomaya Kāya \(gandhabba\) and the Physical Body*.”](#)

2. One could visualize the *manomaya kāya* or the “mental body” as an “energy field” (it has some fine *rūpa* too) overlapping the solid physical body. All vital functions happen in the mental-body. Thoughts generate in the seat of the mind (*hadaya vatthu*). There are five *pasāda rūpa* (*cakkhu, sota, ghāna, jivhā, kāya*) around the *hadaya vatthu* responsible for detecting sights, sounds, smell, taste, and touch.

- That *manomaya kāya* can leave the solid physical body under some conditions. Those who have cultivated supernormal powers (*iddhi*) can willfully come out of the physical body. During heart operations, *manomaya kāya* of some patients come out, as discussed below. In both cases, *manomaya kāya* can see and hear without the aid of physical eyes and ears.
- That is hard to visualize for us. But as you read more posts on the *manomaya kāya*, you will see that it makes perfect sense.
- We experience the world with the “mental body” or the *manomaya kāya* (also called a *gandhabba*.) This is explained in, [“*Ghost 1990 Movie – Good Depiction of Gandhabba Concept*.”](#)

When Inside the Physical Body *Manomaya Kāya* Depends on the Physical Body

3. When the *manomaya kāya* is attached to the physical body, the *hadaya vatthu* needs the help of the physical body to see, hear, smell, taste, feel the touch, and to recall memories. One can think of the *manomaya kāya* as being “trapped inside” the physical body. Physical eyes need to capture images of external objects, ears need to capture sounds, nose helps smelling, tongue helps to taste, and the physical body with the nervous system helps to feel touch.

- The brain analyzes all those “signals” and transmits to the five *pasāda rūpa* located in the *manomaya kāya* around the *hadaya vatthu*.
- The brain is a part of the physical body and is the interface between the physical body and the mental body (*manomaya kāya*).

4. The seat of the mind (*hadaya vatthu*) and the five “internal senses” (*pasāda rūpa*) are born with the *manomaya kāya* at the time of human *bhava* (*paṭisandhi*). All these are very fine *rūpa* that our eyes cannot see. Thus one can visualize the *manomaya kāya* as an “energy field” that overlaps the physical body and provides vitality to the inert physical body.

- The Buddha compared the situation of a *manomaya kāya* separating from the physical body to a sword pulled out of its sheath, or a snake shedding its skin. Once the *manomaya kāya* comes out, the body is like an inert log. And that is precisely what happens when one dies. The vitality is gone the instant the *manomaya kāya* comes out.

Manomaya Kāya of a Human (or an Animal) is “*Gandhabba*”

5. When a person dies, if he/she has more *kammic* energy left in the human “*bhava*,” then the *manomaya kāya* comes out of the dead body. Then it will wait until another suitable womb becomes available. The *manomaya kāya* still in the human *bhava*, but we cannot see it. It is in “*paraloka*” or the “netherworld.”

- While waiting in the *paraloka*, they could inhale aroma (*gandha*) from plants and food and get a bit denser. Thus the name “*gandhabba*” (“*gandha*” + “*abba*” where “*abba*” means “taking in”).
- That is why the *manomaya kāya* of a human (or an animal) is called “*gandhabba*.” For more details, see “[Clarification of “Mental Body” and “Physical Body” – Different Types of “Kāya.”](#)”
- This *gandhabba* may stay in that form for even years until pulled into a suitable womb with matching “*gati*.”

6. The *gandhabba* also can see and hear, actually with much more flexibility. The capabilities of the physical eye and physical ear are much limited.

- Of course, a *gandhabba* cannot smell, taste, or touch because its body is too subtle (it is more like an energy field), and thus, cannot make physical contacts.
- When the *manomaya kāya* is separated from the physical body, it can see and hear without eyes and ears. “Seeing” does not need light (one could look at things far away), and “hearing” does not need air as a medium for the sound to propagate (one could hear sounds from far away). Both mechanisms involve “*kirana*” (or “rays” in English, similar to electromagnetic radiation).
- Furthermore, the *gandhabba* can “travel” very fast; it is not physical travel. For example, the *suttā* talk about the Buddha or *Arahants* with *iddhi* powers traveling to *deva loka* in a time comparable to the time taken to “stretch a bent arm.”

***Gandhabba* Inside the Physical Body**

7. When the *manomaya kāya* (*gandhabba*) merges with the physical body, “seeing” and “hearing” happens with the help of the physical eye and the physical ear. It is like being inside a military tank. One needs to use the sensors mounted on the tank to see and hear what is going on outside.

- Now, “seeing” happens with the help of the physical eye. The physical eye is like a camera that takes a picture. The brain processes that image and sends it to the *cakkhu pasāda rūpa* in the *manomaya kāya*. Same with the ear. Thus, eyes and ears can be thought of as those sensors mounted on that military tank.
- Therefore, the ability to see and hear also degrade with old age, as the physical eyes and physical ears age.
- The brain is like the computer in that tank that processes the information coming in through the sensors.
- Therefore, if there is damage to any of these three “physical instruments” (brain, eyes, ears), the ability to think, see, or hear can be degraded or lost. See “[Our Mental Body – Gandhabba](#)” and “[Brain – Interface between Mind and Body.](#)”

8. However, actual “seeing” and “hearing” still happen at the two *pasāda rūpa* (internal eye and internal ear) associated with the *manomaya kāya*.

- For example, have you ever wondered how we could judge the distances as we move around, avoiding bumping into things and each other? The physical eye cannot “judge distances”; see, “The Sense of Being Stared At” by Rupert Sheldrake (2003, p.12). Our eyes can see many things at the same time and judge relative distances of all things. This ability is in the *pasāda rūpa*, and not in the eyes or the brain.

Out-of-Body Experiences (OBE)

9. The *hadaya vatthu* of the *manomaya kāya* (*gandhabba*) overlaps the physical heart when the two bodies are together. However, in some situations, the *manomaya kāya* can separate from the physical body. That leads to “out-of-body experience (OBE).”

- In his book, “Travels,” the famous author of the Jurassic Park, Michael Crichton (1988, p. 307) mentions his ability to “shift my awareness out of my body and move it around the bedroom,” and he says, “.I didn’t think anything about it... I assumed that anybody could do it.. .”
- A similar account has been given by a woman recently who also thought that “everybody could do it”: [ABCNEWS: Woman Has ‘Out of Body’ Experiences Whenever She Wants](#)
- A series of books, including “Journeys of the Body,” has been written by Robert A. Monroe based on his experiences.

Near-Death Experiences (NDE)

10. Only a few people have the ability to experience OBE at will. Typically, OBE happens under stressful conditions, most commonly during heart operations. These have a special name of near-death experiences (NDE.) The following video provides a good summary:

[WebLink: youtube: Near Death Experiences & Evidence of the Afterlife](#)

- Of course, there are many books on NDE. “Consciousness Beyond Life” by Pim van Lommel (2010) gives detailed accounts of case studies of NDE experienced by people undergoing heart operations.
- A recent book, “Dying to be me: My Journey from Cancer, to Near Death, to True Healing,” by Anita Moorjani (2012), describes the NDE experience of her in detail.

Our Thoughts Do Not Arise in the Brain and We Do Not See With Our Eyes

11. The mind-door is the *hadaya vatthu* in the *gandhabba* or the *manomaya kāya*. Thoughts arise in the *hadaya vatthu* in the *gandhabba*, even when the *gandhabba* is INSIDE a physical human body. See, [“Gandhabba Sensing the World – With and Without a Physical Body.”](#)

- “Seeing” happens in the *cakkhu pasāda rūpa* in the *gandhabba*. When outside a human body, that *cakkhu pasāda* can see by itself.
- When inside a human body, that *cakkhu pasāda* is shielded by the body. In that case, the visual signal needs to come through the eyes, processed by the brain, and that signal is transmitted to the *cakkhu pasāda rūpa*.
- In some cases, people are born with the *cakkhu pasāda rūpa*, but the optic nerve (or the physical eye itself) may be damaged. In that case, they cannot see because the brain is not getting a signal from the eyes. But if the *gandhabba* can come out of the body, it can see by itself. The following video clearly illustrates this situation.

[WebLink: youtube: Near Death Experience - Blind woman ‘sees’ while out of body](#)

- However, in other cases, one may be born blind because one may not have the *cakkhu pasāda rūpa*. In that case, even if the *gandhabba* comes out of the body, it would not be able to see.
- All five sensory faculties are in the *gandhabba* or the *manomaya kāya*. Those signals are first processed by the brain before the signals arrive at the corresponding *pasāda rūpa*. Then that *pasāda rūpa* transfers the signal to the *hadaya vatthu* and it is the *hadaya vatthu* that really “sees”, “hears”, etc.

More information at, [“Mental Body – Gandhabba”](#) and [“Gandhabba \(Manomaya Kāya\).”](#)

A new series of posts discusses life in great detail. [“Origin of Life.”](#)

12.5.8 Cuti-Patisandhi – An Abhidhamma Description

1. Many people believe that *paṭisandhi* or the linking to a new life happens in a womb (in human and animal realms). But that is not correct. *Patisandhi citta* is experienced in the next very *citta* after the *cuti citta* of the old life in the last *citta vīthi* of the dying person.

- The new life form (*gandhabba*) emerges from the dead body right after the last *citta vīthi* (However, if the next life is an *opapatika* one, the life form is fully formed right after the last *citta vīthi*). This is also called the *gandhabba* state. Here we will discuss the case where the new life is either human or animal and thus a *gandhabba* is formed; see, “[Manomaya Kāya and Physical Body](#)” and “[Ghost in the Machine – Synonym for the Manomaya Kāya?](#).”

2. *Patisandhi* (“*patī*” is bond and “*sandhī*” is joining in Pāli or Sinhala, thus *paṭisandhi* means joining a new life at the end of the old) happens in a thought moment in the body of the dying person; if the next life is human or animal, then the *gandhabba* for that life comes out of that body at the end of that last *citta vīthi*. Of course the *gandhabba* has a very fine body, and it can be seen only by a person with *abhiññā* powers. let us discuss this step carefully.

- I must warn in advance that this analysis is highly technical, and is suitable only for those who are familiar with *citta vīthi* processes in *Abhidhamma*. **However, the conclusions are informative, so you may want to go through it.** *Citta vīthi* and *cetasika* are discussed in several posts in [Citta and Cetasika](#).

3. The last *citta vīthi* of the old life with 17 *citta* run in the standard way: *atīta bhavaṅga*, *bhavaṅga calana*, *bhavaṅga upacceda*, *pancadvara vajjana*, *cakkhu viññāṇa*, *sampaticcana*, *santirana*, *vottapana*, and then *javana* sequence (7 *javana citta*) starts. **After the fifth *javana citta*, there are two more *javana citta* left. The sixth is the *cuti citta* and the seventh and last *javana* is the *paṭisandhi citta*.**

- In the last *citta vīthi*, a previous *kamma vipāka* provides an *arammana* (thought object) associated with that *kamma vipāka* through one of the five sense doors: it is normally a visual or a sound associated with the new existence (*bhava*). Even though the person’s physical faculties may be very weak, the person will see or hear very clearly whatever the *nimitta* presented by the *kamma vipāka*. Then at the *vottapana citta*, the mind makes a decision to act on that *arammana* based on the person’s *gathi*. The person has no control of it. It is called, “*kammaja pure jatha; cittaja pacce jatha*”, i.e., *kamma vipāka* comes first, and then accordingly the *javana citta* flow grasping that new *bhava*:

“*kamma vipāka vajjanti, vipako kamma sambhavo*

Tasma punabbhovo hoti, evan loko pavattati”

Or,

“*kamma vipāka* presents a new existence, the ignorant being grasps that existence

Thus the cycle of rebirths repeats, and that is how the world exists”

4. First there is the *vipāka citta*; then it induces *kamma sambhava*. “*Vipako kamma sambhavo*” is initiated at the *vottapana citta*. The *vottapana citta* decides how to proceed with the *arammana* (object) that came from the *kamma vipāka*, and the being normally gets attached to that object via greed/hate and grasps a new existence in the *javana citta* that follow. Thus “*vipako kamma sambhavo*” starts with the first *javana citta*. After 5 *javana citta* *kammic* energy is optimized, with each subsequent *javana* strengthening via *asevana paccayā* from the previous *javana*. The sixth one is called *cuti citta*, and the next *citta* grasps the new *bhava*.

- *Cuti citta* happens in the last *citta vīthi* just after the actual *cuti* (death), because it is *pacce jata* to *kammaja cuti* event. The seventh *javana* always is responsible for the next life.

- Now this linking to the next life happens at the 7th javana citta or the paṭisandhi citta, which is again *pacce jatha* to the actual *kammaja paṭisandhi* that starts at the *pancdvaravajjana citta* in this last *citta vīthi*.

5. Now let us take a look at the last *citta vīthi* of the old life in detail. This *citta vīthi* was started by the last bit of *kammic* energy from the old life, and it will run its course of 17 *citta* before it comes to an end. It is like throwing a stone; even though the energy was fully spent by the time the stone was released, the stone will be travelling until its energy is all spent. In the same way, *even though the kammic energy for the old life has ended, the last citta vīthi will run its course of 17 citta including the last two bhavaṅga citta after the 7 javana citta.*

- *Cuti* or death is not a *citta*; it is the end of the *kammic* energy of the old life. *Cuti* happens just at the moment of initiating the last *citta vīthi*, and the *cuti citta* is in the last *citta vīthi*. *Paṭisandhi* is not a *citta* either. It is also *kammaja* act.
- Here the old *bhavaṅga* has ended too; but there are two *bhavaṅga citta* left in the last *citta vīthi*. The new *vatthu rūpa* cannot be formed until this last *citta vīthi* is done with, because as soon as one is formed, it will start its *citta vīthi*, and no two *vīthi* can be there at the same time.

6. In that last *citta vīthi*, by the time *atita bhavaṅga*, *bhavaṅga calana*, and comes to *bhavaṅga upacceda*, the *kammic vipāka* from the old life are finished. Now what comes to the *pancdvara* is the *kamma nimitta*, *asanna kamma*, or a *gathi nimitta*; **it is the vipāka citta that powers the new life:** “*kamma vipāka vajjanti*”. It is received by the *sampaticcana*, *santirana citta* and then “*vipāka kamma sambhavo*” happens at the *vottapana citta*, i.e., a decision is made on what to do and this decision depends on the level of *avijjā* (in the form of one's *gathi* and *āsavas*).

- This “*vipāka kamma sambhavo*” starts with the first *javana citta* and builds up gradually up to the fifth *javana citta*. Now the sixth *javana*, *cuti citta*, had been determined from the beginning of the *citta vīthi*. The new *kamma bīja* starts working at the seventh *javana* in the new *bhava*.

7. When this last *citta vīthi* ends, the old *hadaya vatthu* is dead too; it had exhausted all its *kammic* power. The next *citta vīthi* starts with a new *hadaya vatthu* in the new life that is powered by a new *kamma bīja*. The new *hadaya vatthu* is formed by the new *kamma* seed that was grasped at the 7th *javana* (the *paṭisandhi citta*), and immediately the first *citta vīthi* for the new life starts. The *gandhabba* is formed and comes out of the dead body.

- If a human died and the next life is an animal, the *gandhabba* with the corresponding animal figure comes out fully formed (of course it is very fine); **It is the blueprint for the new physical body.**
- This *gandhabba* now has to wait for a suitable womb. It is not that *gandhabba* decides which womb is good; rather, when a womb that matches the *gathi* of the *gandhabba* becomes available, *gandhabba* will be pulled into it by the *kammic* energy.
- When a sperm fertilizes an egg in a womb, a single cell called a zygote results. But there is no life there until the *gandhabba* enters the womb and is incorporated with that zygote. Now the zygote becomes an embryo, then a fetus, and once out of the womb grows to a full-size human or an animal according to that blueprint.
- **Science has been unable to explain how all the complex body parts of a human or animal develops starting from a single cell.** This is how it happens. The blueprint for all the complex body parts is in the *gandhabba*, not in that single cell; see, “[What does Buddha Dhamma \(Buddhism\) say about Birth Control?](#).”

12.6 Why Do People Enjoy Immoral Deeds? – *Diṭṭhi* Is Key

1. Most of us feel uncomfortable when we do something immoral or unethical. For example, I remember how my heart rate went up when I stole a cookie or a candy when I was little. We all know how the heart rate goes up and the whole body gets tense when we get angry. Those are definitely not enjoyable moments.

- Therefore, immoral deeds normally make one uncomfortable and even feel like one is “on fire” in extreme cases. This is called “*tāpa*” (“burning”) in Pāli or Sinhala. In the *Satipaṭṭhāna sutta*, “*atāpi sampajāno*” means having a mindset to avoid such deeds; see, “[Satipaṭṭhāna Sutta – Structure](#).”
- When one stay away from bad deeds, the heart “cools down”; this is *Nibbāna* or “*nivana*” or “*niveema*” (“cooling down”).

2. When a thought comes to our mind (mostly triggered by seeing, hearing something related), the decision to act on it may come automatically based our “*gathi*.” If an “enemy” comes into our view when we are walking down the road, thoughts of anger may arise immediately leading to a “fire” in the heart, depending on how “bad” we perceive that person to be. Here the *cetasika* “*dosa*” dominates our thoughts. Such thoughts that come automatically to one’s mind are due to one “*gati*” and are the strongest; sometimes they are labelled as “*asankharika*” *citta*.

- Other times, one may hesitate to do an immoral act, but after deliberation or due to encouragement by others may go ahead and do it; such thoughts are called “*sasankharika*” *citta*.
- When I was thinking about stealing cookies as a child, if I did it with a prompting by a sibling, or I myself did it after not been able to overcome the greed, that would have been a “*sasankharika citta*.”
- In another example, the stronger version of “*lobha*” may be in our minds when we compete for something valuable. Here the desire is not only to acquire it, but we also do not want others to have it. Here the “fire” in the heart is more noticeable compared to the above case of desiring a cookie, which comes under “*rāga*” category.
- So, there are many shades of strength for both good and bad thoughts.
- Even if we do some of these “bad deeds” once in a while, we feel that it is wrong to do them. The stronger the bad deed, the stronger that we “feel” them.

3. However, some people seem to enjoy doing bad deeds. We have heard about people who got tens or hundreds or stab wounds when they died in knife attacks. The person who did the stabbing seem to have been enjoying it; killing of a person does not need that many stabbings. This is a rare event that we all agree is disgusting; we are horrified by the mere thought of it.

- But there are milder versions that seem “normal” to more of us.
- Some people get enjoyment watching other people suffer, say when engaged in a fight. We have seen pictures of people kicking the opponent while the opponent was down on the ground, even unconscious. This is of more common occurrence in torturing animals. Many people enjoy watching “cock fights”.
- In the even more common occurrence of fishing, most people do not “see” the suffering of a fish as it is writhing in agony hanging by the hook, or convulsing while fighting for “water to breath”. These are not immoral people, but their perception about animals has been cultivated to the point that they do not see animals as living beings.

4. *Diṭṭhi* or “wrong vision” play a key role in generating feelings and desires. If we have been taught that killing animals is not an immoral thing to do, then we do not feel uncomfortable doing such an act. People enjoy fishing or hunting because they do not perceive killing fish or deer as an immoral thing to do.

- Instead of getting a “fire” in the heart, they feel a joy while fishing or hunting.
- And this is not restricted to any particular religion. I know many “Buddhists” who enjoy fishing and hunting. On the other hand, most “Buddhists” consider drinking to be immoral, even though “drinking”

per se is not one of the *dasa akusala* (of course excessive drinking can induce one to do immoral things). It just depends on what “*diṭṭhi*” one has.

- In parts of India, some people believe that washing in a particular river will help “wash away” bad merits. But then the fish in that river should be completely devoid of any bad merits, since they live their whole lives in water. Even such “apparently harmless” wrong visions still cover the mind, and prevent the mind from seeing the reality.
- The problem is that most such *diṭṭhi* propagate from generation to generation without people actually examining the sense of such beliefs.

5. *Diṭṭhi* is one of the key immoral *cetasika* (mental factors), and the opposite *sammā diṭṭhi* or *paññā* (wisdom) is of course a “moral *cetasika*.”

- A key point about *cetasika* is that moral and immoral *cetasika* DO NOT arise together in a *citta*. A thought is either moral OR immoral. A moral thought has one or more of “moral *cetasika*” such as *alobha*, *adosa*, compassion, etc. and an immoral thought has one or more of immoral *cetasika* such as *lobha*, *dosa*, shamelessness, fearlessness of wrong, etc.

6. The *cetasika* “*pīṭi*” (pronounced “peethi” or “preethi”) which means “joy” is one that can be associated with either a *kusala* or *akusala* thought. The same thing is true for the *cetasikas* *vīmaṃsā* (liking) and *virīya* (effort). **These three *cetasika* are included in the six types of *cetasika* called “particulars” that can be in either type of thought, *kusala* or *akusala*; see, “[Cetasika \(Mental Factors\)](#).”**

- Thus if one does not believe that killing fish or other animals is immoral and can lead to bad results in future lives, then a person with that *diṭṭhi* can enjoy fishing/hunting (*pīṭi*), can form a liking for it (*chanda*), and enthusiastically make preparations for fishing/hunting trips (*virīya*).
- On the other hand, someone with *sammā diṭṭhi* will definitely feel at least uncomfortable in doing such an act, will not like it, and will not strive to do such acts. He/she will gain joy by doing things with thoughts that have only moral *cetasika*, and also may have *chanda* and *virīya* associated with such activities.

7. Thus there are many types of “*micchā diṭṭhi*” that tend to make people comfortable with immoral acts.

- It must be noted that the word “*diṭṭhi*” is used in Buddha Dhamma to specifically denote *micchā diṭṭhi* or “wrong vision”. The opposite is *sammā diṭṭhi* or *paññā* (wisdom).
- Some people do not have a problem with killing other human beings if those are presumed to be “non-believers”. They have been taught all their lives that it is “good thing to do” and will pave the way to heaven.
- It is amazing how one’s mind can be made to accept certain activities as “acceptable” by conditioning over time, especially if started at young age. This is also called “brain washing”. This is why *diṭṭhi* are very difficult to break. Yet, with a determined mindset, one can break *diṭṭhi*.
- The key is to critically evaluate both sides of the particular issue at hand. Does it make sense to say one can go to heaven by killing people? Other than someone’s promise, is there any truth to that statement? Is there a doctrine that EXPLAINS HOW “killing unbelievers can pave the way to heaven?”
- The key problem is that human mind likes to “take the easy way”. It is easier to try to justify one’s vision or position rather than trying to spend time looking deeper into the issue to make an informed decision. But one needs to think about the consequences that can last for unimaginably long times.

8. Some people just enjoy killing other people; serial killers are a good example. Such people have extreme version of the *moha cetasika*; they are totally and completely morally blind.

- While most of us cannot even fathom, “how can such a person go to sleep at night?” after killing another person for fun, they actually sleep well with a content (but perverse) mind.
- People like Pol Pot and Hitler planned systematic killing of millions of people for many years. In their “*diṭṭhi*” that was the right thing to do, and many others started believing in that “*diṭṭhi*” too.

9. This is why getting rid of “*diṭṭhī*” and embracing *sammā diṭṭhi* is the first step in the mundane Eightfold Path first and then in *lokuttara* Eightfold Path; see, “[What is Unique in Buddha Dhamma?](#).”

- Having wrong kinds of vision (*diṭṭhi*) can be very dangerous, since one may not even realize that one is doing immoral things because of that *diṭṭhi*. Such *diṭṭhis* can only be removed via learning Dhamma. One becomes a *Sotāpanna* just by eliminating such wrong visions and perceptions. The three *saṃyojana* (or *saṃyojana*) that are removed at the *Sotāpanna* stage (*sathkāya diṭṭhi*, *vicikicchā*, *sīlabbata parāmāsa*) all arise due to *micchā diṭṭhi*.

10. **When we analyze at the *akusala citta* we can see why.** All immoral acts are done with just 12 types of *akusala citta*: eight based on *lobha* (greed), two based on *paṭigha* (dislike), and two based on *moha* (ignorance).

- All “*apāyagāmi*” deeds (those acts responsible for rebirth in the four lowest realms or *apāyā*) are done with the first four *lobha citta* and the *vicikicchā citta*; see, “[Akusala Citta and Akusala Vipāka Citta.](#)”
- Those first four *akusala citta* are “*diṭṭhi sampayutta*” or “done with wrong views”. The *cetasika vicikicchā* also arises due to not knowing the true nature of the world, i.e., *anicca*, *dukkha*, *anatta*. Thus all five *akusala citta* that are removed at the *Sotāpanna* stage arise due to *micchā diṭṭhi*, wrong visions about the world.

11. **If one believes one is not doing an immoral act while doing that immoral act**, then he/she is likely to do it with *pīti*, *chanda*, and *virīya*., i.e., with joy, liking, and makes effort joyfully to get it done.

- Of course ignorance of law is not an excuse, as stated in the latin phrase, *Ignorantia juris non excusat*. It holds true for the natural laws stated in Buddha Dhamma as well.
- Even worse, according to Buddha Dhamma, immoral acts done with joy are the worst. That is why out of those first four *lobha citta*, those two done with joy are the absolutely worst: the “*somanassa saḥagata diṭṭhi sampayutta citta*” and the “*somanassa saḥagata diṭṭhi sampayutta sasankharika citta.*”
- In English, these mean, “**act done with joy and wrong vision** due to *gati*” and “**act done with joy and wrong vision** prompted by other factors”. The first is the worst since it comes automatically; the second *citta* arises after some deliberation, and thus has less potency, or *javana*.

12. Therefore, now we can see why some people do immoral acts with joy and make them even worse; **they simply have wrong world views or *diṭṭhi***. This is why learning Dhamma is so important.

- As the Buddha said, “My Dhamma has never been known to the world before”. So, none of us will know **precisely** what is moral or immoral, without hearing or reading about them.
- However, as humans we have the innate sense of knowing roughly what is moral/immoral. These come from our previous lives. **But depending on the environment that we grew up, we may have acquired certain “wrong visions” or “*micchā diṭṭhi*” or “*diṭṭhi*.”**
- This is why teaching children to be moral and making sure they associate with only “good friends” is critical. Those habits learned at young age can last a lifetime unless changed via a determined effort.
- And since one person’s *diṭṭhi* is different from another’s, it is absolutely critical to spend time and verify which *diṭṭhis* are the wrong to be adhered to in the long term. Many people do not believe in rebirth, but according to Buddha that is a *micchā diṭṭhi* that can lead to the adverse outcomes in the future. One needs to examine the evidence and decide for oneself. In addition to looking at , “[Evidence for Rebirth.](#)” one should also examine, “[Complexity of Life and the Way to Seek “Good Rebirths”.](#)”

13. Finally, the reverse is true too: Those *moral* acts that are done with joy and knowledge (wisdom) or “correct views” (*sammā diṭṭhi*) will lead to *vipāka* or outcomes with highest merits.

- Getting rid of wrong views is acquiring correct views or cultivating *sammā diṭṭhi*. The more one becomes knowledgeable in what is moral and what is not, one easily BECOMES joyful while doing

moral deeds; joy and wisdom feed on each other. Of course, *chanda* and *viriya* will grow simultaneously too.

- Thus the “*somanassa sahaḡata ñāḡa sampayutta citta*” or the “**thought with joy and wisdom** that comes out automatically” is the strongest *moral citta* (or *sobhana citta*). The next highest is the “*somanassa sahaḡata ñāḡa sampayutta sasankharika citta*” or the “**thought with joy and wisdom** prompted by other factors”.
- Here, wisdom starts at the mundane *sammā diṭṭhi* level, increases as one embarks on the *Sotāpanna magga*, then *Sotāpanna phala*, and so on until becoming “fully enlightened” at the *Arahant* stage; see, “[Buddha Dhamma – In a Chart](#).”
- The power or *javana* of a *kusala citta* is enhanced with enhanced wisdom. Thus the power of a *citta* of an *Arahant* is much stronger compared to that of a *Sotāpanna*, and that of a *Sotāpanna* is much stronger compared to a normal person.
- Of course the *javana* of a *citta* with strong ignorance (*moha*) is strong too, and thus makes the deed even more potent and will bring about unbearably bad outcomes (*vipāka*).

14. Even though many people perceive Abhidhamma to be complex, if started with good basics, Abhidhamma helps clarify many complex issues very clearly. Learning about types of *citta* and how different *cetasika* play roles in one's habits (“*gati*”) will help clarify many issues.

Next, “[Javana of a Citta – The Root of Mental Power](#)”,

12.7 Key to Sotāpanna Stage – Diṭṭhi and Vicikicchā

1. The attainment of the *Sotāpanna* stage accomplishes the first and foremost goal of a *Bhauddhayā*: to remove the possibility of rebirth in the lowest four realms, where suffering is unbearable.

- Even though I have analyzed different ways one can comprehend the “requirements” to be fulfilled to attain the *Sotāpanna* stage (they are all equivalent), one way to easily remember those requirements is to realize that a *Sotāpanna* has REMOVED two key immoral *cetasika*: *diṭṭhi* and *vicikicchā*.
- See, “[Cetasika \(Mental Factors\)](#)” and “[Diṭṭhi \(Wrong Views\), Sammā Diṭṭhi \(Good/Correct Views\)](#)” for introductions to the types of *cetasika* or “mental factors” that highlight one’s “*gathi*” in one’s thoughts.

2. *Cetasika* are inter-related. A good example is *dosa* (strong hate), which arises as a result of *lobha* (strong greed); actually *lobha* TURNS to *dosa*, **they do not arise together**. When someone kills another human, that is due to *dosa*; at the moment of the killing, only *dosa* was in that person’s mind. But that *dosa* likely arose due to *lobha*, strong attachment to something at an earlier time.

- And *lobha* is strong when *diṭṭhi* is strong. In the above example, one would not have formed such strong *lobha* if one did not have *diṭṭhi*, and instead would have cultivated the moral *cetasika*, *sammā diṭṭhi*, to some extent (i.e., if one knew the consequences of such a strong attachment that can lead to hate and then killing). **Thus when *diṭṭhi* is removed, *lobha* gets to weaker strength of *rāga* (attachment to sense pleasures).**
- **Removal of *diṭṭhi* also leads to the reduction of *dosa* (strong hate) to *paṭigha* (tendency to get angry or irritable).**
- *Vicikicchā* is related to *moha*; **when *vicikicchā* is removed, *moha* (morally blind) is reduced to *avijjā* (ignorance of *anicca*, *dukkha*, *anatta*) level.** As discussed in another post, *vicikicchā* is the tendency to do unfruitful and harmful things because of a “covered mind”, i.e., not knowing the true nature.
- Those two points are stated in another way by saying that the four “*diṭṭhi saḥagatha lobha citta*” and the “*vicikicchā citta*” are removed at the *Sotāpanna* stage (thus 5 of the 12 akusala citta are removed at the *Sotāpanna* stage). This was discussed in the post, “[Why Do People Enjoy Immoral Deeds? – Diṭṭhi Is Key.](#)”

3. In other posts I have discussed how one’s “*gathi*” are intimately linked to the kinds of *cetasika* that dominate in one’s mind. The “*apāyagāmī gathi*” or those habits or tendencies of a person that makes the person eligible to born in the *apāyā* (the lowest four realms) are mainly in several key immoral *cetasika*: *lobha*, *dosa*, *diṭṭhi*, *moha*, and *vicikicchā*.

- At the *Sotāpanna* stage, the *cetasika* of *diṭṭhi* and *vicikicchā* are REMOVED; then *lobha* is reduced to *rāga* (which can be separated out as *kāma rāga*, *rūpa rāga*, *arūpa rāga*); *dosa* is reduced to *paṭigha*, and *moha* reduced to *avijjā*.
- At the *Sakadāgāmī* stage, from those remaining above, *kāma rāga* and *paṭigha* are REDUCED.
- Those two, *kāma rāga* and *paṭigha*, are REMOVED at the *Anāgāmī* stage.
- It is only at the *Arahant* stage that the remaining strength of those key immoral *cetasika* of *lobha* and *moha* (i.e., *rūpa rāga*, *arūpa rāga*, *avijjā*) together with all other immoral *cetasika* are removed.

4. As one sheds these immoral *cetasika* and thus “immoral *gathi*,” one automatically cultivates “moral *gathi*” with moral *cetasika*. We saw above that when *diṭṭhi* diminishes, *sammā diṭṭhi* (which is the same as the *paññā* or wisdom *cetasika*) grows.

- In the same way, as *vicikicchā* is reduced, *saddhā* (faith) *cetasika* grows. This is why a *Sotāpanna* has “unbreakable” faith (*saddhā*) in Buddha, Dhamma, and Saṅgha; *vicikicchā* has been removed. However, that *saddhā* comes through not via blind faith, but via understanding.

- Still, paying homage to Buddha, Dhamma, Saṅgha, via *Tiratana vanadana* or listening to *pirith* helps build *saddhā*.; see, “[Buddhist Chanting – Introduction](#).” This is why it is said that one needs to cultivate *saddhā* and *paññā* together.
- Another thing to remember is that while *alobha* (non-greed) and *adosa* (non-hate) are moral *cetasika* opposing *lobha* and *dosa*, *amoha* is NOT actually a *cetasika*. Unlike *alobha* and *adosa*, *amoha* is not cultivated; *amoha* is merely the absence of *moha*.
- Instead, what is cultivated is *paññā* (wisdom) or the *sammā diṭṭhi cetasika*. And that requires understanding of *anicca*, *dukkha*, *anatta*. This is why *paññā* (wisdom) has nothing to do with “book knowledge”, but is all about comprehending the “true nature of this world of 31 realms”. I will have another post on this important point.

5. Another illuminating way to analyze is to look at the removal of the *āsavas* at each stage. The four types of *āsavas* are: *ditthasava* (*āsava* for *diṭṭhi*), *kamasava* (*āsava* for sense pleasures, almost the same as *kāma rāga*), *bhavasava* (*āsava* for *bhava* or existence, which is almost the same as *rūpa rāga* plus *arūpa rāga*), and *avijjasava* (*āsava* for ignorance). Of course “*āsavakkhaya*” or removal of all *āsavas* is *Nibbāna*.

- As we can see (by comparing with #3 above), *ditthasava* is removed at the *Sotāpanna* stage; *kamasava* is reduced at the *Sakadāgāmī* stage and removed at the *Anāgāmī* stage; *bhavasava* and *avijjasava* removed at the *Arahant* stage.
- Thus we can also see that it is the combination of *ditthasava* and *kamasava* that give rise to strong greed (*lobha*) and strong hate (*dosa*). When one loses *ditthasava* by comprehending the true nature of this world, *lobha* and *dosa* are reduced to *kāma rāga* and *paṭigha* (which constitute *kamasava*).
- While such different analyses will be helpful for someone who has been studying them, all these different terms could be confusing to those who are new to these terms. But one will get used to these terms with time, and it is important to understand what they mean (not just to memorize) in the long term. With usage, they WILL become familiar.
- In the days of the Buddha, Buddha Dhamma was called “*vibhangavādi*” or “doctrine that systematically analyzes by parts”. Just like medical students learn about the human body by dissecting dead bodies, it is informative to look at the mind by analyzing it in different ways. And all types of analyses are inter-consistent.

6. A *Sotāpanna*, by comprehending *anicca*, *dukkha*, *anatta* to a certain extent, REMOVES *diṭṭhi* (i.e., achieves *diṭṭhivissuddhi*) and cultivates *sammā diṭṭhi* to a certain level. And when that happens, the strength of the *moha cetasika* is reduced to just *avijjā* level, and also the *vicikicchā cetasika* is REMOVED. Simultaneously, *lobha* is REDUCED to *rāga*, which then are removed in stages at higher stages of *Nibbāna* as stated in #3 above.

- The above paragraph briefly summarizes what happens at the *Sotāpanna* stage. It may seem simple, but it requires lot of effort to discipline the mind to get to that stage, mostly via learning and contemplating Dhamma.
- One has reduced the strength of attachment to “worldly things” to the extent that one will NOT do certain immoral actions no matter how much wealth or sense pleasure is at stake. One WILL NOT act with *vicikicchā*: there is no hesitation in trying to decide, one KNOWS such an act will lead to the birth in the *apāyā*. It is not something one has to think about at that moment; it comes out AUTOMATICALLY, because of such “*apāyagāmī gathī*” have been PERMANENTLY removed.
- Thus by getting to know some properties of key *cetasika* we can get an idea of how our minds work, and get an idea why different people respond to the same external influences in different ways. **It is because their “gathī” or dominant cetasika are different.**

7. Now let us take some examples. *Diṭṭhi* is at the forefront because one’s “views” determines what one has gotten used to or one is comfortable with.

- If we take the *diṭṭhi* (or view) that says if one bathes in a certain river one could wash away one's sins. This does not appear to be a strong *diṭṭhi*, but it is dangerous one: then one can do all sorts of immoral deeds all day long and then take a bath to “wash away” all those sins and thus get rid of any *kamma vipāka*. Yet, this *diṭṭhi* is something that has been carried from generation to generation in parts of India.
- Many people say, “I don't do immoral things and even help out others, therefore, bad things will not happen to me”. That is a *diṭṭhi* too, because that person does not realize that he/she most certainly has done innumerable bad things in previous lives. That *diṭṭhi* therefore arises due to not believing in rebirth. **The “cause and effect” is a valid argument, but that argument holds only within the broader world view, that this is not the only life we have had.**

8. There are several key *diṭṭhis* that are common in Buddhist countries.

- Many “Buddhists” believe that taking and obeying the eight precepts on Full Moon days is enough to attain *Nibbāna*. There are old ladies in Sri Lanka who do not miss a single Full Moon day and dutifully take those precepts. But their minds are filled with ignorance and some of them mostly get together and gossip all day.
- While taking those precepts and mindfully disciplining oneself and meditating for a whole day is an excellent way to practice, just nominally taking precepts is not going to do anything to cleanse one's mind.
- Then there is the perception that taking even a glass of wine (or some mild alcoholic beverage) is highly immoral. While it is best to avoid taking any kind of alcohol, drinking a glass of wine or beer is not a “*akusala kamma*.” Of course if one gets addicted or intoxicated, then one could be led to do *akusala kamma*. Actually, when one gains wisdom via learning Dhamma, **the tendency to crave for alcohol or anything else** gradually diminishes.
- Rituals are prevalent in most Buddhist countries. People may do all sorts of immoral deeds (gossiping, slandering, using harsh words, fishing, hunting, are a few examples) during the day and at the end of the day, they light a lamp for the Buddha, say a few verses (“*gatha*”), and believe that is all they need to do.
- All these come under one of the three *sanyojana*, “*silabbata paramasa*” (*diṭṭhi* that says following rituals or set guidelines can lead to *Nibbāna*), is removed at the *Sotāpanna* stage.
- But it must be emphasized that most of such procedures CAN BE very effective in calming the mind and building *saddhā* (both of which then help cultivate wisdom by being able to comprehend Dhamma), if done properly while making an effort to cleanse one's mind; see, “[Buddhist Chanting – Introduction](#).”

9. We can also see that *vicikicchā* (tendency to do inappropriate/immoral/dangerous deeds) also arises because one is not aware of how *kamma/kamma vipāka* operate and has not comprehended *anicca*, *dukkha*, *anatta*.

- It is easy for outside influences to change the mind of someone with strong *vicikicchā* to do bad things. Since children in general are unaware of what is right and what is wrong, it is easy to manipulate their minds. This is why making sure children grow up in environments that are conducive to moral behavior is very important.
- Even adults, who are not aware of the consequences of immoral behavior have high levels of *vicikicchā*. They tend to only look at the immediate gratifications of an act rather than to have a long-term perspective.
- Learning Dhamma is the only guaranteed way to remove *vicikicchā*.

10. Some people tend to think that it is better not to even contemplate on bad consequences of bad actions, or to learn WHY bad actions are bound to lead to bad outcomes. The thinking is “as long as I don't think about such depressing things, I will feel fine”.

- Just like not knowing that a certain action is unlawful is not a valid argument in a court of law, ignorance of the Nature's laws is not a valid excuse. Sometimes one can get away when a law is broken by telling

more lies and changing the decision of a jury. **But in the Nature's court, it is one's mind that makes the decisions and one cannot fool one's own mind.**

- This is why *ditṭhis* can be broken only by cleansing one's mind. One cleanses one's mind by first learning about *kamma* and *kamma vipāka* first and THEN reading about *anicca*, *dukkha*, *anatta*, and THEN comprehending the true meanings of those words, i.e., by comprehending the true nature of this world; see, "[Buddha Dhamma – In a Chart](#)" and "[How to Cultivate the Anicca Saññā](#)."
- One's own mind needs to realize futility of doing immoral deeds, **not just because they are bound to bring thousand-fold bad outcomes**, but also because there is "no point", "no real benefit" of doing bad things to fulfil one's sense desires or to "own valuable things"; such sense pleasures or valuable things do not last in the long term. But the consequences can linger on for long times.

11. As I pointed out in "[Why do People Enjoy Immoral Deeds? – Ditthi is Key](#)," we all have *ditṭhis* that have been cultivated in us by the environment that we grew up in, whether it is cultural, social, or religious. And Buddhists are no exception. We all need to critically evaluate such *ditṭhis* and sort out which ones are bad for oneself. Buddha has clearly stated which *ditṭhis* are bad: "[Three Kinds of Ditthi, Eightfold Paths, and Samādhi](#)."

12.8 The Origin of Matter – Suddhaṭṭhaka

November 27, 2015; Revised December 17, 2017; May 17, 2019; August 21, 2019; February 24, 2020

Introduction

1. *Suddhaṭṭhaka* is not even mentioned in even many *Theravāda* Texts. I have deliberated for some time whether this post is premature. This post requires an understanding of the basic concepts that I have discussed so far (as of November 2015).

- Please don't read it, unless you have thought about the basic concepts of “*san,*” *gati* (or *gathi*), *āsava*, *paticca samuppāda*, etc. It may not make much sense, and thus it could discourage people from proceeding any further thinking, “this stuff does not make sense.”
- On the other hand, for those who have some understanding of those concepts, this could help gain more insight.
- As I publish more posts on this issue, the picture will become increasingly apparent. Please be patient. The value of the Buddha Dhamma will also become apparent, and that is the best way to cultivate *saddhā* (faith based on understanding).
- This topic discussed in detail in the “[Nāma & Rūpa to Nāmarūpa](#)” subsection of the “[Living Dhamma](#)” section.

2. Anything has to be either *sankhata* or *asankhata*.

- A *sankhata* (*sankata* in Sinhala) has a beginning, transforms in unpredictable ways during existence (*viparinama*), and eventually ceases to exist; see, for example, “[Root Cause of Anicca – Five Stages of a Saṅkhata](#)” and “[Does any Object \(Rupa\) Last only 17 Thought Moments?](#).”
- An *asankhata* (*asankata* in Sinhala) has no beginning, does not change during existence, and has no endpoint. An *asankhata* (*asankata* in Sinhala) lasts forever. *Nibbāna is the only asankhata (asankata in Sinhala) dhamma*, and it does not belong to “this world of 31 realms”.
- There is nothing in between. Please think carefully about the truth of that.
- **Everything in this world is a *sankhata* (*sankata* in Sinhala), i.e., has a beginning and an end.** And this has been confirmed by science during the past 100 years or so. Einstein thought our universe was in a steady-state, and if proven that way, could have contradicted Buddha Dhamma. But now it has become clear that nothing in this universe will last forever. And everything is changing, in flux.
- All the matter in the universe is thought to have created some 14 billion years ago, in a “Big Bang.” Buddha Dhamma has a different explanation. However, there is no doubt that any matter has a finite lifetime. **Thus Buddha Dhamma is correct in this fundamental aspect.**

Origin of Matter – Background

3. If we accept that all matter has been created in some way, what is the origin of matter?

- Scientists have no clear explanation of this at this point in time (November 2015). They can calculate the evolution of the universe from a fraction of a second after the Big Bang, but physics is unable to explain what happened before the Big Bang.
- And, of course, the “Big Bang Theory” has not yet fully confirmed, even though most scientists believe it. Still, some scientists do not believe everything “popped up” all of a sudden in a Big Bang. They think that universes are cyclic, i.e., they transform and evolve; see, for example, “Endless Universe – Beyond the Big Bang,” by P. J. Steinhardt and N. Turok (2007).

4. Buddha Dhamma, of course, says all living beings living at present have existed forever.

- In other words, “all existing life-streams” have existed forever. In each life, a given “life-stream” gets a physical body (coarse or subtle depending on the realm of existence), and that physical body is, of course, a *saṅkhata* (*sankata* in Sinhala). When that physical body dies, the life-stream takes hold of a new body; see, “[What Reincarnates? – Concept of a Life-stream.](#)”
- What “propagates” from life-to-life (while continually changing), are the *āsava*, *anusaya*, and *gati* (mental properties) that make up a dynamic (ever-changing) life-stream.
- Thus, the universe does not start with a “Big Bang,” as many scientists believe right now. Remember that only 100 or so years ago, scientists thought the universe was in a steady state. Scientific theories change to “fit the existing data.” But pure Buddha Dhamma has not changed at all since Buddha Gotama taught it 2500 years ago; see, “[Historical Background.](#)”

5. The Buddha discouraged people from investigating the properties of the universe in detail. However, he has taught that uncountable “planetary systems” like our Solar system exist in the universe. That also has been confirmed by science.

- In any case, whatever the model that science eventually clarifies WILL BE consistent with Buddha Dhamma. That model will have living beings in existence somewhere in the 31 realms. This has been discussed in detail in a few *suttā*, especially the *Aggañña sutta*. But don’t bother to look it up on the internet, because all current translations are embarrassingly bad. I have written an introductory post: “[Buddhism and Evolution – Aggañña Sutta \(DN 27\).](#)”
- In that *sutta*, the Buddha explains how conglomerates of “planetary systems” blow up and are re-formed in time scales of “*mahā kappas*.” He has given a simile to get an idea of the length of a *mahā kappā*, and it is approximately several billion years; see, “[The Grand Unified Theory of Dhamma.](#)” And this destruction of a “star system” seems to be what scientists have observed as a supernova. Supernovae are of frequent occurrence; about three of them can be expected to happen every century in our Milky Way galaxy.
- We will slowly go through the *Aggañña sutta* because that needs enough background material. I expect this topic will take us several years, and many essays, to complete. However, the mind is the precursor: “[Manopubbangamā Dhammā...](#)”

Origin of Matter – The Mind

6. Yet, now we have enough background material on the website to get an idea about how all the *saṅkhata* (*sankata* in Sinhala) in this world originate and die off, AT THE VERY FUNDAMENTAL LEVEL.

- Here we will discuss only the origin of the smallest unit of matter, called a “*suddhatṭhaka*.” (sometimes written as *suddhāshtaka*).
- This unit of matter is billion times smaller than “an atom” in modern science. One time, not long ago, science believed that an atom was the smallest unit of matter. But they are composites of many “elementary particles.” Even many of those “elementary particles” are shown to have more structure! At present, there is no end in sight how smaller a “basic unit of matter” can get. Now science is unable to distinguish between “matter” and “energy.”
- For example, a “Higgs boson” is just a packet of energy.
- Matter and energy are essentially the same, related by the famous equation, E (energy) = m (mass) $\times c^2$, where c is the speed of light. Thus any small unit of matter is indistinguishable from a “packet of energy.” For example, the light we see comes in “packets” called photons. Thus photon belongs to matter in this sense, and therefore everything in this world at the primary level can have the label “matter” or “energy.”
- The distinction between “matter” and “energy” is blurred at this fundamental level.

7. A *suddhaṭṭhaka* is a “packet of energy” and is THE basic unit of matter. It is much smaller than in energy compared to a light photon that we see. A humongous number of *suddhaṭṭhaka* would have the energy of a single light photon.

- A *suddhaṭṭhaka*, being a *saṅkhata* (*sankata* in Sinhala), is created by the mind. That may be surprising to many of you, but as we progress, I will provide evidence that it is true. That is why the Buddha said, “*manō pubbaṅgamā dhammā...*”, i.e., “everything has a mind as the precursor...”.
- However, almost all of the matter around us was created by this “mental process” a very long time ago. That is the story in the *Aggañña Sutta*. At present also, *suddhaṭṭhaka* are being created by us all the time (via *javana citta*), but in very minute quantities.
- Anyone with higher *abhiññā* powers is supposed to be able to create a significant amount of matter, like a flower or even larger entities. Matter (at the level of *suddhaṭṭhaka*) is created by *javana citta*. And someone with *abhiññā* powers can maintain a *citta vīthi* with *javana citta* flowing continuously to generate “significant amounts of matter.” I briefly discussed that at the end of the post, “[Citta Vīthi – Processing of Sense Inputs.](#)”

8. But most of the time, what we are doing now is to “remake” different types of *saṅkhata* (*sankata* in Sinhala) using the “raw material” (*suddhaṭṭhaka*) created billions of years ago. These original *suddhaṭṭhaka* have lifetimes of close to 20 *antakkappa* (or *antarākalpa* in Sinhala,) where 80 such *antakkappa* are in a *mahā kappā*.

- Thus instead of having a lifetime of 17 thought moments, as some people erroneously believe, a *suddhaṭṭhaka* has a very long lifetime. Again, modern physics has confirmed that some of the elementary particles (e.g., electron) have very long lifetimes. Therefore, this idea of “everything arising and ceasing rapidly” is a misconception; see, “[Does any Object \(Rupa\) Last only 17 Thought Moments?](#).” We will discuss this in more detail in the future.
- Please don’t hesitate to ask questions at this early stage. There is a lot of information in this post to digest, and some of them will become clearer as we proceed.

What is *Suddhaṭṭhaka*?

9. *Suddhaṭṭhaka* (“*suddha*” for “pure” or fundamental” + “*aṭṭha*” or “eight”) means a unit of matter consisting of eight fundamental entities (usually translated as the “pure octad.”)

- Four of these are the “*satara mahā bhūta*”: *Pathavi, āpo, tejo, vāyo*. These are indeed the most fundamental units of matter, but they cannot be detected by themselves. It may be hard to believe for many at this stage, but those arise due to our “*gati*” (or “*gati*”) that I have discussed in several posts; see, the introductory post: “[The Law of Attraction, Habits, Character \(Gati\), and Cravings \(Asavā\).](#)” By the way, removal of “*āsava*” and “*gati*” lead to *Nibbāna*: “[The Way to Nibbāna – Removal of Āsavā.](#)” One needs to have an understanding of these concepts to grasp the material in this post.
- The four *mahā bhūta* are first created by the mind with four basic “*gati*” of humans: “*thada gatiya*” (in Sinhala) means the “coarseness,” corresponding to *pathavi*; a defiled mind is “hard” and “coarse” and correspond to “*pathavi*” nature.
- The word *āpo* comes from the tendency to “attach or get attracted to worldly things” (“*bandena gatiya*” means the “bind together,” which leads to liquidity in science). *Tejo* comes from “fiery or energetic” (“*théjas gati*” in Sinhala), and *vāyo* refers to “motion” (“*salena gatiya*” in Sinhala). They are all created in *javana citta* that arise in mind, of course, in minute quantities that cannot be detected. However, those with *abhiññā* powers can generate large amounts of matter like a flower.

10. Those most fundamental four units (*satara mahā bhūta*) are supposed to be created by the mind due to *avijjā* or ignorance. We like to have possession of things made out of these units because we do not comprehend the “unfruitful nature” of such impermanent things.

- That is discussed briefly in the “[WebLink: suttacentral: Mahāhatthipadopama Sutta \(MN 28\)](#).” An English translation; “[WebLink: suttacentral: The Greater Discourse on the Simile of the Elephant's Footprint \(MN 28\)](#).” Thanks to Dr. Sein Myint for pointing this out.
- **Now, the craving for these material things leads to four more *gati* due to *taṇhā*.** Due to our tendency to think highly (“*varnanā karanava*” in Sinhala), another *gati* of “*vaṇṇa*” is created as different manifestations of the *satara mahā bhūta*. Similarly, three more units called *gandha*, *rasa*, and *oja* created due to *taṇhā*. Those correspond to our desire to be in touch with them, keep them close (*rassa*), and to re-generate them. It will take too much space to explain these in detail, but I hope you get the basic idea.

11. Therefore, four basic units of *pathavi*, *āpo*, *tejo*, *vāyo* arise due to *avijjā*, and the other four of *vaṇṇa*, *gandha*, *rasa*, and *oja* arise due to *taṇhā*. The latter four also occur due to *pathavi*, *āpo*, *tejo*, *vāyo* (actually they are just different modes of vibration of *pathavi*, *āpo*, *tejo*, *vāyo*). We will get into more detail in the future so that even physicists would be able to appreciate the value of *Abhidhamma*.

- These eight never arise in isolation and thus are called “*avinibbhoga rūpa*.” They always rise together; all eight are there in any *suddhaṭṭhaka*. The relative “amounts” of each component can vary, and thus some *suddhaṭṭhaka* can be dominated by one element, for example. Even then, all eight are present to some extent. **That is equivalent to saying that wherever there is *avijjā*, there is *taṇhā*, and vice versa.**
- This very fundamental level is called the “*bhūta*” stage. *Bhūta* is another name for “ghost” because of their elusive nature. They can never be detected and can only be “seen” by a Buddha. The Buddha explained this to *Mahā Brahma*, who thought he knew everything about the world: “[WebLink: suttacentral: Brahmanimantanika Sutta \(Majjhima Nikaya 49\)](#).” I will explain this *sutta* in detail later.
- And a *suddhaṭṭhaka* can never be divided; thus they are called “*avinibbhōga rūpa kalapa*.”

Critical Role of *Gati*

12. Thus “*gati*” leads to “*bhūta*,” the first phase of *rūpa* that can be seen (only by Buddha). That is the *suddhaṭṭhaka* stage. That is where mental energy is converted to matter at the very fundamental stage. Just keep that in mind as we proceed.

- When enormous numbers of these *suddhaṭṭhaka* fuse, they get to a more condensed state of “*mahā bhūta*.” The subtle bodies of *brahmā* and some *gandhabbā* are made of *mahā bhūta*. This level of “solidification” can be compared (in energy) to electromagnetic radiation at the long-wavelength range; thus, we cannot “see” those entities with our eyes.
- Only when vast amounts of these *mahā bhūta* fuse together to become even more condensed, that we can see them. At this highly condensed state, the matter is called “*dhātu*.” Bodies of *devas* are made of finer *dhātu*. That is why we cannot see *devas*, but *brahmā* can see them.
- Thus our bodies are made of more dense *dhātu* that we can see. That is why solid objects are called “*pathavi dhātu*”; *suddhaṭṭhaka* in such solid objects have predominantly *pathavi*. In liquids, things are bound together and flow together because they mostly have *āpo dhātu*. Not only fire but also those objects that have “energetic appearance,” have more *tejo*. And not only the wind but also things that are prone to move, have more *vāyo*.
- Details of *gati* at, “[Gati, Bhava, and Jāti](#).”

Other Implications

13. Therefore, we can see that *pathavi*, *āpo*, *tejo*, *vāyo* have much deeper meanings than just earth, water, fire, and wind. Why did the ancient Greeks also use the same terms? That is due to the same reason that Hinduism also uses terms like *karma* (which is the Sanskrit word for *kamma*), *Nirvana* (which is the Sanskrit word for *Nibbāna*), *ānāpāna*, etc.

- There have been three Buddhas in this *mahā kappa* (i.e., during the existence of our Solar system) before the Buddha Gotama; that is how those terms came to usage before Buddha Gotama. Those concepts by the previous Buddhas were transmitted down through successive generations, but the true meanings got lost.
- **Human history is much longer than tens of thousands of years, as believed by many today.** Whole continents can submerge, wiping out entire populations; this is not being considered seriously yet, but there is the evidence: see, [WebLink: wiki: Submerged continent](#). Anyway, that is a topic to be discussed later when more evidence becomes available. It will be proven that one region that has not changed since the formation of the Earth is Asia encompassing Sri Lanka, India, and China. **Archeologists should focus more in that region rather than in Africa.** See, “[Ancient teeth found in China challenge modern human migration theory.](#)”

14. As I mentioned above, there were three Buddhas before Buddha Gotama. That is how some of the key terms like *pathavi*, *āpo*, *tejo*, *vāyo* and *kamma*, and *Nibbāna* (*nirvana*) have been in use even before the Buddha Gotama. They had been transmitted down through generations, but of course, their true meanings had been lost.

- Losing the true meanings in the *Tipiṭaka* happened at least a few times, even during this Buddha *sāsana*, within the past 2500 years. The best example is the misinterpretation of *san*, *sansara*, *anicca*, and *anatta* during just the past hundreds of years; see, “[What is “San”? Meaning of Sansara \(or Samsara\)](#)” and “[Anicca, Dukkha, Anatta – Wrong Interpretations.](#)”
- **But the Buddha Gotama has said that his *Buddha sāsana* will last for 5000 years. We are only halfway through. That is why it is making a comeback now. And this time it will have staying power due to the presence of the internet. That is one reason why we should all be forever grateful to modern science, much more than for all other technological wonders it has brought about.**

August 2019: I recently started a new series of posts on “[Origin of Life.](#)”

12.9 What are Dhamma? – A Deeper Analysis

April 15, 2016; revised November 5, 2017; February 9, 2018

1. This is an advanced topic (yet, hopefully made easy even for those who are not into Abhidhamma). Please don't hesitate to comment if something is not clear. A simpler version is at: "[What are rūpa? – Dhamma are rūpa too!](#)."

- In contrast to touching, smelling, and tasting, we do not directly "touch" the external world (matter) with our eyes, ears or the mind.
- While we experience the "outside world" as it is (or objectively) with our five physical senses, what we interact with our minds are our own "perceptions, feelings, plans, and hopes" for that external world.
- We will get into more details on those two aspects in the future, but in this post we will look at what "dhamma" are in relation to the mind. That will help us address those other two issues in the future.
- It is to be noted that *dhammā* are rūpa below the *suddhatthaka* stage; *dhamma* as in Buddha Dhamma or Abhidhamma refer to Buddha's teachings.
- As I mentioned in the "[Abhidhamma – Introduction](#)," I very much want to make Abhidhamma easy to grasp for anyone. I also want to highlight the fact the Buddha Dhamma is well ahead of science (quantum mechanics) in understanding even our material world; science has not even begun to explore the mind.

2. Existence in this world of 31 realms is maintained via our attachments to "things" in this world. These "things" are *rūpa*.

- When our minds contact these external *rūpa*, we generate very brief sense enjoyments called *assāda*; see, "[Assāda, Ādīnava, Nissarana](#)." Since we perceive these sense contacts to be long-lasting and enjoyable (and ignore the sufferings that we go through to acquire them), we willingly desire such sense pleasures.
- **However, any *rūpa* that arises is subjected to unexpected change (*viparinama*) and eventual decay and destruction, which is the basis of *anicca* nature.**

3. Another factor that we have not discussed much in detail is that *rūpa* have different levels of texture or solidity.

- The *rūpa* that we experience in the human realms (and those realms below us) are the densest form called *dhātu*. The *deva* realms above us have finer *dhātu* that we cannot see. In the *rūpa lokas*, *rupi brahmā* have even finer *rūpa* called *mahā bhūta*. And in the *arūpa loka*, there are just traces of *bhūta* (just the *hadaya vatthu*) made of the smallest unit of matter called *suddhatthaka*, and of course much finer *gati* (or *gathi*).
- You may want to review the concepts discussed in the following posts: "[What Are Rūpa? \(Relation to Nibbāna\)](#)," "[The Origin of Matter – Suddhatthaka](#)."

4. It is conventional knowledge is that we experience the external world with our five physical senses: We see with our eyes, hear with the ears, smell with the nose, taste with the tongue, and touch things with our physical bodies.

- Is that all one experiences? Imagine being in a dark chamber totally isolated from the rest of the world. A good example is the punishment by the military called solitary confinement especially in the old days: one is kept in a totally isolated dark cell for many hours at a time.
- Does such a person experience the outside world? Of course. He/she can think about all sorts of things: recall past events, think about the future, recall any place that he has been to, etc.
- In fact, we do this any given day, not only by recalling past experiences, but also by imagining desired future events.

5. Sense contacts other than the five physical senses are due to the sixth sense: the mind. One is totally unaware of the external world only when one is totally unconscious.

- So, what are the *rūpa* that we experience with our minds? These are *dhamma*! As stated in the phrase, “*manañca paṭicca dhamme ca uppajjati manoviññāṇaṃ*,” contacts of *dhamma* with the *mana indriya* leads to *mano viññāṇa*.

6. The arising of *viññāṇa* due to different types of sense inputs is described in *abhidhamma* (and also in [“WebLink: suttacentral: Cha Chakka Sutta \(MN 148\)”](#)) as:

“*cakkhuñca paṭicca rūpe ca uppajjati cakkhuviññāṇaṃ*,”

“*sotañca paṭicca sadde ca uppajjati sotaviññāṇaṃ*,”

“*ghāṇañca paṭicca gandhe ca uppajjati ghānaviññāṇaṃ*,”

“*jivhañca paṭicca rase ca uppajjati jivhāviññāṇaṃ*,”

“*kāyañca paṭicca phoṭṭhabbe ca uppajjati kāyaviññāṇaṃ*,” and

“*manañca paṭicca dhamme ca uppajjati manoviññāṇaṃ*”

- Thus it is clear that *mano viññāṇa* arise when *dhamma* make contact with the *mana indriya*, just like *cakkhu viññāṇa* arise when (*vañña*) *rūpa* or light make contact with the *cakkhu indriya* (eyes) or *sota viññāṇa* arise when *sadda rūpa* (sound waves) make contact with the *sota indriya* (ears).
- *Kaya viññāṇa* result from contacts which are the most coarse (*pottabba* or touch due to *dhātu*), and *mano viññāṇa* result from the contacts that are extremely fine, *dhamma*.

7. Thus, we can categorize our six types of contacts with the external world according to the “coarseness” of the contacts.

- **The body contacts (touch), taste, and smell are the coarse contacts**; they involve direct touching (*pottabba*), and those involve solid particulates (taste and smell).
- **Vision involves light particles (photons) interacting with the physical eye.** Light was not even considered a particle until Einstein, Compton and others proved that in the early 1920’s.
- In the language of physics, **sound involves phonons which have even less energy than light photons**, i.e., they are “even softer”.

8. We can also see that the **sense elements in the body** also get less and less coarse in that order. It must be noted that the sensing elements in the ear are not the ear that we see, but very sensitive area deep inside the ear.

- According to Buddha Dhamma (and confirmed by science), two things respond to each other and last longer when in heavy usage, if they have similar densities. For example, if a steel rod rubs against a wooden rod, the wooden rod will soon wear out. But two steel rods (or two wooden rods) can be rubbing against each for long times.
- Thus going from touch, smell, taste, sight, and hearing, both the external influences — touch, tasty things, smells, light (photons), sound (phonons) — and the sense elements (body, tongue, nose, eyes, ears) become finer in that order.

9. **The finest sensing element is the “*mana indriya*” which is inside the brain.** It is likely to be one of the following: thalamus, amygdala, or hippocampus. I have not had enough time to investigate the functions of these sensitive elements of the brain, but according to Buddha Dhamma, the “*mana indriya*” is inside the brain and is analogous to the eyes or the ears; more details will become clear as we discuss below.

- What come down in the legend as the “third eye” is this “*mana indriya*.” It is supposed to be located behind the forehead.

- The *rūpa* that come into contact with the *mana indriya* are finer than a *suddhaṭṭhaka*, and are still in the “*gati*” stage, but they are on the way to become *suddhaṭṭhaka*. They are not coarse enough to be “seeing” even with *abhiññā* powers, and do not make contact with other five coarse senses. Thus they are called, “*anidassanaṃ appaṭighaṃ dhammayatana pariyapanna rupaṃ*.”
- Here, “*anidassana*” means “cannot be seen” and “*appaṭigha*” means “cannot be touched or sensed with even the finest instrument”. And, “*dhammayatana pariyapanna rupaṃ*” means “can make contact only with the *dhammayatana* or *mana indriya*”.

10. In the post, “[The Origin of Matter – Suddhatthaka](#),” we discussed how the smallest material element, a *suddhaṭṭhaka*, is created by the mind with origins in four basic “*gati*” of humans that arise due to *avijjā*: “*thada gatiya*” (in Sinhala) means the “coarseness”, corresponding to *pathavi*; “*bandena gatiya*” means the “bind together” which leads to liquidity corresponding to *āpo*; “*thejas gatiya*” means the “fiery or energetic”, corresponding to *tejo*; and, “*salena gatiya*” means the “motion”, corresponding to *vāyo*.

- **craving for these material things lead to four more *gati* due to *taṇhā***: Due to our tendency to think highly (“*varnanā karanava*” in Sinhala), another *gati* of “*varna*” is created as different manifestations of the *sātara mahā bhūta*. Similarly, three more units called *gandha*, *rasa*, and *oja* are created due to *taṇhā* corresponding to our desire to be in touch with them, keep them close (*rassa*), and to re-generate them. [**rassa**: [adj.] short; dwarfish; stunted]

11. Before these eight inseparable units solidify into what we call matter, there is the precursor stage of *gati*: cultivation of *gati* leads to *bhūta*, which are in the *suddhaṭṭhaka* stage. Further solidification of *bhūta* leads to *mahā bhūta*. The fine *rūpa* of *brahmā* are composed of *mahā bhūta*.

- The *gati* stage of *rūpa* — the origins of *rūpa* — are also called “*mano rūpa*”: these are really what we visualize in our minds. We can visualize scenes from the past, and those are *mano rūpa*. In the process of making *gati*, we constantly think about associated material things; those are *mano rūpa*.

12. *Mahā bhūta*, upon further condensation, become *dhātu*. The bodies of *devas* are made of finer *dhātu*, and our bodies — as well as all material things we see — are composed of denser *dhātu*.

- Therefore, the origins of all matter is *gati*! But our *gati* (of normal humans) actually do not lead to the formation of significant amounts of even *suddhaṭṭhaka*. So, we still have a long way to go before we can explain how these solid objects in our world were formed as described in the *Aggañña Sutta*.

13. Just like the eye is receiving visual information or the ear the sounds, the “*mana indriya*” is receiving “*dhamma*.” And *dhamma* are much finer than light or sound *rūpa*. In fact, all five physical senses deal with signals transmitted via solidified particles made out of *suddhaṭṭhaka*, but *dhamma* are just energy, below what we call “matter”. Actually, even most physicists do not consider light as matter or “particles”; I will write a post on why light photons are indeed particles according to quantum mechanics.

- As we discussed in the post, “[The Origin of Matter – Suddhatthaka](#),” even a single light particle (photon) is made of a very large number of *suddhaṭṭhaka*.
- As we discussed there, a *suddhaṭṭhaka* is made by the mind. *Dhamma* can be considered the early stages of a *suddhaṭṭhaka*; they are in fact *kammic* energy packets made by the mind in *javana citta*, and arise due to our *gati*. **This is really the link between mind and matter!**

14. Therefore, all six senses allow our minds to interact with the material world. We actually interact with two worlds: **the material world and the mind world or the *mano thalaya***.

- Different types of *rūpa* (*varna*, *gandha*, *rasa*, *oja*, *phoṭṭhabba*) in our physical world (*rūpa loka*) are built with *suddhaṭṭhaka*. *Dhammā* or *kamma bīja* (in the *mano loka*) are basically “energy packets” not yet solidified to the state of a *suddhaṭṭhaka*.
- The *pañcakkhandha* of a living being has “components” from both worlds. The *rūpakkhanda* represents interactions with the material world (as mental records); see, “[Pañcakkhandha or Five](#)

Aggregates – A Misinterpreted Concept.” The other four *khandha* (*vedanā*, *saññā*, *saṅkhāra*, *viññāṇa*) represent the mind world.

- Each and every living being is associated with a *pañcakkhandha*. The Buddha said that one cannot define a living being with less than five *khandhas*.
- To repeat: **One’s *pañcakkhadha* is not one’s body as is commonly described.** It is not even physical. It is all mental: “Pancupādānakkhandha – It is All Mental.”

15. The creation of *suddhaṭṭhaka* by the mind in *javana citta*, starts first by enhancing one’s *gati*. As we will discuss in a future post on the “*Asevana Paccaya*,” the more one does activities related to a given *gati*, that *gati* grows. [*Asevana-paccayā*: repetition, is one of the 24 conditional relations paccayā.]

- The growing of a *gati* is really the accumulation of a *kamma bīja* (seed), and that is deposited in the *kamma bhava* in the mind plane. These are really *dhamma* that is in “*manañca paṭicca dhamme ca uppajjati manoviññāṇam*.”
- And they (*dhamma* or *kamma bīja*) can come back to one’s mind when the mind is in a receptive state for such a *gati*. Thus it is a self-feeding feedback loop.
- **This is an important point to contemplate on. This is why a drunkard gets the urge to drink, or a gambler gets the urge to visit a casino. People who don’t have such *gati*, do not get such urges because they do not have corresponding *dhamma* repeatedly coming back to impinge on the *mana indriya*.**
- By the way, as discussed in the “Living Dhamma” section, any such “bad *gati*” can be reduced and eventually eliminated by a two-step method: (i) forcefully stop **activities** — and **conscious thoughts** about them — that contribute that *gati* when one becomes aware DURING such an act OR a conscious thought, (ii) keep learning Buddha Dhamma to comprehend how that process can actually work (as discussed starting with basic fundamentals of Buddha Dhamma in the “Living Dhamma” section); one key aspect here to contemplate on the bad consequences of such actions/thoughts.

16. To emphasize, *dhamma* arise due to *kamma* that we commit. The more *kamma* we do, the corresponding *dhamma* will grow, and become *gati*.

- *Dhamma* means “to bear”; one bears what one likes and what one engages in.
- When one cultivates “dog *gati*” that is what one bears. And that is what comes back to one’s mind at the *cuti-paṭisandhi* moment and can lead to the next *bhava*, and thus birth (*jāti*) as a dog.

17. However, creation of a *suddhaṭṭhaka* requires trillions of *citta vīthi* running consecutively. Thus it does not happen significantly by a normal human being. It requires not only *jhānā*, but being able to get into *samāpatti*. Those with *abhiññā* powers have the ability to get into *samāpatti* very quickly.

- When in *jhānā*, *cittā* can still switch back to five physical senses in between. When one is in a *jhāna*, one can hear external sounds, for example.
- However, when one is in a *samāpatti*, the *jhānic citta* can flow unceasingly for long times. Thus, *pañcadvāra citta vīthi* cannot run in between, and thus one is totally unaware of the external environment when in *samāpatti*.

18. Furthermore, when in *samāpatti*, *jhānic citta* flow unceasingly and make each new *javana citta* stronger than the predecessor with the “*Āsevana Paccayā*.” We will discuss this in detail in the future.

- This is how those with *abhiññā* powers (i.e., who can easily get into *samāpatti* and have practiced it well) can even make physical objects: One can start off with a picture of a flower in one’s mind and then by creating more and more *suddhaṭṭhaka* with each new *javana citta*, create an actual flower in a very short time!

19. Finally, *dhamma* in the *nāma loka* are the same as those *viññāṇa* established in the *kamma bhava*. This is a subtle point; see, “Viññāṇa Aggregate.”

- *Dhamma* or *viññāṇa* are called *anidassana*, *appaṭigha rūpa* (*rūpa* that cannot be seen or made contact with) and they are just energies lying below the *suddhaṭṭhaka* stage; see, "[Anidassana Viññāṇa – What It Really Means.](#)"
- *Kamma bhava* is the same as the *nāma loka*; *Dhamma* in the *nāma loka* are the same as *viññāṇa* that are established in the *kamma bhava*.; see, "[Our Two Worlds: Material and Immaterial.](#)"

12.9.1 24 conditional relations Paccaya

From Dhamma Wiki

Paccaya: 'condition', is something on which something else, the so-called 'conditioned thing', is dependent, and without which the latter cannot be. Many are the ways in which one thing, or one occurrence, may be the condition for some other thing, or occurrence. In the Paṭṭhāna, the last book of the Abhidhamma Piṭaka comprising 6 large vols. in the Siamese edition, these 24 modes of conditionality are enumerated and explained, and then applied to all conceivable mental and physical phenomena and occurrences, and thus their conditioned nature is demonstrated.

The first two volumes of the Paṭṭhāna have been translated into English by the Venerable U Nārada mūla paṭṭhāna Sayadaw of Burma, under the title Conditional Relations Published by the Pāli Text Society, London 1969, 1981.

The 24 modes of conditionality are:

1. Root condition: *hetu paccayā*
2. Object: *ārammana*
3. Predominance: *adhipati*
4. Proximity: *anantara*
5. Contiguity: *samanantara*
6. Co-nascence: *sahajāta*
7. Mutuality: *aññamañña*
8. Support: *nissaya*
9. Decisive Support: *upanissaya*
10. Pre-nascence: *purejāta*
11. Post-nascence: *pacchājāta*
12. Repetition: *āsevana*
13. Kamma: *kamma*
14. Kamma-result: *vipāka*
15. Nutriment: *āhāra*
16. Ability: *indriya*
17. Jhāna: [jhāna](#)
18. path: [magga](#)
19. Association: *sampayutta*
20. Dissociation: *vippayutta*
21. Presence: *atthi*
22. Absence: *natthi*

23. Disappearance: *vigata*

24. Non-disappearance: *avigata*

1: Root-condition *hetu-paccayā* is that condition that resembles the root of a tree. Just as a tree rests on its root, and remains alive only as long as its root is not destroyed, similarly all kammically advantageous and disadvantageous mental states are entirely dependent on the simultaneity and presence of their respective roots, i.e., of greed *lobha*, hate *dosa* confusion *moha* or greedlessness *alobha* hatelessness *adosa* unconfusedness *amoha* For the definition of these 6 roots, see: [mūla](#).

The roots are a condition by way of root for the mental phenomena associated with a root, and for the material phenomena produced thereby e.g. for bodily expression; Patth.

2: Object-condition *ārammaṇa-paccayā* is called something which, as object, forms the condition for consciousness and mental phenomena. Thus, the physical object of sight consisting in colour and light 'light-wave', is the necessary condition and the sine qua non for the arising of visual-consciousness *cakkhu-viññāṇa* etc.; sound 'sound wave' for ear-consciousness *sotā-viññāṇa* etc.; further, any object arising in the mind is the condition for mind-consciousness *mano-viññāṇa* The mental-object may be anything whatever, material or mental, past, present or future, real or imaginary.

3: Predominance-condition (*adhipati-paccaya*) is the term for 4 things, on the preponderance and predominance of which are dependent the mental phenomena associated with them, namely: concentrated intention (*chanda*), energy (*viriya*), consciousness (*citta*) and investigation (*vīmaṃsā*). In one and the same state of consciousness, however, only one of these 4 phenomena can be predominant at a time. "Whenever such phenomena as consciousness and mental concomitants are arising by giving preponderance to one of these 4 things, then this phenomenon is for the other phenomena a condition by way of predominance" (Patth.). Cf. [iddhi-pāda](#).

4-5: Proximity and contiguity or immediacy-condition *anantara* and *samanantara-paccayā* - both being identical - refer to any state of consciousness and mental phenomena associated with them, which are the conditions for the immediately following stage in the process of consciousness. For example, in the visual process, visual-consciousness is for the immediately following mind-element - performing the function of receiving the visible object - a condition by way of contiguity; and so is this mind-element for the next following mind-consciousness element, performing the function of investigating the object, etc. Cf. [viññāṇa-kicca](#).

6: Co-nascent condition *sahajāta-paccayā* i.e. condition by way of simultaneous arising, is a phenomenon that for another one forms, a condition in such a way that, simultaneously with its arising, also the other thing must arise. Thus, for instance, in one and the same moment each of the 4 mental groups feeling, perception, mental constructions and consciousness is for the 3 other groups a condition by way of co-nascent or co-arising; or again each of the 4 physical elements solid, liquid, heat, motion is such a condition for the other 3 elements. Only at the moment of conception in the mother's womb does materiality physical base of mind serve for the 4 mental groups as a condition by way of co-nascent.

7: Condition by way of mutuality *aññamañña-paccayā* All the just mentioned associated and co-nascent mental phenomena, as well as the 4 physical elements, are, of course, at the same time also conditioned by way of mutuality; just like three sticks propped up one by another.; The 4 mental groups are one for another a condition by way of mutuality. So also are the 4 elements, and also mentality and materiality at the moment of conception.

8: Support-condition *nissaya-paccayā* This condition refers either to a pre-nascent see: 10 or co-nascent see: 6 phenomenon which is aiding other phenomena in the manner of a foundation or base, just as the trees have the earth as their foundation, or as the oil-painting rests on the canvas. In this way, the 5 sense-organs and the physical base of the mind are for the corresponding 6 kinds of consciousness a prenascent, i.e. previously

arisen, condition by way of support. Further all co-nascent see: 6 phenomena are mutually see: 7 conditioned by each other by way of support.

9: Decisive-support or inducement condition upanissaya-paccayā is threefold, namely a by way of object ārammanūpanissaya-paccayā b by way of proximity anantarūpanissaya c natural decisive support pakatūpanissaya These conditions act as strong inducement or cogent reason.

a. Anything past, present or future, material or mental, real or imaginary, may, as object of our thinking, become a decisive support, or strong inducement, to moral, immoral or kammically neutral states of mind. Evil things, by wrong thinking about them, become an inducement to immoral life; by right thinking, an inducement to moral life. But good things may be an inducement not only to similarly good things, but also to bad things, such as self-conceit, vanity, envy, etc.

b. is identical with proximity condition No. 4.

c. Faith, virtue, etc., produced in one's own mind, or the influence of climate, food, etc., on one's body and mind, may act as natural and decisive support-conditions. Faith may be a direct and natural inducement to charity, virtue to mental training, etc.; greed to theft, hate to murder; unsuitable food and climate to ill-health; friends to spiritual progress or deterioration.

10: Pre-nascence-condition purejāta-paccayā refers to something previously arisen, which forms a base for something arising later on. For example, the 5 physical sense-organs and the physical base of mind, having already arisen at the time of birth, form the condition for the consciousness arising later, and for the mental phenomena associated therewith.

11: Post-nascence-condition pacchā-jāta-paccayā refers to consciousness and the phenomena therewith associated, because they are - just as is the feeling of hunger- a necessary condition for the preservation of this already arisen body.

12: Repetition-condition āsevana-paccayā refers to the kammical consciousness, in which each time the preceding impulse moments javana-citta are for all the succeeding ones a condition by way of repetition and frequency, just as in learning by heart, through constant repetition, the later recitation becomes gradually easier and easier.

13: Kamma-condition kamma-paccayā The pre-natal kamma i.e kamma-intentions, kamma-cetanā in a previous birth is the generating condition cause of the 5 sense-organs, the fivefold sense-consciousness, and the other kamma-produced mental and material phenomena in a later birth. - Kammical intention is also a condition by way of kamma for the co-nascent mental phenomena associated therewith, but these phenomena are in no way kamma-results.

14: Kamma-result-condition vipāka-paccayā The kamma-resultant 5 kinds of sense-consciousness are a condition by way of kamma-result for the co-nascent mental and material phenomena.

15: Nutriment-condition āhāra-paccayā For the 4 nutriments, see: [āhāra](#).

16: Ability-condition indriya-paccayā This condition applies to 20 abilities ([indriya](#)), leaving out No. 7 and 8 from the 22 abilities. Of these 20 abilities, the 5 physical sense-organs 1 - 5, in their capacity as abilities, form a condition only for unmaterial phenomena visual-consciousness etc.; physical vitality 6 and all the remaining abilities, for the co-nascent mental and material phenomena.

17: Jhāna-condition jhāna-paccayā is a name for the 7 so-called jhāna-factors, as these form a condition to the co-nascent mental and material phenomena, to wit:

- (1) thought-conception ([vitakka](#)),
- (2) discursive thinking ([vicāra](#)),
- (3) interest ([pīti](#)),

- (4) joy (*sukha*),
- (5) sadness (*domanassa*),
- (6) indifference (*upekkhā*),
- (7) concentration (*samādhi*). (For definition s. Pāli terms)

1, 2, 3, 4, 7 are found in 4 classes of greedy consciousness see: Tab. I. 22-25; 1, 2, 5, 7 in hateful consciousness ib. 30, 31; 1, 2, 6, 7 in the classes of confused consciousness ib. 32, 33.

This condition does not only apply to jhāna alone, but also to the general intensifying 'absorbing' impact of these 7 factors.

18 path-condition magga-paccayā refers to the 12 path-factors, as these are for the kammically advantageous and disadvantageous mental phenomena associated with them, a way of escape from this or that mental constitution, namely: 1 knowledge paññā = sammādiṭṭhi right understanding, 2 right or wrong thought-conception vitakka 3 right speech sammā-vācā 4 right bodily action sammā-kammanta, 5 right livelihood sammā-ājīva 6 right or wrong energy viriya 7 right or wrong awareness or mindfulness sati 8 right or wrong concentration samādhi 9 wrong views micchādiṭṭhi 10 wrong speech micchā-vācā 11 wrong bodily action micchā-kammanta 12 wrong livelihood micchā-ājīva Cf. magga

19: Association-condition *sampayutta-paccayā* refers to the co-nascent see: 6 and mutually see: 7 conditioned 4 mental groups *khandha* as they aid each other by their being associated, by having a common physical base, a common object, and by their arising and disappearing simultaneously; Patth. Com..

20: Dissociation-condition *vippayutta-paccayā* refers to such phenomena as aid other phenomena by not having the same physical base eye, etc. and objects. Thus material phenomena are for mental phenomena, and conversely, a condition by way of dissociation, whether co-nascent or not.

21: Presence-condition *atthi-paccayā* refers to a phenomenon - being pre-nascent or co-nascent - which through its presence is a condition for other phenomena. This condition applies to the conditions Nos. 6, 7, 8, 10, 11.

22: Absence-condition *natthi-paccayā* refers to consciousness, etc., which has just passed, and which thus forms the necessary condition for the immediately following stage of consciousness by giving it an opportunity to arise. Cf. No. 4.

23: Disappearance-condition *vigata-paccayā* is identical with No. 22.

24: Non-disappearance-condition *avigata-paccayā* is identical with No. 21.

These 24 conditions should be known thoroughly for a detailed understanding of that famous formula of the dependent origination (*paticcasamuppāda*).

Mahā Thera Nyanatiloka. *Manual of Buddhist Terms and Doctrines*, Buddhist Publication Society, first edition 1952.

See The Significance of Dependent Origination, by Nyanatiloka (WHEEL 140).

12.10 Pabhassara Citta, Radiant Mind, and Bhavanga

April 13, 2017; revised January 19, 2018; August 20, 2018; January 7, 2019

It is a good idea to read the posts, "[Amazingly Fast Time Evolution of a Thought \(Citta\)](#)" and "[Viññāna – What It Really Means](#)" first.

1. Billions of *citta* flow in a second, and what we experience is the cumulative effect of billions of *citta*, which we call a "thought". Let us start at the base state of a *citta* (loosely translated as a thought, but it is really not). Each and every *citta* has 7 universal *cetasika* (mental factors); those universal *cetasika* are discussed in, "[What is in a Thought? Why Gathi are so Important?](#)"

- Those 7 universal *cetasika* are: *Phassa* (contact), *saññā* (perception), *vedanā* (feeling), *cetanā* (intention), *ekaggata* (one-pointedness), *jivitindriya* (life faculty), and *manasikāra* (memory). This is the "baseline" state of a *citta*, which lasts only a billionth of a second.
- And during that brief time, many other *cetasika* (good or bad) can be incorporated into a *citta*. **But let us consider the simpler case where no other *cetasika* are incorporated.**
- **Even such a simple *citta* is still contaminated or defiled at the end of that brief time. This contamination is manifested in *vedanā* and *saññā cetasika*.**

2. Each INDIVIDUAL *citta* — during its existence for a billionth of a second — undergoes change in 9 stages! Such a fast process cannot be seen by any human other than a Buddha; see, "[Citta, Mano, Viññāna – Stages of a Thought](#)."

- At the end of the 9 stages, it has evolved and has become affected by the whole of the *viññāṇakkhandha* (including past *viññāṇa*).
- The contamination of a *citta* is manifested in *saññā* and *vedanā*; **a contaminated *citta* is called *viññāṇa*.**
- *Vedanā* at the base level is "discerning that an event took place" ("veema" + "danaveema" or "වෙම දැනවීම" in Sinhala). Actual "feelings" about the event will be incorporated as the *citta* evolves in 9 stages, as we will discuss below.

3. The other critical universal *cetasika* that evolves in 9 stages is *saññā*. Even though it has become standard to write is as "saññā", that is not how it is pronounced "sangngā":

[WebLink: Play the word "saññā"](#)

- Some do indicate the correct pronunciation by writing as *saññā*. Even though it does not really matter how one writes it ("sanna" or *saññā* or "sangngā"), it is critically important to understand what is meant by it; see, "[What is Saññā \(Perception\)?](#)."
- *Saññā* provides one's perception about a given event that led to the arising of the *citta*. For example, if we see an object, the identification of that object proceeds via those 9 stages (and *vedanā* evolves accordingly).
- So, let us briefly go through the 9 stages of the evolution of a *citta* using *saññā* as the basis.

4. Each *citta* gets contaminated in those 9 stages due to *anusaya* that comes to the surface as *āsava* (or *asaya*), which are also related to one's *gathi*. There are many posts at the site with details on those entities.

- Those nine stages of contamination during the lifetime of the *citta* itself (in a billionth of a second) are: *citta*, *mano*, *mānasan*, *hadayan*, *pandaran*, *mano manāyatanam*, *mana indriyam* (or *manindriyam*), *viññāṇa*, *viññāṇakkhandha*. [*Yaṃ cittam mano mānasaṃ hadayaṃ paṇḍaram mano manāyatanaṃ manindriyaṃ viññāṇaṃ viññāṇakkhandho...*]
- This rapid contamination of a *citta* is explained in the "[WebLink: suttacentral: Patīccasamuppāda Vibhaṅga](#)," in Section 2.5.1. Akusalacitta : "Tattha katamaṃ saṅkhāra paccayā viññāṇaṃ? Yaṃ

cittaṃ mano mānasam hadayaṃ paṇḍaram mano manāyatanam manindriyam viññāṇam viññāṇakkhandho tadjāmanoviññāṇadhātu—idaṃ vuccati “saṅkhārapaccayā viññāṇam”.

- Those 9 stages are also listed in the original commentary, section 1.3.5.3. Tatiyacatukkaniddesa in [WebLink: suttacentral: 1.3. Ānāpānassatikathā](#) or Patisambhidamaggapakarana (or Part I, p. 360 of Buddha Jayanati Tipiṭaka): “..yam cittaṃ mano manasan hadayan paṇḍaran manomanayatanan manindriyan vinnanan vinnakkhandho...” I trust only three commentaries and all three are in the *Tipiṭaka: Patisambhidamagga, Petakopadesa, and Nettippakarana*.
- All other commentaries that are in existence today were written much later and are not reliable; see, [“Buddhaghosa and Visuddhimagga – Historical Background.”](#)
- What we actually experience is *vinnanakkhandha*. Even after going through the 9 stages it is still called a *citta* for convenience; see, [“Citta, Mano, Viññāna – Stages of a Thought”](#) and [“Amazingly Fast Time Evolution of a Thought \(Citta\).”](#)

5. Let us consider the example of seeing one’s mother. At the initial *citta* stage, the only perception is that a person is there. In the next step of “*mano*” (which stands for “calibrating with respect to other persons; “*maneema*” in Sinhala), it is realized that the person is woman.

- In the third stage of “*mānasam*,” “*san*” comes to the picture and extra information (which is personal) is incorporated; see, [“What is “San”?”](#). Now, one identifies the person as one’s mother.
- By the way, we cannot live in this world without at least reaching the “*mānasam*” stage of a *citta*. Otherwise, we will not be able to distinguish a given person in a crowd.
- Actual contamination of the *citta* starts at the next stage of “*hadayan*,” which means identifying whether that person is “close one’s heart” and then getting attracted or repulsed. In our example, one identifies the person as “one’s mother” and of course corresponding *vedanā* of an attachment arises as well.

6. An *Arahant*’s *citta* does not evolve beyond the ‘*mānasam*’ stage. So, the Buddha was able to identify different people, but he did not form any attachment/dislike based on that identification.

- This is what is stated in the *Karaniyamatta Sutta*: “..*mānasam bhāvaye aparimāṇam*...” One needs to cultivate “*mānasam*” as much as possible (“*aparimāṇa*” or “*appramāṇa*” or without limit), but not let the *citta* contaminate beyond that.
- That can be done only via reducing and finally removing one’s bad *gathi*, *āsava*, and *anusaya*, as we discuss below.

7. The next step after “*hadayan*” is “*paṇḍaran*,” which means to “add more power”, i.e., one’s mind will look back at past events (yes, within a billionth of a second), recall how loving she was, and “attach more”. It is done automatically by the *manasikāra cetasika*.

- So, the *citta* gets more and more contaminated and gets to the *viññāṇa* stage. Thus *viññāṇa* is actually a *citta* that is very much contaminated due to one’s *anusaya*, *āsava*, and *gathi*.
- Finally, it becomes part of the *viññāṇakkhandha*, which includes 11 types of *viññāṇa*: past, present, future, near, far, fine (*sukuma*), coarse (*olārika*), likes (*paneeta*), dislikes (*appaneeta*), internal (*ajjatta*), and external (*bahidda*).
- A *viññāṇakkhandha* has incorporated not only one’s *anusaya*, *āsava*, and *gathi*, but also one’s past memories and future hopes, etc.

8. Now we can address the issue of a “*pabhassara citta*.” First, what is meant by “*pabhassara*”?

- The word comes from three sounds at the root: “*pa*” means again and again, “*bha*” is related to “*bhava*”; and “*sara*” or “*chara*” means to “*sarisareema*” in Sinhala or “to participate”. Thus a “*pabhasara citta*” with only one “s” in the word (NOT *pabhassara*) is a contaminated *citta* that will lead to *sansāric* journey or the rebirth process.

- The opposite of “*pabha sara*” is “*pabha assara*,” where “*assara*” means “not take part in”. It rhymes as “*pabhassara*.”
- This is why I say that Pāli is phonetic language. Meanings come based on sounds. I have given many examples throughout the website.

9. Therefore, a “*pabhassara citta*” is that base state, or the **pure state** of a *citta*, BEFORE it goes through the 9 stages of contamination. It has only the 7 universal *cetasika*.

- Each and every *citta* of a given person starts off as a *pabhassara citta*, but gets contaminated to varying degrees depending one's personality or one's advancement along the Path.
- Even an *Arahant's citta* is not a *pabhassara citta*; it will contaminate to the level of “*mānasaṃ*,” as we discussed above. However, *Arahant phala citta*, which lasts for only one *citta*, is a *pabhassara citta*.
- When an *Arahant* is in *Arahant phala samāpatti*, he/she knows that one is alive, but has no awareness of outside events. This is called *animitta*, *appanihita*, *suññata samādhī*. That is different from the *nirodha samāpatti*, where the flow of *citta* stops.
- In Buddha Dhamma, defilements are associated with “dark”, and pure states are associated with “bright” or “radiant”. So, we could call a *pabhassara citta* a “radiant *citta*,” and **a mind that generates AND maintains *citta* at that state a “radiant mind”**.
- The only time such radiant or pure *citta* flow occurs, is when an *Arahant* is in *Arahant phala samāpatti*, with the *Arahant phala citta* flowing continuously.

10. This process of contamination of a *citta* is what stated in the “[WebLink: suttacentral: Pabhassara Sutta \(AN 1.51\)](#)”: “*Pabhassaramidaṃ, bhikkhave, cittaṃ. Tañca kho āgantukehi upakkilesehi upakkiliṭṭhaṃ. Taṃ assutavā puthujjano yathābhūtaṃ nappajānāti. Tasmā 'assutavato puthujjanassa citta bhāvanā natthi' ti vadāmi ti.*”

- First, “*Pabhassaramidaṃ*” is “*Pabhassara idaṃ*”. As I keep saying, words are sometimes combined or even a bit changed to rhyme in *suttā*. So, the first sentence says, “Bhikkus, *citta* (the first stage) is *pabhassara* or does not contribute to rebirth process”.
- The next sentence says how it is defiled: “*āgantuka*” (which is also a Sinhala word “ආගන්තුක”) means “introduced”. What is introduced is “*upakilesa*” or defilements (that are in one's *gathi*, *anusaya*, *āsava*). That leads to “*upakilitta*” or contamination. Again. “*kiliti*” in Pāli and Sinhala means “dirty”.
- The next sentence says, “those *puthujjano* who do not understand this, cannot comprehend the reality (*yathābhūta*)”. Here *puthujjana* means a normal human who has not been exposed to Buddha Dhamma; specifically, one who does not comprehend *Tilakkhaṇa*. Thus the last sentence says, “therefore, I do not recommend *citta bhāvanā* to those who do not comprehend *Tilakkhaṇa*.”

11. Another famous quote from the [WebLink: suttacentral: Kevatta Sutta](#) in the *Digha Nikāya* (DN 11), says, “*Viññāṇaṃ anidassanaṃ anantaṃ sabbato pabhaṃ...*” This could be written as “*Viññāṇaṃ anidassanaṃ, anantaṃ, sabbato pabhaṃ..*” in order to break into three components.

- Here, “*anidassana*” means “cannot be seen”. *Viññāṇa* is more than a *nāma dhammā* and has “*kammic energy*”. But it is below the “visible *rūpa*”; see, “[Kamma Viññāna – Link Between Mind and Matter](#).”
- And, “*ananta*” is infinite; *viññāṇa dhātu* is infinite.
- “*sabbato*” means “in every way/for all”.
- As we discussed above in #8, “*pabbha*” means “repeated *bhava*” (“*pabhaṃ* comes for that).
- Therefore, the above verse means, “***viññāṇa* is unseen, infinite and leads to the rebirth process for all**”.
- To emphasize: ***viññāṇa* is a defiled *citta*. We all experience *viññāṇa*, not pure *citta*. Even more accurately, we experience *viññāṇakkhandha* (*viññāṇa* aggregate). However, we loosely call “a thought” a *citta*.**

- One stops the rebirth process by removing one's bad *gathi*, *āsava*, and *anusaya* and not letting *citta* contaminate beyond the “*mānasaṃ*” stage.

More details at this post: “[Anidassana Viññāna – What It Really Means.](#)”

12. Some commentaries say that *bhavaṅga citta* are *pabhassara citta*. **That is absolutely incorrect.** All living beings have *bhavaṅga citta* that depend on one's *bhava*; see “[Bhava and Bhavaṅga – Simply Explained!](#).”

- *Bhavaṅga* comes from “*bhava*” + “*anga*,” where “*anga*” is “a part”. So, *bhavaṅga* means “associated with a given *bhava*.” *Bhavaṅga* is obviously different for different *bhava*.
- An animal also get into the *bhavaṅga* state. **Does that mean an animal has a “radiant mind” when it is in the *bhavaṅga* state?**
- Furthermore, sometimes “*anidassana viññāṇa*” is also incorrectly explained as the base level of *viññāṇa*. Per #11 above, it is clear that *anidassana viññāṇa* just explains that *viññāṇa* cannot be “seen”.

13. In fact, **it is not correct to say *bhavaṅga citta***. *Bhavaṅga* is a “state of mind”, no *citta vīthi* run during *bhavaṅga*.

- For example, a living being in the *asañña* realm does not experience any thoughts. There are absolutely no *citta vīthi* running during the whole time there. However, the body is maintained by *bhavaṅga* that corresponds to that *bhava*.

14. So, the point here is that as long as one has bad *gathi* (or *anusaya*, *āsava*, etc., which are all inter-related and can be just called *avijjā*), one's thoughts **will be contaminated as they arise**.

- Therefore, we cannot control our thoughts as they arise: **a *citta* is contaminated to the *viññāṇa* stage in a billionth of a second, which is unimaginably fast.** This is why the Buddha said a *citta* is the fastest entity in the world (we loosely call “a thought” a *citta*, even though it is really *viññāṇakkhandha* that we experience).
- All we can do is to REDUCE *avijjā* (and thus all those related entities of *gathi*, *āsava*, *anusaya*) by learning *Dhamma* and then practicing *Ānāpāna* (not breath meditation) and *Satipaṭṭhāna* meditation.
- As one proceeds in the Path, one's had *gathi* (and *āsava* and *anusaya*) will start decreasing, one's *citta* will tend to be more “cleaner and brighter”.
- Once one gets to a certain level, one can start contemplating on those key concepts like *anicca*, *dukkha*, *anatta*, i.e., *vipassana* meditation, and attain *magga phala*.

15. Not all *citta* get contaminated at the same level. A *citta* arises when one of our six sense faculties makes a sense contact, and the level of contamination of the *citta* depends critically on what that sensory input is.

- Let us take some examples. When we taste a delicious food or see an attractive object, greedy thoughts may arise. But we know that we all don't have the same cravings for a given object. Some foods that some people crave can be repulsive to some others. In another example, a given person may be liked by some but disliked by others (think about a famous politician).
- Furthermore, we don't generate defiled thoughts in many cases. Billions of *citta* flow through our minds as we look at scenery passing by while riding in a car; they are mostly neutral, but still are contaminated to a certain level.
- But the level of contamination will be stronger when one sees an eye-catching object.

16. I have seen some people say *citta* that arise in a baby are *pabhassara citta*. One's *anusaya* are ALWAYS with oneself, whether it is a baby, animal, *brahma*, or any living being.

- A baby's brain has not developed so it cannot experience the world as we do, and it also cannot express itself. But a baby's *citta* are also contaminated due to *anusaya* being there.

- Only when one attains *magga phala* that a part of one's *anusaya* (and *āsava* and *saṃyojana*) is removed permanently; see, "[Conditions for the Four Stages of Nibbāna](#)."

17. As one starts at the *Sotāpanna* stage of *Nibbāna*, and advance through *Sakadāgāmī*, *Anāgāmī* stages to the *Arahant* stage, one's *avijjā* (and thus bad *gathi*, *anusaya*, *āsava*, etc) decrease permanently.

- Thus a *Sotāpanna*'s thoughts will not be defiled beyond a certain level of contamination. Certainly, a *Sotāpanna* will not generate strong *akusala citta* that are capable of leading to rebirth in the *apāyā*.
- By the time one gets to the *Anāgāmī* stage, one has removed all *kāmāsava* (*kāmā āsava*), and thus will not be tempted by any sensual object in the *kāmā loka*. Thus he/she will not be reborn anywhere in the *kāmā loka* (four *apāyā*, human realm, and the six *deva* realms).
- When one gets to the *Arahant* stage, one has removed all *avijjā* (and all bad *gathi*, *anusaya*, *āsava*, etc): One has attained *Nibbāna*, and thus one will not reborn anywhere in the 31 realms at death.
- All the above have been discussed in detail in many posts at the site. One can use the site map "[Pure Dhamma – Sitemap](#)" or use the "Search" box on top right to look for posts for given keyword(s).

13.1 Historical Background – Introduction

One of the earliest posts: Revised May 27, 2017

1. Today, we have three main “sects” of “Buddhism” that include the Theravāda Buddhism in Sri Lanka, Burma, Thailand, and few other South Asian countries, Mahayana Buddhism in the form Zen in Japan, China, and several other Asian countries, and Vajryana Buddhism in Tibet.

- All sects are being practiced in other countries in varying degrees. How the original teachings of the Buddha got branched out over 2500 years is discussed in, “[Historical Timeline of Edward Conze.](#)”

2. The vast literature in Theravāda Buddhism, which is contained in the Tipiṭaka (three baskets of Sutta, Vinaya, and Abhidhamma) are mostly self-consistent.

- Considering the vastness of the material in these documents, the consistency is amazing, and gives one confidence that any “contamination” would be small indeed.

3. However, even the *Theravāda* literature has been contaminated with incorrect interpretations of the *Tipiṭaka*.

- The root causes of misinterpretations of key terms are discussed at several posts below in this section, but specifically two major historical events can be pointed out: “[Buddhaghosa’s Visuddhimagga – A Focused Analysis](#)” and “[Misinterpretation of Anicca and Anatta by Early European Scholars.](#)”
- These inconsistencies were first pointed out by my teacher *Thero* who recently passed away, and my goal with this website is to point out those errors and illustrate that those correct interpretations provide a fully-consistent picture: “[Parinibbāna of Waharaka Thero.](#)”

4. It is hard for me to fathom how a normal human being, regardless of how intelligent he is, could teach the doctrine in such different ways over forty five years, yet be so consistent in multiple ways (the discourses range from simple one-to-one question answer sessions with individuals to lengthy discourses delivered to audiences of thousands of people, not to mention the complex Abhidhamma material).

- Even with the help of a computer, it is hard for me to keep track of the intricacy of Abhidhamma. The complex workings of the mind has been analyzed in multiple ways, and they are all consistent within the Abhidhamma and also with the Suttā.

5. Teachings of the Buddha, as given in the Theravāda Tipiṭaka, are confirmed and solidified with each new scientific discovery (in contrast, the mythical aspects introduced in various forms of Mahayana Buddhism are facing problems in light of scientific progress).

Buddha Dhamma is like a diamond covered in the dirt of ignorance. The more we find about the world through scientific methods (thus removing more dirt from the diamond), the more of the diamond’s luster become apparent. Not too far into the future, Buddha Dhamma will shine brightly and will greatly help the humanity all over the world.

6. It is ironic in a way how the “materialistic science” is helping to clarify and confirm the teachings of the “mind-based” Buddha Dhamma. Yet the humanity is still only enamored with the truly amazing materialistic advances based on scientific discoveries, and is for most part unaware of its primitive stage compared to ultimate knowledge contained in Buddha Dhamma.

- The real breakthrough may come when science will be forced to embrace the mind as yet another fundamental property of nature.
- The discovery of quantum mechanics has clearly laid the foundation for this next breakthrough. It has been more than hundred years since the advent of quantum mechanics, but it is only within the past two to three decades that real progress has been made in this direction. I discuss these developments in detail in the “[Dhamma and Science](#)” section.

Next, "[Methods of Delivery of Dhamma by the Buddha](#)",

13.2 Methods of Delivery of Dhamma by the Buddha

1. Buddha Dhamma is undoubtedly the most complex “theory” in the world. It is truly amazing that such a deep philosophical doctrine has survived over 2500 years.

- However, we can be confident that the pure Dhamma still survives, because the three baskets of *sutta*, *vinaya*, and *abhidhamma* were written down in 29 BCE when there were still numerous *Arahants* were present.
- After about 100 - 200 CE, people started translating the *Tipiṭaka* into *Sanskrit* and also the *Mahāyāna* sect started writing their own *suttā* in *Sanskrit*; see, “[Historical Timeline of Edward Conze.](#)”

2. Another important point to remember is that there is no single discourse in which the Buddha has drawn together all the elements of his teaching and assigned them to their appropriate place within some comprehensive system; see, “[Sutta – Introduction.](#)”

- Therefore, the same material was delivered in a variety of different ways over the 45-year “ministry” of the Buddha. If some mistakes were made in the transmission of one of the *suttā* or discourses, that would become apparent when compared with the numerous other discourses or the *Abhidhamma*.

3. The Buddha tailored his discourses to his audience at hand. Thus his teachings that have been transmitted encompass a broad spectrum, ranging from one-to-one conversations with people who had particular questions in mind to long discourses to audiences consisting of groups with wide-ranging mental capabilities.

- If the Buddha realized that it was not fruitful to explain a deep concept to an individual, he remained silent. One example cited is Buddha’s silence when a certain wanderer named Vacchagotta asked him whether there was an *Atman* or *āthma* (permanent soul) or not. Even though Buddha had clearly explained in *Paṭicca Samuppāda* that the concept of a lifestream with changing “*gathi*,” in this case, he remained in silence when Vacchagotta asked him the question twice. Vacchagotta then left.
- After Vacchagotta left, Buddha’s personal attendant, Ven. Ānanda, asked him why Buddha did not explain the concept that it is not correct to say “there is no soul” or “there is a soul” to Vacchagotta. The Buddha told Ānanda that he did not think Vacchagotta was mentally capable at that time to understand the concept, and that he did not want to confuse him. See the post, “[What Reincarnates? – Concept of a Lifestream](#)” for the correct explanation.
- It turned out that Vacchagotta later became a disciple and even attained *Nibbāna* through his efforts.

4. Other times, he would enunciate invariable principles that stand at the heart of the teaching: for example, *Abhidhamma* is a complete description of the working of the mind. The Buddha delivered this *Abhidhamma* material in summary form to his chief disciple, Ven. Sariputta, and it was Ven. Sariputta and his followers who expanded that summary to the form that we have today in the *Tipiṭaka*; see, “[Abhdhamma – Introduction.](#)”

- But in most cases, instead of trying to provide the most thorough and intellectually deep answers, he tried to find the best way to steer people to the truth according to their mental capabilities. Some recent books have misrepresented such isolated one-to-one correspondence as indications that some fundamental issues have not been addressed by the Buddha. They are probably unaware that such questions have been answered in other *suttā*. I will point such instances as they come up in other posts.

Next, “[Misconceptions on the Topics the Buddha “Refused to Answer”](#)”,

13.3 Misconceptions on the Topics the Buddha “Refused to Answer”

Coming back to the literature on the Theravāda Dhamma, the Buddha seems to have followed four ways of treating questions: (1) Some should be answered directly, (2) others should be answered by way of analyzing them, (3) yet others should be answered by counter-questions, and (4) there are questions that should be put aside. As mentioned in the above section, depending on the audience he chose the method that he deemed was appropriate.

He always told his disciples that they should not waste time worrying about such questions on the universe, since they should be using the precious little time on the Earth in pursuit of Nibbāna. So, questions on the characteristics of the universe was one that Buddha chose to put aside in REGULAR question and answer sessions. A good example is when a monk named Malunkayaputta came to the Buddha and asked a number of questions regarding the universe and stated that he will leave the order if the Buddha refuses to answer them. The Buddha’s following answer illustrates the urgency with which he asked the followers to “follow the path” diligently instead of wasting valuable time on metaphysical questions.

The Buddha told Malunkayaputta, “Suppose Malunkayaputta, a man is wounded by a poisoned arrow, and the friends and relatives bring him to a surgeon. Suppose the man should then say: “I will not let this arrow be taken out until I know who shot me; whether he is a Ksatriya or a Brahmana or a Vaisya or a Sudra (i.e., which caste); what his name and family may be; whether he is tall, short, or of medium stature; whether his complexion is black, brown, or golden; from which village, town, or city he comes. I will not let this arrow be taken out until I know the kind of bow with which I was shot; the kind of bowstring used; the type of arrow; what sort of feather was used on the arrow and with what kind of material the point of the arrow was made”. Malunkayaputta, that man would die without knowing any of these things. Even so, Malunkayaputta, if anyone says: “I will not follow the holy life under the Blessed One until he answers these questions such as whether the universe is eternal or not, etc.” he would die with these questions unanswered by the Blessed One”.

We have to look at this from the perspective of the “knowledge base” that existed at the time of the Buddha. Think about the fact that starting with the Greek philosophers at the time of the Buddha (a coincidence), the Western science took over 2500 years to reach the current level of understanding of the universe. Even a mere two hundred years ago, the scientific understanding was limited to the Solar system and basically nothing beyond that. Now we know that there are billions of galaxies, each with billions of stars (most of which have planetary systems like our Solar system), and that all this started with the big bang. This transition was slow and took the genius and courage of people like Galileo who sometimes sacrificed their lives to bring out the truth.

Twenty five hundred years ago, there was no rational way that the Buddha could have “explained” concepts such as the origin of the universe, extent of the universe, etc. Therefore, even though he clearly stated the existence of “innumerable world systems” in order to lay down the basis of consciousness (see [“Consciousness – A Dhamma Perspective”](#)), he refused to discuss such concepts with individuals simply because it would have been a waste of time given the limited base knowledge existed at that time. If the Buddha was teaching his doctrine today, I believe that he would have answered such questions directly, because the vocabulary and background knowledge for doing so is available today.

However, Buddha’s perspectives on the universe is apparent in his teachings on Abhidhamma (and also in some main Suttā). This is because the fundamental aspects of the universe (infinite in space and time) are inherent in the doctrine. Those principles are embedded in the teachings, but the Buddha avoided giving answers to specific questions, especially from individuals, because it would have totally confused those people.

Some people used examples as mentioned above to state that the Buddha refused to answer any questions related to the origin of the universe or that his position on the existence of a soul was not very clear. That is not the case at all. The Buddha’s main concern at any given instance was to provide an answer that the audience at hand was able to comprehend. If the correct answer would have befuddled the audience, he remained silent on that particular question. He has described the evolvement of life on this planet in the

Agganna Sutta. But please do not read the published translated versions, because the translations are embarrassingly flawed.

Therefore, one should not come to certain conclusions by reading just a few discourses, and needs to pay attention in what context the discourse was delivered. It is always possible to refer to Abhidhamma to clarify issues, since it is written in a methodical way. So, the texts of the oldest Pāli texts contain Buddha's teachings in a variety of forms, ranging from simple interpretations of Dhamma to its very deep philosophical aspects in the Abhidhamma as well as some of the Suttā. Yet the contents in all this vast material remains self-consistent when one examines the contents with the correct perspective. We owe a deep gratitude to the Saṅgha of Sri Lanka for keeping this material intact.

Next, "[Preservation of the Dhamma](#)"

13.4 Misinterpretations of Buddha Dhamma

Revised October 5, 2016

1. It is said that the Buddha advised not to translate the *Tipiṭaka* material word-by-word into any other language. Instead, commentaries were written to explain the Pāli material in the *Tipiṭaka* in condensed form fit for listening, retention, recitation, memorization, and repetition – the five major elements in oral transmission.

- This is a very important point. For example, the Buddha orally delivered the main Suttā over many hours; the *Dhamma Cakka Pavattana Sutta* was delivered over several days to the five ascetics. For easy transmission, these discourses were SUMMARIZED in *Magadhi* (and that particular format of “lining up” was termed *Pāli*); see, “[Sutta – Introduction](#).”
- Each line, sometimes even a word in a *Sutta* needs a further explanation; see, “[Satipathāna Sutta – Structure](#)” and follow-up posts. Such “explanatory texts” or “commentaries” were originally written in *Sinhala* and were called “*Sinhala Atthakata*”.
- Commentaries in *Sinhala* accumulated for centuries and in the fourth or fifth century CE, these commentaries were translated to Pāli (and edited with his own ideas incorporated) by Buddhaghosa. Subsequently, most of the original *Sinhala* commentaries were lost, and today we only have the edited summaries of Buddhaghosa where he incorporated his own ideas.
- Fortunately, three of the original commentaries (“*Sinhala Atthakata*”) have been preserved in the *Tipiṭaka*; see, “[Preservation of the Dhamma](#).”

2. Among the commentaries to the *Tipiṭaka*, those on the Abhidhamma are dominated by the three commentaries of Buddhaghosa: (i) the *atthasālini*, “The Expositor”, the commentary to the *Dhammasaṅgani*, (ii) the *Sammohavinodani*, “The Dispeller of Delusion”, the commentary to the *Vibhaṅga*, and (iii) the *Pāncappakaraṇa Atthakathā*, the combined commentary to the other five treatises.

- But it must be remembered that Buddhaghosa wrote those commentaries with his own ideas as a former Hindu Brahmin. **The original *Tipiṭaka* remains unaltered, including those three original commentaries (“*Sinhala Atthakata*”) mentioned above.**

3. In addition to writing those commentaries on the *Tipiṭaka* while he was in Sri Lanka, Buddhaghosa also wrote the *Visuddhimagga* (The Path of Purification) around 430 CE, which is considered to be an important treatise on *Theravāda* doctrine. This is wrongly considered to be a comprehensive manual condensing the theoretical and practical teaching of the Buddha, and some consider it to be the most important *Theravāda* text outside of the *Tipiṭaka* Canon of scriptures.

- I will point out many problems with Buddhaghosa’s writings – including *Visuddhimagga* — at this site.
- The most common problems include: misinterpretation of *Ānāpānasati bhāvanā* as “breath meditation”; see, “[7. What is Ānāpāna?](#)” and “[Mahā Satipathāna Sutta](#).”
- He also incorporated *kasina* meditations, which are *anāriya* meditations and are not *Ariya* meditation techniques. In *Ariya* (or true Buddhist) meditations, the object of meditation is *Nibbāna*, not a mundane object like a *kasina* object.

4. This is critical issue since most current *Theravāda* institutions teach mainly the works of Buddhaghosa, since those works are supposed to be reliable summaries of the teachings in the *Tipiṭaka*. Therefore, it is good to have the works of Buddhaghosa reviewed extensively.

- I will point out the most important misrepresentations on this website, based on what I have learned from my teacher *Thero* in Sri Lanka. The Dhamma that I present here is, in my opinion, the correct interpretation of the *Tipiṭaka*. I hope you will come to that conclusion on careful examination of the material.
- More details can be found in “[Incorrect Theravāda Interpretations – Historical Timeline](#)” and other posts in the “[Historical Background](#)” section.

5. After Emperor Asoka's reign, no further steps were taken to hold back the inevitable *Brahminic* influence on Buddhism in India, and Buddhism went through a gradual decline in India (despite or even because of the resurgent philosophical activity led by Nagarjuna, Asanga, Vasubhanudhu, and others around the beginning of the first millennium) and virtually disappeared from India during the first millennium.

6. The Mahayana version of Buddhism started with the works of Nagarjuna, who, in all likelihood had best intentions for the promotion of Buddhism (even though he was naive enough to assume that Buddha Dhamma can be refined for the "new ages").

- These refinements became major revisions by the time D. T. Suzuki's books were written in the early 1900's, and the original teachings were badly distorted. This is the reason why I am so obsessive about making sure that my essays are compatible with the original teachings of the Buddha.

7. All these distortions in both Mahayana and Theravāda versions have their origins in various philosophers (such as Nagarjuna and Buddhaghosa) trying to interpret Buddha Dhamma in terms of mundane concepts; see, "[Buddha Dhamma: Non-Perceivability and Self-Consistency](#)."

- However, as pointed out in that post, it is easy to point out the inconsistencies with such mundane interpretations by Nagarjuana, Buddhaghosa, and others, especially with the evidence gained by the scientific advances made during the past few hundred years.
- And such scientific evidence and the ones that are yet to be discovered will only confirm the pure Dhamma that stays intact in the *Tipiṭaka* to the day, as also pointed out in that post.

Next, "[Preservation of Dhamma](#)",

13.5 Preservation of the Buddha Dhamma

Revised October 28, 2017; November 11, 2017; January 9, 2019; re-written January 26, 2020

Tipiṭaka – The Pāli Canon

1. Buddha’s teachings were handed down verbally from one generation to the next over three to four hundred years. That material is in the Pāli Canon, *Tipiṭaka*.

- *Tipiṭaka* was composed into a form that is suitable for easy verbal transmission, in many cases in SUMMARY form. See, “[Sutta – Introduction](#).”
- That is the reason that it survived almost entirely in content over this long period.
- It was written down at the turn of the first century, 2000 years ago, in Matale, Sri Lanka. See, “[Welcome to Aluvihāra Rock Cave Temple](#)” for information about the location where the *Tipiṭaka* writing took place.
- The other earliest written Buddhist documents are from Gandhāra in modern northwestern Pakistan; see, “The Buddhist Literature of Ancient Gandhāra” by Richard Salomon (2018.) However, those do not provide a complete version of the *Tipiṭaka*; see p. 83 of the book.
- All other documents in Chinese, Tibetan, etc. date later and derived from the Pāli *Tipiṭaka*.

Initial Oral Transmission

2. The discourses of the Buddha were said to have been delivered in *Māgadhi* language. The written form was called Pāli. But Pāli does not have its own script, so it was written down with Sinhala script.

- **That provides a clear way of sorting out the Mahāyāna literature, which was written in Sanskrit, and never written in Pāli. thus all the Sanskrit *suttā* were written by Mahāyānic philosophers in Sanskrit.**
- Around the turn of the first millennium, translations of the *Tipiṭaka* to Chinese and subsequently to Tibetan also took place. The original manuscripts in Pāli can be expected to contain most of the original discourses delivered by the Buddha.

3. Today, it is hard to fathom (especially for Westerners) that such a level of accuracy could have been maintained in a verbally-transmitted material.

- However, we need to understand the background traditions and also the determination of the monks over thousands of years that helped preserve most of the original teachings.
- Even today, there are people who have memorized large sections of the *Tipiṭaka*, especially in Myanmar (formerly Burma). In Myanmar, there are special examinations to test memorizations. See, “[WebLink: myanmarnet.net: TIPITAKADHARA SAYADAWS OF MYANMAR \(BURMA\) IN FIVE DECADES](#).” Also see, “[WebLink: dhammadharo: Memorizing the Tipitaka](#).”
- During the period of oral transmission, there were groups of *bhikkhus* who memorized (overlapping) sections of the *Tipiṭaka*. Then during a *Sangāyanā* (Buddhist Council), they all got together and compared each other versions to make sure they were all compatible.

It Took Three Councils to Finalize the *Tipiṭaka*

4. A major reason for the assembly of the First Buddhist Council within three months of the Buddha’s *Parinibbāna* was to organize the vast material.

- Within the next two hundred years, two more Councils were held to recite and verify the teachings and to finalize the *Tipiṭaka* in three broad categories (“*ti*” + “*piṭaka*” or “three baskets”). The second was held about a century after the first one.

- The third was held in 250 BC at Pataliputra under the patronage of King Asoka. The “three baskets” were completed at this Council with the finalization of the *Abhidhamma Piṭaka*.
- It was this completed *Tipiṭaka* that was written down in 29 BCE at the Fourth Buddhist Council, in Matale, Sri Lanka.

The authenticity of the *Tipiṭaka*

5. Another important point is hidden in the history of the *Tipiṭaka*. Even up to the 20th century, the whole *Tipiṭaka* was written on specially prepared ola (palm) leaves. They deteriorate over 100 years or so and needed to re-written. Even though that was a very labor-intensive process (there are about 60 large volumes in the modern printed version of the *Tipiṭaka*), it served another important purpose.

- Sinhala language (both spoken and written) changed over the past 2000 years. **The need to re-write it every 100 or so years made sure that the changes in Sinhala script were taken into account.** Of course Pāli language has not changed.
- The following video gives an idea about how those leaves were prepared and what tools were used to write with:

[WebLink: youtube: Ola Leaf manuscripts](#)

Most *Suttā* Condensed Versions of the Discourses

6. A critical point here is that a *sutta* is a **CONDENSED** version of discourse in many cases. For example, the *Dhamma Cakka Pavattana sutta* was delivered to the five ascetics overnight. Imagine how many written pages would be if written verbatim! Yet it was summarized in a few pages. The same is true for all the important *suttā*. Otherwise it would, have been impossible to transmit all those thousands of *suttā*;

- **The Buddha delivered most of his discourses in the *Māghadhi* (*māghadhi* = “*maga*” + “*adhi*” or Noble path) language.** *Tipiṭaka* was written in Pāli with Sinhala script. Pāli is a version of *Maghadhi* suitable for writing down oral discourses in summary form suitable for transmission.
- Each Pāli word is packed with a lot of information, and thus commentaries (called “*Attha Kathā*”) were written to expound the meaning of important Pāli words and to explain the key phrases in the *suttā*.

Importance of the Commentaries

7. Thus the *Tipiṭaka* was meant to be used with the commentaries. Pāli *suttā* are not supposed to be translated word-by-word. See, “[Sutta – Introduction](#).”

- Most of those Sinhala commentaries were burned down in the Anuradhapura era; see, “[Incorrect Theravāda Interpretations – Historical Timeline](#).”
 - Fortunately, three original commentaries written by the main disciples of the Buddha (Ven. Sariputta, Ven. Kaccayana, etc.) during the time of the Buddha had been included in the *Tipiṭaka* (in the *Khuddhaka Nikāya*), and thus survived. The current revival of pure Dhamma by the *Theros* in Sri Lanka is partially due to their perusal of these three documents (*Paṭisambhidāmagga*, *Petakopadesa*, and *Nettipakarana*).
8. With the loss of most of the commentaries and the non-prominence of the surviving three commentaries mentioned above, people started translating the *Tipiṭaka* word by word. The problem was compounded by the increasing usage of the Sanskrit language beginning around the first century CE.

- For example, “*anicca*” was translated first to Sanskrit as “*anitya*” and then the same Sanskrit word “*anitya*” was ADOPTED as the Sinhala translation for *anicca*. Similarly, “*anatta*” was translated to Sanskrit as “*anathma*” and again was adopted as the Sinhala word for “*anatta*.” **This itself has been responsible for preventing millions of people attaining *Nibbāna* for all these years;** see, “[Anicca, Dukkha, Anatta – Wrong Interpretations](#).”

- Another good example is the translation of *paṭicca samuppāda* to Sanskrit as *Pratītyasamutpāda*; see, “[Paticca Samuppāda – “Pati+ichcha” + “Sama+uppāda.](#)” I think it is NOT POSSIBLE to translate some key Pāli words to Sanskrit or English or any other language without losing the true meaning. This is the reason that I am going to just keep the original words in some cases and just explain what it is; also see, “[Anantara and Samanantara Paccayā](#)” or words like *taṇhā* and *Nibbāna*.

Direct Translation of the *Tipiṭaka* Is Dangerous

9. **The Buddha had foreseen this and warned not to translate the *Tipiṭaka* to ANY LANGUAGE, and particularly to Sanskrit.** There were two *Brahmins* by the names of Yameḷu and Kekuṭa who were experts on the *Vedic* Texts; they became *bhikkhus* and asked the Buddha whether they should translate the Pāli *suttā* to Sanskrit.

- That is when the Buddha admonished them that Sanskrit was a language with musical overtones developed by the high-minded *Brahmins* and thus it was not possible to convey the true meanings of *Māghadhi* (Pāli) words in Sanskrit; see, [WebLink: suttacentral: Chulavagga 5.33.](#)
- In the Sutta Central English translation, the Pāli word for *Sanskrit* (*chandasa*) is translated incorrectly as, “metrical”; see, “[WebLink: suttacentral: 15. Minor matters \(Khuddaka\)](#)” which is the translation of “[WebLink: suttacentral: 1. Khuddakavatthu.](#)” The relevant Pāli text is located close to the end, and starts as, “*Tena kho pana samayena yameḷakekuṭā nāma...*”.

10. **One grave problem we have today is the many people try to translate a given *sutta* word by word to another language. Thus the *Dhamma Cakka Pavattana sutta* that we mentioned above is translated to a few pages. **

- For a comprehensive translation of that *sutta*: “[Dhammacakkappavattana Sutta.](#)”
- **That is why most of the existing translations are inadequate at best and erroneous in most cases; see, “[Sutta – Introduction.](#)”**

Buddhaghosa’s Commentaries

11. Finally, just before the Sinhala commentaries were burned down, Buddhaghosa translated **and edited** those commentaries back to Pāli in his *Visuddhimagga* and other books.

- Even though he had made many errors (like including *kasina* meditation and substituting the *ānāpānasati bhāvanā* with “breath meditation”), he had actually used the words *anicca* and *anatta* in the Pāli version of the *Visuddhimagga*; see, “[Buddhaghosa and Visuddhimagga – Historical Background](#)” and “[Buddhaghosa’s Visuddhimagga – A Focused Analysis.](#)”
- Thus the incorrect translations of the words “*anicca*” and “*anatta*” may have happened long before him probably in the first to second century CE; see, “[Misinterpretation of Anicca and Anatta by Early European Scholars.](#)”

Timeline and Organization of the *Tipiṭaka*

First Buddhist Council

12. That first Buddhist council was held three months after the *Parinibbāna* at Rājagaha the capital of Māgadha.

- Shortly after the Buddha passed away, Ven. Mahakassapa, the *de facto* head of the Saṅgha, selected five hundred monks, all Arahants (those who have attained Nibbāna), to meet and compile an authoritative version of the teachings.

This first Buddhist council was held three months after the *Parinibbāna* at Rājagaha the capital of Magadha.

13. The *cullavagga*, one of the books of the Pāli *Vinaya Piṭaka*, gives an account of how the authorized texts were compiled at the First Buddhist Council:

- On the basis of Venerable Upali's recitation of *Vinaya*, the *Vinaya Piṭaka*, the compilation on disciplinary matters was compiled.
- Venerable Ānanda then recited "the Dhamma" or the *Sutta Piṭaka*, i.e., the discourses, and on the basis of this recitation the *Sutta Piṭaka*, the Compilation of Discourses, was compiled (Venerable Ānanda was supposed to have an amazing memory and had memorized all the *Suttā* preached by the Buddha).
- The *Abhidhamma* was rehearsed by all the *Arahants* present at the Council. Although parts of the *Abhidhamma* were recited at these earlier Buddhist Councils, it was not until the Third Council that it became fixed into its present form as the third and final *Piṭaka* of the Canon.

Finalization of *Tipiṭaka* at the Third Council

14. The proceedings of the Third Council compiled by the Moggaliputta-Rissa *Thero* in the Kathavatthu, which became part of the *Tipiṭaka* (Three Baskets). It was during the Third Council that the final version of the *Tipiṭaka* (as available today) was compiled. It finalized the *Abhidhamma piṭaka*, and added several books on the *Khuddhaka Nikāya*, in addition to the *Kathavatthu*.

The composition of the *Tipiṭaka* is as follows:

1. The *Vinaya Piṭaka* is composed of five books: Major Offenses (*Prajika Pāli*), Minor Offenses (*Pacittiya Pāli*), Greater Section (*Mahavagga Pāli*), Smaller Section (*Culavagga Pāli*), and Epitome of the *Vinaya* (*Parivara Pāli*).
2. The *Sutta Piṭaka* consists of five *Nikāyas*: *Digha Nikāya* (Collection of Long Discourses), *Majjhima Nikāya* (Collection of Middle-Length Courses), *Samyutta Nikāya* (Collection of Kindred Sayings), *Aṅguttara Nikāya* (Collection of Discourses arranged in accordance with number), and *Khuddaka Nikāya* (Smaller Collection).
3. The *Abhidhamma Piṭaka* consists of the following categories: *Dhamma Sanghani* (Classification of Dharmas), *Vibhanga* (The Book of Divisions), *Kathavatthu* (Points of Controversy) which was actually compiled by venerable Moggaliputta Tissa at the Third Buddhist Council, *Puggala Pannatti* (Description of Individuals), *Dhatukatha* (Discussion with Reference to Elements), *Yamaka* (The Book of the Pairs), and *Paṭṭhāna* (The Book of Relations).
 - That collection is the *Tipiṭaka* (Three Baskets) or the Pāli Canon.

Writing Down the *Tipiṭaka* at the Fourth Council

15. It is this enlarged Canon completed at the Third Council that was committed to writing in Sri Lanka in the first century BCE (29 BCE) at the Aluvihara Monastery at the Fourth Buddhist Council. The material in Pāli was written down in Sinhala language (Pāli does not have its own script).

This huge collection was written down on palm leaves with a styluses, a pointed steel dagger-like instrument, which scratched the letters into the soft leaves. Ink made from berries was rubbed over the whole page and then gently removed, so that only the indentations retained the color. It is said that *Tipiṭaka* was also written down on gold leaves as well.

16. It is to be noted that Theravāda Buddhism was brought to Burma and Thailand from Sri Lanka in the first century CE. Over the next two centuries, it diffused into adjoining countries of Laos, and Cambodia, and survives in its purity in those countries as well to the present day. (In Cambodia, the Khmer Rouge regime in the 1970's massacred most of the monks, and the Buddha Dhamma is virtually extinct).

- While the *Saṅgha* (with the aid of most of the kings) in Sri Lanka took pride and honor in keeping the teachings intact, Buddhism went through many changes in India, as well as in China, Japan, and Tibet, and then finally disappeared altogether from India around 1200 CE.

Next, “[Historical Timeline of David Conze](#)”,

13.6 Historical Timeline of Edward Conze

Edward Conze was a Mahayana scholar, and translated the Mahayana Prajnaparamita or *Perfection of Wisdom* sutras from original Sanskrit to English. See, [WebLink: WIKI: Edward Conze](#)

(It must be noted that any Sanskrit *suttā* are Mahayana *suttā* that were composed by Mahayana philosophers like Nagarjuna (who were just intellectuals, and not Arahants) and are NOT original *suttā* delivered by the Buddha).

Conze was impressed with those Mahayana *suttā*, and in the book, “On Indian Mahayana Buddhism” (1968) he compiled works of the Mahayana/Zen scholar D. T. Suzuki. Even though his bias towards Mahayana *suttā* are clear, I selected his timeline which clearly shows how Mahayana scholars wrote their own *suttā* and tried later to attribute those to the Buddha.

This historical timeline is discussed in detail by Edward Conze in his book, “A Short History of Buddhism” (1980). According to Conze, the history of Buddhism can be conveniently divided into four periods:

1. The old Buddhism, which largely coincided with what later came to be known as Theravāda
2. Rise of Mahayana,
3. Rise of the Tantra (Vajryana) and Ch’an (Zen),
4. No further divisions.

The first period is roughly 500 years; second and third periods roughly cover the first thousand years of the current era (CE); the last thousand years can be considered as the fourth period. During this whole period the Theravāda Dhamma was kept mostly intact. In the following description, it is also clear some of the differences between the original teachings and the Mahayana ideology.

In the following I will present this story verbatim as told by Conze (starting at p. 45 of his book):

“.....About 100 BCE (roughly 400 years after the Buddha’s Parinibbāna) a number of Buddhists in India felt that the existing statements of the doctrine had become stale and useless. In the conviction that Dhamma required ever new re-formulations so as to meet the needs of new ages, new populations and new social circumstances, they set out to produce new literature which ultimately came to known as Mahayana Buddhism. The creation of this literature is one of the most significant outbursts of creative energy known to human history and it was sustained for about four to five centuries. Repetition alone, they believed, cannot sustain a living religion. Unless counterbalanced by constant innovation, it will become fossilized and lose its life-giving qualities, they believed.

So far the Mahayanistic attitude seems quite logical. What is more difficult to understand is that they insisted in presenting the new writings, manifestly composed centuries after the Buddha’s Parinibbāna, as the very words of the Buddha himself. They followed the Mahasanghikas in minimizing the importance of the historical Gautama Buddha, whom they replaced by the Buddha who is the embodiment of Dhamma (dharmakaya). In the “Lotus of the Good Law”, we are told that the Buddha, far from having reached his enlightenment at Bodhgaya, abides for eons and eons, from eternity to eternity, and that He preaches the Law at all times in countless places and innumerable disguises.

.....Not content with this, the Mahayanists tried to link their own writings with the historical Buddha by a number of mythological fictions. They asserted that they had been preached by the Buddha in the course of his life on Earth, that parallel to the (First Buddhist) Council at Rajagaha, which codified the *Suttā* of the Theravāda, the Mahayana *suttā* had been codified by an assembly of Bodhisattvas on the mythical mountain of Vimalasvabhava; that the texts had been miraculously preserved for five centuries and stored away in the subterranean palaces of the Nagas, or with the king of the Gandharvas, or the king of the Gods. Then, as Nagarjuna puts it, “five hundred years after the Buddha’s Nirvana, when the Good Law, after having

gradually declined, was in great danger”, these treasures from the past were unearthed, revealed and made known, so as to revivify the doctrine.

What then were the main doctrinal innovations of the Mahayana? They can be summarized under five headings:

1. As concerns the goal there is a shift from the Arhat-ideal to the Bodhisattva-ideal;
2. A new way of salvation is worked out, in which compassion ranks equal with wisdom, and which is marked by the gradual advance through six “perfections” (*paramita*);
3. Faith is given a new range by being provided with a new pantheon of deities, or rather of persons more than divine;
4. “Skill in means” (*upayakausalya*), an entirely new virtue, becomes essential to the saint, and is placed even above wisdom, the highest virtue so far;
5. A coherent ontological doctrine is worked out, dealing with such items as “Emptiness”, “Suchness”, etc”.

We will now consider these one by one.

1. The goal of Arhantship is now relegated to the second place. The Mahayanists strive to to be a “Bodhisattva”. A Bodhisattva is distinguished by three features: (a) In his essential being he is actuated by the desire to win the full enlightenment of a Buddha, (b) He is dominated by two forces, in equal proportion, i.e., by compassion and wisdom. From compassion he selflessly postpones his entrance into the bliss of Nirvana so as to help suffering creatures,..... (c) Although intent on ultimate purity, a Bodhisattva remains in touch with ordinary people by having the same passions they have. His passions, however, do not either affect or pollute his mind.

2. A Bodhisattva’s compassion is called “great”, because it is boundless and makes no distinctions..... This enlightenment does not automatically entail the desire to assist others. Among the enlightened they distinguish three types, two of them “selfish”, one “unselfish”. The “selfish” types are Arhants and Pratyekabuddhas, who are said to represent the idea of the Hinayana, of the “inferior vehicle”. The “unselfish” ones are the Buddhas, and the pursuit of the unselfish quest for enlightenment on the part of a Bodhisattva is called the “Buddha-vehicle”, of the “Great Vehicle” (*mahā-yana*).

A Bodhisattva must be a patient man. He wants to become a Buddha, but his distance from the transcendental perfection of a supreme Buddha, who both knows and is everything, will obviously be infinite. In one life it could not possibly be traversed. Countless lives would be needed and a Bodhisattva must be prepared to wait for eons and eons before he can reach his goal. Yet, he is separated from the Buddhahood only by one single obstacle, i.e., his belief in a personal self. To get rid of himself is the Bodhisattva’s supreme task. By two kinds of measures he tries to remove himself – actively by self-sacrifice and selfless service, cognitively by insight into the objective non-existence of a self. The first is due to compassion, the second to wisdom.

The unity of compassion and wisdom is acted out by the six “perfections”, or “paramita”, the six “methods by which we go to the Beyond”. A person turns into a Bodhisattva when he first resolves to win full enlightenment for the benefit of all beings. The six are: the perfections of giving, morality, patience, vigor, meditation, and wisdom”.

This ends the quotation from Edward Conze’s book. (I have not added or edited anything other than to skip some text in order to make it concise).

I agree with Conze’s analysis except for the statement in the very first paragraph: “The creation of this literature is one of the most significant outbursts of creative energy known to human history and it was sustained for about four to five centuries.” This literature, even though voluminous, only made a simple theory much more seemingly confusing, and contradictory. We will discuss this in a follow-up post. The only

fortunate thing about is that it is written entirely in Sanskrit, and thus is easy to distinguish from the original teachings written in Pāli Tipiṭaka.

In addition to the “improvements” that were added in India, further material associated with national customs were added when Mahayana Buddhism spread to China, Japan, and Tibet (and came to known by different names such Zen, Vajrayana, etc.).

So, the premise of the Mahayana re-formulation of the Buddha Dhamma was to “refine and improve” the Dhamma of the Buddha. This is in sharp contradiction with one of the most fundamental concepts in Dhamma that only a Buddha can discover these laws of nature and BY DEFINITION, it is not possible to improve upon them. They themselves admit that a Buddha appears in the world after long times, and **thus their attempt to change Buddha Dhamma is one of the basic contradictions in Mahayana.**

What we need to understand is the basic difference between Buddha Dhamma and any other human endeavor: All other human endeavors involve cumulative effort of many, whether it is science, philosophy, engineering, etc.; see, “[Dhamma and Science – Introduction](#).” And all those efforts are made within the system, using the knowledge acquired by the experience within the system; see, “[Gödel’s Incompleteness Theorem](#).” A Buddha transcends the human realm, and discovers the “whole existence” of the 31 realms; see, “[The Grand Unified Theory of Dhamma](#).” The Mahayanists took that world view, which is not accessible to normal human beings but only to a Buddha, **and then added their own theories that only complicates that “already seemingly esoteric” picture.** This is why there are so many apparent contradictions in “Buddhism” today. Adding more “pluff”, which is wrong anyway by definition, only distorts the correct picture. My goal here is to provide a consistent picture using the accepted scientific methods.

Next, “[Background on the Current Revival of Buddha Dhamma](#)”,

13.7 Why is it Critical to Find the Pure Buddha Dhamma?

1. In 2014, I participated in an online discussion group on “Buddhism” for a few days. Couple of things that struck me were:

- There are a lot of people out there who see that there is something valuable in Buddha Dhamma. But there is lot of confusion, because there are so many conflicting ideas brought up and discussed without reaching a conclusion.
- Each person seems to have their own version, their own “theory” what Dhamma really is. In many forums, instead of having a honest discussion about what ideas are right and what are wrong, many people use the forums for “entertainment”. It is their “coffee break” to sit around and show off their “knowledge” and “wisdom”. **(I must say that I regularly participated in a couple of other discussion groups in 2014 where people seemed to be genuinely interested in having an open exchange of ideas; due to lack of time, I don’t participate in such discussions any more).**

2. It is a good idea to first decide what the goal of such a forum is. I think the goal should be to find and confirm the core ideas that the Buddha taught 2500 years ago. Let us get rid of all these different labels, Mahayana, Theravāda, etc.. Since it does not appear to happen any time soon, I have decided to just present what I have found. I call it Buddha Dhamma. And that is what was called until the term “Buddhism” came into vogue in the 19th century.

3. I have two key points to make:

- We can remove many bad ideas that crept into Dhamma by looking at the historical “evolution” of “Buddhism”; The main problem of “evolution” of Dhamma is that it is not a germ idea that needs to be nurtured and refined: **Buddha Dhamma is the set of ultimate natural laws that a Buddha DISCOVERS after long times.** Now, one can be skeptical about that, and that is perfectly fine. Confidence in that belief comes by critically examining the evidence, and it may come later. But let us make that assumption, because that is a key idea in Buddha Dhamma: That it is a rare event that a human being can discover the ultimate laws of nature; see, [“Power of the Human Mind – introduction,”](#) and the follow-up posts.
- Modern science can be another useful tool in finding the truth or fallacy of some concepts involved; the “theories” of science are continually being tested and verified by thousand of independent scientists, so even though they are not infallible, they are better than many speculations by individuals. And there is a key difference in finding the nature’s laws via the scientific method and the way a Buddha finds them; see, [“Dhamma and Science – Introduction.”](#)

I will use both these tools in presenting my case.

4. The goal (and the motivation) in finding true Dhamma (or any kind of true salvation for those who believe in any other religion or belief system) is different compared to a philosophical debate. One could possibly “win an argument” in a philosophical debate especially if “winning” means persuading more people in the audience. One could thus “win a debate”, but deep inside one knows the argument has flaws. It is like winning court case, and freeing a criminal. The criminal (and may be even the lawyer) knows that he/she committed the crime. Even though the consequences will not be paid in a prison, they will be paid according to the Dhamma or the nature’s laws.

5. If we can recover those correct laws that the Buddha taught, then we can gain the benefits of knowing those laws and following them for our benefit. It is not about winning an argument. It is ALL about finding the truth for oneself. If what Buddha said is true, then this world is much more complex than most people think, and there is much more suffering to be had, if one does not use the remaining time in this life wisely.

6. Then there is this naive argument out there that says: “All religions work for the good of the mankind. Do not criticize any religion or any sect within Buddhism”. But some of those people also say, “Our sect of Buddhism is the best version because we are so compassionate that we will not attain Enlightenment until

EVERYONE is ready". As we will see below, this oath itself is against one of the five precepts in Buddha Dhamma, that of promising not to lie. I am not going to talk about other religions, but I am going to point out the flaws in many existing versions of "Buddhism" today, because **that is the compassionate thing to do.**

7. If one is truly compassionate, one should try to find the true Dhamma (because there is only one set of natural laws), and then SHARE it with anyone who would be interested. Dhamma is not something that anyone can GIVE to anyone else. Even the Buddha could only teach those who would listen to him. Some people even question the compassion of the Buddha when they hear this story from the Tipiṭaka:

- There was a butcher named Cundasukara who lived right next door to the Jetawanaramaya, where the Buddha resided for a long time. Some may wonder why the Buddha did not try to "save" Cundasukara by teaching him the right path. Actually, there were some *bhikkhus* who could hear the screams of the pigs being slaughtered and asked the Buddha why he would not try to teach Dhamma to Cundasukara. The Buddha told them that Cundasukara would accrue much more bad kamma if he tried to do that. Killing pigs leads to accumulation of much bad kamma, but unimaginable bad kamma could be accumulated by having hateful thoughts towards a Buddha: see, "[How to Evaluate Weights of Different Kamma](#)." One could accumulate more bad kamma by hurting the feelings of a human being than by killing an animal, and hateful thoughts towards a Buddha can be infinitely worse than hurting a normal human being. Therefore, sometimes the true compassion can be hidden.
- In my way of thinking, I would not be acting compassionately if I did not point out these flaws in both Mahayana and Theravāda, because I have experienced the benefits of the true and pure Dhamma.
- My goal is not to try to "convert" anyone to anything. The Buddha did not try to convert anybody. It is up to each person to make their own decisions, because one is responsible for one's own future, and no one else is. Most of us are lucky to live in societies where we can make our own decisions.
- As I keep emphasizing, Buddha Dhamma describes the ultimate laws of nature. Anyone with any religious background, or an atheist, can follow Dhamma and should be able to see that it does describe the laws of nature. However, it is critical to find the true Dhamma. The only way to do that is to check for consistency at ALL TIMES, and to weed out the bad versions.

8. In the following few posts we will examine the problems in many different versions of Mahayana and also in Theravāda. If you see any flaws in my arguments, please send me a comment. **It is possible that I could make a mistake, and if so I will correct them.** I hope all those who read these posts will keep an open mind, because all of us should have the same goal: finding the pure Dhamma which will be beneficial to us all.

Next, "[Key Problems with Mahayana Teachings](#)",

13.8 Key Problems with Mahāyāna Teachings

Revised September 2, 2019

1. The main problem is a conflict with a very fundamental tenet of Buddha Dhamma. That a Buddha comes to this world after very long times and DISCOVERS the laws of nature by his efforts. Mahāyānists agree that it takes eons of time to fulfill the “*paramitas*” and to become a Buddha.

- Then they turn around and say that Buddha Dhamma needed to be “refined” for the changing times; see “[Background on the Current Revival of Buddha Dhamma](#).” How can the ultimate laws of nature discovered by a Buddha be “refined” or “revised”? **No one has answered this basic question.**

2. The first thing one is supposed to do in becoming a “Mahāyāna Buddhist” is to take the “*Bodhisattva* vow.” They say each being should endeavor to become a Buddha, i.e., each person should be a *Bodhisattva*.

- Those who initiated this idea a long time ago probably did not have any idea that there is an infinite number of sentient beings in this world. Each human body has an amazingly large number of microscopic beings. See, “[There are as many creatures on your body as there are people on Earth!](#).”
- There are 1000 trillion of just ants on this Earth: [WebLink: ASK: Q: How many ants are there in the world?](#). Or do they not count other living beings?
- We know that there have not been a significant number of *Arahants* for past 1800 years. Is there any realistic way for trillions of beings to attain *Aranhathood*, let alone *Buddhahood*?
- In this eon (basically the time duration of a universe or about 30 billion years), there have been four Buddhas. One more Buddha is to appear. That is truly an exception. Before this eon, there were 30 eons (trillion years!) that did not have a single Buddha appearing. So, how long would one to have wait to become a Buddha, i.e., remain a *Bodhisattva*? **And will all beings (or even the human population today) be able to become Buddhas in the same eon let alone at the same time? Are they serious?**

3. Within 500 years of the passing away of the Buddha, the Indian Mahāyānists started not only refining but incorporating concepts that were alien to Buddha Dhamma. If it needed refining just after 500 years, how come they have not kept up with the updating process? **One would think they would be doing a significant revision these days with so much changes in science and technology.**

4. Those who started this revision process did not understand the central idea of Nibbāna. They never mention concepts like *anicca*, *dukkha*, *anatta*. So, they defined those in their own terms and then got into a slippery slope in trying to explain those terms by inventing more concepts. It snowballed, and in the words of Edward Conze, who translated many Mahāyāna texts to English:

- “.....About 100 BCE (roughly 400 years after the Buddha’s Parinibbāna) a number of Buddhists in India felt that the existing statements of the doctrine had become stale and useless. They were convinced that Dhamma required ever new re-formulations so as to meet the needs of new ages, new populations, and new social circumstances. So they set out to produce new literature which ultimately came to known as Mahāyāna Buddhism. The creation of this literature was one of the most significant outbursts of creative energy known to human history and it was sustained for about four to five centuries. Repetition alone, they believed, cannot sustain a living religion. Unless counterbalanced by constant innovation, it will become fossilized and lose its life-giving qualities, they believed”.
- (see, “[Historical Timeline of Edward Conze](#)“).

For someone who is not familiar with the original teachings of the Buddha, those philosophical arguments could look impressive, as they did for Edward Conze. We will examine those concepts in detail in upcoming posts. I have discussed the concept of “emptiness”; see the link below.

5. None of the Mahāyānist “authors” such as Nagarjuana, Vasubhandhu, Asanga, is documented to be *Arahants* or even *Sotāpannas*. They were like philosophers of today, putting forth their theories. Not only that, they had an aversion to the concept of an *Arahant*.

- The Mahāyāna *sutras* have their origin with Nagarjuna, who lived 150-250 CE in India. Thus the original teachings of the Buddha went underground somewhere before 200 CE, within about 700 years of the *Parinibbāna* (passing away) of the Buddha.
- **Thus those Indian intellectuals like Nagarjuna were just like the philosophers from the time of Socrates. They make all kinds of speculations consistent with the “knowledge” about the “world” at any given time.**
- The Buddha did warn of this outcome: He said: “there will be other versions that look like Dhamma and feels like Dhamma. Just like when there are imitations of gold coming to the market, the real gold goes underground” ([WebLink: suttacentral: Saddhamma Patirupaka Sutta \(SN 16.13\)](#)). That has been the case for over 1800 years.
- But the truth comes out eventually. That time could well be now. The correct interpretations of *anicca*, *dukkha*, *anatta* have been hidden for many hundreds of years.

6. So what are these revisions that the Mahāyāna forefathers made?

Edward Conze has listed five doctrinal “innovations” of the Mahayanists; see, [“Historical Timeline of Edward Conze.”](#) They are:

- As concerns the goal, there is a shift from the Arahant-ideal to the *Bodhisattva*-ideal;
- A new way of salvation was worked out, in which compassion ranked equal with wisdom.
- Faith is given a new range by being provided with a new pantheon of deities.
- “Skill in means” (*upayakausalya*), an entirely new virtue, becomes essential to the practitioner. That is placed even above wisdom, the highest virtue in the Buddha Dhamma.
- A coherent ontological doctrine was worked out, dealing with such items as “Emptiness”, “Suchness”, etc.

We will point out the critical contradictions of each of these revisions with the Buddha’s original teachings (see i-v below) and will go into details later on.

- i. The basic idea of Buddha Dhamma is that each human being has a unique mind. But greed, hate, and ignorance defile a mind. Because of that, each person commits immoral acts and subsequently “pay for those actions”, suffering is the net result in the cycle of rebirths. One gets out this cycle of rebirths by purifying one’s mind; one who has accomplished this task is an *Arahant*. No person can purify another person’s mind. *Nibbāna* is not an abstract concept. See the subsection [“Nibbāna.”](#)
- ii. One attains *Nibbāna* when one purifies the mind of ALL defilement. That is when one has ultimate wisdom, or *paññā*. There is no way to equate compassion with *paññā*. One can be compassionate to the maximum, but that does not mean one has gotten rid of ignorance. Those beings in the Brahma worlds do not generate any hateful thoughts; they have perfected the four *Brahmavihara*: *metta*, *karuna*, *mudita*, *upekkha*. They don’t have a trace of hateful thoughts. Yet they have ignorance (of the Four Noble Truths), and thus will one day be reborn in the four lower realm. Therefore, this is also a significant contradiction. See, [“Sotāpama Stage of Nibbāna.”](#)
- iii. Buddha said life in the human realm is better than life any other (except for the ones reserved for the *Anāgāmis*). That is because the easiest to attain *Nibbāna* is from the human realm. Some beings in higher realms can be helpful to us, and we should share merits with them. However, a human is not supposed to worship any other being. One has to have faith only in the Buddha, Dhamma, and Saṅgha. No other being can help with our goal of attaining *Nibbāna*.

- iv. “Skill in Means” or whatever other term anyone comes up runs into the same problem as compassion above in (ii). Such ideas run against the core teachings of the Buddha. Even if one gets rid of greed and hate, but still has ignorance, then one will end up getting back greed and hate DUE TO ignorance. One attains *Nibbāna* by cultivating wisdom.
- v. Mahāyāna descriptions on all these philosophical concepts like emptiness or *sunyāta* are just a lot of empty words. They have much simpler explanations that are consistent with original teachings; see the links below. The Mahāyānists had to re-invent alternate descriptions for these terms. The original meanings came to conflict with their “revisions” discussed in i-iv.

7. Those who follow the Mahāyāna version do that due to a couple of reasons. (1) They are born into Mahāyāna tradition (just like I was born to Theravāda). (2) They have had no exposure to other versions of Buddhism. The problems with Mahāyāna versions are not due to their making. But it is time at least to start changing those features that are in stark contradiction not only with the original teachings of the Buddha, but also with modern science.

- The oath in most Mahāyāna traditions to, “not to seek Enlightenment until ALL BEINGS ARE READY for Enlightenment” is the most visible contradiction. As I pointed out in #2 above, at least these days, we know that this is an outright lie. That itself is an apparent break of the precept not to lie knowingly.
- There needs to be an open discussion about how to weed out the inconsistent material from all sects, and to recover the pure Buddha Dhamma for the benefit of all.

Before discussing the problems with the wrong interpretations in Theravāda, let us discuss the concept of *sunyāta*; see, [“What is Sunyāta \(Emptiness\)?”](#) Mahāyāna Buddhism tries to make a big deal out of *sunyāta*, because their forefathers (those who started Mahāyāna tradition) could not understand the concept of *Nibbāna*. Mahāyāna teachings believe that *Nibbāna* is an abstract concept. However, it is a simple concept; see, [“Nibbāna – Is It Difficult to Understand?”](#)

Also see: [“Saddharma Pundarika Sutra \(Lotus Sutra\) – A Focused Analysis”](#)....

13.9 Saddharma Pundarika Sutra (Lotus Sutra) – A Focused Analysis

Revised August 13, 2019; July 26, 2020

Difference Between a *Sutra* and *Sutta*

1. This *sutrā*, written by several Indian philosophers over hundreds of years, led to the gradual formation of Mahāyāna Buddhism over that period. Note that I am NOT referring to it as a *sutta*. *Suttā* are the original teachings of the Buddha delivered in *Māghadhi* language. They were subsequently written down in Pāli, and are available in the *Tipiṭaka*.

- In contrast, all Mahāyāna *sutrās* were written after the *Parinibbāna* (passing away) of the Buddha. Furthermore, they all are in Sanskrit without exception.
- Thus at least we have a clear way of distinguishing the original discourses by the Buddha (*suttā*) and those Mahāyāna *sutrās* written by laypeople hundreds of years after the Buddha.
- Even in the Theravāda tradition, the question often arises regarding the interpretation of key concepts. As mentioned in the *Tipiṭaka*, this problem was there, even DURING the time of the Buddha.

How to Verify the Authenticity of Buddha Dhamma

2. Once Mahā Prajapathi Gotami *bhikkhuni*, who was Prince Siddhartha's stepmother, approached the Buddha and pointed out that some *bhikkhus* were teaching incorrect interpretations of the Dhamma. She fears that things will really get out of hand after the *Parinibbāna* of the Buddha. "How can the future generations figure out the correct version of Dhamma?" she asked the Buddha.

- The Buddha agreed that it is inevitable that wrong interpretations will always be there, but said that there is a way to clarify identify the correct version. He always said to look for consistency with the Four Noble Truths, as explained in the *suttā*. The Buddhist principle of Cause and effect is defined in the *Paṭicca Samuppāda*. How to live a moral life by getting rid of *lobha/rāga* (greed), *dosa* (anger/hate), *moha/avijjā* (ignorance of the Four Noble Truths) is laid out in the *Vinaya*.
- These teachings lead to *rāgakkhaya*, *dosakkhaya*, and *mohakkhaya* (getting rid of *rāga*, *dosa*, *moha*).
- If a version of Dhamma does not lead to *rāgakkhaya* (reduction of greed), *dosakkhaya* (reduction of hate), and *mohakkhaya* (reduction of ignorance), then that version should be discarded. Internal consistency must be there too.

Three Ways to Attain *Nibbāna*

3. A bit of background material before we discuss this *sutrā*. According to the Buddha, there are **three ways** to attain *Nibbāna*:

- A **Sammā Sambuddha** (like Buddha Gotama) discovers the Noble Eightfold Path and achieves *Nibbāna* through his efforts, AND he can teach the doctrine to others.
- A second way to attain *Nibbāna* is to learn the Dhamma from a *Sammā Sambuddha* or a true disciple of his. That is how **an Arahant** reaches *Nibbāna*.
- Then there are *pacceka Buddhas* who discover the Path by themselves but are not capable of explaining it to other people.

Only One Vehicle to *Nibbāna* (the "Great Vehicle" or Mahāyāna)?

4. Now let us discuss how this *sutrā* paved the way for the *Bodhisattva* concept in Mahāyāna.

This *sutrā* starts by the Buddha saying that even though he had taught that there were three paths to *Nibbāna* but now he is admitting that there is only one. When Ven. Ānanda asked why he says that he did not think people were “ready” for this higher doctrine. Instead of there being three vehicles (or paths) that one can take, there is the only one. It is the great vehicle or the Mahāyāna (“*mahā*” is great, and “*yāna*” is a vehicle). And this is the path that he himself took by striving for eons as a *Bodhisattva* to become a Buddha.

- Continuing with this *sutrā*, now he (the Buddha) was advising everyone to become a *Bodhisattava* and to attain the Buddhahood. Then he assures all those *Arahants* present there, including Ven. Sariputta, that they themselves will become Buddhas. That is a complete lack of understanding of the concept of an *Arahant*. An *Arahant* is not going to be reborn, and thus, there is no way for an *Arahant* to become a Buddha.

Now let us go through a few more “obvious inconsistencies” in the *sutrā*.

The *Sutrā* Opens With a Lie (*Musāvāda*)

5. It is astonishing to see that the *sutrā* opens with, “Thus have I heard...”, a big *musāvāda* (an untruth) that Ven. Ānanda is providing the details of the *sutrā*.

First, a brief background is in order. Venerable Ānanda, who knew all the *suttā* by heart, recited them at the First Buddhist Council. Thus any given *sutta* in the *Tipiṭaka* starts off with clarification, “Thus have I heard...” to indicate that this was what Venerable Ānanda had heard himself. In trying to give the impression that this *sutrā* was also one delivered by the Buddha, the authors of the *Lotus sutra* attempted to deceive the readers.

- The historians have generally accepted that the *Lotus sutra* was written much later after the passing away (*Parinibbāna*) of the Buddha Gotama. That is true of all other *sutras* written in Sanskrit
- The oldest parts of the text (Chapters 1–9 and 17) were probably written down between 100 BCE and 100 CE, and most of the text was complete by 200 CE. See, for example, [WebLink: WIKI: Lotus Sutra](#). Thus it was written by several authors over 100 years or more. A translation was made from Sanskrit to Chinese in 255 CE, and this is the earliest historical documentation of its existence.

Reads Like a Fairytale

6. The middle of the *sutrā* is devoted to describing the “universal accessibility” of the Buddhahood to anyone. Here it reads like a fairytale with astounding stories of accomplishments. For example, the daughter of the dragon king Sagara astonishes the assembly by performing various supernormal acts and says she can attain the Buddhahood “in an instant.”

- However, these *sutrā* also stress the importance of faith and devotion as a means to the realization of Enlightenment. There is less emphasis on the need for wisdom.

The *Bodhisatta* Vow

7. A critical problem is the *Bodhisatta* vow that a Mahāyāna Buddhist agrees in advance to take (see, [WebLink: WIKI: Bodhisattva vow](#)). That is the promise to wait until “everyone is ready to attain the Buddhahood.” It is not clear how or who can determine WHEN everyone is ready.

- Current scientific facts point to the existence of an innumerable number of living beings; see, “[There are as many creatures on your body as there are people on Earth!](#)” Therefore, it is a critical question as to how all these beings can attain the Buddhahood at the same time.
- Furthermore, it seems contradictory that Buddha Gotama and many other previous Buddhas did not wait for anyone else.

A Buddha is Eternal?

8. The story gets even more fascinating in Chapter 16 (presumably as a different writer of the *śūtrā* comes up with another idea). That is when the Buddha Gotama reveals that he is an eternal being. He had attained the Buddhahood an incalculably distant time in the past. Even though he seems to pass away at times to *nirvāna* (Sanskrit word for *Nibbāna*), he periodically makes appearances in the world.

- This declaration makes the Buddha more like a Creator God, who has been there at all times! And there is no discussion on the issue of whether there was a beginning to this world.
- It seems to me that the philosophers who wrote these Mahāyāna *śūtras* had no idea of the concept of *Nibbāna*! By the very definition, the whole idea of attaining *Nibbāna* is to dissociate from this suffering-filled material world: There are several posts at this site ranging from, “[Three Kinds of Happiness – What is Nirāmisa Sukha?](#)” to “[What are Rūpa? – Relation to Nibbāna](#)” on the concept of *Nibbāna*.
- Then there is the issue of there being other Buddhas present at that assembly too. And they all seem to be “at the same level.” Thus the question arises as to who was the first Buddha and then why those other Buddhas “did not wait until everyone else was ready for the Buddhahood.”

Absence of Key Doctrinal Concepts

9. Most of the sections of the *śūtrā* hyperbolize the value of the single, great vehicle (Mahāyāna) to attain *Nibbāna*. That is in contrast to the three vehicles of *Sammā Sambuddha*, *Pacceka Buddha*, an *Arahant*; see #3 above. **There is no discussion on the actual distinguishing doctrinal concepts of the single vehicle, other than just saying that it has the advantage of “easy accessibility of the Buddhahood.”** What makes this “single-vehicle” approach different from the original “three-vehicle” approach in terms of details in Dhamma? For example, does it have a new way of describing the Noble Eightfold Path, *Paṭicca Samuppāda*, or the Four Noble Truths?

- The *śūtrā*, like many other Sanskrit *śūtrās*, only mentions those critical foundational concepts of Buddha Dhamma in passing. There is no discussion on them, let alone pointing any difference from the original doctrine. **I am amazed that no one even refers to this glaringly obvious point. What sets the “single-vehicle” approach apart from the original “three-vehicle” approach other than the name change?**
- But the real problem is that in changing some key concepts. For example, getting rid of the *Arahant* concept and making the Buddha effectively a Creator God. This *śūtrā* paved the way to distort the Buddha Dhamma for generations to come.
- In terms of the necessary conditions set forth by the Buddha, does this *śūtrā* clarify how to reduce greed, hate, and ignorance? Can anyone point to such aspects? Other than the usage of grandiose descriptions, there is nothing substantial in terms of doctrine, let alone a revised doctrine. All it does is to gravely distort foundational concepts like *Nibbāna*, *Buddhahood*, and *Arahanthood* with the concept of a “single-vehicle”.

Numerous Untruths, Inconsistencies, and Exaggerations

10. There are so many untruths, inconsistencies, and exaggerations in this *śūtrā* that I only have space in this essay to point out the gross problems that are vividly displayed. That is why the post is a “focused analysis.”

- Here is an English translation of the *śūtrā* available online, so that anyone can peruse through and see the apparent difference between this *śūtrā* and any Pāli *sutta* that is in the *Tipiṭaka*: [WebLink: PURIFYMIND: Lotus Sutra](#)
- One could compare this *śūtrā* with the actual Pāli *suttā* that I started discussing; see, “[Sutta – Introduction](#),” and the posts on the *Mahā Satipaṭṭhāna Sutta* below that.
- I must emphasize that one needs to evaluate this *śūtrā* in the context of the profound and self-consistent Buddha Dhamma. One can get a glimpse of this by examining the “Key Dhamma Concepts,” “*Paṭicca*

Samuppada,” and “Abhidhamma” sections at this website, where I have only begun to layout the teachings, especially in the Abhidhamma section.

11. I would be happy to respond (and to correct any legitimate errors in the analysis) if anyone can point out any problems with my analysis. Please send me a comment to lal@puredhamma.net.

- This analysis is consistent with the central theme of this website. To point out problems with both Mahāyāna and Theravāda versions as being practiced today. It is for the benefit of everyone that we should remove (or at least be aware of) all inconsistencies and untruths. Then the current and future generations will have a version of Buddha Dhamma that is close to the original version.

13.10 **What is Sunyata or Sunnata (Emptiness)?**

Revised (added #6) December 28, 2015; November 26, 2017; December 16, 2017

1. In Mahayana Buddhism, there are books written about *Suñyāta* (actually it is *Suññāta* in Pāli) or emptiness. Mahayana Buddhism tries to make a big deal out of *suñyāta*, because their forefathers (those who started Mahayana tradition) could not understand the concept of *Nibbāna*. It is unfortunate that many people who are only introduced to Mahayana teachings (and are not aware of the original teachings of the Buddha) believe that *Nibbāna* is an abstract concept.

- However, *Nibbāna* is a very simple concept if one understands pure Buddha Dhamma; see, "[Nibbāna – Is it Difficult to Understand?](#)."
- But it can be examined at deeper levels too: "[Nibbāna “Exists”, but Not in This World.](#)"
- See more at "[Nibbāna.](#)"

2. What is emptiness?

- When an entity A is devoid of entity B, then it can be said that entity A is devoid of B, or empty of B. That is the emptiness or *suñyāta*.
- For example, if we take a water bottle and pour the water out, we say we have an empty bottle. But in reality there is air in the bottle, so the bottle is empty only with regard to water; it is not empty regard to air.
- Emptiness is relative. One has to say what it is empty of. There is no absolute “emptiness”. It is meaningless to say “this is emptiness”, because there may be something there that we are not aware of.
- For example, up until recently scientists thought deep space is “empty”. But now they know that it is full energy. Still, one could say that “deep space is empty of tangible matter” to a good approximation.

3. The Buddha said when the mind becomes empty of greed (*rāga*), hate (*dosa*), and ignorance (*moha*) it becomes empty of those defilements: “*ragakkhayo Nibbanan, dosakkhayao Nibbanan, mohakkhayo Nibbanan,*” and that mind has attained *Nibbāna*. **That is emptiness, *suñyāta* with respect to defilements, and also with respect to anything material in this world of 31 realms; see below.** VERY SIMPLE explanation, even though it is not easy to get there.

- When one attains the *Arahant phala*, one’s mind becomes *sunya* of *rāga, dosa, moha*. But one still has *saññā* (perception), *vedanā* (feelings), etc. and lives like a normal human being until death.
- But his/her mind is devoid of greed, hate, and ignorance, so that h/she will not do any immoral act, under any circumstances.
- At the death of an *Arahant*, “this world of 31 realms” becomes devoid of any trace of that lifestream, except for the *Arahant’s nama gotta* (*mano* imprints or memory records, for previous lives; see, "[Difference Between Dhamma and Saṅkhāra \(Sankata\)](#)"); there is no rebirth. So that is another *suñyāta*.

4. There is a *sutta* in *Tiṭṭaka* that is about *sunnata* (emptiness), and was delivered by the Buddha, called the *Cula-Suññāta sutta*. I actually wrote the original post before I knew about this *sutta*. When a friend of mine told me about the *sutta*, I was glad to see that the *sutta* described emptiness very similar to the way I described it above. This does show that the Dhamma is internally self-consistent.

- Please click the link below for its translation that I extracted from, [WebLink: ACCESSTOINSIGHT: Cula-suññāta Sutta: The Lesser Discourse on Emptiness](#). Normally, I come across many English translations that are bad and even erroneous, but fortunately this translation is fairly good.

The highlighting in the link below is mine, and I have made some comments:

[WebLink: Cula-Suññāta Sutta](#)

There is no need to write books on emptiness that are full of meaningless words. The above *sutta* says it all.

5. In an online discussion forum in 2014, I saw a comment saying that emptiness describes *paṭicca samuppāda*. This was really a surprise, because in Mahayana texts it is not explained what *paṭicca samuppāda* is.

- I have not seen the *paṭicca samuppāda* explained in even a remotely sensible way in a Mahayana text, Zen, Vajrayana, or any other form. If you know of such a book, please send me a comment giving the name of the book (or any other source), and I would appreciate it.

6. Anything in this world of 31 realms arise due to *avijjā* (ignorance of the real nature of that world): This is the step, “*bhava paccayā jathī*” in *paṭicca samuppāda*. See the [Paticca Samuppāda](#) section for details.

- When *avijjā* is dispelled through the removal of greed, hate, and ignorance via comprehending Dhamma, NOTHING in this material world can arise, because it all starts with “*avijjā paccayā saṅkhāra*,” i.e., via thinking, speaking, and doing things with *avijjā*.
- At *Arahanthood*, even the slightest bondage to anything material in the 31 realms is discarded, and all causes for anything material (which is the cause of suffering at a deeper level) to arise. This is real emptiness or *Nibbāna*. Also see, “[What Are Rūpa? \(Relation to Nibbāna\)](#).”

7. The Buddha said, “*Yo paticcasamuppadam passati, so Dhammam passati*” or, “One who understands *paṭicca samuppāda*, understands Dhamma”

- The Mahayana sects have moved so far away from Buddha Dhamma, I cannot fathom why they still call it Buddha’s Dhamma.
- It is very easy to get the idea behind *paṭicca samuppāda*, because it is in the words; see, “[Paticca Samuppāda – “Pati+ichcha”+“Sama+uppada”](#),” and follow-up posts. Buddha Dhamma is all about cause and effects, and that is what is described in *paṭicca samuppāda*.

8. There is a deeper way to analyze *Suññata*. However, one needs to know the meanings of the Three Characteristics of Nature (*Tilakkhaṇa* or *anicca, dukkha, anatta*) first. It is not possible to attain *Nibbāna* without knowing *Tilakkhaṇa* or the real nature of this world; see, “[Anicca, Dukkha, Anatta](#).”

- One can get to *Nibbāna* (also called *vimokkha*) via contemplating on *anicca, dikkha*, or *anatta* (of course they are inter-related). Contemplation of *anicca* leads to *animitta vimokkha*. Contemplation of *dukkha* leads to *appanita vimokkha*. Contemplation of *anatta* leads to *suññata vimokkha*. [*vimokkha* : (m.) liberation, deliverance; release; emancipation.] [The 3 liberations are: 1. the conditionless (or signless) liberation (*animitta-vimokkha*), 2. the desireless liberation (*apanihita-vimokkha*), 3. the emptiness (or voidless) liberation (*suññatā-vimokkha*).]
- However, regardless of the path taken, the end result is the same: one gets to *Nibbāna*, release (or freedom) from this world.

9. Finally, at the very basic level, *Nibbāna* means getting rid of greed, hate, and ignorance. That REQUIRES comprehension of *anicca, dukkha, anatta* or the real nature this world.

- Put in a different way, greed, hate, and ignorance need to be removed via *Ānāpāna* and *Satipaṭṭhāna* meditations; see, “[Satipaṭṭhāna Sutta – Structure](#).” But those meditations need to be done with the comprehension of *anicca, dukkha, anatta*.
- More details on the correct versions of those meditations can be found at: “[Bhāvanā \(Meditation\)](#)” and “[Maha Satipaṭṭhāna Sutta](#).”

Next, “[Incorrect Theravāda Interpretations – Historical Timeline](#)”,

13.11 **Incorrect Theravada Interpretations – Historical Timeline**

April 29, 2017

1. Degradation of *Theravāda* Buddha Dhamma occurred gradually over the past 1500 years, but two drastic changes took place during that time: (i) Buddhaghosa's introduction of Hindu meditation techniques 1500 years ago, (ii) misinterpretation of *anicca* and *anatta* by the European scholars when they translated both *Tipiṭaka* and *Visuddhimagga* to English in the late 1800's.

- In several posts following this post in this section, I will provide evidence for the above (see bullet #7 below).
- In this post I will discuss the historical timeline, which is critical to the discussion. I have combined two previous posts, “Theravada: Problems with Current Interpretations of Key Concepts” and “Historical Timelines of Buddha Dhamma and Sri Lanka – End of Sinhala Commentaries” (and removed them) to come with this more concise post.
- As I explained in earlier posts in this section, much worse distortions to Buddha Dhamma took place with branching out of various sects based on Mahayana, Zen, and Tibetan (*Vajrayana*). It started with the rise of Mahayana in India about 500 years after the Buddha. Here we are focusing only on ***Theravāda Buddha Dhamma***.

2. Here we look at the timeline of *Theravāda* Buddha Dhamma from the beginning, and see whether we can discern when the pure Dhamma started going underground. There are a few historical facts that most people agree on.

(BCE = Before Current Era, CE = Current Era = AD):

- **563 – 483 BCE:** Buddha Gotama
- **377-307 BCE:** The city of Anuradhapura, Sri Lanka, was established by King Pandukabhaya. But there is evidence that human colonization in Sri Lanka goes back to at least 30,000 years; see the detailed article on Sri Lanka on Wikipedia : [WebLink: Wikipedia: History of Sri Lanka](#)
- **247 BCE:** Buddha Dhamma was introduced to the Sinhala Kingdom in Anuradhapura, Sri Lanka by Ven. Mahinda Thero.
- **161-137 BCE:** For the first time in history, King Dutugemunu united all of Sri Lanka under one kingdom.
- **29 BCE:** *Tipiṭaka* (the version recited at the Third Buddhist Council —*Dhamma Sangayana* — around 247 BCE), was written down in Sri Lanka at the Fourth *Sangayana*, which was the last *Sangayana* attended by all *Arahants*. This is the Pāli *Tipiṭaka* that has survived to this date.
- **100-200 CE:** Ven. Maliyadeva, Last *Arahant* by some accounts, lived in Sri Lanka : [WebLink: Wikipedia: Maliyadeva](#) (However, it is likely that there have been “*jāti Sotāpannas*” who attained *Arahanthood* since then, but may not be that many).
- **100 BCE:** It is likely that Mahayana Buddhism actually originated when the earliest Mahāyāna sūtras to include the very first versions of the *Prajñāpāramitā* series, along with texts concerning *Akṣobhya* Buddha, which were probably written down in the 1st century BCE in the south of India : [WebLink: Wikipedia: Mahayana](#)
- **150-250 CE:** Life of Nagarjuna; considered to be the founder of Mahayana Buddhism. Nagarjuna's central concept was the “emptiness” (*shunyata*) of all *dhammas*. Most influential work is *Mulamadhyamakakarika* (Fundamental verses on the middle way).

2. It is clear that the Pāli *Tipiṭaka* that we have today has the original teachings of the Buddha, since it was written down by *Arahants*. However, Buddha Dhamma started to decline within 100-200 after it was written down.

- Still, there was no significant impact on *Theravāda* Buddhism up to the writing of *Visuddhimagga* by Buddhaghosa around 450 CE.
- The other major work that influenced *Theravāda* teachings to date was *Abhidhammattha Sangaha* by *Acariya* Anuruddha, who was there around the same time as *Acariya* Buddhaghosa. However, since not many people are knowledgeable in Abhidhamma, it has not impacted *Theravāda* to the same extent as *Visuddhimagga*.
- The last, and most important misinterpretation took place much later, in the late 1800's when early European scholars started translating the *Tipiṭaka* to English. That was when the key Pāli terms *anicca* and *anatta* were incorrectly translated as impermanence and “no-self”.

3. In order to first discuss the influence of Buddhaghosa, let us look at the timeline of events that led his visit to Sri Lanka roughly 950 years after the *Parinibbāna* of the Buddha. Here is a timeline compiled by *Bhikkhu* Nyanamoli, taken from his introduction to Ref. 1 (see the references below).

King Devanampiyatissa (307-276 BCE):

- Arrival of Ven. Mahinda in Anuradhapura and establishing Dhamma in the kingdom of King Devanampiyatissa.
- *Mahavihara* monastery founded by Ven. Mahinda.

King Vattagamini (104-88 BCE):

- Abhayagiri monastery founded by the King and becomes separate from Mahavihara monastery.
- Sensing insecurity, Mahavihara monastery writes down *Tipiṭaka* (away from the royal capital).

King Bhatikabhaya (20 BCE-9 CE):

- Public disputes started to break out between Abhayagiri and Mahavihara monasteries.

King Vasabha (66-110 CE):

- Sinhala commentaries on *Tipiṭaka* ended being recorded at any time after his reign.

King Voharika-Tissa (215-237 CE):

- King supports both Mahavihara and Abhayagiri monasteries.
- Abhayagiri adopts Vetulya (Mahayana?) *piṭaka*.
- King suppresses Vetulya doctrines.

King Gothabhaya (254-267 CE):

- King supports Mahavihara monastery.
- 60 bhikkhus in Abhayagiri banished by King for upholding Vetulya doctrines.
- Indian Bhikkhu Sangamitta supports Abhayagiri monastery.

King Jettha-Tissa (267-277 CE):

- King favors Mahavihara monastery; Sangamitta flees to India.

King Mahasena (277-304 CE):

- King supports Sangamitta, who returns from India.
- Persecution of Mahavihara by King; its Bhikkhus driven from capital for 9 years.
- Mahavihara with its libraries of seven stories burnt to the ground.
- Sangamitta assassinated.

- Rebuilding of Mahavihara.

King Sri Meghavanna (304-332 CE):

- King favors Mahavihara.
- Sinhala monastery established at Buddha Gaya in India.

King Jettha-Tissa II (332-334 CE):

- Dipavamsa composed.
- Some of Buddhadatta Thera's works.

King Mahanama (412-434 CE):

- Buddhaghosa arrives in Sri Lanka and composes *Visuddhimagga* and other works.

4. I really recommend reading the Introduction to the English translation of *Visuddhimagga* by Ven. Nyanamoli (Ref. 1). To quote Ven. Nyanamoli (starting on p. xxvii of Ref. 1):

"...Now by about the end of first century B.C. E. (dates are very vague), with Sanskrit Buddhist literature just launching out upon its long era of magnificence, Sanskrit was on its way to become a language of international culture. In Ceylon the Great monastery (Mahavihara), already committed by tradition to orthodoxy based on Pāli, had been confirmed in that attitude by the schism of its rival, which now began publicly to study the new ideas from India.In the first century C.E., Sanskrit Buddhism ("Hinayana", and perhaps by then Mahayana) was growing rapidly and spreading abroad. The Abhayagiri monastery would naturally have been busy studying and advocating some of these weighty developments while the Mahavihara has nothing new to offer.King Vasabha's reign (66-110 CE) seems to be the last mentioned in the Commentaries as we have them now, from which it may lie dormant, nothing further being added. Perhaps the Mahavihara, now living only on its past, was itself getting infected with heresies.in King Mahasena's reign (277-304 CE) things came to a head. With the persecution of Mahavihara with royal assent and the expulsion of its *bhikkhus* from the capital, the Abhayagiri monastery enjoyed nine years of triumph. But the ancient institution rallied its supporters in the Southern provinces and the king repented. The *bhikkhus* returned and the king restored the buildings, which had been stripped to adorn the rival".

"Still, the Mahavihara must have foreseen, after this affair, that unless it could successfully compete with the "modern" Sanskrit in the field of international Buddhist culture by cultivating Pāli at home and abroad it could assure its position at home. **It was a revolutionary project, involving the displacement of Sinhala by Pāli as the language for the study and discussion of Buddhist teachings, and the founding of a school of Pāli literary composition.**It is not known what was the first original Pāli composition in this period; but the *Dipavamsa* (dealing with historical evidence) belongs here (for it ends with Mahasena's reign and is quoted in the *Samantapasadika*, and quite possibly the *Vimuttimaggā* (dealing with practice), was another early attempt by the Mahavihara in this period (4th century) to reassert its supremacy through original Pāli literary composition".

5. Here is another account of the destruction of the original Mahavihara during the reign of King Mahasena (277-304 CE) from Ref. 2 (p. 46): "...the Mahā-Vihara, the Brazen Palace, and all such religious edifices, built by generosity of devout kings and pious noblemen for the use of the orthodox Saṅgha, were razed to the ground. Some three hundred and sixty-four colleges and great temples were uprooted and destroyed, says an ancient chronicle (Nikāya-Sangraha, p.14), ..."

6. **Thus it is clear that the historical tradition of compiling Sinhala commentaries (on *Tipiṭaka*) was abandoned somewhere in the 4th century or even before that,** and many of the original Sinhala *Atthakatha* could have been burnt when the original Mahavihara was burned. A concerted effort was initiated by the Mahavihara to compile literature in the Pāli language to counter the onslaught by Sanskrit Mahayana literature in India that was benefiting the Abhayagiri monastery. The appearance of Buddhaghosa on the scene in the early fifth century accelerated this effort to compile Pāli literature.

- More details can be found in the *Mahavamsa*, the Pāli historical account of the history of Sri Lanka compiled in the 5th century (Ref. 3).

7. In the next two posts, “[Buddhaghosa and Visuddhimagga – Historical Background](#)” and “[Buddhaghosa’s Visuddhimagga – A Focused Analysis](#),” I will discuss the events leading to Buddhaghosa’s writing of *Visuddhimagga*, and how it introduced the **first major contamination** of Buddha Dhamma by incorporating Hindu *vedic* meditations — breath meditation and *kasina* meditation.

The second major contamination — which has been even more damaging — was the incorrect translation of *anicca* and *anatta* as impermanence and “no-self”. This is discussed in the last two posts: “[Background on the Current Revival of Buddha Dhamma](#)” and “[Misinterpretation of Anicca and Anatta by Early European Scholars](#).”

13.12 **Buddhaghosa and Visuddhimagga – Historical Background**

April 8, 2017; Revised April 29, 2017

1. *Acariya* Buddhaghosa has had a strong influence on *Theravāda* Buddhism for the past 1500 years. Before examining his commentaries — especially the *Visuddhimagga* (Path of Purification) — we will discuss some significant events that took place prior to his time, and why he came to Sri Lanka to compose those commentaries.

- The historical timelines up to the arrival of Buddhaghosa in Sri Lanka is given in the previous post in this section: “[Incorrect Theravāda Interpretations – Historical Timeline.](#)”
- I have used material from the three references given below in putting together this post.

2. First, we note that only *Arahants* participated in the first four Buddhist Councils (*Sangayana*), and the fourth one was held at the Aluvihara Monastery (a rock temple) near present-day Matale in the Central Province of Sri Lanka in 29 BCE; see, “[Preservation of the Dhamma.](#)”

- The *Tipiṭaka* was **written down fully** (as exists today) for the first time in this fourth *Sangayana* in Pāli with Sinhala script (**Pāli does not have its own alphabet**).
- So, it is important to keep three things in mind: (i) Genuine *Dhamma* existed in 29 BCE with *Arahants* also completing the *Abhidhamma Piṭaka*, (ii) What we have in the *Tipiṭaka* today is this version and therefore we can have confidence that the true teachings of the Buddha are in the *Tipiṭaka*, (iii) *Tipiṭaka* was written down in Pāli with Sinhala alphabet.

3. Secondly, many parts of the *Tipiṭaka* are in a condensed form as discussed in “[Sutta – Introduction.](#)” **Today, there is a tendency to translate *Tipiṭaka suttā* word-by-word**, and this has led to significant confusion and many contradictions as discussed in that post.

- **Starting at the time of the Buddha, commentaries were written to expand and explain the key concepts that are in a condensed form that was designed for easy oral transmission.** We need to remember that the *Tipiṭaka* was not written down for around 500 years after the *Parinibbāna* of the Buddha, **and during that whole time it survived only because it was in a form that was designed for ease of remembering; thus many details were omitted.**
- For example, *Dhamma Cakka Pavattana sutta* took many hours to deliver, but the *sutta* was condensed to just a few pages of verse. It is not possible to condense all that information in a *sutta* for mostly oral transmission that was available at the time. **In those early days, *Bhikkhus* explained the details when they delivered *desanā* or discourses to the public.**
- **Therefore, in addition to the *Tipiṭaka* being orally transmitted through generations, the details were also orally transmitted.** However, when Buddha Dhamma started declining around 100-200 CE, those details stopped being transmitted (there were not enough *Ariyā*, or those who attained *magga phala*, to pass down correct explanations). Of course, the easy-to-memorize verses of the *Tipiṭaka* were faithfully transmitted.
- That last bullet explains a key problem that we have today. Even though the *Tipiṭaka* remains intact, there have not been many *Ariyā* within the past hundreds of years to explain the key concepts in the *Tipiṭaka*; but thanks to late Waharaka Thero, that has changed; see, “[Parinibbāna of Waharaka Thero.](#)”

4. **Even though a few commentaries were composed in the time of the Buddha in Pāli (we have three in the *Tipiṭaka*; see below), most of them were written later on in Sinhala (especially after the time of Ven. Mahinda), when written language became more common.**

- Up to the time of Buddhaghosa (after about 700 years from the time of Ven. Mahinda), there would have accumulated a vast number of such commentaries called Sinhala *Atthakathā* which means “accounts of the truth” (*attha* + *kathā*). However, it is likely that most of those were destroyed when the *Mahavihara* was burned before Buddhaghosa’s arrival in Sri Lanka; see below.

- **Buddhaghosa's task was to translate those from Sinhala to Pāli, but instead he just made a few of his own commentaries — especially the *Visuddhimagga* — where he incorporated his own Vedic concepts in them; see below.**

5. As given in the timeline in the post mentioned in #1, an important event took place before the arrival of Buddhaghosa in Sri Lanka which led to the possible destruction of many original commentaries; this was the establishment of the *Abhayagiri Vihara* in Anuradhapura around 100 BCE. This led to degrading of Buddha Dhamma in Sri Lanka, which then was accelerated by the writing of the *Visuddhismagga*, as we discuss below.

- Over a number of decades, *Abhayagiri Vihara* became a rival to the *Mahavihara*, which had been the center of religious activity since Ven. Mahinda (King Devanampiyatissa).
- The arrival of a body of monks from Pallarama in India, who belonged to the *Vajjiputta Nikāya*, apparently started this schism between the two *Vihara* (p. 29, Ref. 3). This sect descended from those who were expelled from the *Theravāda* by Ven. Moggaliputta Tissa Thero at the Third *Sangayana*.

6. Later, during the reign of King Voharaka Tissa (215-237 CE), *Abhayagiri Vihara* adopted the *Vaitulya Piṭaka*. It is no coincidence that by this time *Mahayana* had become dominant in India.

- When the *Mahavihara* raised objections to this new development, King Voharaka Tissa appointed minister Kapila to investigate, and on his recommendation ordered all *Vaitulya* books be burnt.
- A key point to remember is that, “Literary activity in Ceylon (Sri Lanka) declined and, it seems, fell into virtual abeyance between 150 CE and 350 CE, as will appear below” (Ref. 1, p. xxiii).

7. During King Gothabhaya's reign (254-267 CE), the *Vaitulyan* heresy raised its head again, and the King again took action. He not only burnt their books, but branded 60 of their leaders and expelled them.

- Those expelled settled down at Kavira in South India. While they were there, a new recruit by the name of Sangamitta joined them.
- One day, while bathing, Sangamitta saw the branding on the backs of the others and learned what had happened in Sri Lanka. He vowed to take revenge.

8. Sangamitta went to Sri Lanka, and was able to win the confidence of King Gothabhaya, who appointed Sangamitta to be the tutor of his two sons.

- When King Gothabhaya died, his elder son Jettha Tissa became King, but he was not that much attached to Sangamitta, so Sangamitta went back to India. When Jettha Tissa died 14 years later, the younger brother, Mahasena, became King.

9. Mahasena was very much attached to Sangamitta, and Sangamitta decided to come back to Sri Lanka, realizing that his time to take revenge had come.

- On Sangamitta's advice, King Mahasena started a process that was very damaging to the *Mahavihara* and to the Buddha Dhamma in Sri Lanka in general. He prohibited providing alms to Mahavihara, and over time *bhikkhus* at *Mahavihara* migrated to other parts of the country.
- By this time, Buddhism in Sri Lanka was in decline due to other factors too, one being the rise of *Mahayana* in India. *Arahants* were scarce in the Island, and if there were some they would have been in remote regions.

10. For 9 years, Sangamitta lived in glory, plundering the properties of Mahavihara, **and eventually burning down the seven story building with its libraries (p. 47 of Ref. 3)**. People became angry with what happened to *Mahavihara*, and a rebellion was started by a minister of the King named Meghavaranaabhaya.

- However, before a battle took place, the minister was able to meet the King and explain why he needed to make amends to the *Mahavihara* to appease the populace. The King apologized and rebuilt the *Mahavihara*.

- However, people were quite angry at Sangamitta, and he was killed on the orders of a queen of the King, probably without the knowledge of the King.

11. The damage had been done. It is also said that when the King rebuilt the *Mahavihara*, it was mostly those who were at the *Abhayagiri* who took residence at the restored *Mahavihara*. **Therefore, when Buddhaghosa visited the *Mahavihara*, the *bhikkhus* there could have been those originally belonging to the *Abhayagiri* sect.**

- Furthermore, It is possible that many of the original Sinhala *Atthakathā* were destroyed when the *Mahavihara* was burned to the ground. Even though copies of the *Tipiṭaka* were at many different locations scattered throughout the country, it is not known how many of the *Atthakathā* had copies.
- In any case, none of those original Sinhala commentaries is in existence today.
- *Mahayana* was taking root in India and possibly contributed to the degrading of *Theravāda* in Sri Lanka as well. Sanskrit became the “language of the pundits” (with many new Sanskrit *sutra* written by Nagarjuna, Vasudeava, etc), and Pāli was losing the battle; see, [“Incorrect Theravāda Interpretations – Historical Timeline.”](#)

12. By the time of Buddhaghosa arrived in Sri Lanka (during the reign of King Mahanama between 412-434 CE), it is possible that some of those *Atthakathā* were still there.

- Ven. Nyanamoli says (p. xviii of Ref. 1), “..There are references in these works (by Buddhaghosa) to “Ancients (*Porana*) or “Former Teachers (*Pubbacariya*)” as well as to a number of Sinhalese Commentaries additional to the three referred to in the quotation given earlier. The fact is plain enough that a complete body of commentary had been built up during the nine centuries or so that separate Bhandantacariya Buddhaghosa from the Buddha..” and “..This body of material — one may guess that its volume was enormous — Bhandantacariya Buddhaghosa set himself to edit and render into Pāli (the *Tipiṭaka* itself had been left in the original Pāli)..”
- By the way, “*Porāna*” is a Sinhala word (now *Purāna*), meaning ancient.
- Apparently, the detailed explanations in those *Atthakathā* were held in high esteem among the remaining Buddhists in India, and as we see below, this is where Buddhaghosa came to the picture.
- So, it appears that even though some of the Sinhala *Atthakathā* were burned with the destruction of the *Mahavihara*, some had survived in other locations and brought back to the rebuilt *Mahavihara*.

13. Buddhaghosa was born into a *vedic brahmin* family who lived close to the *Bodhi* Tree in India. He mastered the three *Vedas* and was a well-known *vedic* scholar. He was converted to Buddhism by a *Bhikkhu* Revata who lived in that region in India.

- Law (p. 6 of Ref. 2) writes that Ven. Revata told Buddhaghosa, “..The Sinhalese *Atthakatha* are genuine. They were composed in the Sinhala language by the inspired and profoundly wise Mahinda, who had previously consulted the discourse of the Buddha, authenticated at the three convocations (*Sangayana*), and the dissertations and arguments of Sariputto and others, and they are extant among the Sinhalese. Repairing thither, and studying the same, translate (them) according to the rules of the grammar of the Maghadhas (Pāli). It will be an act conducive to the welfare of the whole world”. Malalasekara (p.66 of Ref 3) gives a very similar account of that request.
- Ven. Nyanamoli also gives a detailed account of how Ven. Revata recruited Buddhaghosa for the project on pp. xxxiv-xxv (Introduction) of Ref. 1. Also see, pp. 31-39 of Ref. 2 and pp. 64-69 of Ref. 3.

14. The important position assigned in the *Theravāda* tradition to the work of Buddhaghosa is evident from the following quote from Ref. 1 (p. xli):

- “..The doctrines (*Dhamma*) of the Theravāda Pāli tradition can be conveniently traced in three main layers. (1) The first of these contains the main books of the Pāli *Sutta Piṭaka*. (2) The *Abhidhamma Piṭaka*, notably the closely related books, the *Dhammasangayani*, *Vibhanga Paṭṭhāna*. (3). The

system which the author of the *Visuddhimagga* completed, or found completed, and which he set himself to edit and translate back into Pāli ...”

- Even today, many *Theravadins* just use the *Visuddhimagga* and don't bother to consult the *Tipiṭaka*.

15. Sinhala tradition assigns the arrival of Buddhaghosa in Sri Lanka 965 years after the *Parinibbāna* of the Buddha, according to Malalasekara (p. 66). This is consistent with the above timeline.

- Upon arriving at the Mahavihara in Anuradhapura, Sri Lanka, Buddhaghosa requested those *Atthakathā* from the authorities. They were reluctant first, but after verifying that he was indeed a scholar, they gave him access to the books (Refs. 1-3).
- Law (p. 8 of Ref 2) says, “..Taking up his residence in the secluded Ganthakaro viharo at Anuradhapura, he translated, according to the rules of the *Maghdhas*, **which is the root of all languages**, the whole of the Sinhalese *Atthakathā* (into Pāli)”.

16. This assertion that Buddhaghosa “**translated** Sinhalese *Atthakathā* into Pali” is obviously not correct.

- It is clear that he incorporated many of his *vedic* concepts (breath meditation, *kasina* meditation, etc) and made his own commentaries, as I will discuss in the next post.
- Furthermore, in the next post, I will point out obvious inconsistencies of the *Visuddhimagga* with the *Tipiṭaka* and with the remaining three original Pāli commentaries that are still in the *Tipiṭaka*.

17. Law makes the following interesting statement (p. 38 of Ref. 2): “..Buddhaghosa's task of translating was finished in three months. Having observed the *Pavarana*, he informed the chief of the congregation of the completion of his task. **The Samgharaja praised him much and set fire to all the works written by Mahinda in Sinhalese...**” We can make two observations:

- If indeed the work was completed in three months as Law says, Buddhaghosa obviously did not have even time to go through the whole of the Sinhalese *Atthakathā*, even if only a part of it was left.
- It is hard to believe that the chief *Bhikkhu* set fire to the original books. However, it is true that ALL those Sinhalese *Atthakathā* were lost after the time of the Buddhaghosa.

18. In the next post in this section, “[Buddhaghosa's Visuddhimagga – A Focused Analysis](#),” I will discuss the key reasons why *Visuddhimagga* does not represent Buddha Dhamma.

- However, as we discussed above, all of the Sinhala *Atthakathā* were lost soon after the publication of *Visuddhimagga*, and *Visuddhimagga* became the sole source for explaining *Tipiṭaka* material.
- In fact, it became customary to just use the *Visuddhimagga* and not even consult the *Tipiṭaka* until recent times, especially until the “discovery of Buddhism” by the Europeans who started translating the *Tipiṭaka* as well as Buddhaghosa's works; see detail in the “[Historical Background](#)” section.

19. **Furthermore, When Europeans started translating the *Tipiṭaka* (starting with Rhys Davis and others), they translated *suttā* word-by-word to English, a practice that continues today.**

- However, It is not a good idea to translate Pāli *suttā* word-by-word, and those early commentaries were critically important in order to expand on the *Tipiṭaka* material. This is discussed in “[Sutta – Introduction](#).”
- In addition, those early European scholars made a huge mistake by incorrectly translating the Pāli words *anicca* and *anatta* as impermanent and “not-self”; see, “[Misinterpretation of Anicca and Anatta by Early European Scholars](#).”
- This is why the work of late Waharaka Thero is so important. He was able to “re-discover” the meanings of the key Pāli words by perusing through the remaining three original Pāli commentaries of *Patisambhidamagga*, *Petakopadesa*, and *Nettipakarana*; see, “[Preservation of the Dhamma](#).”

13.13 **Buddhaghosa's Visuddhimagga – A Focused Analysis**

April 29, 2017

1. In the previous post in this series, "[Buddhaghosa and Visuddhimagga – Historical Background](#)," we discussed the reason for Buddhaghosa to travel to Sri Lanka. Here is a brief summary of that post:

- Many parts of the *Tipiṭaka* are in condensed form. Starting from the time of the Buddha, commentaries were written to expand and explain the key concepts in the *Tipiṭaka*.
- Most of those commentaries — at least from the time of Ven. Mahinda — were written in Sinhala language by Ven. Mahinda himself and many Sinhalese *Arahants* for over 950 years up to the time of Buddhaghosa. These were called Sinhala *Atthakatha* (true accounts).
- A certain *bhikkhu* by the name of Ven. Revata in India recruited Buddhaghosa to travel to Sri Lanka and translate those Sinhala *Atthakatha* to Pāli (This is detailed in Refs. 2-4 below as well).
- In this post, I will point out that instead of translating those Sinhala *Atthakatha*, Buddhaghosa incorporated his own *vedic* ideas into his commentaries in Pāli, especially describing *Ānāpānasati* as breath meditation.

2. Those Sinhalese *Atthakatha* disappeared from existence not long after Buddhaghosa completed his work (it is likely that most of them were burnt with the *Mahavihara* well before Buddhaghosa's time). Regardless of what happened to those original *Atthakatha*, *Theravāda* tradition accepted *Visuddhimagga* to represent those original *Atthakatha* as well as the *Tipiṭaka*, and to date *Visuddhimagga* is regarded in high esteem.

- When he edited those Sinhala *Atthakatha* and composed the *Visuddhimagga*, Buddhaghosa — who was a scholar in *Vedic* literature — incorporated Hindu *Vedic* concepts to the *Visuddhimagga*.
- In particular, he replaced real Buddhist *Ānāpāna bhāvanā* with breath meditation and also introduced Hindu *kasina* meditation.
- **Buddhaghosa also disregarded the importance of the *Tilakkhaṇa* (*anicca, dukkha, anatta*), but I will show evidence that he never distorted the meanings of them.** That happened only when the Europeans translated the both the *Tipiṭaka* and the *Visuddhimagga* to English; see, "[Misinterpretation of Anicca and Anatta by Early European Scholars](#)."
- He also reportedly wrote other commentaries on *Tipiṭaka*, but they are not widely used.
- My guess is that Buddhaghosa did not consult the Sinhala *Atthakatha* even for the *Visuddhimagga*. Certainly, *Visuddhimagga* is not compatible with the remaining original three commentaries, as well as the *Tipiṭaka*, regarding meditation techniques.

3. As I discussed in the post, "[Buddhaghosa and Visuddhimagga – Historical Background](#)," pure Dhamma existed at least up to the fourth Buddhist Council (*Sangayana*) held in 29 BCE in Matale, Sri Lanka.

- By the time Buddhaghosa arrived in Sri Lanka roughly 450 years later, drastic changes had taken place (with the Buddhist center of Anuradhapura *Mahā Vihara* burnt down once and a Mahayanist sect dominated the landscape for a while; see the above post) among other things.
- **So, the degradation of Theravāda Buddha Dhamma occurred gradually over two thousand years, but two drastic changes took place during that time: (i) Buddhaghosa's introduction of Hindu meditation techniques in the fifth century, (ii) misinterpretation of *anicca* and *anatta* by the European scholars when they translated both *Tipiṭaka* and *Visuddhimagga* to English in the late 1800's.**
- **Even though there was a resurgence of Buddha Dhamma since late 1800's due to the efforts of those Europeans like Rhys Davids, Eugene Burnouf, and Thomas Huxley, unfortunately it was this "distorted Dhamma" that spread throughout the world in the past 200 years.**

4. Even though those old Sinhala commentaries were lost, three commentaries composed in Pāli (*Patisambhidamagga*, *Petakopadesa*, and *Nettipakarana*) at the time of the Buddha remained intact with the *Tipiṭaka*; see, “[Preservation of the Dhamma](#).”

- After Buddhaghosa composed *Visuddhimagga*, Theravadins almost exclusively used *Visuddhimagga* instead of the *Tipiṭaka*, and those original Pāli commentaries were totally neglected.
- With help of those three original Pāli commentaries, Waharaka Thero was able to “re-discover” the original teachings of the Buddha over the past 25 years or so. Unfortunately, Waharaka Thero attained *Parinibbāna* recently; see, “[Parinibbāna of Waharaka Thero](#).”
- After the “re-discovery” of the true teachings of the Buddha by Waharaka Thero over the past 25 years or so, it became clear that several key misinterpretations crept into Buddha Dhamma over the past two thousand years. But the actual timeline of contamination was not clear.
- For example, it was not clear whether Buddhaghosa himself was responsible for the misinterpretations of *anicca* and *anatta*. In this post, I will show that Buddhaghosa was not responsible for that part. In the post, “[Misinterpretation of Anicca and Anatta by Early European Scholars](#)”, I presented evidence that it was done by the Europeans pioneers when they assumed that the Pāli words *anicca* and *anatta* were derived from *anitya* and *anathma* in Sanskrit.

5. First, I will show evidence that Buddhaghosa did not distort the meanings of the words *anicca* and *anatta*, even though he did not realize the importance of the *Tilakkhaṇa*.

- **We need to remember that what Buddhaghosa was supposed to do was to take material from Sinhala *Atthakatha* and to compose his own commentary, *Visuddhimagga*, in Pāli.** One can purchase that original Pāli version, Ref. 1 below, from Amazon.
- When comparing the Pāli and English texts below, I will be using the English translation of Ref. 2.

6. On p. 271 of the Pāli *Visuddhimagga* (Ref. 1), for example, it says, “*Catutthacatukke pana aniccakupassi ettha tava aniccama veditabbam. Aniccata veditabba. Aniccakupassana veditabba. Aniccakupassi veditabbo.*”

- This is translated in the book by *Bhikkhu Nyanamoli* (p. 282, vol. I) as, “But in the fourth tetrad, as to contemplating *impermanence*, here firstly, the *impermanent* should be understood, and *impermanence*, and the contemplation of *impermanence*, and one contemplating *impermanence*.”
- So, in this case Buddhaghosa used the correct Pāli words *anicca*, but *Bhikkhu Nyanamoli* incorrectly translated it as “impermanence” following the misinterpretation by the European pioneers before him, as we discussed above.

7. Buddhaghosa’s original Pāli version also states the relations among the three characteristics, as I discussed in the post, “[Anicca, Dukkha, Anatta – Wrong Interpretations](#).” On p. 617 of Ref. 1, “*Yadaniccām tam dukkha’nti (SN 3.15) vacanato pana tadeva khandhapanacakam dukkham. Kasma? Abhinhatipilana, abhinhatipilanakaro dukkhalakkhanam.*” AND

“*Yam dukkham tadanatta’ti (SN 3.15) pana vacanato tadeva khandhapanacakam anatta. Kasma? Avasavattanato, avasavattanakaro anattalakkhanam.*”

- Which, combined to yield, “if something is *anicca, dukkha* arises, therefore *anatta*”, as I explained in my post too.

8. However, *Bhikkhu Nyanamoli*, following the incorrect interpretation by the early European pioneers in the 1800’s, translates those two verses as (p.663 of Ref.2): “Those same five aggregates are painful because of the words, ‘**What is impermanent is painful**’ (S. iii,22). Why? Because of continuous oppression. The mode of being continuously oppressed is the characteristic of pain.”, AND

“Those same five aggregates are not-self because of the words, ‘**What is painful is not-self**’ (S. iii,22). Why? Because there is no exercising of power over them. The mode of insusceptibility to the exercise of power is the characteristic of not-self.”

9. Thus, it is very clear that it was not the Buddhaghosa who interpreted *anicca* as impermanent and *anatta* as not-self, but those early Europeans in the late 1800’s. As explained in those previous posts, subsequent scholars from Sri Lanka and other Asian countries propagated those two incorrect interpretations.

- For example, those early Sinhala scholars like Malalasekara, Jayathilaka, and Kalupahana, learned Buddhism (and received Doctoral degrees on Buddhism!) from those European pioneers at universities in United Kingdom.
- One needs to contemplate on how the authority of those early Europeans on Buddha Dhamma. They were merely translating the *Tipiṭaka* word-by-word (using perceived etymologies to Sanskrit), as explained in those other posts.
- **We must realize that translating *Tipiṭaka* is not the same as translating any other book from one language to another. One has to have a deep background in Buddha Dhamma to do that.**
- **The key mistake made by Rhys Davids, Bernouf, and others, was to assume that Pāli *anicca* and *anatta* are the same as Sanskrit *anitya* (which does mean impermanence) and *anathma* (which does mean no-self).**

10. Now we turn to the issue of Buddhaghosa introducing Hindu *Vedic* meditation techniques to Buddha Dhamma in his *Visuddhimagga*.

Here is a key passage from Buddhaghosa’s original Pāli *Visuddhimagga* (p. 254 of Ref. 1): “*Tattha dighama va assasantoti digham va assasam pavattayanto. Assasoti bahi nikkhamanavato. Passasoti anto pavisanavatoti vinayatthakathayam vuttam. Suttantatthakathasu pana uppatipatiya agatam. Tattha sabbesampi gabbhaseyyakanam matukucchito nikkhamanakale pathamam abhantaravato bahi nikkhamati. Paccha bahiravato sukhumarajam gehetva abhaantaram pavisanto talum ahacca nibbayati. Evam tava assapassasa veditabba.*”

Bhikkhu Nyanamoli correctly translates this passage to English as follows (p. 265 of Ref. 2): “Herein, breathing in long (*assasanto*) is producing a long in-breath. ‘**assasa is the wind issuing out; passasa is the wind entering in**’ is said in the *Vinaya* Commentary. But in the *Suttanta* Commentaries it is given in the opposite sense. Herein, when any infant comes out from the mother’s womb, first the wind from within goes out and subsequently the wind from without enters in with fine dust, strikes the palate and is extinguished [with the infant’s sneezing]. This, firstly, is how *assasa* and *passasa* should be understood”.

- So, above is concrete evidence that Buddhaghosa himself referred to *Ānāpānasati* as breath meditation. He specifically talked about the inhaling and exhaling air.
- However, actual Buddhist *Ānāpāna bhāvanā* is not breath meditation; see, “[7. What is Ānāpāna?](#).”

11. The second problem that Buddhaghosa introduced in his *Visuddhimagga* was to present mundane *kasina* meditation as a viable path to *Nibbāna*. He gives detailed explanations on how to make *kasina* objects in the chapters 4 and 5 in Ref. 1.

- **For example, he goes to minute details in describing how to make an “earth kasina” starting on. 118 of Ref. 1:** “*..Nilapitalohitaodatsambhedavasena hi cattaro pathavikasinadosa. Tasma niladivannam mattikam aggahetva gangavahe mattikasadisaya arunavananaya mattikaya kasinam katabbam...*”
- **Bhikkhu Nyanamoli translates (p. 123 of Ref. 2):** “..Now the four fruits of the earth *kasina* are due to the intrusion of blue, yellow, red, or white. So instead of using clay of such colours, he should make the *kasina* of clay like that in the stream of Ganga, which is the colour of the dawn...”

- In the same way, Buddhaghosa goes to great details to describe how to make other types of *kasina* objects.

12. **The critical point is that true Buddhist *kasina* meditation does not involve any physical *kasina* objects.** If anyone can find a reference in the *Tipiṭaka* where it is described how to make a physical *kasina* object, I would appreciate receiving that reference.

- The true Buddhist *kasina* meditation was described by the Buddha to Ven. Rahula in the [Mahā Rahulovada Sutta](#) (*Majjhima Nikāya*, MN 62). It was explained to him as a part of *Ānāpānasati bhāvanā*, which can be done in many ways, but here by contemplating on internal body parts made of *satara mahā bhūta* and realizing that external objects are also made with the same *satara mahā bhūta*. Furthermore, that means there is nothing to be considered in one's body as. "me, myself, etc".

“..*Ekamantaṃ nisinno kho āyasmā rāhulo bhagavantaṃ etadavoca: “kathaṃ bhāvitā nu kho, bhante, ānāpānassati, kathaṃ bahulīkatā mahapphalā hoti mahānisamsā”ti? “Yaṃ kiñci, rāhula, ajjhattaṃ paccattaṃ kakkhaḷaṃ kharigataṃ upādinnaṃ, seyyathidaṃ—kesā lomā nakhā dantā taco maṃsaṃ nhāru aṭṭhi aṭṭhimīṇjaṃ vakkhaṃ hadayaṃ yakanāṃ kilomakāṃ pihakāṃ papphāsaṃ antaṃ antagaṇaṃ udariyaṃ karisaṃ, yaṃ vā panaññāmpī kiñci ajjhattaṃ paccattaṃ kakkhaḷaṃ kharigataṃ upādinnaṃ— ayaṃ vuccati, rāhula, ajjhattikā pathavīdhātu. Ya ceva kho pana ajjhattikā pathavīdhātu yā ca bāhirā pathavīdhātu, pathavīdhātūvesā. Taṃ ‘netāṃ mama, nesohamasmī, na meso attā’ti—evametaṃ yathābhūtaṃ sammappaññāya daṭṭhabbaṃ. Evametaṃ yathābhūtaṃ sammappaññāya disvā pathavīdhātuyā nibbindati, pathavīdhātuyā cittaṃ virājeti..”*”

- The other three, *āpo*, *tejo*, *vāyo* are discussed in the same way there. **One does not need to make *kasina* objects for true Buddhist *kasina* meditation**, and as I said there is nowhere in the *Tipiṭaka* that discusses **preparing *kasina* objects**.

13. In the next post, “[Misinterpretation of Anicca and Anatta by Early European Scholars](#),” we will wrap up this section on “[Historical Background](#).” With that post, I would have summarized the historical background starting from the time of the Buddha to the present day. This is probably the only section that can be said to be “finished”, even though I may edit the posts in this section as needed.

13.14 Background on the Current Revival of Buddhism (Buddha Dhamma)

Revised April 29, 2017; January 27, 2020

Critical Role of the British Civil Servants

1. Ironically, the current revival of Buddhism (Buddha Dhamma) is also due to the same reason that led to the decline in Buddha Dhamma in most Buddhist countries for hundreds of years. That decline was in the latter part of the second Millennium, i.e., the colonization of Asia by the Western powers starting with the Portuguese and ending with the British.

- The civil servants of the British East India Company came across ancient Buddhist literature in various Asian countries in the 1800s. Some of them realized the importance of these documents and started deciphering the documents themselves (e.g. Thomas W. Rhys Davids, 1843-1922.) They became motivated and learned Pāli and Sanskrit languages.
- Others sent documents universities in Europe. There, mostly French and English philosophers (e.g., Eugene Burnouf, 1801-1852) studied them and translated them to French and English.
- A thorough account of the efforts by the British civil servants in India, Sri Lanka, and other Asian countries in uncovering the “lost knowledge” has been given by Charles Allen in his excellent book, “The Search for the Buddha” (2003). It also covers restoration of historical Buddhist sites in India.

Early European Scholars

2. These Westerners realized that there was something profound in this ancient doctrine which exposed them for the first time to a religion that was not based on a Creator.

- Thomas Huxley captured the essence this new religion brilliantly as follows (Thomas H. Huxley, *Evolution and Ethics and Other Essays*, 1894, pp. 68-69): “A system which knows of no God in the Western sense; which denies a soul to man; which counts the belief in immortality a blunder and the hope of it a sin; which refuses any efficacy to prayer and sacrifice; which bids men look to nothing but their own efforts for salvation; which, in its original purity, knew nothing of vows and obedience, abhorred intolerance, and never sought the aid of the secular arm; yet spread over a considerable moiety of the Old World with marvelous rapidity, and is still, with whatever base admixture of foreign superstitions, the dominant creed of a large fraction of mankind”.
- It is amazing that even at that early stage, when there must have been some confusion about the mythical aspects of especially the Tibetan and Zen Buddhist practices, Huxley was able to express the essence of Buddha Dhamma.

3. Based on their interest in the documents from Asia on Buddhism and Hinduism, Madame Helena Petrovna Blavatsky and Colonel Henry Steel Olcott founded the Theosophical Society in New York City in 1875. They subsequently traveled to India and Sri Lanka and became Buddhists.

- Olcott published “A Buddhist Catechism” in 1881. This book together with the “Light of Asia” by Edwin Arnold in 1871 (which went through 100 printings), led to much interest in Europe and America about Buddhism. Colonel Olcott opened several Buddhism-oriented schools in Sri Lanka in order to revive the religion. I was fortunate to be able to attend one of those schools.
- These efforts were subsequently augmented by a number of Sri Lankan intellectuals such as Anagarika Dharmapala, G. P. Malasekara, K. N. Jayatilleke, Narada Thera, Walpola Rahula Thera, David Kalupahana, and also by several more Westerners who were impressed by the Buddhist teachings to a point that they came to Sri Lanka, became monks, and wrote many excellent treatises on Theravāda Buddhism; these include Nyanatiloka Thera, Nyanyaponika Thera, and Bhikkhu Bodhi.

A surge of Zen Buddhism

4. Even though those early publications by Rhys Davids, Arnold, and Olcott in the late 1800s were mainly on the Theravāda Buddhism, beginning in the early part of the 1900s, Zen Buddhism became an object of fascination in the West and continues to be a significant presence in the West.

- In contrast to the earlier introduction of (Theravāda) Buddhism to the West by Westerners, Zen made its way into the Western consciousness via the efforts of an elite group of Japanese intellectuals – most notably D. T. Suzuki. Suzuki, who came to America in 1897, wrote several books including “An Introduction to Zen Buddhism”; this book emphasized the transcendent and mystical nature of Zen.

5. Here is an excerpt from the above book by Suzuki, which clearly states the belief of the Mahāyāna thinkers that the original teachings of the Buddha are “primitive” and Mahāyāna provided the needed improvements (p. 1, footnote 1):

- “.to be accurate, the fundamental ideas of the Mahāyāna expounded in the Prajnaparamita group of Buddhist literature, the earliest of which must have appeared at the latest within 300 years off the Buddha's death. The germs are no doubt in the writings belonging to the so-called primitive Buddhism. Only their development, that is, a conscious grasp of them as most essential in the teachings of the founder, could not be effected without his followers' actually living the teachings for some time through the variously changing conditions of life. **Thus enriched in experience and matured in reflection, the Indian Buddhists came to have the Mahāyāna form of Buddhism as distinguished from its primitive or original form.** In India two Mahāyāna schools are known the Madhyamika, of Nagarjuna and the Vijnaptimatra or Yogacara of Asanga and Vasubandhu. More schools developed in China: the Tendai, the Kegon, the Jodo, the Zen, etc. In Japan, we have besides these the Hokke, the Shingon, the Shin, the Ji, etc. All of these schools or sects belong to the Mahāyāna wing of Buddhism”. (Highlighting is mine).

Problems with Mahāyāna Teachings

6. This is in sharp contrast with the basic presumption in Buddha Dhamma that only a Buddha can discover the laws of nature and those teachings CANNOT be improved upon:

I have discussed key problems with Mahāyāna teachings in “[Saddharma Pundarika Sutra \(Lotus Sutra\) – A Focused Analysis](#)” and “[What is Suñyāta or Suññāta \(Emptiness\)?](#).”

- There is only ONE set of natural laws and those were discovered by the Buddha. As one goes through the content in this website, I hope one would be able to see that statement is justified. Also see, “[Dhamma and Science – Introduction](#)”

Role of Dalai Lāma

7. More recently, Tibetan Buddhism (*Vajrayāna*) has gained prominence in the West. This is no doubt the result of the publicity of the Chinese invasion of Tibet in 1953 and the incredible personal charisma of the Dalai Lāma.

- It is unfortunate that the Dalai Lāma has to state that, “My confidence in venturing into science lies in my basic belief that as in science so in Buddhism, understanding the nature of reality is pursued by means of critical investigation: **if scientific analysis were conclusively to demonstrate certain claims in Buddhism to be false, then we must accept the findings of science and abandon those claims.**”(highlighting mine) – cited from “The Universe in a Single Atom: The Convergence of Science and Spirituality” (2005).

8. Both the *Mahāyāna* and *Vajrayāna* sects are now realizing that some concepts in those forms of “Buddhism” have to change with the new findings of science. The fundamental teachings of the Buddha as stated in the Theravāda Dhamma, in contrast, remain unchallenged because no such “improvements” were incorporated to “keep up with the times and cultures”.

- The **Pāli Tipiṭaka** has remained the same since it was written down 2000 years ago. The reality is that science is only now beginning to confirm many things that the Buddha stated 2500 years ago; see, “[Dhamma and Science – Introduction](#)” and the subsequent links.
- Regrettably, the **translated and edited versions** of the *Tipiṭaka*, especially those by Acariya Buddhaghosa, have many misinterpretations.

Scientists’ Role in Recent Years

9. Beginning at the end of the twentieth century, there is a renewed interest in “Buddhism” in the West, based on several books by Western scientists.

- It seems to have started with the publication of “The Tao of Physics” by physicist Fritjof Capra (1975). In the book he describes how, one day quietly sitting by the ocean, he realized that there may be a connection between the subtleties of quantum mechanics and Eastern “mysticism,” in which he included “Hinduism, Buddhism, Chinese Thought, Taoism, and Zen.” It appears that he was trying to make a connection between the world of matter described by quantum mechanics and the “mind” that is predominant in “Eastern mysticism.” Even by the time of the 5th edition (2010), he had not realized that Zen was a branch of Buddhism, and had not been exposed to any Theravāda literature. However, the connection he was trying to establish apparently made an impact on the Western audience and this trend will hopefully continue and be directed in the right direction.
- There are others who have contributed to the recent interest in “Buddhism” in the West: “The Art of Happiness” and other books by Dalai Lāma, “The Embodies Mind” by Francisco Varela et al., “Confession of a Buddhist Atheist” and other books by Stephen Batchelor, are some examples.
- However, most these books have incorrect interpretations of Buddha Dhamma because they are heavily influenced by *Mahāyāna* Buddhism, which has totally veered away from the original teachings of the Buddha, as I have discussed in this section, “[Historical Background](#).”

Sorting Out the True Teachings of the Buddha

10. The books that I mentioned at the beginning of the essay and several other books by Ven. Ledi Sayadaw, Ven. Bhikkhu Bodhi, Ven. Walpola Rahula, and others (see the References below), are providing the much needed material on *Theravāda* Buddhism to the Western audience, **even though they themselves use some incorrect interpretations due to two main “contamination problems”**.

- One happened 1500 years ago when Buddhaghosa distorted *Ānāpāna Bhāvanā* as “breath meditation” and also introduced Hindu *kasina* meditation to Buddha Dhamma in his commentary, *Visuddhimagga*.
- The other problem of misinterpreting *anicca* and *anatta* as impermanence and “no-self” was done by those early European scholars who translated *Tipiṭaka* to English; see, “[Why is Correct Interpretation of Anicca, Dukkha, Anatta so Important?](#).” These incorrect interpretations were adopted by the whole world since the late 1800s.
- **Therefore, all Buddhist literature published in all languages since the late 1800s have both these problems. This is a critical point, see, “[Misinterpretation of Anicca and Anatta by Early European Scholars](#).”**
- We need to resort to the Pāli *Tipiṭaka* that still contains the original teachings of the Buddha, and it is the goal of this website to systematically present those original teachings of the Buddha.

13.15 Misinterpretation of Anicca and Anatta by Early European Scholars

April 29, 2017; revised next day (#12); revised August 14, 2018; February 3, 2020

Introduction

1. Degradation of *Theravāda* Buddha Dhamma occurred gradually over the past 1500 years, but two drastic changes took place during that time:

- (i) Buddhaghosa's introduction of Hindu meditation techniques 1500 years ago,
- (ii) misinterpretation of *anicca* and *anatta* by the European scholars when they translated both *Tipiṭaka* and *Visuddhimagga* to English in the late 1800s.

2. To understand the current situation, one needs to have an understanding of the historical background in this section, "[Historical Background](#)," but at least the posts starting with, "[Incorrect Theravāda Interpretations – Historical Timeline](#)."

- As I explained in earlier posts in this section, much worse distortions to Buddha Dhamma took place with branching out of various sects based on *Mahāyāna*, Zen, and Tibetan (*Vajrayāna*). It started with the rise of *Mahāyāna* in India about 500 years after the Buddha.
- Degradation of *Theravāda* Buddha Dhamma occurred gradually over the past 1500 years. Still, two drastic changes took place during that time: (i) Buddhaghosa's introduction of Hindu meditation techniques 1500 years ago, (ii) **misinterpretation of *anicca* and *anatta* by the European scholars when they translated both *Tipiṭaka* and *Visuddhimagga* to English in the late 1800s.**

Background for This Discussion

3. To set up the context for the present discussion on (ii) above, we also need to know at least the following facts (Detail in posts in this section).

- Pāli is a "phonetic language" (sounds give the meanings in most cases, especially for keywords). It comes from *Māgadhi* (*Maga Adhi* or Noble Path) language that the Buddha spoke.
- Furthermore, Pāli does not have its alphabet. The Sinhala script was used to write down the *Tipiṭaka* 2000 years ago. Details at. "[Historical Background](#)."

4. The root problem of writing a given Pāli word in English must have been a critical issue to address for those English, German, and French scholars who took on the daunting task of translating the *Tipiṭaka* in the late 1800s.

- **Now there are two separate key issues: First is to just write the Pāli text in English**, like writing "අත්ත" as "atta" instead of "aththa" as one would write in "Standard English." A "***Tipiṭaka* English" convention was adopted before 1900**, to preserve the Pāli sounds and also to keep the text not too long. See, "["Tipiṭaka English" Convention Adopted by Early European Scholars – Part 1.](#)"
- The second issue is even more important: **The actual translation of the Pāli word to English**. In this particular case of the word "අත්ත", they translated it as "self". That translation is incorrect, and now let us see why those early translators like Rhys Davids, Eugene Burnouf, and Edward Muller chose that meaning.

Tipiṭaka Had Not Been Translated Until Recently

5. Going back to our main discussion, *Tipiṭaka* was not even TRANSLATED to the Sinhala language until 2005. It had remained in Pāli language (written with Sinhala script) since first written down in 29 BCE (2000 years ago).

- Before written down 2000 years ago, the *Tipiṭaka* was transmitted orally for over 500 years. It is composed in a special, condensed, way to make it easier to recite and remember.
- It is not POSSIBLE to just translate the *Tipiṭaka* word-by-word. That is discussed in detail in “[Sutta – Introduction](#).”
- Furthermore, Sinhala commentaries (called Sinhala *Atthakathā*) were composed to expand and explain the key concepts in the *Tipiṭaka*.
- But all those were lost and we only have commentaries written after about 500 CE (including *Visuddhimagga*) and they have many errors. See, “[Buddhaghosa and Visuddhimagga – Historical Background](#).”

Confusion on Pāli and Sanskrit Texts

6. **Those Europeans first came across Sanskrit *vedic* texts in India.** Later on, they found the Pāli texts in Sri Lanka, Burma, and other countries. This is very important to note.

- By the time of the arrival of English, Buddhism in India had totally vanished. There were no Pāli texts in India except those inscribed on the “[WebLink: Wikipedia: Pillars of Ashoka](#),” the stone columns made by Emperor Ashoka about 300 years after the *Parinibbāna* of the Buddha.
- So, when they tried to interpret those inscriptions, they were very much confused, because that language (Pāli) was not in existence in India. Furthermore, there were Sanskrit texts which were written well before the Buddha's time.
- Another important point is that Pāli was never a widely-used language in India. It appeared in India for a relatively brief time while Buddhism flourished for a few centuries encompassing Emperor Ashoka's reign.

The Book “The Search of the Buddha” by Charles Allen

7. In order to get an idea of how those European pioneers struggled with first interpreting the inscriptions on Ashoka pillars and later translating the *Tipiṭaka* itself, I highly recommend the book “The Search of the Buddha” by Charles Allen (2003). His family had been in India for generations serving in the British governments and he was born in India.

- The book has a lot of information and also pictures of many historical sites in India before they were restored; even though not shown in that book, historical sites in Sri Lanka and other Buddhist countries were in similar bad shape. It is truly fascinating to read about the efforts of those who dedicated their lives to the effort of uncovering Buddha Dhamma.
- All those Asian countries (Sri Lanka, India, Burma, Thailand, etc) were in decline and Buddhism itself was in a much worse shape than today. Those European scholars are really responsible for the current revival of Buddhism.

8. However, the only bad outcome was that they mistranslated most of the key concepts of Buddha Dhamma. We cannot really blame them. They were doing their best and there were no *bhikkhus* (even in Sri Lanka) who were knowledgeable at that time.

- At least, in the beginning, those pioneers thought Sanskrit and Pāli were very much related. They are related, but not in a useful way. Sanskrit adapted many Pāli terms, but made them “sound sophisticated”. But the true meanings were not as apparent.
- For example, *pabhassara* in Pāli Pāli became *prabhasvara* in Sanskrit. While the meaning of *pabhassara* can be discerned from its Pāli roots (see, “[Pabhassara Citta, Radiant Mind, and Bhavaṅga](#)”), as far as I know, that is not true for the Sanskrit word *prabhasvara*.

- Another example is *paṭicca samuppāda* (see, “[Paticca Samuppāda – “Pati+ichcha”+“Sama+uppāda”](#)”), which was adapted to Sanskrit as, “*Pratityasamutpada*”, which sounds more sophisticated, but does not convey anything useful.

Wrong Translation of *Anicca* and *Anatta*

9. The most significant damage was done with the translation of the two Pāli words of “*anicca*” and “*anatta*” when those pioneers took those two words to be the same as the two Sanskrit words “*anitya*” and “*anathma*.”

- Sanskrit word “*anitya*” does mean “impermanent”, but that is not what is meant by the Pāli word “*anicca*.” Similarly, Sanskrit word “*anathma*” does mean “no-self” but “*anatta*” means something totally different; see, “[Anicca, Dukkha, Anatta – Wrong Interpretations.](#)”
- **This itself has been responsible for preventing millions of people from attaining *Nibbāna* for the past 200 years.**

10. Let me show just two verses that obviously do not make any sense if “*anatta*” is interpreted as “no-self”:

- Many people translate, “*Sabbe dhammā anattā*” as “all things are not-self.” How can *dhamma* have a self in any case? For example, it is necessary to say that “Buddha Dhamma has no self?”
- Another example from the [WebLink: Suttacentral: Anatta Sutta](#): “..*Rūpaṃ, bhikkhave, anattā, vedanā anattā, saññā anattā, saṅkhārā anattā, viññāṇaṃ anattā.*”
- If we translate that verse with “*anatta*” as “not-self,” it says, “*bhikkhus*, there is no self in any *rūpa*, *vedanā*, *saññā*, *saṅkhāra*, or in *viññāṇa*...”
- How can an inert *rūpa* (or *vedanā*, *saññā*, etc.) have be “self” anyway? Those are nonsensical statements IF we translate “*anatta*” to be “no-self”.

Sinhala Scholars Who Learned Buddhism from the Europeans

11. In order to complete the historical background relevant to this discussion, I need to point out a couple of more points.

- Following the original translations by Rhys Davis, Eugene Burnouf, and others, contemporary Sinhala scholars like Malalasekara (who was a doctoral student of Rhys Davis), “learned” Buddhism from the Europeans, and thus started using wrong interpretations.
- Other Sinhala scholars like Kalupahana and Jayathilake also learned “Buddhism” at universities in the United Kingdom (received Doctoral degrees on Buddhism), and wrote books in both English and Sinhala.
- Of course, scholars in other Buddhist countries did the same in their languages and the incorrect interpretations spread throughout the whole world.
- So, I hope I have provided enough information to at least contemplate on why the opinions of “scholars” are likely to be wrong, due to reasons beyond their control. Again, I admire and appreciate what Rhys Davids, Burnouf, Muller, and others did those days, and it was not their intention to distort Buddha Dhamma. It is not the fault of current scholars either.

Tipiṭaka was written on Ola Leaves

12. It is also important to note that mass printing was not available until recent years, and became common only in the 1800s; see, “[WebLink: Printing press.](#)”

- In the early days, *Tipiṭaka* was written on specially prepared leaves and needed to be re-written by hand every 100-200 years before they degraded. So, we must be grateful to the *bhikkhus* in Sri Lanka

who did this dutifully over almost 2000 years. **That served another important purpose. Any changes to Sinhala script over those two thousand years were taken into account!**

- Thus mass production of books became possible only with the new rotary printing presses that came out in the middle of the 1800s. By the time those key concepts had been mistranslated, printing had become widespread.
- [WebLink: Wikipedia: The Pāli Text Society](#) was founded in 1881 by Rhys Davids and started printing those translations. So, it was just unfortunate that it was those “distorted English translations” that spread throughout the world.
- Luckily, we still have the original Pāli *Tipiṭaka* and three original commentaries.
- With the help of those three original Pāli commentaries, Waharaka *Thero* was able to “re-discover” the original teachings of the Buddha over the past 25 years or so. Unfortunately, Waharaka *Thero* attained *Parinibbāna* recently; see, “[Parinibbāna of Waharaka Thero.](#)”

Translation of *Tipiṭaka* to Sanskrit Was Prohibited by the Buddha

13. The Buddha had foreseen the problems of a direct translation of the *Tipiṭaka*. He warned not to TRANSLATE the *Tipiṭaka* to ANY LANGUAGE, and particularly to Sanskrit. There were two *Brahmins* by the names of Yamela and Kekuta who were experts on the *Vedic* Texts. They became *bhikkhus* and asked the Buddha whether they should translate the Pāli *suttā* to Sanskrit.

- That is when the Buddha admonished them that *Sanskrit* was a language with musical overtones developed by the high-minded *Brahmins* and thus it was not possible to convey the true meanings of *Maghadhi* (Pāli) words in Sanskrit; see [WebLink: tipitaka: Chulavagga 5.33.](#)
- In the SuttaCentral English translation, the Pāli word for *Sanskrit* (*Chandasa*) [*chandaso*: Conversant with the Vedas, a brahmin] is translated incorrectly as, “metrical”; see, “[WebLink: suttacentral: 15. Minor matters \(Khuddaka\)](#)” (at [Now at that time Yamela and Tekula were the names of two monks who were brothers]) which is the translation of “[WebLink: suttacentral: 1. Khuddakavatthu.](#)” The relevant Pāli text is located close to the end, and starts as, “*Tena kho pana samayena yameḷakekuṭā nāma...*”.

Role of the Commentaries To *Tipiṭaka*

14. Therefore, the *Tipiṭaka* was not translated to even Sinhala for 2000 years in Sri Lanka. Instead, commentaries were written in Sinhala to expand and explain the *Tipiṭaka*. Unfortunately, ALL those have been lost except for three commentaries in Pāli included in the *Tipiṭaka*. See, “[Buddhaghosa and Visuddhimagga – Historical Background.](#)”

- However, the *Tipiṭaka* was translated to Sanskrit (despite the admonition by the Buddha not to do that), and it is likely that those translations were in even Sri Lanka within the Abhayagiri sector.

15. Recently I participated in two online forums briefly, and one of the criticisms published at the Dhamma Wheel and the SuttaCentral discussion groups was that I was not using “..international standards used by Indologists for over a century.”

- With the above explanation, I hope one can understand why those standards established starting in the late 1800's have actually distorted Buddha Dhamma. Of course, it was not intentional.
- There are a few Pāli words that give different meanings based on how they are written and pronounced, and I will write about them in the future.

Pāli Is a Unique Language

16. I cannot emphasize enough that Pāli is unlike any other modern language. Meanings come from how one pronounces words. One cannot use etymology with the way one spell out (in English). Again to emphasize:

- Pāli does not have its own alphabet. *Tipiṭaka* was written in Pāli with Sinhala script.
- Pāli does not have grammar rules, even though those European pioneers tried to invent grammar for Pāli, compose Pāli-English dictionaries, etc.
- Sanskrit words should never be used to interpret Pāli words. That is because there are many Pāli words that have been “Sanskritized” and that leads to much confusion. For example, there is no corresponding word for *anatta* in Sanskrit. But the Sanskrit word “*anātma*” is regularly used as the translation of “*anatta*.” *Anatta* does not mean “impermanence,” but “*anātma*” does have that meaning.
- While a Pāli-English dictionary could be useful in some cases, there are cases where they give wrong interpretations (*anicca*, *anatta*, *pabha*, etc); see, “[Pāli Dictionaries – Are They Reliable?](#).”

“*San*” Is a Unique Word in Pāli

A key Pāli word, the meaning of which has been hidden for thousands of years, is “*san*” (pronounced like son). See the section on “[San](#).”

17. In the *Dhammapada* verse,

“*Aneka jāti sansāram
sandā vissan anibbisān
gahakaram gavesan to
dukkhā jāti punappunam*”

- There are four places in the above where “*san*” comes in. This and another *gātha* (verse) capture the intense joy felt by the Buddha at the moment of attainment of *Buddhahood*. I will write a post on this in the future.
- The word “*san*” appears very frequently in the *Tipiṭaka*. But it is often masked by the fact that in many places it rhymes as “*sam*,” as in “*samsāra*,” “*sampādetā*,” “*sammā*”; see, “[What is “San”? Meaning of Sansāra \(or Samsāra\).](#)”

Critical Role of the Printing Press in Widespread Circulation of the Incorrect Interpretations

18. The printing press became widely available only after the rotary press was invented in 1843: “[WebLink: Printing press](#).” As pointed out above, Rhys Davids started publishing the English translations of the *Tipiṭaka* in 1881. **That led to the widespread circulation of the incorrect interpretations of those Early European scholars!**

- Up to that time, the printed version of the Pāli *Tipiṭaka* was on specially prepared ola (palm) leaves; see, “[Preservation of the Dhamma](#).” This was a laborious process as detailed in that post. Fortunately, *bhikkhus* kept re-writing the *Tipiṭaka* material in every hundred years or so, when the “old version” started degrading.
- The key point is that there were only versions of the original *Tipiṭaka*. It was not in wide circulation until the printing press was invented, just in time for the incorrect interpretations to be widely circulated. Rhys Davids started publishing the English translations of the *Tipiṭaka* in 1881.
- This is why there is no record of the correct interpretations of keywords like *anicca* and *anatta* in Sinhala. Those interpretations were in the original Sinhala commentaries (Sinhala *Atthkathā*.) It is safe to assume that the same holds in other Asian countries.
- The invention of the printing press was a key factor in spreading the incorrect interpretations that those early Early European scholars came up with (unintentionally)!

Also see, “[Tipiṭaka Commentaries – Helpful or Misleading?](#).”

13.16 **Tipiṭaka Commentaries – Helpful or Misleading?**

December 6, 2017

1. I recently came across the following essay on *Tipiṭaka* commentaries: “[WebLink: accesstoinsight.org: Beyond the Tipiṭaka : A Field Guide to Post-canonical Pāli Literature](http://www.accesstoinsight.org/)”. It describes the importance of such commentaries in clarifying key concepts in the *Tipiṭaka*. I will present evidence to the contrary. In fact, such commentaries have introduced contradictory explanations.

- Over the years, I have also seen heated discussions on key concepts of Buddha Dhamma like *anicca*, *anatta*, and *anidassana viññāṇa*, on internet discussion boards.
- I often wonder about the immense amounts of time people waste on discussing the meaning of key Pāli words in *Tipiṭaka suttā*. They go back and forth between different interpretations without reaching a conclusion. I hardly see any issue resolved fully in such discussions. Same topic is discussed year after year without much progress.
- One key factor contributing to this confusion is those commentaries themselves; they are not consistent with Buddha's original teachings in the *Tipiṭaka*. The other key factor is the incorrect translation of key Pāli words. Both these issues are discussed below.

2. I hope this post would be helpful in thinking about a new approach to finding the “correct teachings of the Buddha”. **By discarding sources of incorrect interpretations once and for all**, one could save a lot of time and really focus on making progress.

- When I seriously started studying different versions of Buddhism several years ago, this was the strategy that I used to eliminate “corrupt” or “contaminated” versions. I eliminated Mahāyāna, Vajrayana (Tibetan), and Zen versions first. After I came across *desanās* of Waharaka Thero, I was able to eliminate Visuddhimagga and other relatively recent commentaries. These steps are discussed in detail below.
- Then I was left out with just the *Tipiṭaka* and its **three ancient, original commentaries, which were composed during the time of the Buddha; see below**. A consistent picture that is crystal clear has emerged for me.
- I hope others can follow the same procedure. **If everything can be understood within that framework, what is the need for more sources?** As the principle of philosophy “[WebLink: wiki: Occam's razor](http://en.wikipedia.org/wiki/Occam's_razor)” (or Ockham's razor) says, simplest explanation without any inconsistencies is the best explanation.

3. **My key assertion is that the *Tipiṭaka*, together with the three original commentaries of *Patisambhidamagga*, *Petakopadesa*, and *Nettipakarana* are sufficient to clarify the original teachings of the Buddha.**

- This was made possible by my Noble teacher Waharaka Thero, who was able to discern the true meanings of key Pāli words with the help of those three original commentaries; see, “[Parinibbāna of Waharaka Thero](#).”
- At this website I present this self-consistent picture that came out of the efforts of Waharaka Thero.
- Note that I am not asking anyone to take what I present at this website as the correct version. It is up to each person to look at the evidence and decide. **As far as I can see, everything at this site is consistent with the *Tipiṭaka* and is also self-consistent**. I encourage all to point out any inconsistencies, because my goal is 100% consistency.
- Self-consistency, i.e., making sure that there are no contradictions is the scientific procedure used also by modern scientists to evaluate the validity of a scientific theory.

4. **There is no need to consult any commentary other than the three original ones mentioned above.** In fact, I have explained at length why the other key commentaries used today provide inaccurate and inconsistent explanations; see, “[Historical Background](#).”

The above mentioned essay (in #1) is a good example of some misconceptions on the importance and validity of *Tipiṭaka* commentaries. **When I say “commentaries” from now on below, they do not include the original three commentaries included with the *Tipiṭaka*.**

- In the following, **the statements within quotation marks and highlighted in red** are from the above essay, and are accompanied by my comments pointing out the flaws in those statements.
5. “**The *Tipiṭaka* (Pāli canon) assumed its final form at the Third Buddhist Council (ca. 250 BCE) and was first committed to writing sometime in the 1st c. BCE. Shortly thereafter Buddhist scholar-monks in Sri Lanka and southern India began to amass a body of secondary literature: commentaries on the *Tipiṭaka* itself..”**
- Not true. The original three commentaries mentioned in #3 above (*Patisambhidamagga*, *Petakopadesa*, and *Nettipakarana*) were compiled during the time of the Buddha, and those still are in the *Tipiṭaka* itself.
 - Those three original commentaries are in Pāli, but there were many others written in Sinhala language, and all of those have been lost, as discussed below.
6. “**Most of these texts were written in Sinhala, the language of Sri Lanka, but because Pāli — not Sinhala — was the *lingua franca* of Theravāda, few Buddhist scholars outside Sri Lanka could study them. It wasn’t until the 5th c. CE, when the Indian monk Buddhaghosa began the laborious task of collating the ancient Sinhala commentaries and translating them into Pāli, that these books first became accessible to non-Sinhala speakers around the Buddhist world”.**
- This statement refers to those early Sinhala commentaries that have since been lost.
 - **It is correct that Buddhaghosa’s** *Visuddhimagga* — as well as other commentaries such as *Vimuttimagga* — were written in Pāli by Indian scholars.
 - It is also important to note that incorrect translations of those Pāli words led to more problems when those were translated to English; see #7 below.
7. “**These commentaries (*Atthakatha*) offer meticulously detailed explanations and analyses — phrase-by-phrase and word-by-word — of the corresponding passages in the *Tipiṭaka*.**”
- First of all, *Atthakatha* (a Sinhala word meaning “true accounts”) were the ancient commentaries on *Tipiṭaka* written in Sinhala. **They ALL have been lost**; see, “[Preservation of the Dhamma](#).”
 - **So, it is misleading to refer to those as the commentaries in question.** In contrast, the commentaries in circulation today are NOT those ancient *Atthakatha*, but more recent ones like *Visuddhimagga*.
 - Buddhaghosa’s mission was to translate the material in Sinhala *Atthakatha* to Pāli so that those *bhikkhus* in India could read them. **Unfortunately, he incorporated many *Vedic* concepts**; see, “[Buddhaghosa’s *Visuddhimagga* – A Focused Analysis](#).”
 - **Further problems were introduced when *Visuddhimagga* was translated to English in recent times.** Today, both the original Pāli version of *Visuddhimagga* and its recent English translation are available on Amazon; see Refs. 1 and 2 below.
8. “**Almost everything we know today about the early years of Buddhism comes to us from these post-canonical books”.**

- This is completely false. In fact, those **post canonical commentaries** (such as Visuddhimagga) have “muddied the waters” than help.; see, “[Buddhaghosa and Visuddhimagga – Historical Background](#)” and “[Buddhaghosa’s Visuddhimagga – A Focused Analysis](#).”
 - What I am saying is to examine the evidence presented in those posts. **If one agrees, then one can just remove Visuddhimagga as a reliable source. That itself will solve half the problem.**
 - **The second problem is the incorrect translation of key Pali words in those commentaries as well as in Tipiṭaka suttā;** see, “[Misinterpretation of Anicca and Anatta by Early European Scholars](#).”
 - As I have presented evidence throughout this website, the *Tipiṭaka* and the three original commentaries are enough to guide us.
9. “First, the chronicles and commentaries provide a vital thread of temporal continuity that links us, via the persons and historical events of the intervening centuries, to the *Tipiṭaka*’s world of ancient India. A *Tipiṭaka* without this accompanying historical thread would forever be an isolated anachronism to us, its message lost in clouds of myth and fable, its pages left to gather dust in museum display cases alongside ancient Egyptian mummies...”
- **There are no myths or fables in the *Tipiṭaka*.** I would challenge anyone to show any evidence from the *Tipiṭaka*. This is an irresponsible and egregious statement.
10. “Second, almost everything we know today about the early years of Buddhism comes to us from these post-canonical books..”
- There is nothing in these commentaries that provide any significant information about the time of the Buddha. They may provide information about the time at which they were written. For example, Visuddhimagga was written about 800 years after the Buddha.
11. “One might reasonably wonder: how can a collection of texts written a thousand years after the Buddha’s death possibly represent his teachings reliably? How can we be sure they aren’t simply derivative works, colored by a host of irrelevant cultural accretions? First of all, although many of these texts were indeed first written in Pāli a thousand years after the Buddha, most Sinhala versions upon which they were based were written much earlier, having themselves been passed down via an ancient and reliable oral tradition...”
- This is the point I am making. We do know that, for example, Buddhaghosa distorted Buddhist meditation techniques, *Ānāpāna* meditation was misinterpreted as breath meditation and Hindu *kasina* meditations were also incorporated,
 - For details, see, “[Buddhaghosa’s Visuddhimagga – A Focused Analysis](#)” and “[Is Ānāpānasati Breath Meditation?](#).”
12. “But what of the credentials of the commentators themselves: can their words be trusted? In addition to living a monastic life immersed in Dhamma, the compilers of the commentaries possessed unimpeachable literary credentials: intimate acquaintance with the *Tipiṭaka*, mastery of the Pāli and Sinhala languages, and expert skill in the art of careful scholarship. We have no reason to doubt either their abilities or the sincerity of their intentions”.
- This is also a critical issue. As I discussed in those posts mentioned above, Buddhaghosa was a Vedic Brahmin and he distorted *Ānāpāna* to breath meditation and incorporated *kasina* meditations into Visuddhimagga; no such *kasina* meditations are to be found anywhere in the *Tipiṭaka*.
 - Like so many late commentators, Buddhaghosa was just another philosopher like Nagarjuna. By the way, Nagarjuna was also a commentator, and his work led to the rising of Mahāyāna version of Buddhism.
 - I have discussed the drawbacks in Mahāyāna; see, for example, “[Key Problems with Mahāyāna Teachings](#)” and “[Saddharma Pundarika Sutra \(Lotus Sutra\) – A Focused Analysis](#).”

- Same kind of arguments can be applied to Tibetan Buddhism (Vajrayāna) and Chinese Zen Buddhism; all these are off-shoots of the original teachings in the *Tipiṭaka*; see, “[Historical Background](#).” In fact, it is well-worth the time to read this section before coming to any conclusions.

13. “And what of their first-hand understanding of Dhamma: if the commentators were scholars first and foremost, would they have had sufficient meditative experience to write with authority on the subject of meditation? This is more problematic”.

- This is the only statement that I agree with. They were just “scholars” and philosophers, who had not made any progress in actual practice.
- This is true today as well. Many “scholars” have written books on Buddha Dhamma without having any significant progress in following the Noble Path. In fact, many are not even nominally Buddhists; some are “secular Buddhists” who do not believe in rebirth or *Nibbāna*; see, “[Buddhism without Rebirth and Nibbāna?](#).”
- I am not trying to put them down. They do serve a meritorious purpose in teaching how to live a moral life. However, those books/journal papers/websites cannot be used to **clarify deeper teachings** in the *Tipiṭaka*.

14. **A key point missing in the current discussion is that it is not possible to comprehend the key concepts like *anicca* and *anatta* without at least attaining the *Sotāpanna* stage of *Nibbāna*.** However, these days, people tend to gauge the qualifications by checking only whether a given person is an “academic scholar”.

- Just like only a practicing physician can truly understand and diagnose a patient, not one who has just studied medical text books.
- Only an *Ariya* (a Noble person) — who has practiced the true teachings and at least attained the *Sotāpanna* stage of *Nibbāna* — can comprehend deep concepts like *anicca*, *anatta*, *viññāṇa*, and *saññā*. **One cannot fully understand such deep concepts by just studying or reading about them.** For example, see, “[What is Saññā \(Perception\)?](#).”

15. The most referred to commentaries (these days) are Buddhaghosa’s [WebLink: wiki: Visuddhimagga](#) and Upatissa’s [WebLink: wiki: Vimuttimagga](#) (to a much less extent). The original Pāli text for the latter was long believed to have been lost; for centuries, discussions about the text therefore relied on a 5th c. Chinese edition.

- As we have established, those later commentaries — including *Visuddhimagga* and *Vimuttimagga* — were written in Pāli.

16. Therefore, those late commentaries lead to confusion in two ways:

- One is the erroneous interpretations by the commentators themselves, as discussed above.
- The other is incorrect translations — initially done by early European scholars — in translating key Pāli terms incorrectly; see, for example, “[Misinterpretation of Anicca and Anatta by Early European Scholars](#).” This has made the situation even worse.

These are two critical points to consider by those who are tempted to refer to those late commentaries. I cannot emphasize the importance of those two points enough.

17. Then there are those who quote from Chinese *Āgama*. Even though those original Chinese documents COULD BE authentic, my point is that they were also derived from the *Tipiṭaka* and **thus serve no purpose as additional resources.**

- They could be valuable for those who are proficient in Chinese but cannot read Pāli, Sinhala, or English.

18. Finally, to re-emphasize my main point: The *Tipiṭaka* — together with the three original commentaries included in it — are sufficient to clarify the original teachings of the Buddha. The goal of this website is to have such a consistent clarification of Buddha's teachings in English at one place.

- Using just the *Tipiṭaka*, I have also pointed out some current misinterpretations in Theravāda Buddhism, mainly due to the influence of Buddhaghosa's *Visuddhimagga*; see, "[Incorrect Theravāda Interpretations – Historical Timeline](#)" and posts referred there.
- There still could be some minor inconsistencies at the website, and I am appreciative of those readers who have pointed out some of them that have led to improvements. But I have high confidence in the correctness of key concepts.
- Please do not hesitate to comment on any inconsistency with the *Tipiṭaka* or within the website. However, for the reasons that I have detailed, please do not quote from any other sources.

XIV Buddhist Chanting

- [“Buddhist Chanting – Introduction”](#)
- [“Namaskaraya – Homage to the Buddha”](#)
- [“Supreme Qualities of Buddha, Dhamma, Saṅgha”](#)
- [“The Five Precepts – Panca Sīla”](#)
- [“Sutta Chanting \(with Pāli Text\)”](#)
- [“Sadhu – Symbolizes Purified Hadaya Vatthu \(Mind\)”](#)

14.1 Buddhist Chanting – Introduction

1. This section on Chanting may be helpful in cultivating *saddhā* (faith). For those who believe that there is no value in these “ritual-like” procedures, it may be a good idea to read the post, “[Panca Indriya and Panca Bala- Five Faculties and Five Powers](#).”

- If done with understanding, these are not rituals as in “*silabbata paramasa*”.
- Therefore, as I keep adding items to this section, I will try to provide the deep meanings behind these “seemingly ritualistic” chantings.
- In addition to the aspect on the deeper meanings, there are subtle benefits in listening to chantings, especially those by *Ariyā* or Noble Persons. This is why I decided to add the sound recordings by the Venerable Thero.

2. The Buddha said that the mind takes precedence over everything else. Our speech and bodily actions are controlled by our thoughts. And these thoughts get their moral power from wisdom (*paññā*) and the joyful state (*pīti* or “*preethi*”) of the mind.

- One can make a given meritorious deed much more powerful by doing it with joy and understanding. The most potent *kusala citta* is done with “joy and understanding” (a *somanassa-sahagata, ñāṇa-sampayutta citta*); see, “[Javana of a Citta – Root of Mental Power](#)”.
- Recent scientific studies are beginning to illustrate the power of the focused mind; see, for example, “The Biology of Belief” by Bruce H. Lipton (2008) and “Biocentrism” by Robert Lanza (2009).
- Thus chanting done with understanding can have benefits, especially for those who have a dominant “*saddhā indriya*,” or have a high-degree of faith in the Buddha or Buddha Dhamma.

3. **However, one should not force anything on the mind.** If chanting is not something that appeals to someone, then it should not be forced. Different people start off with different tendencies (i.e., they have a dominant faculty or power, see, “[Panca Indriya and Panca Bala- Five Faculties and Five Powers](#)”). *Out of sati, saddhā, viriya, samādhi, and paññā, the dominant one should be the focus.* As one cultivates the Path, other four will also grow.

- This is also related to the concept of how one’s character (*gathi*) and habits change as one follows the Path. Then one’s tendencies, associations, etc will also gradually change; see, “[The Law of Attraction – Habits, Character \(Gathi\), and Cravings \(Āsavas\)](#).”
- Thus one may want to concentrate just on the topics on the site that are appealing to oneself. Once in a while, one can take a look at other sections and see whether their opinions on those sections have changed or not.
- The main thing is to stay on the path of least resistance and the topics that can be easily comprehended.

Next, “[Namaskaraya – Homage to the Buddha](#)”,

14.2 Namaskaraya – Homage to the Buddha

1. In the *Theravāda* tradition, it is customary to pay homage to the Buddha (*Namaskāraya*; pronounced “namaskāraya), recite the Three Refuges (*Tisarana*, where “*ti*” is three and “*sarana*” means refuge or protection; pronounced “Thisarana”) and undertake to observe the five precepts (*Panca Sīla*; pronounced “pancha seela”) on visiting a place of worship or before starting a meditation session.

- Some people just do the Namaskāraya if they do not have time to recite the Tisarana (Refuge in Buddha, Dhamma, Saṅgha) or the Panca Sīla (five precepts; sometimes eight or ten precepts).

2. One can recite the following stanza three times by oneself or at more formal occasions (e.g., visiting a temple) a Buddhist monk administers them.

“*Namo tassa bhagavato arahato sammā sambuddhassa*”

- A brief translation is, “I pay homage to the fully Enlightened One who found the truth about the existence and became free of all defilements”.
- Another conventional translation is, “I pay homage to the Blessed One, the Exalted One, the fully Enlightened One”.
- The deeper meaning is discussed below.

3. **Both interpretations are important.** For someone starting out, without much knowledge of Dhamma (but still sees the value in Dhamma) and thus wishes to pay respects to the Buddha, the conventional meaning itself is the dominant.

- But the Buddha himself said that the best way to pay homage to him is to learn Dhamma and to follow the Path. That is the more deeper meaning of the *Namaskāraya*. But they also have the reverence for the Buddha himself. As the knowledge in Dhamma grows, the second interpretation becomes clear, while not losing the first.

4. Here is a recital of the *Namaskāraya* by a Venerable *Thero* (volume adjustment on the right). It is normally recited three times:

[WebLink: Listen to verse of: Namaskāraya](#)

You can download the file below by clicking “DOWNLOAD”. You can play it there or right-click on the screen and choose “save as..” to save to your computer.

[Download](#)

More audio files are at: [“Sutta Chanting \(with Pali Text\).”](#)

Namaskāraya – What Does it Really Mean?

“*Namo tassa bhagavato arahato sammā sambuddhassa*”

1. Most Pāli verses have two (or more) meanings: one is the conventional (“*padaparama*”) meaning, and the other is the deeper meaning that helps understand the deeper idea behind the verse. Unfortunately, most times it is the conventional idea that that is brought out when translating even whole *suttā*.

- In the case of *suttā*, a *sutta* that was delivered over an hour (sometimes many hours, like the *Dhamma chakka pavattana sutta*) is normally translated word-to-word in a few pages; see, [“Sutta Interpretations.”](#)
- As I explained in the post, [“Preservation of the Dhamma”](#), most existing *sutta* translations are incomplete at best, and erroneous most of the time.
- Even the conventional meaning can be useful in some cases, like in *namaskāraya*, *Tisarana*, and the five precepts. For those who do not have a deeper understanding, the deeper meanings may not serve the

purpose of bringing “joy to the heart” or “*citta pasāda*” (pronounced “*citta pasāda*”); for a deeper discussion on *citta pasāda*, see, “[Javana of a Citta – The Root of Mental Power.](#)”

- Thus for those who are new to the deeper meanings in Dhamma, the conventional interpretations may be a good start. As knowledge in Dhamma grows, the second interpretation becomes clear without losing the first, i.e., reverence to the person himself can also only grow as one learns how valuable his Dhamma is.

2. What we have here is a short phrase that can be correctly translated in a short essay. Let us see what is really meant by this verse.

- “*Namo*” means incline as in accepting something with this reverence because of its value; “*tassa*” means “to this” or “because of this”. This is why we bend our heads to signify this.
- “*bhaga*” is to separate and “*vata*” is the usually translated as body, but it has more wider meaning to anything in this world. The Buddha, in trying to show that uselessness of clinging to one’s body, advised to separate the body into 32 parts and see that there is nothing substantial in any of the parts. Even though we highly value our bodies, it will decay with old age, and will eventually give us only sicknesses and ailments. And it will last only about 100 years.
- In the wider sense, anything in this world can be divided into parts and be shown that there is nothing substantial in them.
- Once we see that it is unfruitful to cling our bodies (and anything in general), we lose the craving (“*raha*” in Pāli or Sinhala) and become “*arahant*”(from “*a*” + “*raha*”). The word Arahant also comes from this meaning, i.e., someone who has given up craving for worldly things, by comprehending the true nature.
- As we saw in the post, “[What is “San?” – the Meaning of Samsāra](#)”, “*san*” means accumulating worldly things. “*ma*” means become free of doing that. Thus “*sammā*” (*san+ma*) means “stop accumulating worldly stuff that will only cause suffering in the end”.
- The accumulation of worldly things lead to preparation of future births or “*bhava*”. *Sambuddhassa* (*san+bhu+uddassa*) means “remove from the root the causes for preparing bhava via accumulating *san*”, i.e., become free of the rebirth process or to work towards *Nibbāna*.

3. Now we can see the whole verse:

“By analyzing my body and other worldly things with wisdom, I have come to understand the unfruitfulness of clinging to such things, and I incline to rout out the rebirth process (i.e., existence in the 31 realms) and attain *Nibbāna*”.

- Here incline means one keeps “bent on attaining that goal”. With deeper understanding of Dhamma one’s resolve will be strengthened. As with most things in Buddha Dhamma, it is always about one’s mind.
- The resolve has to come through understanding. There is no one watching, and no one else monitoring the progress; it is one’s own mind that is doing all that.

4. Finally, the word *namaskāraya* (*nama+as+kāraya*, where “*nama*” is one’s name, “*as*” pronounced like “us” means remove, and “*kāraya*” means doing) conveys the idea that one is making a resolve to get rid of the attachment one has for one’s worldly things. It is a condensed version of the verse.

- Of course the conventional meaning of “*namaskāraya*” is “paying homage”.

14.3 Supreme Qualities of Buddha, Dhamma, Saṅgha

May 28, 2016 ; revised October 1, 2018; April 26,2020

1. It is traditional to start a meditation session with an homage to the Buddha (*Namaskāraya*):

- *Namo tassa bhagavato arahato sammāsambuddhassa*
- *Namo tassa bhagavato arahato sammāsambuddhassa*
- *Namo tassa bhagavato arahato sammāsambuddhassa*

and then to recite the supreme qualities of the Buddha, Dhamma, and Saṅgha.

Here is a recital of the *Namaskāraya* by the Venerable *Thero*. It is normally recited three times: [WebLink: mp3 audio: Namaskāraya – Homage to the Buddha](#)

- The meaning of the above phrase is described in, “[Namāskaraya – Homage to the Buddha.](#)”

The 24 Supreme Qualities

2. There are nine, six, and nine supreme qualities attributed to the Buddha, Dhamma, Saṅgha respectively.

- These are listed and discussed in several suttā in the *Dīgha Nikāya* of the *Tiṭṭaka*.
- For example, see, “10. *Dhammādāsadhmapariyāya*” section of the “[Mahā Parinibbāna Sutta \(DN 16\)](#).”
- The Buddha tells Ven. Ananda that when one becomes a *Sotapanna*, one would begin to understand these qualities and will have “unbreakable faith” in the Buddha, Dhamma, Saṅgha (*Tiratana*, or Three Jewels.)

3. The 24 supreme qualities are called “*suvisi guṇa*,” where *suvisi* means 24 and *guṇa* are the qualities. [There are two main ways to interpret and utilize these 24 qualities.](#)

- [Chanting of these qualities can provide a calming effect for the mind](#) and is normally done before a formal meditation session; see, “[Tisarana Vandana and Its Effects on One’s Gati.](#)”
- Meaning of the word “*vandanā*” is “*va*” + “*andha*” + “*nā*”, where “*va*” is for “*vaya*” or destroy, “*andha*” is for blind, and “*nā*” is for “*nyāya*” or the procedure for getting rid of moral blindness and attaining *Nibbāna*. [The path to attaining Nibbāna is encoded in the Tiratana vandanā.](#) We will discuss this in detail in a future post.
- Also, this chanting is alternatively called *Tiratana vandanā* (where *Tiratana* means the Three Jewels) OR *Tisarana vandanā* (where *Tisarana* means “guidance from the Three Jewels”). It is imperative to recite them correctly.

[WebLink: Listen to the verses of Tiratana Vandana](#)

- The recital should break at places where there is a coma to state each quality separately, and should not break in the middle (e.g., no breaks in *amuttarro purisadamma sārathi*); see below.

4. These qualities can only be stated partially, and can never be fully grasped. If a person with a mathematics Ph.D. teaches addition/subtraction to a first-grade student, that student cannot fully appreciate the capabilities or qualifications of the teacher. When the same student grows up and learns higher mathematics later from the same teacher at a university, he can appreciate the capabilities of the teacher more.

- In the same way, the qualities of the Three Jewels can be appreciated only with more learning of Dhamma. In fact, when I first wrote the original post on this subject more than a year ago, my understanding was much less than now. In the meantime, I have understood more and also experienced the power of the recital of these qualities.

Supreme Qualities of the Buddha

5. **Correct Recital:** *itipi so bhagavā arahaṃ sammāsambuddho vijjācaraṇasampanno sugato lokavidū anuttaro purisadammasārathi satthā devamanussānaṃ buddho bhagavā'ti.*

- It is imperative to break the phrase “*itipi so*” to two words; “*so*” means “him.”
- **Most people recite it as a single word “*itipiso*” and that gives not only an incorrect but a derogatory meaning: “*piso*” is for “*pisācha*” or a “lowly being like a *preta*.”**
- “*itipi so Bhagavā*” means “because of (the following qualities) he (Buddha) is.”
- The recital should break at places where there is a comma to state each quality separately, and should not break in the middle (e.g., no breaks in *Anuttarro purisadamma sārathi*); audio recording is given below.

6. There are 9 qualities of the Buddha stated in the above verse. Each quality is said to be impossible for a human being to describe fully.

- As one learns more and more Dhamma, one truly begins to understand the value of a Buddha. It is said that an *Anāgāmī* can better understand the qualities of a Buddha than a *Sotāpanna*, and an *Arahant* even better.

7. Here are the list of the 9 qualities:

- *Arahaṃ* – “*A*” + “*rahaṃ*” or not a trace of defilement (attachment for sense pleasures) left.
- *Sammāsambuddhō* – “*San*” + “*mā*” + “*sambhava*” + “*uddha*”, or who discovered the way to dissociate from this suffering-filled world by removing “*san*”; see, [“What is “San”? Meaning of Sansāra \(or Samsāra\).”](#)
- *Vijjācaraṇasampanno* – “*Vijjā*” (science or knowledge) + “*caraṇa*” + “*san*” + “*panno*”, or perfectly knowledgeable about how the world arises (out of “*san*”).
- *Sugato* – Ultimate in “*su*” + “*gathi*” or “good qualities.”
- *Lokavidū* – “*Loka*” + “*vidū*”, or having the ability to examine and explain any of the three worlds that encompass everything: world of mental formations (*Sankharaloka*), world of beings (*Sattaloka*), world of things (*Okasaloka*).
- *Anuttaro purisadammasārathi* – “*Purisa*” here is not a gender: *purisa dhamma* are the highest qualities; “*anuttara*” means unmatched. [*purisadammasārathi* : the modesty of the man. *damma* : [adj.] tamed or trained. *sārathi* :[m.] a charioteer; a coachman; a driver.]
- *Satthā devamanussanan* – Teacher of celestial and human beings.
- *Buddho* – Perfectly Enlightened, uprooted all “*bhava*”.
- *Bhagavā* or *Bhagavath* – “*Bha*” + “*ga*” + “*vatha*” – Able to examine a living being’s origin in many different ways. Here “*Bha*” is *bhava* or existence and “*ga*” means connection or relationship, and “*vatha*” is the form of any being.

8. The above are, of course, not the only meanings. Since each word describes the infinite qualities of the Buddha, there are other meanings as well. Thus it is best not to really get hang-up on the translations above.

- It is best to get an idea of what these qualities and ALWAYS recite them in Pāli. As one’s understanding grows, one will realize the meanings better.
- **Pāli is a phonetic language. Meanings come via sounds. Thus what is imperative is to be able to recite the Pāli phrase above to the best to one’s ability. I have provided the recordings at the end of the post, where my teacher *Thero* recites them as they should be recited.**

Supreme Qualities of the Dhamma

9. There are six supreme qualities of Dhamma:

“Svākkhāto bhagavatā dhammo sandiṭṭhiko akāliko ehipassiko opaneyyiko paccattam vedittabbo viññūhī’ti”

First, *Bhagavathā Dhammo* is the Dhamma taught by the Buddha.

- *Svākkātho* – leads to the removal of *sansāric* suffering via getting out of the 31 realms. Here “*svakkata*” (“*sva*” for “self” and “*akkata*” or “*akrutha*” or “*akriya*” means putting out of action) **means getting rid of the concept of a “me”** (*asmai māna*). It is not about whether a “self” exists or not; it is rather to realize that nothing in this world is worth to be considered “mine”.
- *Sandiṭṭhika* – It **allows one to comprehend “san”** (“*san*” + “*diṭṭhī*”), the key reason for the existence in this world; see, [“What is “San”? Meaning of Sansāra \(or Samsāra\).”](#)
- *Akaliko* – This **Dhamma does not change over time**; it is the same Dhamma that is delivered by all Buddhas (“*a*” + “*kālika*”). Another meaning is that it leads to the removal of darkness (due to *avijjā*); here “*kalu*” means “black” or “darkness.” [*kālika* :[adj.] temporal = relating to time.]
- *Ehipassiko* – “*Ehi*” + “*passika*” or **defilement can be removed (“passika”) when each ārammaṇa comes to the mind (“Ehi”)**. One does not wait to remove defilement in a formal meditation session. Rather, one takes care of that at each instant when an immoral thought comes to the mind (with *āĀnāpāna* or *Satipaṭṭhāna*). [*ehi* :[imper. of eti] come, come here.]
- *Opanayiko* – “*Opa*” + “*naiko*”, where “*Opa*” means “*upata*” or “origins” and “*nyāya*” means the principle or the nature. Thus it means **one can comprehend how each existence (bhava and jāti) arises**.
- *Paccattam vedittabbo vinnuhi-* “*paccaya*” can be understood by looking at the origins (*veda* or *vedic*): *vedittabbo*. “*Vinnu*” means the hidden can be seen (like something hidden in a vessel by piercing it). Anything in this world arises due to *Paṭicca Samuppāda*. **Thus, Dhamma allows one to “see through” how this whole world, together with all the suffering arises.**

Supreme Qualities of the Saṅgha

10. Here it must be noted that *Saṅgha* is not *bhikkhus*. *Saṅgha* means the Nobles or *Ariyā*, those who have attained one of the *magga phala*. (*Saṅgha* means one who has removed “*san*,” i.e., “*san*” + “*gha*”).

“Suppaṭipanno bhagavato sāvakaṣaṅgho, ujuppaṭipanno bhagavato sāvakaṣaṅgho, ñāyappaṭipanno bhagavato sāvakaṣaṅgho, sāmīcippaṭipanno bhagavato sāvakaṣaṅgho yadidaṃ cattāri purisayugāni aṭṭha purisapuggalā, esa bhagavato sāvakaṣaṅgho āhuneyyo pāhuneyyo dakkhiṇeyyo añjalikaraṇīyo anuttaram puññakkhettaṃ lokassā’ti.

2. *Bhagavato savakasāṅgho* means Noble disciples of the Buddha. The first four phrases describe four Noble qualities: *Suppaṭipanno*, *ujuppaṭipanno*, *ñāyappaṭipanno*, and *sāmīcippaṭipanno*.

- *Paṭipanno* means “having such quality”: “*Su*” means goodness and morality; “*uju*” means straightforward and not crooked in character; “*nāya*” means *ñāna* or wise; “*sāmīci*” means pleasant to associate. Thus it is easy to what is meant (succinctly) by those phrases. But as with all these qualities, it is not possible to describe them fully in words.

12. “*Yadidaṃ cattāri purisayugāni aṭṭha purisapuggalā*” means thus described eight types of persons (*aṭṭha purisapuggalā*) of four Noble (*purisa*) lineages. Eight types come when each stage is divided into two, for example, *Arahant magga* and *Arahant phala*.

13. Then starting with “*esa bhagavato sāvakaṅgho*” (i.e., those Noble disciples of the Buddha), five more qualities are stated: *āhuneyyo*, *pāhuneyyo*, *dakkhiṇeyyo*, *añjalikaraṇīyo*, *anuttaraṃ puññakkhettaṃ lokassa*.

- In those words, “*neyyo*” means *niyama dhamma* or core principle of nature; also called “*nyāma*.” Then “*āhu*” means “grasped,” “*pāhu*” means “inseparable” or “fused together,” “*dakkhi*” means “see.” Thus those disciples have clearly seen the core principles of nature (*paṭicca samuppāda*), have grasped them, and will not be separated from them ever.
- Because of that, they can dissolve and remove the causes (food) that fuel the *sansāric* journey: *añjalikaraneeyo*. Here “*an*” means “*āhāra*” or causes, “*jalī*” is water (dissolve), and *karāṇyo* means “do”. Another meaning of “*an*” is “horn” with sharp tips (as in a bull), which can hurt others; here *añjalikaraṇīyo* means dissolving them (by cultivating *Metta*) so that they cannot hurt others.
- *Anuttaraṃ puññakkhettaṃ*: *anuttara* is unmatched, *puñña* is meritorious, and *khetta* is for a field. Thus it means these disciples are like fertile fields, that can provide unlimited resources to others (just like a well-cultivated field can provide food for many).

Here is a recital of the *Namaskaraya* by the Venerable *Thero* (you need to adjust volume control on your computer). It is normally recited three times:

14.4 The Five Precepts – Pañca Sila

Revised February 12, 2020

1. The five precepts (*pañca sīla*; pronounced “pancha seela”) are normally recited after paying homage to the Buddha (*Namaskāraya*), and then taking the refuge (*Tisarana*), i.e., one says nine times that one takes the refuge in the Buddha, Dhamma, and the Saṅgha. In the following they are combined, as customary; see the previous post for pronunciations and details.

- Even for a Buddhist, it is not necessary to recite the precepts.
- It is important to keep in mind that JUST BY RECITING PRECEPTS does not do anything to purify the mind. The Buddha said, “*Yaṃ samādānaṃ taṃ vataṃ, Saṃvaraṭṭena sīlaṃ,*” or “reciting precepts is a ritual (“vata”), moral behavior is attained by seeing and controlling ‘san’.”
- However, it is good to recite *Namaskāraya*, *Tisarana*, and the precepts, to attain *citta pasāda* or calmness and joy of mind, especially before a formal meditation session. If one does it WITH UNDERSTANDING and RESOLVE, it can bring benefits.
- Furthermore, reciting precepts and *suttā* is preferred by those with developed *saddhā* (faith) *indriya*; see, “[Pañca Indriya and Pañca Bala – Five Faculties and Five Powers](#).” For those who lack *saddhā indriya*, this may be something they want to consider doing.

2. It is important to realize that the five precepts have deep meanings, and thus should not be taken lightly; see, “[The Five Precepts – What the Buddha Meant by Them](#).” The true meaning of the five precepts are discussed there.

- Only an *Arahant* is capable of strictly keeping those precepts (abstaining from all ten defilements or *dasa akusala*); **thus one needs to recite with the intention of doing one’s best to keep the precepts. Otherwise, we will be lying from the outset.**

Here a Venerable Thero is reciting the *Namaskāraya*, *Tisarana*, and the five precepts with the audience repeating them (volume adjustment on the right):

[WebLink: Listen to verse of: Pansil](#)

Here is a pdf file with the text and translation:

[WebLink: PDF File: Pañca Sīla \(click to open\)](#)

3. To emphasize, these English translations are the conventional (“*padaparama*”) or mundane ones and the real meanings are discussed in “[The Five Precepts – What the Buddha Meant by Them](#).” Also, while reciting, one needs to keep in mind that one is promising to do one’s best to keep the precepts.

14.5 Sutta Chanting (with Pali Text)

Revised August 14, 2016: Added more *suttā* at the end.

Following are recordings of three popular *suttā* by a Venerable Thero and the corresponding Pāli texts. At some point, I will make English translations. Most existing translations provide only the mundane (“*padaparama*”) meanings.

Please note that a few *suttā* are translated and discussed in the section “[Sutta Interpretations](#).”

1. Karaniya Metta Sutta (volume adjustment on the right):

14.6 Sādhu – Symbolizes Purified Hadaya Vatthu (Mind)

Revised February 21, 2019

1. It is customary to say “*Sādhu! Sādhu! Sādhu!*” before and after reciting precepts, a meditation session, chanting sutta, or a meritorious act (by oneself or another). Since anything is done for a purpose in Buddha Dhamma, it is good to understand why it is done.

- *Sādhu* comes from “*sa*” and “*hadaya*” or a purified heart (not the physical heart, but the *hadaya vatthu* where thoughts arise).

2. It is important to realize that our minds are associated with the *hadaya vatthu*, which is in the *manomaya kāya* and is aligned close to the physical heart; see, “[Ghost in the Machine – Synonym for the Manomaya Kāya?](#)” This is why in a traumatic or joyful event we feel it in the heart, and not in the brain. Brain is like a computer, and when it is overworked, it causes headaches. But our feelings of love, hate etc. are felt close to the physical heart, in the *hadaya vatthu*.

How is one’s heart (and mind) purified?

- “*Kāyena sanvaro sādhu, sādhu vācaya sanvaro; manasā sanvaro sādhu, sādhu sabbatta sanvaro*”
- “The heart is purified via moral discipline; one needs to act, speak, and think morally”

Thus when a meritorious deed is done by oneself or another, it is customary to say, “*sādhu*”. It reinforces the “goodness” of the deed and one makes a determination to do more; the lightness of the heart can be felt if one does it with understanding.

3. Our hearts are darkened with greed, hate, and ignorance of *Tilakkhaṇa*. As we purify the mind, the darkness fades away and the “white light emerges”; it is like lighting a lamp gets rid of the darkness. Heart becomes joyful.

We get rid of greed, hate, and ignorance via staying away from the ten defilements:

- When we abstain from killing, stealing, and inappropriate conduct (including but not limited to sexual conduct), we are cultivating **moral discipline through bodily acts**.
- Abstinence from lying, vain talk, gossiping, and hateful speech leads to **moral discipline through speech**.
- When we forcefully control our bodily acts and speech, the mind will gradually calm down because we thus reduce *abhijjā* [*abhijjhā*] (strong greed) and *vyāpāda* (strong hate). Then we can cultivate *sammā diṭṭhi* via comprehending the *Tilakkhaṇa*; this leads to reduction of *micchā diṭṭhi* too (***abhijjā* [*abhijjhā*], *vyāpāda*, and *micchā diṭṭhi* are the three *akusala kamma* done with the mind**). This is the step-by-step procedure that is discussed in the [Bhāvanā \(meditation\)](#) section.

4. Thus we can see that by saying “*sādhu*” mindfully, what we are doing is to make a firm determination to get rid of the ten defilements (*dasa akusala*) and thus to purify the mind and heart. Or, we are agreeing with a good deed done by someone else, and share the merits of that deed.

5. Now, what is the significance of putting the open hands together when saying “*Sadhu!*”?

- The gesture that we make by opening the hands fully, putting them together, and bringing them close to the heart or top of head also signify this determination. “With all my heart I make a commitment”, or “this commitment stands above everything else”, or “I agree wholeheartedly”.

The strengthening of the fingers versus making a fist embody two basic characteristics of human nature.

- One makes a fist when hitting someone in anger. Also, someone caught doing a misdeed has clenched hands in addition to a bent posture (you have seen pictures of criminals being hauled off to jail in such timid postures).

- In contrast, open hands indicate “I have not aggressive intentions” as when putting up hands indicating one has no desire to fight. Furthermore, as you may have noticed, people when say “*Sādhu!*” normally have their backs straight too, especially if they are doing with a joyful mind.
6. As mentioned above, one can make a given meritorious deed much more powerful by doing it with joy and knowledge; such thoughts should be there during that act and also when saying “*Sādhu!*” at the beginning and end. The most potent *kusala citta* are done with “joy and understanding” (“a *somanassa-sahagata, ñāṇa-sampayutta citta*”; see, “[Javana of a Citta – Root of Mental Power](#)”).

XV Dhammapada

- “[Manopubbangamā Dhammā..](#)”
- “[Sabba Pāpassa Akaranan....](#)”
- “[Appamado Amata Padam....](#)”
- “[Najajja Vasalo Hoti.....](#)”
- “[Arogya Parama Labha..](#)”
- “[Anicca vata Sankhara...](#)”
- “[Attā Hi Attano Nātho](#)”

15.1 Manopubbangamā Dhammā..

May 5, 2018; revised August 22, 2019; November 17, 2019; September 15, 2020

*Mano pubbaṅgamā dhammā,
mano seṭṭhā manomayā;
manasā ce paduṭṭhena,
bhāsati vā karoti vā;
tato naṃ dukkhamanveti,
cakkam va vahato padam.*

*Mano pubbaṅgamā dhammā,
mano seṭṭhā manomayā;
manasā ce pasannena,
bhāsati vā karoti vā;
tato naṃ sukhamanveti,
chāyā va anapāyini.*

(Dhammapada verses 1 and 2)

1. These two verses encompass the critical idea in Buddha Dhamma: That mind is at the forefront. This whole world is made of the mind and has the mind as the basis for everything.

- *Mano* is, of course, the mind. **Dhammā** (plural, not Buddha Dhamma) are the **energies that the mind generates (via javana power.)** **Dhammā** means to “to bear” meaning “everything arises due to **Dhammā.**”
- Those *dhammā* then **give rise to everything (all phenomena) in this world** – whether living or inert. This analysis can go to profound levels. For the basis of that analysis, see, “[What are rūpa? – Dhammā are rūpa too!](#)”
- *Pubbaṅgama* (*pubba* + *aṅga*) means what comes first. The first line (in both verses) says the mind creates all *dhammā* that give rise to everything in this world. The second line says, everything is prepared (*settā*) and is a manifestation of the mind (*manomayā*).
- The mind creates those **Dhammā** with thoughts (*saṅkhāra*.) That requires a lengthy explanation that can go to profound levels: “[Buddha Dhamma – A Scientific Approach](#)” and “[Worldview of the Buddha.](#)”

2. Depending on whether one speaks (*bhāsati*) and acts (*karoti*) with a defiled (*padutta*) or a pleasant (*pasanna*, Sinhala is *prasanna*) mind, those *dhammā* that are generated by the mind lead to (*tato naṃ*) suffering (*dukkhamanveti*), or happiness (*sukhamanveti*).

- In the case of a defiled mind (acting with *lobha*, *dosa*, *moha*), suffering will follow just as a wheel of a cart follows the footsteps of the ox pulling it (*cakkamva vahato padam*).
- In the case of a pleasant, moral mind (acting with *alobha*, *adosa*, *amoha*), happiness will follow one just as one’s shadow follows oneself (*chāyāva anapāyani*).

3. These two verses can be interpreted in a mundane way, as outlined in #2 above. Any given task done with an un-defiled mind will always lead to a pleasant and joyous state of mind.

- There is a more in-depth interpretation. Thoughts, speech, and actions done with a defiled mind (*lobha*, *dosa*, *moha*) can lead to births in the *apāyā* and, thus, to a high degree of suffering. Those done with a pleasant mind (*alobha*, *adosa*, *amoha*) will lead to births in the “good realms,” and will eventually lead to *Nibbāna*, end of all suffering.
- The first several subsections of the “[Living Dhamma](#),” discuss the fundamental aspects. That provides the background needed to go to the deeper issues discussed in the latter subsections there.

4. Now we can loosely translate the two verses as follows:

- All phenomena have mind as their forerunner; they all are mind-made. If one speaks or acts with an evil mind (i.e., engages in *dasa akusala*), then suffering (*dukha*) will follow just as the wheels of a cart follow the footsteps of the ox that is pulling the cart.
- All phenomena have mind as their forerunner; they all are mind-made. If one speaks or acts with a purified mind (i.e., engages in *dasa kusala* and *puñña kamma*), happiness (*sukha*) follows one like

one's own shadow that always follows one. That is the source of "*nirāmisā sukha*," which eventually leads to *Nibbāna*.

I found a youtube video with the Pāli recital; it may take a minute to download. The two verses start respectively at 0.30 and 2.18 minutes:

[WebLink: Youtube: Dhammapada - Yamaka Vaggo - Part 01](#)

15.2 Sabba Pāpassa Akaranan....

Revised June 6, 2020

“*Sabba pāpassa akaraṇaṃ,
Kusalassa upasampadā,
Sachitta pariyo dapaṇaṃ,
Etaṃ Buddhānasāsaṇaṃ*”

(Dhammapada verse 183)

Let us see what is meant by the verse:

- *Sabba* = all; *pāpassa* = immoral deeds/speech/thoughts; *akarana* = (*a* + *karana*) = not engaged in
- *kusalassa* = moral deeds/speech/thoughts, *upasampadā* = *upa* + *san* + *padā* = sort out “*san*” and embrace *kusala*; see, “[What is “San?”](#)”
- *sachitta* = *sa* + *citta* = one’s own thoughts; *pariyodapaṇaṃ* = *pari* + *yo* + *dapaṇaṃ* = control at the onset (where “*dapaṇa*” means control and “*yo*” means origin and “*pari*” means around)
- *Buddha āna* = All Buddhas’ *niyama* or principle. Another meaning is *Buddha* + *anusāsana* = Buddha’s advice or his “doctrine.”

Note: The process of “cleansing the mind” is what this website is about. See, “[Sīla, Samādhi, Pannā to Pannā, Sīla, Samādhi](#)” and “[Living Dhamma](#).”

Therefore, we can summarize as follows:

“Discard all that is immoral, what should not be done

Take in what is moral by sorting out “*san*”

Do this by controlling one’s own thoughts (mind)

This is the doctrine of the Buddhas”

Here is a recording of the verse recited by a Venerable *Thero*; it keeps repeating several times:[WebLink: Listen to verse of: Sabba papassa akaranan](#)Next, “[Appamado Amata Padam...](#)”,

15.3 Appamādo Amata Padam....

*Appamādo amata padam
pamādo maccuno padam
appamattā na meeyanthi
ye pamattā yathā matā.*

(Dhammapada verse Verse 21, Samavati Vatthu)

- *Appamāda* is “doing without delay” and *pamāda* is being delayed.
- *Mata* (pronounced “matha”) is death, and *amata* is deathless, another word for *Nibbāna*. *Maccuno* (pronounced “machchuno”) is also death, so is *meeyanthi*.
- *Pada* means “word” (most of these words are also Sinhala words).
- *Appamattā* is one who is not delayed, *pamattā* is one who is delayed.
- *Yathā* is “true status”.

Now we can extract the MEANING of the verse as:

Hastening is a “deathless word”

Delay is a “death sentence”

One who makes haste attains the deathless status

One who negligent is like already dead

1. Thus someone who is delayed in seeking *Nibbāna* (either due to not knowing Buddha Dhamma or just procrastinates in following the Path) is like a dead person even while living. He/she will be facing innumerable deaths in the future.

- But someone who strives and attains *Nibbāna* has already reached the “deathless state”. Because after attaining *Nibbāna*, all future deaths are stopped: No more future rebirths and thus no more deaths.
- One actually attains the “deathless state” when one becomes one of the 8 Noble Persons (*attha purisa puggala*). This is because once one becomes an *Ariya* (Noble Person), one will never lose it, and will never be born in an *apāya*. Thus one can be said to “born” as an *Ariya*, when one becomes a *Sotāpanna Anugāmi*; see, [“Sotāpanna Anugāmi – No More Births in the Apāyā.”](#)

2. There are two reasons for the urgency:

- a. The time of death is unpredictable. Even a young, healthy person may die via an accident or other unforeseeable cause.
- b. As we get old, our brains start to degrade and thus our minds will not be able to grasp the Dhamma.

3. Many Buddhists that I know say they want to “enjoy life while young” and then start focusing on *Nibbāna* at old age long after retirement. But one may not reach the old age, and even if did, the mind may not be able to grasp the deep message of the Buddha.

- Most people come to the conclusion of postponing practice, because they think attaining *Nibbāna* (or the *Sotāpanna* stage) is a mere act of following some rituals that can be done at any time. This would be a big mistake. The *Sotāpanna* stage is reached via comprehending the true nature of this world, *anicca*, *dukkha*, *anatta*, and that needs a sharp mind and a lot of contemplation.

4. The Buddha was once traveling with some *bhikkhus* and they saw an old beggar couple. The Buddha told the *bhikkhus* that the man’s name was Mahādana (meaning rich), and he was indeed a very rich person, and the woman was his wife; they both were of “tihatuka birth”, i.e., they were born due to a very potent good kamma (done with all three good roots of non-greed, non-hate, and wisdom) from a previous life.

- Thus, the Buddha said, if they started on the Path when they were very young, the man could have become an *Arahant* and the woman an *Anāgāmī*; if they started when they were young (20's), they could have become *Anāgāmī/Sakadāgāmī*, and if they started on the Path in the middle age they could have attained *Sakadāgāmī/Sotāpanna* stages. Instead, they lived a very lavish life, wasted their wealth, and became beggars. Now they were too old to comprehend anything.
- It is unfortunate to see many people today postponing the practice to their “old age”. It is a good idea to start early and at least keep a slow pace.
- **There are four factors that contribute to the capability of attaining *Nibbāna*: *Āyu* (age), *vaṇṇa* (lively), *sukha* (comfort), *bala* (ability.)** These are due to past *puñña kamma*. See #13 of “[Kanha \(Dark\) and Sukka \(Bright\) Kamma and Kammakkhaya.](#)”
- Some people may have sufficient *vaṇṇa* and *bala* even at a very old age. Thus a normal person cannot look at a given old person and say, “this person seems too old to attain *Nibbāna*”. Only a Buddha can determine whether a person is too old to grasp the Dhamma. Yet, in general, as one becomes older the brain gets weaker.

5. Here is a recording of the verse recited by a Venerable *Thero*:

[WebLink: Listen to verse of: Appamado](#)

Next, “[Najajja Vasalo Hoti.](#)”,

15.4 **Na Jacca Vasalo Hoti.....**

Revised May 2, 2020

“*Na jaccā vasalo hoti, na jaccā hoti brāhmano*
Kammanā vasalo hoti, kammanā hoti brāhmano”
([Vasala Sutta, Sutta Nipāta 1.7](#))

When I started writing this post, I erroneously assumed that the above verse is from *Dhammapada*. But it turned out that it is actually from the [Vasala sutta](#). (It is the last verse of the *Sutta*.) However, I decided to put the post in the *Dhammapada* section. It is a succinct verse providing insight into the core message of the Buddha.

Let us look at the meaning of different key terms:

- “*Ja*” means birth and “*jaccā*” means “by birth” or “related to birth”.
- “*Vasala*” (or “*vasalaya*” in Sinhala) is a derogatory term identifying someone as an “unworthy” person. Not merely “useless” but “someone not to be associated with”, as if the person has a communicable disease. Even today, there are such “untouchables” in India even though their conditions have improved since 1995: [WebLink: WIKI: Dalit](#).
- In those days, a *Brahmin* was supposed to be the opposite of a *vasalaya*, having the highest social rank. Of the 31 realms of existence, *Brahmā* live the highest 20 realms. They have the highest level of mental states (greedy or hateful thoughts normally do not arise in them.) Thus a *Brahmin* (who lives like a *Brahma*) is supposed to be of the highest moral values.
- *Kamma* is of course action, and *kammunā* means according to one’s actions.

So, the meaning of the verse is clear:

“It is not the birth that makes a noble person or an ignoble person, but it is one’s actions (the way one lives one’s life) that determines whether one is a noble person or an ignoble person”.

- Here one could substitute a Noble Person with a *Brahmin* and ignoble person with an untouchable, AND that does not come about by birth but by one’s moral values.

We can make the following deductions using Buddha Dhamma:

- One is determined to be a Noble Person not by birth but by one’s character.
- One change from being an ignoble person to a noble person and even a Noble Person (*Ariya*) by changing one’s character (*gathi*). There are several posts on how to change habits; use the “Search” box on right to find the posts (just search for “habit” or “*gathi*”). This search box is a good resource to find relevant posts using a keyword.
- Sometimes a noble person can change to an ignoble person too, but a Noble Person (*Ariya*) never (even in future lives) changes to an ignoble person.
- Some people are very high-minded because of their birth, wealth, beauty, fame, among many other possibilities. But we need to be always aware of the fact that we have been born much worse than even the poorest human. We all have been born animals and worse. There is no reason to be high-minded for a span of 100 years in a rebirth process that has no beginning!
- Contemplating on the “bigger world view” with the 31 realms (with four realms of much suffering) can make one humble, and be compassionate; see, “[Implications of the Rebirth Process in Daily Life and Society](#).” During the hard-to-comprehend time scale of *samsāra*, we have been born in almost all of the 31 realms, good and bad.
- Also, we need to remember that even a lowly worm may have a potent *kamma* seed that could make it in its next life a king. (Even though chances are extremely low.) See, “[How to Evaluate Weights of](#)

Different Kamma“), and if we do not act with wisdom we could have a rebirth worse than a worm. Actually, high-mindedness (*uddhacca*; pronounced uddachcha) can make one be born in a lower realm.

Next, “Arogya Parama Labha”,

15.5 **Ārogya Paramā Lābhā..**

Revised September 27, 2017; revised January 30, 2019; April 18, 2020; June 28, 2020

*Ārogya paramā lābhā
Santuṭṭhiparamaṃ dhanam
vissāsa paramā ñāti
Nibbānaṃ paramaṃ sukhaṃ*

(Dhammapada verse 204)

Here is a recital by the Venerable Thero:

[WebLink: Listen to Venerable Thero recital](#)

1. As with many Dhammapada verses (and *sutta* interpretations), the conventional (or “*padaparama*”) interpretation is the one that is widely known, which goes as: **“Health is the ultimate profit, happiness is the ultimate wealth, a trusted friend is the best relative, *Nibbāna* is the ultimate bliss”**.

- The deeper meaning remains hidden for many. In some hospitals in Sri Lanka, the verse, “*Ārogya Paramā Lābhā*” is displayed in big letters to emphasize the benefits of being healthy.
- While it is good to abide by those conventional meanings while we live this life, we should also try to grasp the deeper meanings to embark on the Noble Eightfold Path; see, “[Buddha Dhamma in Chart](#)” and “[What is Unique in Buddha Dhamma](#).”

2. First “*parama*” means “ultimate” or “prominent”. By the way, the word “*padaparama*” above means the interpretation that makes the “conventional meaning of a word prominent”; “*pada*” is “word”. Now let us look at the other words in the verse.

3. “*Roga*” means “disease”, so *ārogya* means not subject to disease. The bodies of all beings below the *Deva lokā* (human and below) are subject to disease. We cannot remove the possibility of disease until we remove causes for us to be reborn in the human realm or the lowest four realms, i.e., attain the *Sakadāgāmī* stage of *Nibbāna*. [*ārogya* : [nt.] health.]

- “*Lābha*” is “profit”. **The ultimate profit (better than any amount of wealth) of “disease-free” status is attained at the *Sakadāgāmī* stage of *Nibbāna*.**
- Actually “*ārogya*” is a Sanskrit word that has become standard. The actual line is, “*Aroga parama lābha*”.

4. “*Santuṭṭhi*” comes from “*san*” + “*tuṭṭhi*” or removing “*san*.” *Santuṭṭhi* and the more common Sinhala word “*santhosa*” means happy. When one removes “*san*,” one gains the *nirāmisā sukha* of *Nibbāna* or “cooling down”.

- “*Dhanam*” means “wealth”; Sinhala word is “*dhanaya*.” **Thus ultimate wealth is achieved by getting rid of “*san*” or defilements of greed, hate, and ignorance; see, “[What is “San”?](#)”.**

5. “*Vissāsa*” comes from “*vis*” + “*āsā*”, where “*āsā*” means “*āsava*” or cravings. Thus it means getting rid of cravings that makes one bound to the *samsāra* (round of rebirths).

- “*Ñāti*” means “relative.” **Thus ultimate refuge is reached via giving up the cravings for worldly things.**

6. The last one, *Nibbānaṃ paramaṃ sukhaṃ*, or “***Nibbāna* is the ultimate bliss**” is the only one that has the same meaning as the conventional or “*padaparama*” version in #1 above.

- Therefore, when one embarks on the *Sotāpanna magga*, one should be able to understand to the correct version.

7. Buddha dhamma has no language, cultural, social barriers. But the Buddha advised never to translate *Tipiṭaka* to any language, particularly to Sanskrit, because the meanings of certain words can get distorted; see, “[Preservation of the Dhamma.](#)”

- It is ironic that this is exactly what has happened during the past 1500 years or so, at least since Buddhaghosa wrote *Visuddhimagga*, probably even earlier. The most damaging are the replacement of the Pāli words *anicca* and *anatta* by the Sanskrit word *anitya* and *anātma*. The latter likely to have happened more recently. See, “[Misinterpretation of Anicca and Anatta by Early European Scholars.](#)”
- On the other hand, the Buddha also advised that what really matters is to get the “meaning of a given word or phrase across”. He said to use the words and phrases (and examples) appropriate for a given locale to convey the MEANINGS of these key Pāli words. While we should keep the *Tipiṭaka* intact in Pāli, we should interpret its content in a way that most conducive to get the ideas across depending on the audience.
- The correct way to interpret the *Tipiṭaka* material is outlined in “[Sutta – Introduction.](#)”

8. It is interesting to note that this verse was a popular one among the *Vedic Brahmins* of the day of the Buddha. In the [WebLink: suttacentral: Māgandhiya sutta \(MN 75\)](#), it is described how Māgandhiya *brahmin* tells the Buddha that his teacher also taught him the same verse. When the Buddha asked him to explain the meaning that his teacher taught him, Māgandhiya gave the same interpretation that was given in #1 above.

- The Buddha told Māgandhiya that this *gāthā* (verse) came to the *Vedic* literature from the previous Buddha (Buddha Kassapa,) whose Buddha *Sāsana* had since disappeared: “***Pubbakehesā, māgaṇḍiya, arahantehi sammāsambuddhehi gāthā bhāsītā.***”
- It is important to note that there had been three Buddhas before Buddha Gotama in this *mahā kalpa*, and there will be another, Maithree Buddha, in the future after the present Buddha *Sāsana* disappears in about 2500 years.
- This is why only “conventional meanings” of pure Dhamma survives when *Ariyā* (Noble Persons) who can correctly interpret the deep meanings in the *suttā* and verses like this are absent for long times in this world. Either a Noble Person or a Buddha has to be born to bring back the true meanings.
- This is exactly what has happened during the past hundreds of years, where true meanings of many keywords like *anicca*, *dukkha*, *anatta*, *Paṭicca Samuppāda*, and *Ānāpānasati Bhāvanā*, have been not known; see, “[Anicca, Dukkha, Anatta – Wrong Interpretations.](#)”

9. For those who like to dig deeper into *Tipiṭaka*, the “[WebLink: suttacentral: Santuṭṭha Sutta \(SN 16.1\)](#)” clearly illustrates that “***santuṭṭha***” is with one who lives a simple life, without minimal cravings, as **Ven. Kassapa** did: “***..Santuṭṭhāyaṃ, bhikkhave, kassapo itarītarena cīvarena, itarītara-cīvarasantuṭṭhiyā ca vaṇṇavādī; na ca cīvarahetu anesanam appatirūpaṃ āpajjati; aladdhā ca cīvaraṃ na paritassati; laddhā ca cīvaraṃ agadhito amucchito anajjhāpanno ādīnavadassāvī nissaraṇapañño paribhuñjati.***”

- The [WebLink: suttacentral: English](#) and [WebLink: suttacentral: Sinhala](#) translations at the Sutta Central site are correct, for this *sutta*.

15.6 **Anicca vata Saṅkhārā...**

Revised August 16, 2019; February 25, 2020; June 8, 2020

*Aniccā vata saṅkhārā**Uppāda vaya dhammino**Uppajjitvā nirujjhanti**Tesaṃ vūpa samo sukho**(Mahā Parinibbāna Sutta)*

This verse is not in the Dhammapada, but it is a very common verse. In Sri Lanka (and possibly in other Buddhist countries), it is displayed at funerals in order to emphasize the “fleeting nature” of life. It actually has a much deeper meaning, and explains why we face sorrow inevitably (because death is inevitable). We generate our future rebirths via our own (*abhi*)*saṅkhāra*! We need to stop creating *abhisāṅkhāra* (with *lobha, dosa, moha*) to attain the *Nibbānic* bliss.

- This verse was uttered by Sakka, the King of the *Devas*, just after the *Parinibbāna* (passing away) of the Buddha. It is in the *Mahā Parinibbāna Sutta* (DN 16) and also in a short sutta: “[WebLink: suttacentral: Parinibbāna Sutta \(SN 6.15\)](#).”

A common and incorrect translation is:

- All things are impermanent
- They arise and pass away
- Having arisen they come to an end
- Their coming to peace is bliss

Let us examine the correct interpretation of the verse.

1. *Anicca* is, of course “cannot be maintained to our satisfaction.” It is NOT just impermanence, because even permanent things (relative to our lifetime) cannot be maintained to our satisfaction; see, “[Anicca, Dukkha, Anatta – Wrong Interpretations](#).”

Vata (pronounced as “vatha”) here means “surely” or “indeed”.

(There are other meanings for “*vata*”: In the verse, “*yaṃ samādānaṃ taṃ vataṃ, sanvaraṭṭena sīlaṃ,*” or “reciting precepts is a **ritual**, moral behavior, or *sīla*, is attained by controlling “*san*.” Thus, there “*vata*” means ritual. Another meaning is “**action**.” One needs to pick the right meaning for the given situation).

We think, speak, and take actions based on our *mano, vacī,* and *kāya saṅkhāra*. They are all thoughts (we cannot even lift a finger without an associated thinking). Those *saṅkhāra* lead to *viññāṇa* via “*saṅkhāra paccayā viññāṇa*” in *Paṭicca Samuppāda*. Strong *viññāṇa* produced via “*abhisāṅkhāra*” (or strong *saṅkhāra*) lead to future rebirths. But all births end up in death. See, “[Saṅkhāra – What It Really Means](#)” and “[Saṅkhāra, Kamma, Kamma Bija, Kamma Vipāka](#).”

- Thus the first line says, “any *vata*” or a “person” (that is a result of past *abhisāṅkhāra*) cannot be maintained to our satisfaction”.
2. *Uppāda* means arise and *vaya* means destruction. *Uppajjitvā* means that which arises, and *nirujja* means fading away. *Dhammino* (or *dhammathā*) means the “Nature’s way”.
- Thus the first line implies that any rebirth (which inevitably arises due to our *abhisāṅkhāra*) cannot be maintained to our satisfaction. Any birth ends up in death and suffering.

3. *Te* means “those,” and thus “*tesaṃ*” means those (three) “*saṃ*” or *lobha, dosa, moha*; see, “[What is “San”?](#).”

vūpasama means “remove and get to *samādhi*.” In the *Paṭisambhidā Magga Pakaraṇa* (*Jhāna Vibhaṅga* section) on p. 55, it explains that, “*vitakkavicāraṃ vūpasamā*” means “getting rid of *vitakka* and *vicāra* and attaining *savitakka, savicāra*.” See, “[Vitakka, Vicāra, Savitakka, Savicāra, and Avitakka, Avicāra](#).”

Sukha is happiness.

- Thus the fourth line says, “by removing *lobha, dosa, moha* (three bad “*saṃ*”s) from our minds; we can reach (the ultimate) happiness or *Nibbāna*.”

Here is a recording of the verse by the Venerable *Thero* (repeated three times; note the volume control on right):

[WebLink: Listen to verse of : Anichchavatha sankara](#)

- This verse is a very good *kammaṭṭhāna* (meditation subject) for cultivating the “*anicca saññā*.” One could recite the verse and contemplate on its meaning. Think about all those loved ones who passed away and led to much suffering. And one’s own death is also inevitable.
- We have been through this process in perpetuity, being distressed as loved ones are lost and also thinking about one’s own demise, at every birth.
- But there is a way to stop this suffering, by following the Path.
- Thus, instead of getting depressed about the inevitability of death, one WILL start feeling better if one can really cultivate the “*anicca saññā*”; see, “[How to Cultivate the Anicca Saññā](#).”
- This *kammaṭṭhāna* will also cultivate the “*udayavaya ñāṇa*” or “the knowledge about arising and decay of a *saṅkhata*.” See, “[Udayavaya Ñāṇa](#).”

15.7 **Attā Hi Attano Nātho**

March 4, 2017; revised November 13, 2018; October 25, 2019

*“Attā hi attano nātho
ko hi nātho paro siyā
attanā hi sudantena
nāthanṃ labhati dullabhamṃ”*

(Dhammapada verse 160)

This is an important verse where the word “*atta/attā*” (pronounced “aththa”/“aththā”) is used with two very different meanings in two places within the same verse.

- **In the conventional sense**, “*attā*” means “a person”.
- **The deeper meaning of “*atta*”** is “in full control”, the opposite of which is *anatta* (“helpless”) as in the *Tilakkhaṇa*.
- Depending on the context, one needs to pick the correct meaning. In this verse, both meanings are used.
- When one attains the true “*atta*” state (*Nibbāna*), one has become “*nātha*,” which is still used in Sinhala meaning “found refuge or salvation”. As long as one remains in the 31 realms (this world), one is “*anātha*” (which is the Sinhala word for *anatta*) or “helpless”.
- “*paro siyā*” means “outside oneself”. Thus “*ko hi nātho paro siyā*” means “how can one find refuge outside oneself”?
- One becomes *atta* (*attano*) by cleansing (one’s mind): *sudantena* (*sudda* means “clean”).
- *Labhati* means get and *dullabhamṃ* means rare, and as we saw above “*nātha*” is attaining *Nibbāna*. So, *nāthanṃ labhati dullabhamṃ* means “it is not easy to get to salvation (*Nibbāna*)”.

Therefore, we can translate the verse as follows:

*“One is one’s own refuge
how can another be a refuge to one?
one reaches salvation by purifying one’s mind
getting to the refuge (*Nibbāna*) is rare”*

Here is a recording of the verse recited by me (I could not find a recording by Venerable Waharaka Thero):

 [WebLink: Play Dhammapada verse 160](#)

A detailed discussion on “*atta/attā*” is given in the posts, “[Pāli Dictionaries – Are They Reliable?](#)” and “[Anatta – the Opposite of Which Atta?](#)”

October 25, 2019: *Attā* is used in the sense of “a person” in many of the verses in the “[WebLink: suttacentral: Attavagga](#)” of the Dhammapada.

16.1 **Sutta – Introduction**

Revised April 10, 2017; August 28, 2018; January 7, 2019

1. Buddha dhamma in the *Tipiṭaka* is in three categories: “*uddesa, niddesa, patiniddesa.*” A fundamental concept is first stated (“*uddesa*” or “utterance”). “*Niddesa*” is a “brief explanation”. Finally, “*patiniddesa*” is explaining in detail with examples to clarify complex or “knotty” points.

[*uddesa* : [fr. uddisati] -- 1. pointing out, setting forth, proposition, exposition, indication, programme M. III, 223 (u. uddiṭṭha) , 239; S. IV, 299; SnA 422. -- 2. explanation S. V, 110 sq. ; sa-uddesa (adj.) with (the necessary) expln. , point by point, in detail, D. I, 13, 81; III, 111; A. III, 418; It. 99; Nd2 6171. -- 3. samaṇuddesa one marked as a Samaṇa, a novice (cp. sāmaṇera) D. I, 151; M. III, 128; A. IV, 343; uddesa-bhatta special or specified food Vin. I, 58 = 96, cp. II. 175, propounding, recitation, repetition.

niddesa : [m.] description; analytic explanation.]

- For example, “*ye dhammā hetuppabbavā.*” is *uddesa*. There, the fundamental characteristics of “this world” just stated, that everything in this world arises due to causes.
- In the *niddesa* version, *Paticca Samuppāda* is “*avijjā paccayā saṅkhāra, saṅkhāra paccayā viññāṇa,.....*” (all 11 steps): These are concise statements.
- In contrast, discourse (*desana*) is the *patiniddesa* version of explanation: a detailed explanation with examples.

2. Most *suttā* are in *uddesa* or *niddesa* version (*Digha Nikāya* is an exception, even though some verses do have deeper meanings). They require detailed explanations. **Translating word-by-word is not appropriate in many instances.**

- For example, “*anicca, dukkha, anatta*” are only in the *niddesa* version in *Dhamma Cakka Pavattana Sutta* and *Anatta Lakkhana Sutta*. [[SN 56.11 Rolling Forth the Wheel of Dhamma – Dhammacakkappavattanasutta](#), [SN 22.59 The Characteristic of Anatta – Anattalakkhanasutta](#)]
- However, each *sutta* took many hours to deliver. It was not possible to condense all that information in a *sutta* for mostly oral transmission that was available at the time. Each *sutta* is in a condensed form (most likely by the Buddha himself; see below).
- Thus the material in each *sutta* **as written in the *Tipiṭaka*** is in CONDENSED form in most cases. It is in the “*niddesa*” version. They are in verse format for oral transmission.

3. During the time of the Buddha, other *bhikkhus* then described in detail each *sutta* to audiences when they delivered discourses. That is the “*patiniddesa*” version. Especially after the *Parinibbāna* of the Buddha, **many *Arahants* started writing “*Attakathā*” or commentaries on essential *suttā*. But a few were written during the time of the Buddha.**

- Three of the original books with such early commentaries remain preserved in the *Tipiṭaka*: *Patisambhidhā Magga Prakarana*, *Nettipparakana*, and *Petakōpadesa*. Of these, the *Patisambhidhā Magga Prakarana* consists of the analyses by Ven. *Sariputta*, one of the chief disciples of the Buddha, and the *Nettipparakana* by Ven. *Maha Kaccāyana*. Thus we are lucky to have these three original commentaries still with us.
- These three books contain the “*patiniddesa*” versions of many of the essential *suttā*, which describe in detail the keywords/phrases in a given *sutta*. All other such excellent commentaries are lost; see, “[Incorrect Theravada Interpretations – Historical Timeline](#)” and “[Buddhaghōsa and Visuddhimagga – Historical Background.](#)”

4. In this section, I will be discussing the *suttā* in the *patiniddesa* mode, providing explanations of verses in the *Tipiṭaka* with deeper meanings.

- During the time of the Buddha, some could comprehend just the *uddesa* version. For example, Upatissa and Kolita (who became Ven. Sariputta and Ven. Moggalana later) became *Sotāpannas* upon hearing the verse, “*ye Dhamma hetupabbhavā....*”. They had done much in their past lives and needed “just a little push” to understand. They are called *ugghatitañña* or “persons with high wisdom.”
- And many could understand the *niddesa* version. Those were *vipañcitañña* and needed a bit more explanation to grasp the concepts. [WebLink: suttacentral: Ugghatitaññū Sutta \(AN 4.133\)](#) discusses the four categories of persons — *ugghatitañña*, *vipañcitañña*, *neyya*, and *padaparama*.
- However, these days, most people are in the lower category of *neyya*. They need detailed explanations (i.e., *patiniddesa*) to grasp a concept. They also belong to two groups. Those with *tihetuka patisandhi* (optimum births) can attain *magga phala* in this life. But those with *dvihetuka patisandhi* (inferior births) cannot achieve *magga phala*, but they can accrue merits to attain *magga phala* in future lives. Of course, there is no way for anyone to figure out (except for a Buddha) whether one has a *tihetuka* or *dvihetuka patisandhi*.
- It is essential to realize that those who are either *ugghatitañña* or *vipañcitañña* had been *neyyas* with *dvihetuka patisandhi* in previous lives. They had strived to gain more wisdom and now are benefitting in this life. Thus there is no point worrying about whether one a *tihetuka* or *dvihetuka*.

5. By the way, many erroneous commentaries are there today, and the best example is the *Visuddhimagga* of *Buddhaghosa*. It was written around 400 CE (where CE is “Current Era” or AD) when the “pure Dhamma” was already lost, and the conventional meanings were commonplace, just as now.

- The “pure Dhamma” has been lost for an extended period from about 200 CE up to now. See “[Incorrect Theravada Interpretations – Historical Timeline](#).” But the original *suttā* survived because people at least used and preserved them even if they used the “conventional” or “mundane” (“*padaparama*” in Pāli) meanings.
- Thus we can see why people have been translating *suttā* “word for word” and just getting the conventional meanings. Profound verses in *suttā* need detailed explanations.

6. From time to time, *jāti Sotāpannas* are born. They had attained the *Sotāpanna* stage in a previous life, possibly during the time Buddha was alive. They likely have had births in the *deva loka* for long times and are reborn human now. Some of them have the unique capability to interpret the keywords/phrases in the *suttā*. This specialized knowledge is “*Patisambhidā Ñāna*.”

- There has been at least one time previously that the real meanings were brought out by a *Thero* with the *Patisambhidā Ñāna*. But this is not the time to discuss that.
- However, we have a few *Theros* at this time who have this ability. I will leave it up to others to decide for themselves whether this is true or not. I have experienced the benefits of these clarifications, and I want to make them available for anyone who could benefit.

7. Here is my personal belief about what happened. The Buddha knew that Buddha Dhamma would be going through periods of decline where *bhikkhus* capable of interpreting the *suttā* will not be present. Thus the *suttā* were composed in a way that only the “conventional” meaning is apparent. **That was a necessary step to preserve the *suttā*, especially before writing became commonplace.**

- It is important to remember that Ven. Ananda had memorized all the *suttā* which he then recited at the First Buddhist Council, just three months after the *Parinibbāna* of the Buddha.
- Ven. Ananda was Buddha’s personal assistant over the last few decades of the Buddha’s life. I believe that the Buddha condensed each *sutta* and Ven. Ananda memorized each of them. The Buddha synthesized each *sutta* in a “double meaning” way for them to survive the “dark periods.”
- Then, at the first Buddhist Council, all the *suttā* were recited and were sorted into various categories (*Nikāyās*). That is my theory, and I believe that it will be proven to be accurate in the future.

8. There are times when *bhikkhus* with the *Patisambhidā Ñāna* are not born for long times. During such times people use conventional interpretations. **And that served the purpose of keeping the *suttā* intact, especially before written texts became common.**

- A perfect example is the *Ānāpānasati Sutta* (some of which are also part of the *Satipaṭṭhāna Sutta*). As we discussed in “[7. What is Ānāpāna?](#)”, the conventional meaning is to tie up “*ana*” with breath inhaling and “*pana*” with breath exhaling. That was consistent with the breath meditation that has been there in the world at any time. Many *yogis* practiced it at the time of the Buddha. He learned those methods from such *yogis* before attaining the Buddhahood.
- Another phrase is “*majjhimā patipada*” in the *Dhamma Cakka Pavattana Sutta*. It is easy to interpret it as “middle path” since the *sutta* describes the two extremes of *kāmasukallikānu yōga* and the *attakilamatānu yōga*. It is true that “*majjhima*” means middle, and it makes sense. However, there is a deeper meaning too.
- “*Majjhī*” is getting intoxicated (with not only alcohol/drugs but also with power, beauty, wealth, etc.), and “*mā*” is to remove that tendency. Thus “*majjhimā patipadā*” is to stay away from the extremes and to maintain a purified mind.

9. Regardless of the validity of my claims about the Buddha purposely synthesizing the *suttā* with “double meanings,” the following are the key points from the above discussion that I wish to emphasize:

- The *suttā* seem to be designed to convey “conventional” meanings while keeping the “deep meanings” embedded in them.
- It is those “deep meanings” that bring out the uniqueness of Buddha Dhamma.
- Word to word translation of the *suttā* does not convey the message of the Buddha. Examples are critical Pāli words like *anicca* and *anatta*.
- The surviving three original commentaries in the *Tipiṭaka* can verify the deep meanings of the keywords/phrases.

10. It is an offense to misinterpret *suttā*. That is in several *suttā* in the [WebLink: suttacentral: Bālavagga of Aṅguttara Nikāya 2](#).

- For example, AN 2.25 is a short *sutta* that says: “*Dveme, bhikkhave, tathāgataṃ nābbhācikkhanti. Katame dve? Yo ca neyyatthaṃ suttantaṃ neyyattho suttantoti dīpeti, yo ca nītatthaṃ suttantaṃ nītattho suttantoti dīpeti. Ime kho, bhikkhave, dve tathāgataṃ nābbhācikkhanti*” *ti*.
- **Translation** (“[WebLink: suttacentral: A Meaning to be Inferred](#)”): “Monks, these two people slander the *Tathāgata*. Which two? He who explains a discourse whose meaning that needs to be inferred as one whose meaning has already been fully drawn out. And he who explains a discourse whose meaning has already been fully drawn out as one whose meaning needing clarification. These are two who slander the *Tathāgata*.” [*Tathāgata* : the 'Perfect One', lit. the one who has 'thus gone', or 'thus come', is an epithet of the Buddha used by him when speaking of himself.]

11. I will first discuss the foundation of the *Satipaṭṭhāna sutta* in a “bottom-up” approach, starting with the goal of the *sutta* in mind and developing the related concepts. These ideas are in other posts, so it will be a matter of tying them up together.

- That would be a refreshing approach than to start with the Pāli version of the *sutta* and try to discuss each line.
- But in the end, I will show how the lines in the *sutta* tally with this description. As the Buddha emphasized, what matters is to get the IDEA across, and NOT to memorize the Pāli *suttā*. (Memorization is needed only for transmission purposes).

12. If one recites *suttā* with the understanding, it can be beneficial. It also needs to be recited in an appropriate tune without too much “dragging.” (there are some recordings in the [Sutta Chanting \(with Pāli Text\)](#) section).

April 18, 2017:

A useful resource for finding Pāli *suttā* is suttacentral.net.

- Once you open a *sutta*, click on the left-most drop-down to choose one of several languages. That is a useful resource; consider donating if you find it useful. **Note: I am not associated with them in any way.**
- Of source, the translations are incorrect frequently for critical Pāli words, as is the case at many sites. But at least one can see the correct Pāli version.

Next, “[Pāli Dictionaries – Are They Reliable?](#)”

16.2 Pāli Dictionaries – Are They Reliable?

March 4, 2017; Revised March 5, 2017; Revision March 7, 2017; May 17, 2018; October 27, 2018; August 20, 2019; June, 2020

I have received several emails pointing out that my interpretations of certain words are not compatible with those in Pāli dictionaries. I hope I can explain why one must be careful in using a Pāli dictionary if one's goal is to grasp the true teachings of the Buddha. Of course, I learned this from my Noble teacher, late Waharaka Thero.

1. In Pāli a word can have different meanings depending on the context. Furthermore, sometimes, grammar rules are bypassed.

- Many of the problems with an incorrect interpretation of the *Tipiṭaka* arise mainly because of those two misconceptions.
- Pāli does not have its alphabet. It was a spoken language. The Pāli Canon (*Tipiṭaka*) was first written using the Sinhala alphabet around 5 BCE (two thousand years ago); see, "[Historical Background](#)."

2. Even in English language, words can have different meanings depending on the context. Following are some examples for three words:

- Right: You were right./Make a right turn at the light.
- Rose: My favorite flower is a rose./He quickly rose from his seat.
- Type: He can type over 100 words per minute. /That dress is not her type.

(Read more at "[WebLink: grammar.yourdictionary.com: Words with Multiple Meanings](#)").

- In Pāli language, there are **many** keywords with different meanings. In many cases, there is a conventional meaning and a deeper meaning, as mentioned above: "[Sutta – Introduction](#)."

3. Pāli is a phonetic language. The *Tipiṭaka* was transmitted for many hundreds of years faithfully, because verses were formulated for easy memorization. Grammar rules bypassed in some cases. That is clear in the verses, "*Buddhaṃ Saraṇaṃ gacchāmi*," "*Dhammaṃ Saraṇaṃ gacchāmi*," etc. [In Pāli, if the verb is "*gacchāmi*" with the ending "*..mi*" it is for the **1st person singular "I"**, and if the word is "*gacchāma*" with the ending "*..ma*" it is for the **1st person plural "We"** and similarly for 2nd person (*si*, *tha* - you, you all), and 3rd person (*ti*, *nti* - he, they).]

- There is no subject in the above verse. The first of course means, "I take the refuge in the Buddha," but "I" is missing in "*Buddhaṃ Saraṇaṃ gacchāmi*." It is just understood.
- If you look at *suttā*, there is no clear grammatical structure. It is the sound that gives the meaning, and most verses have "double meanings": There is a simple meaning, but deeper meanings may be hidden. I have discussed this to some extent in the post, "[Sutta – Introduction](#)."
- Some key Pāli words discussed in the post: "[Introduction to Citta, Vedanā, Saññā, Saṅkhāra, and Viññāna](#)."

4. Let us start with the word "*atta*" (pronounced "aththa" or "aththā" depending on where used). This word can have many meanings depending on the context.

- **In the conventional sense**, "*attā*" means "a person." It is used with this meaning in some contexts; see below.
- **The deeper meaning of "*atta*"** is "in full control" or "the essence" or "the truth that is timeless." Just like the word "*anicca*," it is not possible to translate to English. **One has to get the idea by learning how it is used in various situations.** The opposite of "*atta*" is *anatta*. That means "helpless" in case of a living being, or "useless" in case of an inert thing.

- At least, in this case, one could see the difference in meaning by the way they are pronounced: *attā* versus *atta*.
 - Both these meanings appear in the Dhammapada verse (*gāthā*), “[Attā Hi Attano Nātho](#)” that I am posting concurrently.
5. We can take more examples to illustrate the application of “*atta*” with those two very different meanings.
- In “*atta kilamatānu yoga*” *atta* is used in the conventional sense, to describe “procedures that cause suffering in a person.”
 - The word *sutta* comes from “*su*” and “*atta*”: a *sutta* can make someone moral and ethical. So, here also *atta* is used in the conventional sense.
 - The phrase “*anattan asārakattena*” means “(anything in this world) is *anatta* because it is devoid of any good or any usefulness.” Something is *atta* only if it is the ultimate truth or has timeless value. Here, of course, the deeper meaning is used. [*asāraka* : (adj.) [*a* + *sāraka*] unessential, worthless, sapless, rotten.]
6. *Paramattha* comes from “*paramā*” + “*attha*,” where “*paramā*” means “at the highest level” and “*attha*” means “the truth that is timeless”, the deeper meaning.
- This word has been translated to Sinhala as “*artha*” to indicate “meaning” in Sinhala. So, the Pāli word *paramattha* has been translated to Sinhala as “*paramārtha*” or “ultimate meaning.”
 - Therefore, the four types of *ñāṇa* (pronounced “gnāna”) involved in the *Paṭisambhidā Ñāṇa* are, “*attha*, *dhamma*, *nirutti*, *patibhāna*.” These days, they appear in Sinhala as, “*artha*, *dharma*, *nirukthi*, *patibhāna*.”
 - I will write a separate post to discuss those four terms in the *Paṭisambhidā Ñāṇa*. A person qualified to explain Buddha Dhamma to others is supposed to have the *Paṭisambhidā Ñāṇa*. Otherwise, one could mislead others by providing incorrect explanations. Of course, no one but a Buddha can provide entirely error-free answers. It does not make much sense to learn Dhamma from someone who is not at least a *Sotāpanna* (i.e., an *Ariya*).
7. Of course the most problematic misuse of “*atta*” as “a person” or “a self” is in *Tilakkhaṇa*, the Three Characteristics of Nature. There, *anatta* is commonly translated just as “no-self.” One correct expression is “no-unchanging self”.
- We need to realize that “*atta*” is always “truth” and “*attā*” could be “person” in the conventional sense. So, the opposite of “*atta*” is ALWAYS “*anatta*” (pronounced “*anatttha*”), which is NEVER pronounced “*anattā*,” i.e., “*anaththa*.”
 - That — together with translating *anicca* as “impermanence” — had kept *Nibbāna* hidden for a thousand years: see, “[Anicca, Dukkha, Anatta](#).”
8. That is why a dictionary can’t provide fixed meaning for the word “*atta*,” as well as for *anatta*, *nicca*, *anicca*, and many other words.
- Many words are supposed to have both conventional and deeper meanings. Only someone who has the *paṭisambhidā ñāṇa* can correctly explain the meaning of a verse in the *Tipiṭaka* regardless of where the word appears.
 - Therefore, in most current English literature on Buddha Dhamma, some explanations are correct, but many are not. That is because of the tendency to use a fixed meaning for a keywords without paying attention to *contex*.
9. Another such key word is “*paṭi*,” which is pronounced also as “*pati*”, not as “*pathi*”. I have received emails saying that Pāli dictionaries say “*paṭi*” means “against”.
- *Paṭi* is also a Sinhala word that is being used to this day. It means “bonds” or “ties,” just as in Pāli.

- If “*paṭi*” means “against,” how would that be compatible with many other words with “*paṭi*”? For example, “*paṭisamvedī*” or “*paṭisanvedī*” (“*paṭi* + “*san*” + “*vedī*”) means *vedanā* due to bonds with “*san*” becoming apparent. *Paṭinissagga* means “getting rid of bonds”. *Paṭiniddesa* means “detailed instructions on sorting out knotty or difficult points,” etc. The latter is explained in detail at “[Sutta – Introduction](#).”

10. One could get a better idea of a keyword by looking at its application in various situations. The word *paṭisambhidā* in *paṭisambhidā ñāṇa* is a good example.

- *Paṭisambhidā* comes from *paṭi* + *san* + *bidhā*. “*San*” is, of course, a keyword; see, “[What is “San”? Meaning of Sansāra \(or Samsāra\)](#),” and *bidhā* means to separate or to break apart; “*bindeema*” is the Sinhala word.
- So, *paṭisambhidā ñāṇa* is the knowledge to be able to sort out the meaning of a word by breaking it down to locate “*san*,” i.e., connection to defilement.
- And that interpretation must be consistent with “*attha, dhamma, nirutti, paṭibhāna*” as will discuss in a future post. By the way, *paṭibhāna* means the ability to describe in detail with examples. *Nirutti* means finding the origins of keywords, i.e., how compound words are put together using critical words like *paṭi* and *atta* or *attha*.

11. Other examples come in the *gathā* to pay tribute to the *Saṅgha*: “*supaṭipanno bhagavatho savaka sangho, Ujupaṭipanno...*”

- Here the “bonding” is to “good things.” *Supaṭipanno* means “bound to moral things,” *Ujupaṭipanno* means “bound to be straightforward,” *Ñāyapaṭipanno* means “bound with wisdom,” and *Sāmīchipaṭipanno* means “good to associate with.”
- Another is “*paṭisandhi*,” which comes from “*paṭi*” + “*sandhi*,” where *sandhi* (which is also a Sinhala word) means “to join.” At the *cuti-paṭisandhi* moment, one’s mental body (*gandhabba*) dies (*cuti*, pronounced “chuthi”) and one grasps a new existence. So, this joining of two adjacent lives is called *paṭisandhi*.
- Note that *cuti* pronounced as “chuthi.” See, “[“Tipitaka English” Convention Adopted by Early European Scholars – Part 1](#)” and “[“Tipitaka English” Convention Adopted by Early European Scholars – Part 2](#).”
- Of course, the most important is “*paṭi*” in *Paṭicca Samuppāda*; see, “[Paṭicca Samuppāda – “Paṭi+ichcha”+“Sama+uppāda](#).”

12. Here is a table showing the conventional and deeper meanings of some key Pāli words. Some meanings given in dictionaries are wrong, and they are in bold. Whether to use the correct conventional meaning or the deeper meaning depends on the context (where the word is used); a good example is, “[Attā Hi Attano Nātho](#).”

| | Conventional | Deeper Meaning |
|---------|--------------------------------|--|
| Atta | Person, self | In control, has essence or ultimate truth |
| Anatta | no-self (incorrect) | helpless, no essence and devoid of value |
| Ānāpāna | in and out breathing | take in moral, discard immoral (in the mind) |
| Majjima | middle | majji + ma (avoid intoxication of mind) |
| Icca | like | like |
| Nicca | permanent (incorrect) | can be maintained to liking |
| Anicca | impermanent (incorrect) | cannot be maintained to liking |
| Pati | against (incorrect) | bind |

| | Conventional | Deeper Meaning |
|-------|-------------------------------------|----------------------------|
| Sammā | (i) good (ii) friend (incorrect) | san + mā; removal of "san" |

13. Also see, [“Why is it Necessary to Learn Key Pāli Words?”](#)

- Mostly the deeper meanings of Pāli words can be found at: [“Pāli Glossary – \(A-K\)”](#) and [“Pāli Glossary – \(L-Z\)”](#).
- Again, one must pay attention to make sure that the meaning found in a dictionary is compatible with the context.

16.3 **Nikāya in the Sutta Piṭaka**

January 7, 2016

1. The *Tipiṭaka* or the Pāli Canon of Buddha Dhamma (Buddhism) consists of three major sections or “baskets” called “*piṭaka*” (*Tipiṭaka* is three *piṭaka*). They are *Sutta piṭaka*, *Vinaya piṭaka*, and the *Abhidhamma piṭaka*.

- The *Sutta piṭaka* consists of five sections called “*nikāya*.” The Wikipedia is wrong to say that *nikāya* means “volume” in Pāli (and also what is meant by the five types of *nikāya*); see, [WebLink: Wiki: Nikāya](#)
- *Nikāya* comes from “*ni*” + “*kāya*” where *kāya* means our **volitions and actions** initiated via the six sense inputs, like in “*kāyānupassanā*” where one is mindful of how to respond to those sense inputs. Here, “*ni*” means to cease (*nikmeema* in Sinhala means to be freed) and thus *nikāya* means “path to *Nibbāna*”. At *Nibbāna*, one has stopped all *kāya*.

2. All *suttā* (note that plural of *sutta* is *suttā*) are in those **five *nikāyas* (*Dīgha*, *Majjhima*, *Samyutta*, *Aṅguttara*, and *Kuddaka*)**, based on the five types of people. All humans are in five general types based on their *sansāric* habits and capabilities. They are also called “*indriya* types”: *saddha*, *virīya*, *sati*, *samādhi*, *paññā*. (Note that “*indriya*” here is different from the sense types such as *cakkhu indriya*, etc., as discussed in #6 and #7 below).

- ***Dīgha Nikāya*** is mainly for those with predominant *saddha indriya* who need detailed explanations. These are long (*dīgha*, pronounced “*dheega*,” which means long in Pāli and Sinhala). For example, the *Mahā Satipaṭṭhāna Sutta* in the *Dīgha Nikāya* provides detailed instructions on how to be mindful and practice *ānāpāna*.
- *Suttā* in the ***Kuddaka Nikāya*** (“*ku*” + “*uddaka*” where “*ku*” is *keles* or defilements and “*udda*” means to remove) are short and concise. They provide brief instructions for those with high wisdom (*paññā indriya*).
- ***Majjhima Nikāya*** has “middle length” *suttā* that provide instructions at a level in between those in the *Dīgha Nikāya* and the *Kuddaka Nikāya*. It is more suitable for those with dominant *virīya indriya*. Note here that *Majjhima* means “middle,” but *Majjhimā* — as in *Majjhimā patipadā* — has a deeper meaning of “abstaining from getting intoxicated”; see, “[Majjhima Patipada – Way to Relinquish Attachments to this World.](#)”

3. The *suttā* in the ***Samyutta Nikāya*** are focused on explaining “*san*”, which is a critical word in the foundation of Buddha Dhamma; see, “[What is “San”? Meaning of Sansāra \(or Samsāra\).](#)”

- Here *Samyutta* comes from “*san*” + “*yutta*” where *yutta* (pronounced “*yuththa*”) means “consists of.” It natural to pronounce as “*Samyutta*” than “*sanyutta*.” This is true of many combined words with “*san*” (like *samsāra*, *Sammā* = “*san*” + “*mā*”).
- *Suttā* in the *Samyutta Nikāya* are said to be more suitable for those with dominant *sati indriya*.

4. *Suttā* in the ***Aṅguttara Nikāya*** are said to be more suitable for those with dominant *samādhi indriya*.

- *Aṅguttara* comes from “*anga*” + “*uttara*” where “*anga*” means parts or components and “*uttara*” means “predominant or principle.” Therefore, the *suttā* in the *Aṅguttara Nikāya* are focused on fundamental principles and are also relatively short. These *suttā* are more suitable for people who can quickly get to *samādhi*.
- These categories help explain why *Dīgha* and *Majjhima Nikāya* *suttā* are the ones that are mostly in use today. Most people today fall into the categories of those with the *saddha* and *virīya indriya* dominant.

5. It is also important to point out a different usage of the term “*nikāya*.” Among the *Theravāda* nations of Southeast Asia and Sri Lanka, bhikkhus (and the temples they reside in) belong to several different groups or *nikāya*.

- For example, in Sri Lanka different temples belong to three types of *nikāyas*: *Siam*, *Ramanya*, and *Amarapura*.
- They are all *Theravāda* and there is no real difference among them as far as the doctrine is concerned. When one visits a temple, it is not possible to say to which *nikāya* it belongs.

6. The word *indriya* comes in two contexts. “*Indriya*” means “dominant” in some contexts. Here, the six types of dominant sense faculties are *indriya*: *cakkhu*, *sota*, *jivhā*, *ghāṇa*, *kāya*, and *mano*.

- Modern science deals with only five physical senses of eyes, ears, tongue, nose, and body.
- Scientists believe that our brains randomly produces our thought. That will be proven to be incorrect in the future.
- *Mana indriya* — located in the brain — is the sixth and most important one according to Buddha Dhamma. It detects *dhammā* from the “*nāma loka*”; see, “[Our Two Worlds: Material and Immaterial](#)” and “[What are Dhamma? – A Deeper Analysis](#).”
- *Rūpa* are eleven types, but are split into two main categories (*oḷārika* or dense and *sukhuma* or fine). Those above the *suddhaṭṭhaka* level belong to the material world or “*bhauthika loka*.” Those below the *suddhaṭṭhaka* level (*dhammā*) belong to the mental world or “*nāma loka*.” The five physical senses detect those *rupa* above the *suddhaṭṭhaka* level. The *mana indriya* detects those below the *suddhaṭṭhaka* level (*dhammā*). see, “[Our Two Worlds: Material and Immaterial](#).”

7. The other use of *indriya* is with categorizing people by their dominant characteristics and capabilities (*gati*). For some people, it is easy to grasp Dhamma concepts. That is because they have cultivated the Path in their previous lives, and thus have higher wisdom (*paññā*).

- Some others have also cultivated the Path mainly via just following precepts, but have high confidence in Buddha Dhamma. They are said to have their *saddha indriya* dominant.
- Some have the *sati indriya* dominant; they can focus on a given concept better than others.
- We all are familiar with some people who have the *virīya indriya* dominant; they are the “never give up” type, who seem to have inexhaustible energy levels.
- Some others have meditated and possibly got into *jhānā* in previous lives and have the *samādhi indriya* dominant.

8. Finally, there is an excellent website that has the full and complete *Sutta Piṭaka* with all Pāli *suttā*: [WebLink: Sutta Central](#)

- That site also has the complete *Vinaya* and *Abhidhamma Piṭaka* as well (in Pāli).
- Sutta Central also has Sanskrit *sūtras*, which are, of course, *Mahāyāna*.
- The Chinese *Agama suttā* are also at this site (in Chinese). As I understand, they are very close to *Theravāda suttā*. Those translations to Chinese from *Theravāda* happened before the appearance of *Mahāyāna sūtras*. I would appreciate feedback from persons who are proficient in both Chinese and English, as to whether my understanding is correct.

Next, “[Sutta Learning Sequence for the Present Day](#)”,..

16.4 Mahā Satipaṭṭhāna Sutta

[“Satipaṭṭhāna Sutta – Structure”](#)

[“Satipaṭṭhāna – Introduction”](#)

[“Kayanupassana – Section on Postures \(Iriyapathapabba\)”](#)

[“Kayanupassana – The Section on Habits \(Sampajanapabba\)”](#)

[“Prerequisites for the Satipaṭṭhāna Bhāvanā”](#)

[“What is “Kaya” in Kayanupassana?”](#)

16.4.1 Satipaṭṭhāna Sutta – Structure

Revised September 1, 2016; October 29, 2017; February 16, 2020

Introduction

This post is the most important post on the *Mahā Satipaṭṭhāna Sutta*. It sets the foundation. This is where 99% of the people should get started. Please read this and then follow the posts in the [“Living Dhamma”](#) section, before trying to follow the rest of the *Satipaṭṭhāna Sutta*.

1. Several web pages provide Pāli version of the *sutta* and/or its English translation. I believe that they all are incorrect translations, and as I proceed I will explain why.

- Here is a website that provides Pāli and English translations of the *sutta* side-by-side: [WebLink: TIPITAKA: Mahāsatipaṭṭhāna Sutta \(Pāli-English\)](#)
- It is not the fault of those who took their time with good intentions to write those posts. That is how this *sutta* and others have been interpreted for more than a thousand years.
- I will not follow the *sutta* sequentially, but you will be able to follow the relevant sections. Eventually, I hope to cover most of the *sutta*.

Three Levels of Explanations

2. As I explained in [“Sutta – Introduction,”](#) there are three ways of presenting Dhamma: *uddesa*, *niddesa*, *patiniddesa*.

- Most *suttā* don't have the very brief summary or *uddesa*, but the *Mahā Satipaṭṭhāna Sutta* has it in the very beginning; see the above link in #1 which provides the complete *sutta* in Pāli and English.
- In the main body of the *sutta*, the concepts are **outlined**. Those key concepts are supposed to be described in detail, with examples, in verbal discourse (i.e., a *desanā*.) That is what I will be doing in these series of posts, i.e., to describe the concepts in detail.

Uddesa Version – Brief Summary

3. The *uddesa* (or *uddeso*) starts with, “*Ekāyano ayaṃ, bhikkhave, maggo sattānaṃ visuddhiyā, sokaparidevanaṃ samatikkamāya, dukkhadomanassanaṃ atthangamāya, nāyassa adhigamāya, nibbānassa sacchikiriyāya, yadidaṃ cattāro satipaṭṭhānā*”

- **Translation:** “This is **one guaranteed way**, monks, for the purification of beings, for the overcoming of sorrow and lamentation, for the extinguishing of suffering and grief, the Noble way for gaining wisdom, for the realization of *nibbāna*. That is to say, the fourfold establishing of **moral mindset**”.

Two Key Points

The main difference from the translation (conventional interpretation) given in the link in #1 above are the two phrases as highlighted above:

- It is not the only way to *Nibbāna*. Many had attained *Nibbāna* before the Buddha delivered this discourse. But it is a systematic, **guaranteed way**, of attaining *Nibbāna* at any level from “just cooling down” to the *Arahant* stage.
- The translation of “*nāyassa adhigamāya*” and “*satipathāna*”: “*Nāya*” (Sanskrit “*nyāya*”) means “underlying principle.” It is grasped with “*nāna*” or wisdom, and “*adhigama*” is “*adhi*+”*gama*” or “higher way”. **Translating *Satipaṭṭhāna* as “moral mindset”** is not too bad, but I will discuss “*satipaṭṭhāna*” in the next post.
- So, the essence of that verse is that the method described in the *Satipaṭṭhāna sutta* provides a guaranteed way to attain *Nibbāna*, **via purification of the being, i.e., via cleansing one’s mind.**

“Four Stations” of Mindfulness

4. The next phrase is, “*Katame cattāro? Idha, bhikkhave, bhikkhu kāye kāyānupassī viharati ātāpī sampajāno, satimā vineyya loke abhijjhā domanassaṃ. Vedanāsu vedanānupassī viharati ātāpī sampajāno, satimā vineyya loke abhijjhā domanassaṃ. Citte cittānupassī viharati ātāpī sampajāno, satimā vineyya loke abhijjhā domanassaṃ. Dhammesu dhammānupassī viharati ātāpī sampajāno, satimā vineyya loke abhijjhā domanassaṃ*”

- Of course, “*Katame cattāro?*” is, “Which four? (*cattāro* pronounced, “chaththaro”). Pāli words are NOT spelled according to “Standard English.” See, “[“Tipitaka English” Convention Adopted by Early European Scholars – Part 1](#)” and “[“Tipitaka English” Convention Adopted by Early European Scholars – Part 2.](#)”
- And then it lists the four: *kāyānupassana*, *vedanānupassana*, *cittānupassana*, and *dhammānupassana*. Notice that the phrase, “*ātāpī sampajāno, satimā vineyya loke abhijjhā domanassaṃ*” appears after each of the four.
- This indicates the critical importance of this phrase. This is the beginning of the purification process, by laying out the foundation; see, “[“Satipaṭṭhāna Sutta – Relevance to Suffering in This Life.”](#) **One HAS TO go through this process to reach the *Sotāpanna* stage.**

A Key Phrase Relevant to All Four

5. We will discuss “*kāye kāyānupassī viharati*” etc in subsequent posts, but let us look at that all-important common phrase, “*ātāpī sampajāno, satimā vineyya loke abhijjhā domanassaṃ,*” that is common to all four “stations of mindfulness.” This needs to be evaluated in two parts: “*ātāpī sampajāno*” AND “*satimā vineyya loke abhijjhā domanassaṃ*”.

- “*Tāpa*” (pronounced “*thāpa*”) means heat; when we get really stressful we feel a “fire” in the heart. When it gets really bad, people say, “I could feel my heartburn” when a piece of especially poignant news comes through.
- And “*ātāpī*” is to remove that “fire” from the heart and the stress from the mind and calm the mind. This is the “cooling down”, “*niveema*,” “*nivana*” or early stages of *Nibbāna*.
- When one cultivates *Satipaṭṭhāna*, one would not feel that “burning up” even upon hearing the tragic news. One will be able to “handle things” appropriately without taking drastic actions on the “spur-of-the-moment”.
- *Sampajana* comes from “*san*” + “*pajana*” or sorting out “*san*” the things that make a mind stressful; see, “[“What is “San”?](#)” The worst forms of “*san*” are the ones that we instinctively know to be immoral. They include killing, stealing, sexual misconduct, lying, and getting intoxicated. [*pajānanā* : [f.] knowledge; understanding; discernment.]

- *Sampajana* is closely related to “*sampādetā*” as in the Buddha’s last words: “..*appamadena sampadeta*” or “..make haste and sort out *san*.” Here *sampadeta* is “*san*+”*padeta*” or again sort out “*san*”.
- When one has done “*sampādetā*” one becomes “*sampajanno*”: One knows what is right and what is wrong automatically; it has become a habit.
- This critical verse is discussed in the following *desanā* from the post, “[WebLink: Audio Desana: Episode 3 - Satipatthāna Sutta - Relevance to Suffering in This Life](#)” section (you may need to control the volume at your computer):
[Episode 3 – Maha Satipatthāna Sutta – Relevance to Suffering in This Life](#)

Ātāpī Sampajāno

6. Therefore, “*ātāpī sampajāno*” means “remove the fire or heat from one’s mind by being aware of the ‘*san*’ or immoral tendencies”. They also go by the names “*kilesa*” and “*asobhana cetasika*”; see, “[What Are Kilesa \(Mental Impurities\)? – Connection to Cetasika.](#)”

- When one starts making progress, one could start to avoid tendencies for extreme sense pleasures as well.

Satimā Vineyya Loke Abhijjhā Domanassaṃ

7. Then we have, “*satima vineyya loke abhijjhā domanassaṃ.*” This is a highly condensed statement about the nature of this world. It needs to be analyzed as “*sati mā vineyya loke abhijjhā domanassaṃ,*” i.e., *satima* is really two words: *sati* and *mā*.

- The root cause of all suffering is extreme greed or “*abhijjā [abhijjhā]*” (which comes from “*abhi*” + “*icchā*” or strong craving or attachment). When one does not get what one desires, one gets depressed. That is *domanassa*. It is important to see that one acts with hate with a *domanassa* mindset because one is upset, deflated, and angry.
- “*Vineyya loke*” refers to this world where we are “bound to each other” via debt to each other. See, “[Kamma, Debt, and Meditation.](#)”
- And “*satima*” comes from “*sati*” + “*mā*” where “*mā*” means removal, but not the removal of *sati*. It combines “*sati*” with the rest of the phrase, “*vineyya loke abhijjhā domanassaṃ*”.
- Thus “*sati ma vineyya loke abhijjhā domanassaṃ*” means establishing moral mindset and moral conduct in order to be free from the debt-ridden world and to be relieved from *abhijjā [abhijjhā]* and *domanassa*. This is the key to “cooling down”; see, “[Living Dhamma](#)” for details.

A Key Idea Behind the *Sutta*

8. Thus the verse, “*ātāpī sampajāno, satimā vineyya loke abhijjhā domanassaṃ,*” means “get rid of the fire or heat in the mind by being aware of *kilesa* or defilements and by removing extreme greed (*abhijjā [abhijjhā]*) that leads to a depressed mind (*domanassa*) through discipline (*vineyya*)”.

- In the first stage, one needs to focus on abstaining from immoral activities or *dasa akusala*.
- As one makes progress, one can start also on abstaining from extreme sense pleasures that may not hurt others. By that time, it will start becoming clear HOW and WHY extreme sense pleasures also lead to “fire or heat in the mind”.
- Therefore, the phrase, “*ātāpī sampajāno, satimā vineyya loke abhijjhā domanassaṃ*” is the key to both *Satipatthāna* and *ānāpāna bhāvanā*.
- The rest of the *Satipatthāna sutta* is on the details on how to go about achieving these goals.

The “Cooling Down”

9. This “cooling down” happens in four ways. They are *kāyānupassanā*, *vedanānupassanā*, *cittānupassanā*, and *dhammānupassanā*.

- These are somewhat sequential, in the sense that one needs to start with taking care of major sources of *abhijjā* [*abhijjhā*] and *domanassa* with *kāyānupassana*. This is basically the same as *sīla* or moral conduct. One needs to be aware that one’s actions and speech need to be moral, i.e., to abstain from *dasa akusala* as much as possible.
- Once one achieves that to a certain extent, moral conduct will follow. One will “feel” when one is about to do something wrong. That means one will become “sensitized.” But initially, it takes an effort to pause and think of the consequences.
- With the mind clear of the worst hindrances, then it will be easier to learn Dhamma with *dhammānupassanā*, be easier not to REACT to feelings (*vedanānupassanā*) but to take time and evaluate consequences, and to automatically be aware of immoral thoughts that come to the mind (*cittānupassanā*).
- Thus it is a gradual process. Each advance helps with gaining confidence in one’s actions, helps not to just react to feelings, helps to think with a clear head, which in turn helps with the understanding process.

Comprehension of *Tilakkhaṇa* Will Accelerate Progress

10. The process of comprehension of *Tilakkhaṇa* (*anicca*, *dukkha*, *anatta*) starts with *kāyānupassanā* but all four can be cultivated simultaneously. The Buddha stated that if one makes an all-out effort, *Arahanthood* can be attained in seven days. If one makes a less commitment, either *Arahant* or at least the *Anāgāmī* stage attained within seven years according to the Buddha.

- Getting started on this process is described in detail in the section, “[Living Dhamma](#).”
- Another deeper approach is discussed at, “[Origin of Life](#).”

Further Analyses

11. The phrase “*ātāpī sampajāno, satimā vineyya loke abhijjhā domanassam*” has been analyzed by dividing into four components connected to *virīya indriya*, *paññā indriya*, *sati indriya*, and *samādhi indriya* in the [WebLink: suttacentral: Lakkhanahāravibhaṅga](#) of the *Nettiprakarana* (or p. 50 of the *Nettiprakana* (Sri Lanka Buddha Jayanthi edition):

“..*Tasmātiha tvaṃ bhikkhu kāye kāyānupassī viharāhi ātāpī sampajāno satimā vineyya loke abhijjhādomanassam*”. “*Ātāpī*”*ti viriyindriyaṃ*, “*sampajāno*”*ti paññindriyaṃ*, “*satimā*”*ti satindriyaṃ*, “*vineyya loke abhijjhādomanassam*”*ti samādhindriyaṃ*, *evaṃ kāye kāyānupassino viharato cattāro satipaṭṭhānā bhāvanāpāripūriṃ gacchanti..*”

- Here “*ātāpī*” is *virīya indriya*, *sampajāno* is *paññā indriya*, *satimā* is *sati indriya*, and “*vineyya loke abhijjhādomanassam*” is *samādhi indriya*.
- One sorts out “*san*” with *paññā*, keep mindfulness with *sati*, and make an effort (*virīya*) to stay away from “*bad san*” or *dasa akusala*, thus getting the mind to be free of *abhijjhā* and *domanassa* and thus get to *samādhi*. And that should be done whenever possible, not only in formal meditation. Then one will be in *samādhi* all the time.

Connection to *Dasa Akusala*

12. Finally, *kāyānupassanā* basically tackles *dasa akusala* done with actions and speech (moving body parts), as we will see in the next section. The harder part comes with those done directly by the mind, especially *micchā diṭṭhi* or wrong views.

- There are two levels of *micchā diṭṭhi*: First, the 10 types of *micchā diṭṭhi* removed via the mundane Path. Removal of the deeper wrong views comes with the grasping of *anicca, dukkha, anatta*.
- Thus we can see the critical role of the *paññā indriya* (wisdom). One can start on all four types of *anupassanā*. However, when one becomes good in *kāyānupassanā*, the other three types of *anupassanā* cultivate to some extent too.
- **The key is to get started with *kāyānupassanā*** and make the effort (*virīya*). Then wisdom (*paññā*) will grow together with mindfulness (*sati*), and one will automatically get into other three *anupassanā* with increasing levels of *samādhi*.

Next, "[Satipatthāna – Introduction](#)",

16.4.2 Satipaṭṭhāna – Introduction

1. First we need to figure out what "*sati*" means. Bear with me as I use some key Pāli words, because it is important to understand them correctly. Things will become clear as we proceed below. Again, first try to read the post through without clicking on links, and then come back and read any relevant other posts as needed.

- *Sati* is a "good" mental factor (*sobhana cetasika*). Therefore, "*sati*" arises only in moral thoughts (*kusala citta*), and DOES NOT arise in *akusala citta*. As discussed in "[Cetasika \(Mental Factors\)](#)", "good *cetasika*" do not arise in *akusala citta* (similarly, "bad *cetasika*" do not arise in *kusala citta*).
- This is important to realize at the outset. Many people think "*sati*" is "attention" or "mindfulness". But a suicide bomber has to be mindful in wiring up the bomb, or a professional thief making plans for a grand robbery in minute detail needs to pay total attention to it; "*sati*" is NOT involved in either case. The *cetasika* involved there, are the two "neutral" *cetasika* (which can appear in both *kusala* and *akusala citta*) of *vitakka* (focused application) and *vicāra* (sustained application); see, "[Cetasika \(Mental Factors\)](#)".
- There are others who believe "*sati*" is the ability to remember or recall past events, but it is the "*manasikara*" *cetasika* that does that.

When a person stops and contemplates whether an action one is about to take has moral or immoral consequences, and carries out only those actions that have moral consequences, then that person is acting with "*sati*".

2. *Paṭṭhāna* can mean establishment, prepare, or "to mold". Therefore, "*satipaṭṭhāna*" means establishment of "*sati*", or train the mind to act with "*sati*" as described in the previous paragraph.

- This training process comes in four steps, and that is why it is also called "*satara satipaṭṭhāna*" where '*satara*' means four. Even though the four steps are interrelated, there is a sequence. The four steps are *kāyānupassanā*, *vedanānupassanā*, *cittānupassanā*, and *dhammānupassanā*.
- The meaning of "*anupassanā*" is described in point #4 of "[4. What do all these Different Meditation Techniques Mean?](#)" in the Meditation section.

3. Buddha Dhamma is all about cleansing the mind; that is the key to real and lasting tranquility of the mind. A defiled mind generates defiled thoughts (*citta*). Defiled thoughts lead to defiled speech (with a time lag) and defiled actions (with even longer time lag).

- **The sequence of cleansing the mind is backwards:** First control bodily actions, then (or simultaneously) to control speech, and controlling thoughts (as they arise) is harder. This is important to understand, so let us look into the reasons.

4. As discussed in the *Abhidhamma* section, thoughts (*citta*) arise very fast; there are well over billions of *cittā* per second; but of course we “experience” only “bundles of *citta*” accumulating for at least about 0.05 seconds. **Even then it is not possible to control thoughts by sheer will power.**

- But our thoughts are dictated by our character and habits (“*gati*”). And, these character qualities (*gati*) can be changed with concerted effort by controlling one’s speech and actions. We have discussed “*gati*” in many posts spread over different sections.

5. This is why *kāyānupassanā* comes first in *Satipaṭṭhāna*. We first discipline ourselves by making sure we speak only moral words, and do only moral actions. Both speech and actions arise from thoughts, but they come with a “time lag”. We first think that “this person has done something bad to me”, and then we start saying something bad to the person. But there is enough of a “time lag” to stop saying it.

- We tend to take “bodily actions” with even longer delay than for speech. So, unless one is in a rage, there is enough time to catch oneself and stop any bad actions. Actually, when we get good at it, and control both speech and actions, such instances of acting with rage will diminish with time, and will go away. This is because the more we act with “*sati*”, the more that we give up bad “*gati*” and cultivate good “*gati*”.

6. Thus *Kāyānupassanā* basically means “catching ourselves before we say or do something wrong”.

- To put it in another way, what we need to accomplish with *kāyānupassanā* is to be aware of our speech and actions AT ALL TIMES. By now it must be clear why *satipaṭṭhāna* cannot be restricted to a “formal sitting down meditation session”.
- We say or do things in response to what we see, hear, smell, taste, touch, or think. The speech or actions have time delays from the time we get the “input” from outside or even if generated by the mind itself. Even if we start saying something bad, we can catch ourselves and stop (and apologize if we hurt someone’s feelings). Even if get up to hit someone, we can realize the bad consequences of such an action and immediately stop. That is how one starts.

7. With practice, one’s *gati* will change, and such awkward instances will occur less and less. There are many posts on “*gati*” at the site, and there are some in the meditation section under, “[9. Key to Ānāpānasati – How to Change Habits and Character \(Gati\)](#)”. *Satipaṭṭhāna* is basically a methodical way of doing *Ānāpānasati*. A scientific view is discussed in, “[How Habits are Formed and Broken – A Scientific View](#)”.

8. Therefore, it is easy to see that *kāyānupassanā* is the first and most important part of the *satara satipaṭṭhāna*.

- When *kāyānupassanā* is practised, one’s “*gati*” will gradually change and one will start to calm down. And one will not REACT to feelings on an impulsive basis, and thus it will be easier to practice the next stage of “*vedanānupassanā*”, i.e., “think about how to respond when certain feelings arise”.
- When both those are practised, “*gati*” will change to an extent that even initial thoughts will have “less venom”, and thus it will be easier to practice “*cittānupassanā*” or “think morally” automatically.
- Finally, it will be easier to get into *samādhi* and to contemplate *anicca*, *dukkha*, *anatta* (or any other *Dhamma* concept), which is “*dhammānupassanā*”.

9. Thus one starts with *kāyānupassanā* first and then move on to other three “*anupassanā*”. When one completes all four one completes the process and will have “*sammā sati*” in full, which leads to “*sammā samādhi*” in full, i.e., *Arahanthood*.

- Of course, that is normally accomplished in four stages, the first of which is the *Sotāpanna* stage.
- Just like it is not possible to attend middle school without attending the primary school, or to take college courses without passing high school, one needs to go through the four steps methodically. One needs to control one’s actions and speech first. That is what “*kāyānupassanā*” is about. We will discuss that in detail in the next post.

- This does not mean that one should not do the other three while doing *kāyānupassanā*; it just means there is “not much benefit” in doing the other three unless one is actively engaged in stopping the “BIG EIGHT” done with speech and body; see, “[2. The Basics in Meditation.](#)”
- And one does not stop doing *kāyānupassanā*, ever. It is not something to be done forcefully, it will become a habit. When one sees the benefits, one would want to advance. One just keeps incorporating other three gradually and soon enough will be doing all four. But *kāyānupassanā* is the FOUNDATION.

Next, “[Kayanupassana – The Section on Postures \(Iriyapathapabba\)](#)”,

16.4.3 Kāyānupassanā – Section on Postures (Iriyāpathapabba)

1. Let us first clarify what *kāyānupassanā* means. There are two interchangeably used meanings for “*kāya*”: one is the body, the other is whatever is involved in “*kriya*” or “actions”. In *kāyānupassanā* the latter is more general. This section on postures is based on body postures, but is still concerned with all “actions” done via all six senses. This will become clear as we proceed below.

- It is normally written as “*kāyānupassanā*”, and is ALWAYS pronounced as “*kāyamupassana*”.
- In interacting with the world, we see visuals (*rūpa*) with eyes, hear sounds with ears, smell odors with nose, taste with the tongue, touch (*pottabba*) with body, and think about concepts (*dhamma*) with the mind.
- Thus there are six internal “*kāya*”, and six external “*kāya*” involved in experiencing the world. Thus we are concerned with both the internal sense faculties (*ajjhatta*, pronounced “*ajjhaththa*”) and the six external entities (*bahiddha*), while we are in any of the four main postures of sitting, standing, walking, or lying down.

2. When one starts on the Path, one does not need to believe in anything that the Buddha (or anybody else) said about the true nature of the world. One can start with a simple goal of “getting some peace of mind” or “get some relief from the day-to-day stresses of this world”, i.e., get to the “*ātāpi*” stage.

- One can keep an open mind on whether there is rebirth or not, whether the concept of *kamma* is correct or not (of course one should not rule out those either; that would be “*niyata micchā ditthi*” and one WILL NOT be able to make any progress); see, “[How do we Decide which View is Wrong View \(Ditthi\)?](#).”

3. The Buddha said that the mind is burdened by greed, hate, and ignorance. It is not easy to see “the truth” (i.e., to remove ignorance) because the mind is normally “covered” by strong versions of greed and hate called “*kāmachanda*” (one becomes blind by greed) and “*vyāpāda*” (one keeps going downward with intense hate); **you can do keyword searches to find related posts.**

- And these two, *kāmachanda* and *vyāpāda* are the main culprits for making a mind stressful, and for causing “inside fires”. Thus by forcibly removing any thoughts of extreme greed and hate as they come to the mind, one can get relief in real time. One does not have to wait for “effects of *kamma* to materialize”. Such benefits will be there too, but one WILL be able to experience more immediate benefits.
- This is the beginning of “cooling down” or experiencing *nirāmisā sukha*, as explained in the post, “[Three Kinds of Happiness](#)”.

4. As explained in the previous post, “[Satipatthāna – Introduction](#)”, we start by disciplining our actions through speech and bodily actions, because they have a “time lag” and there is enough time to stop them willfully.

- We can start with the conventional five precepts. Without that basic discipline, one CANNOT get any kind of long-lasting peace of mind, no matter how much time one spends in meditation.

- If one is engaged in any of these five (intentional killing of living beings, stealing, sexual misconduct, lying, and using alcohol excessively or using drugs), and can abstain from them one should be able to experience the benefits of that in the near term.

5. After that one can tackle the BIG EIGHT (killing, stealing, sexual misconduct, lying, gossiping, slandering, harsh speech, and getting “drunk” with not only drugs or alcohol, but also with wealth, fame, power, etc); see, “[2. The Basics in Meditation](#)”.

6. The *kāyānupassanā* of the *satipaṭṭhāna* consists of six sections or “*pabba*“:

Anapānāpabba (section on “*ānāpāna*“),

Iriyāpathapabba (section on postures),

Sampajānapabba (section on habits),

Patikulamanasikārapabba (section on contemplation of body parts),

Dhatumanasikāra (section on contemplation of elements), and

Navasivathikapabba (section on contemplation of the decay of a body).

- We have already discussed *ānāpāna* in several posts, starting with “[7. What is Ānāpāna?](#).”

7. The “*Iriyāpathapabba*” section of the *Kāyānupassanā* in the *Satipaṭṭhāna sutta* is all about how to abstain from committing an immoral act AT ANY TIME.

- We have four postures or “*iriya*”: sitting, standing, walking, and in the sleeping position (laying flat).
- In any posture, we need to be vigilant on what we are about to do or speak. This is the beginning of “*satipaṭṭhāna*”, being “morally mindful” at all times.
- When a thought comes to mind to say something or to do something (whether sitting, standing, walking, or lying down), we need to get into the habit of contemplating their consequences.

8. For example, we may be walking on the street and see someone, whom we do not like, coming our way. If we get the tendency to say something bad, we have enough time to contemplate the bad consequences and stop saying those words.

- We may be lying in bed and getting bored, and may decide to go and see a friend to do some “gossiping” for fun. We have time to think about it and see whether we can use that time more productively.
- Sometimes we get “nasty e-mails”; someone pointing out an allegedly bad deed that we have done. We get that immediate “*tāpa*” or “heating up” in our heart because we get so perturbed by that false accusation. We tend to fire up an equally nasty e-mail back to that person. But we need to take time and contemplate a better action. Give that person the benefit of the doubt; may be he/she did not do it to aggravate us, or truly was misled. Of course, there are people who do such things purposely to aggravate, but even then it is better to ignore it, rather than letting it develop into a worse situation. Learning to keep away from such troublemakers is a habit that we learn to develop. By responding in kind, it will not help quenching the “fires”.

9. We need to constantly ask ourselves “why am I going to do this? Why am I going to say this?”. **If the outcome of that action could hurt us or someone else, we need to think about a different way, or totally abandon it.**

- It is sad to see that many people waste their time “walking mindfully” one step at a time, just concentrating on taking each step, or “lifting their arm mindfully” This is the ‘*iriya*’ that is being practiced in most places. How can that procedure lead to a long-lasting peace of mind? Of course, just like doing breath meditation, it can make a person calm for the time being; that is the ONLY benefit.
- And it is not enough to do this in a formal session. This needs to become a habit (a keyword search can be done to find more on habits; developing habits is the key to change those all important “*gati*”). Buddha Dhamma is all about purifying the mind.

10. If one can do this for a week or so, one should be able to see a change in oneself; a sense of tranquility, a “peace of mind”. Of course some of you may be there already. We will discuss how to take the next step in the next post.

- When one is at this stage, it will be easier to get into *samādhi*, even if one is just doing the “breath meditation”. A moral mind is easy to be calmed. Many people do horrible acts on the spur-of-the-moment because they do not have this mindset or habit. Also see, “[Possible Outcomes of Meditation – Samādhi, Jhāna, Magga Phala.](#)”

Next, “[Kāyānupassanā – The Section on Habits \(Sampajānapabba\)](#)”,

16.4.4 Kāyānupassanā – The Section on Habits (Sampajānapabba)

Revised February 8, 2019

This is really an extension of the section on postures (*Iriyāpathapabba*) discussed in the previous post (“[Kāyānupassanā – Section on Postures \(Iriyāpathapabba\)](#)”, going into finer postures and activities. The key point is ultimately to become “sensitized” to each and every action that we take thus leading to the formation of “good habits”, i.e., to become a “*sampajānno*”.

1. One cannot start on this section until one has acquired discipline with the “bigger activities”. For example, if one is killing animals for fun, then there is no point in worrying about kicking a dog.

- As one gets some practice with abstaining from major offenses, one will become “sensitized”, i.e., one will start seeing minor offenses that one is about to make.

2. The relevant paragraph on the *Sampajānapabba* in the [WebLink: suttacentral: Mahā Satipatthāna Sutta \(DN 22\)](#) reads::

“Puna ca param, bhikkhave, bhikkhu abhikkante patikkante sampajānakāri hoti, ālokite vilokite sampajānakāri hoti, saminjite pasārite sampajānakāri hoti, sanghātippattacivaradhārane sampajānakāri hoti, asite pite khāyite sāyite sampajānakāri hoti, uccārapassāvakamme sampajānakāri hoti, gate thite nisinne sutte jāgarite bhāsīte tunhibhāve sampajānakāri hoti”.

Here is the **mundane translation** (“[WebLink: tipitaka.org: The Great Discourse on the Establishing of Awareness](#)”), which is word by word:

- “Again, monks, a monk, while going forward or backward, he does so with constant thorough understanding of impermanence; whether he is looking straight ahead or looking sideways, he does so with constant thorough understanding of impermanence; while he is bending or stretching, he does so with constant thorough understanding of impermanence; whether wearing his robes or carrying his bowl, he does so with constant thorough understanding of impermanence; whether he is eating, drinking, chewing or savoring, he does so with constant thorough understanding of impermanence; while attending to the calls of nature, he does so with constant thorough **understanding of impermanence**; whether he is walking, standing, sitting, sleeping or waking, speaking or in silence, he does so with constant thorough understanding of impermanence”.

3. Thus many possible “finer posture and actions” can be seen in the above direct translation, which are correct. The point is to be “morally mindful” in each and every such action, and not just to do those acts like a robot just in a formal setting as most people do.

- I am not sure where “impermanence” came from, apparently as the translation of the word, “*sampajānkāri*”. But as was explained in the post, “[Satipatthāna Sutta – Structure](#)”, *sampajāno* means knowing right from wrong (“*san*”) via enhanced wisdom.
- Thus *sampajānkāri* means doing something the right way, and *sampajānkāri hoti* means developing a habit to do that.

4. When one goes into finer details on “being morally mindful” of one’s actions, one is not just concerned with killing, stealing, etc. One is also concerned about general welfare, that one should act with civility and be courteous to others: one should be wearing proper clothes appropriate for the occasion, when eating one should not be making inappropriate noises, while walking in a crowded street one should be mindful of the others and not throw one’s refuse on the roadside, etc.

- As I pointed out in the post, “[Sutta – Introduction](#)”, a *sutta* gives instructions in the “*niddesa*” or as a brief description. It needs to be EXPLAINED rather than doing a direct translation. Any *sutta* was originally delivered over a number of hours, and then summarized in a special way to make it brief and suitable for oral transmission.

5. A case in point is the direct translation of “*..uccārapassāvakamme sampajānakārī hotī*”, as “while attending to the calls of nature (going to the bathroom), he does so with constant thorough understanding of impermanence!” (from the conventional translation in #2 above).

- What is meant there is to act with decency and not to relieve oneself in an inappropriate place. In all those cases, *sampajānakārī hoti* means acting with diligence and prudence.

6. There are many other aspects too. For example, if one is about to take a nap in the middle of the day, one should be asking oneself why one needs to take nap. Unless one had engaged in some strenuous activity and really needs to get some rest, it is not a good habit to take unnecessary naps. Then it could become a habit, a bad one.

- We should also develop good habits. While walking on the street, it is good to help out those who need help, and to be courteous to others. A small thing like not spitting in a public place or just dropping trash anywhere one pleases can cause discomfort (and health problems) for others.
- Of course with each minor act we should also make sure it does not pan out to immoral activities. A good example is drinking too much. Drinking alcohol is not an *akusala kamma* per se (and there is nothing wrong with taking a drink in a social setting), but there is danger in getting intoxicated.
- An intoxicated mind can be very dangerous; one could lose any sense of decency, and may get into situations that are immoral and offensive. Both drinking and smoking can be harmful to oneself and also to others.

7. As one develops good habits and gets rid of bad ones, **one becomes more and more “sensitized” and catch even minor mistakes. This is what is meant by “*patisamvedī*” (“*pati*” + “*san*” “*vedī*”), i.e., becoming aware of “getting attached to a wrong mindset”.**

- At the same time, one will start seeing a big improvement in one’s “inside fires”, but one also becomes less prone to be aggravated or offended, and one becomes more forgiving to others.
- There are many posts at the site on habits, and how they can lead to *sansāric* habits and *āsavas*; developing good habits and getting rid of bad habits is key to “cooling down” in the short term as well as in the long term.
- Parents, teachers, and friends play key roles in a child’s life, because a child’s mind can be influenced by others in a good or bad ways, and can lead to lifelong habits. If the foundation is set right, then it will be easier for one to become a “*sampajānno*”, one who is capable of “keeping fires under control”.

8. This is what was meant by being a “*sampajānno*”, and being able to “quench fires”, i.e., “*ātāpi sampajāno*”, which was a key phrase in the *uddesa* (brief description) of the *Satipatthāna sutta*; see, “[Satipatthāna Sutta – Structure](#).”

Next, “[Prerequisites for the Satipatthāna Bhāvanā](#)”,

16.4.5 Prerequisites for the Satipaṭṭhāna Bhāvanā

As you may have noticed, I am not going to follow the *sutta* in the formal order. I would like to present it in a way that is conducive to the present day. However, at the end it will become clear that everything in the *sutta* has been discussed.

1. From the previous two posts it is clear that this meditation is **not just to be practiced in a formal session**, even though formal sessions can and should be done. In particular, *Dhammānupassana* needs to be done in formal sessions, which we will discuss shortly. With that in mind let us look at how the *sutta* begins (after the *uddesa* or the “brief description” section, to which we will get back later):

“*Kathaṃ ca pana, bhikkhave, bhikkhu kāye kāyanupassi viharati?*”

- Here and many other other places, “*ca*” is pronounced “*cha*”.
- Here “*viharati*” means “to live”. Thus what it says is, “Bhikkhus, what is meant by living with *kayanupassana* of the body (*kaye kayanupassana*)?”.
- This should make it very clear that the *bhāvanā* is not just to be practised in a formal session; one has to “live it”.

2. Now let us look at the next phrase that describes how to prepare for the *bhāvanā*:

“*Idha, bhikkhave, bhikkhu araṇṇa gato vā rukkhamūla gato vā suñṇāgāra gato vā nisidati pallankaṃ ābhujitvā, ujum kāyaṃ pañidhāya, parimukhaṃ satim upaṭṭhapetvā*”.

- The conventional translation is something like, “Here a monk, having gone into the forest, or to the foot of a tree, or to an empty room, sits down cross-legged, keeps his body upright and fixes his awareness in the area around the mouth”.
- Of course, this is a good thing to do if one is going to do a formal session, except that one should focus the awareness not “around the mouth” but on the object of contemplation as we will discuss later.

3. I pointed out in the introduction how the *sutta* (like most other *suttā*) was apparently designed to convey the above “conventional” meaning while keeping the deeper meaning hidden; see, “[Sutta – Introduction](#)”. This is a good example of how this was accomplished. Let us describe the above sentence in detail. However, I may not be able to go into such details for the rest of the *sutta*, because it will take up too much space.

Continuing with the interpretation of the phrase in #2, “*gato va*” means “get in to” or in the deeper sense, “get into the mindset”.

- *Araṇṇa* is a forest (or forest monastery). But the hidden meaning comes from “*rana*” which means “battle” and thus “*araṇṇa*” means staying away from battles. Thus, “*araṇṇa gato vā*” means “get into a calm mindset leaving behind the everyday battles”. In the conventional interpretation is says, “having gone into the forest”.
- “*rukka*” is “tree” and “*mūla*” is the “root”; even though the top of a tree sways back and forth with the wind, the tree trunk close to the root is very stable. Thus “*rukkhamūla gato va*” means getting to a stable mindset. In the conventional interpretation is says, “having gone to the foot of a tree”.

4. Next, “*suñṇāgāra*” is an empty building or room. The deeper meaning is that the mind should be empty of greed, hate, and ignorance. One should dispel any such thoughts that comes to the mind.

- Now comes, “*nisidati pallankaṃ ābhujitvā*”, which is translated as, “sits down cross-legged”. The key word here is, “*anka*” or literally “number”; in Pāli or Sinhala, “reduce the number” or “*palla+anka*” means not giving importance. Thus “*nisidati pallankaṃ ābhujitvā*” means, “being modest” and getting rid of any sense of “superiority”.

- And, “*ujum kāyaṃ paṇidhāya*” is translated, “keeps his body upright”. In the deeper meaning, it is about being “straightforward” or forthright and honest.
- The post, “[Kāyānupassanā – Section on Postures \(Iriyāpathapabba\)](#),” describes how one needs to conduct *satipattāna* in all four postures (sitting, standing, walking, lying down), AND in numerous sub-postures; Therefore, the idea of “keeping the physical body upright” during *satipaṭṭhāna* is a falsehood.

5. Finally, “*parimukhaṃ satim upaṭṭhapetvā*” is the KEY to *Satipaṭṭhāna*: It is translated literally as “fixes his awareness in the area around the mouth”. What is actually meant is to keep the mind on the main object (called “*mukkha nimittā*”), i.e., “*Nibbāna*” or “cooling down”. “*Pari*” here means “complete” or “full”.

- Therefore, “*parimukhaṃ satim upaṭṭhapetvā*” means maintaining one’s focus on the main goal or *Nibbāna*.
- Thus what is described in that sentence is the required mindset for the meditator, whether he/she is going to be “meditating” in any one of the four postures described in the previous post, not just in a sitting down formal meditation session.

6. Thus the “preparation instructions” in that opening phrase can now be stated something like, “get into a calm and stable mindset that is devoid of greed, hate, and ignorance; keep a modest attitude without any sense of superiority; be forthright and honest, and keep the mind on the main object of cooling down”.

- Such a state of mind needs to be cultivated for all times. That is the key to cooling down on a long-term basis.
- Of course the conventional interpretation can also be used for sitting down, formal, sessions **without** “fixing awareness in the area around the mouth”. One ALWAYS focuses on cooling down, and becoming an “*ātāpi sampajanno*”; see, “[Satipaṭṭhāna Sutta – Structure](#),” and “[Kāyānupassanā – The Section on Habits \(Sampajānapabba\)](#).”
- Thus the idea is for one to become a “firefighter” (“*ātāpi sampajāno*”), who is always on the lookout not for actual fires, but for those mental events that CAN LEAD TO mental fires in the future. These are basically any immoral acts, speech, or thoughts.

7. There are five sections or “*pabba*” in the *kāyānupassanā*. The reason that I described the *Iriyāpathapabba* (“section on postures”) and the *Sampajānapabba* (“section on habits”) in the previous posts was to emphasize the point that this *bhāvanā* cannot be restricted to a formal session. One could say, “How can I be meditating the whole day?”. This question arises only because of the misconceptions we have on what meditation or “*bhāvanā*” is.

- The Buddha said, “*bhavanaya bahuleekathaya*”, or “*bhāvanā* is what one does all the time”. It is about getting into the habit of developing good habits and getting rid of bad habits. [*bahulīkata*: [pp. of bahulīkaroti] took up seriously; increased. (adj.), practised frequently.]
- One can just make it a “formal session” in order to get into deeper levels of *samādhi* or *jhānā*.

8. Buddha Dhamma is not a religion in the sense of providing “salvation” by following certain rules or procedures. The Buddha said the only way to achieve long-lasting happiness is to purify the mind. It starts with avoiding the worst immoral acts of killing, stealing, etc. When one sees the benefits of that one can go a step further and include gossiping, slandering, etc. and so on.

- The more one purifies one’s mind, the true nature of this world will become increasingly clear. One cannot read about it in one essay or even many essays. One has to put it into action. Even though it is good to read about *anicca*, *dukkha*, *anatta*, it is not possible to “get it” until one purifies one’s mind to a certain extent AND experiences the “cooling down” that results from a purified mind; this will be discussed in the *Dhammānupassana*.

9. *Satipaṭṭhāna sutta* describes a very methodical way of following the Path prescribed by the Buddha. **Initially, one does not even have to worry about whether rebirth is valid or whether there are 31**

realms of existence. One just focuses on realizing that there are “internal fires” (*ātāpi*) that we are not even aware of; see [“Satipatthāna Sutta – Structure.”](#)

- As one purifies the mind, one can clearly see and FEEL these fires and how they start. When one clears up the “big fires” one is able to see and feel smaller ones; one becomes more “sensitized”. And then one tackles those smaller fires. It is a gradual, step-by-step process. That is why it is called the Path. The higher one climbs on the Path, the more one can “see” and get rid of, and more happier one becomes.

Next, [“What is “Kāya” in Kāyānupassanā?”](#),

16.4.6 What is “Kāya” in Kāyānupassanā?

Revised May 20, 2018; February 17, 2019

1. There are two meanings to “*kāya*”: one is “*kāya*” for the body, and the other “*kāya*” means “collections” or “aggregates” of anything: *rūpa*, *vedanā*, *saññā*, *saṅkhāra*, or *viññāṇa*.

- “*Sabba*” means all. Therefore, “*sabba kāya*” is the same as “*pañcakkhandha*”; see, [“Five Aggregates – Introduction,”](#) and follow-up posts.
- In the *Satipatthāna Sutta*, one contemplates on the five aggregates via four categories (*kāyānupassanā*, *vedanānupassanā*, *cittānupassanā*, and *dhammānupassanā*).
- *Kāyānupassanā* deals mostly with bodily actions (i.e., regarding *kāya*). But “*kāya*” + “*anupassanā*” rhymes as “*kāyānupassanā*”; see, [“Satipatthāna – Introduction.”](#)

2. We experience pictures, sounds, smells, tastes, touch (which are all different types of *rūpa*), and *dhammā* (things which we think about).

- **Note that *dhammā* are different from *dhamma* (without the long “a” at the end) in Buddha Dhamma; the latter *dhamma* refers to “teachings of the Buddha”.**
- Even though “*rūpa*” is commonly used to describe “material objects” (which are really “*vanna rūpa*” or “*rūpa rūpa*”), *rūpa* includes sounds (*sadda rūpa*), smells (*gandha rūpa*), tastes (*rasa rūpa*), and touch (*phoṭṭhabba rūpa*).
- **I will just use the term “*rūpa*” to include sounds, smells, tastes, and touch as well as pictures for the rest of the post.**
- *Dhammā* are a type of *rūpa* too; but they are below the *suddhaṭṭhaka* stage and “cannot be seen or touched”: “*anidassanaṃ, appaṭiḡhaṃ, dhammāyatana pariyāpanna rūpaṃ*”; see, [“What are rūpa? – Dhammā are rūpa too!”](#)

3. Something is a picture or a visual object only when one is seeing it. A moment later it is only a memory, and it is now a “memory of an old picture”. If we visualize a house that we are building, that is also a picture in the memory plane, an “envisioned future picture”.

- In the [WebLink: Anatta Lakkha Sutta \(SN 22.59\)](#), “all *rūpa*” are described as 11 categories: “*Tasmātiha, bhikkhave, yaṃ kiñci rūpaṃ atītānāgatapaccuppannaṃ ajjhattaṃ vā bahiddhā vā oḷārikaṃ vā sukhumaṃ vā hīnaṃ vā pañītaṃ vā yaṃ dūre santike vā, sabbam rūpaṃ..*”. They are past, present, future, near, far, likable, distasteful, fine (not strong), coarse (strong), internal, and external; see also, [“Five Aggregates – Introduction.”](#)
- For example, feelings (*vedanā*) *khandha* can be any in the 11 categories. Here, near and far means recent or way back in the past. Internal is one’s own and external is feelings of the others; one needs to be aware of other’s feelings in the sense that “if I do this, it could cause a feeling of grief to so and so”, as an example.

4. It is good to contemplate on these concepts and have a good idea of how different representations mean the same things: *Pañcakkhandha* is the same as “*sabba kāya*”, both include “everything in this world”.

Please send me a comment if this is not clear. Many people think “*kāyānupassanā*” is just about one’s body, and that is not correct.

- But we don’t think about the “whole world” out there either. We think about a tiny fraction of that “world out there”. **AND we get attached to (*taṇhā*) even a smaller fraction.**
- Thus even though *pañcakkhandha* (five aggregates) is unimaginably large, the fraction of *pañcakkhandha* that we interact with or think about is very small. **And we form attachments (via greed or hate) to even smaller fraction,** and this is the *pañcupādānakkhandha*, the aggregates that we attach to with greed and hate (and ignorance). *Upādāna* means “drawn to”, and that is what one grasps willingly because one thinks there is happiness in them.

5. For example, we all know about the zillions of stars out there, or about the other planets in our Solar system; but do not generate any greed or hate about them. We only attach to **some of the pictures**, sounds, smells, tastes, and touch that we interact with daily, which is indeed a tiny, tiny fraction of the “world out there”. The biggest component of our “*pañcupādānakkhandha*” is the dhamma aggregate, the things we think about. Let us discuss this a bit more.

- **Thus here we are concerned with only a tiny fraction of “*sabba kāya*”: Only those that lead to greed, hate, or ignorance. This is the same as *pañcupādānakkhandha*, which is a tiny fraction of *pañcakkhandha*.**

6. When we contemplate on this a bit more, we realize that most of the pictures, sounds, smells, tastes, and touch we think about belonging to the *dhammā* category; see #2 above..

- A long series of thoughts may start with an “old picture” that is in our memory (say an old friend), and then we start generating more thoughts about that person, and then we get into something altogether different: We may think about the nice neighborhood that person is living in and then start thinking about building a house there. Thus we may end up thinking (generating *saṅkhāra*) about something totally different. Thus it now belongs to the *dhammā* category.
- Later, we need to focus on such thoughts and dhamma in the “*cittānupassanā*” and “*dhammānupassanā*”. What we need to do in “*kāyānupassanā*” is to mainly control our speech and actions first. This way we will be able to slowly change our habits (*gathi*) and start controlling our “automatic actions” that we used to do almost on impulse.

7. We already discussed how we need to be “morally mindful” while we are in any of the four main postures (*Iriyapathapabba*), and also in any of “sub-postures” or basically any movement (*sampajānapabba*).

- For example, we see a likable picture (a person or an item) we need to immediately think about whether it is appropriate to take the action that automatically comes to our mind with our old habits. We may be waiting at the airport for the next flight and see a bar; instead of going there and have a drink, it may be more productive to get on to the internet and read something useful. It is more productive to take a nap if one is really tired.
- In another example, someone may come to you and accuse you of doing something wrong. Instead of just retaliating, it may be a good idea to calm down and listen to that person first to see whether you have indeed done something unknowingly to aggravate that person.

8. As we discussed in the post, “[4. What do all these Different Meditation Techniques Mean?](#),” *Anupassanā* means “discard according to the principles learned” (“*anu*” means according to and “*passanā*” means to get rid of). We need to logically think of what would happen if a certain action is taken. If that seems to lead to a “bad ending” we need to discard it.

- Thus “*kāyānupassanā*” in the *iriyāpatapabba* and the *sampajānapabba* means to contemplate on the moral consequences of an act one is about to do and abstain from doing it if it seems to have bad consequences.

9. Now, there are three sections in the *kāyānupassanā* where one specifically contemplates on the physical body. These are *patikulamanasikara pabba*, *dhatumanasikāra pabba*, and *navasivathika pabba*. These sections involve just contemplating on the nature of our physical bodies.

- In the *patikulamanasikara pabba* the 32 parts of the body are discussed. Those body parts are not very appealing when separated from each other. It is amazing how our bad perception of hair in the dinner plate is so different from the admiration we have for the hair that is attached to our head. The hair in the plate could be one of our own, but still, we do not like it.
- The nail on the finger is something we admire, take care and sometimes paint too. But as soon as it is cut, it becomes something not appealing.

10. What we form a liking for is the “whole complete package” with all 32 parts that are in “good condition”. We get distraught when hair starts greying, or the skin starts sagging. A beautiful person may become ugly in an instant if the face becomes disfigured due to some mishap.

The reality is that all the above IS GOING TO HAPPEN to us in the future. As long as there is birth, there is decay and death.

11. The section (*pabba*) on *dhatumanasikāra pabba* is to contemplate on the fact that all our bodies are composed of just four entities. They are *pathavi* (solidness), *āpo* (liquid-ness/tendency to bind together), *tejo* (heat or warmth), *vāyo* (wind). Out of the six *dhātu*, *ākāsa* (space) is there too, but *viññāna* (consciousness) does not belong to the physical body.

- Those four things make all bodies — whether beautiful or ugly. There is nothing special.

12. The third section (*pabba*) of the physical body, *navasivathika pabba*, is to contemplate on what happens to a dead body over the course of many months if left out on the ground to decay. (That was commonly done at the time of the Buddha).

- Again, whether it is a body of a homeless person or an emperor, the same decay process will take place. Eventually, all body parts will be absorbed to the ground or released to the air.

13. All three of those sections are to help us lose attachments to our physical bodies. The purpose is NOT to get distraught but to develop the wisdom to realize that it is common to us all and will happen.

- A major component of our suffering arises when we eventually realize that we cannot maintain things to our satisfaction. Most people do not like to think about this inevitability. They just want to “whatever it takes” to maintain a beautiful body. The more one does that, the more one will be depressed later.
- Instead what we should do is try to maintain a healthy body by eating well and sticking to a good exercise program. It is not “eye catching aspect” that matters more. One should be more concerned with the health of the body.
- Eating healthy foods and exercising regularly (see, “[“Spark” by John Ratey](#)”) will keep the body and the mind in good condition, so that we will have enough time to at least get to the *Sotāpanna* stage of Nibbāna.

14. It is important to remember that in all these “*anupassanā*,” we need to contemplate on the Three Characteristics of nature (*anicca*, *dukkha*, *anatta*) when we contemplate on the unfruitfulness in attaching to “things and concepts”.

- Also, it is important to examine the potentially “bad outcomes” of immoral and unwise actions. We should also think about the wisdom of our stressful attempts to try to maintain our body appearances. (Especially using artificial techniques like botox). The sooner we realize this, the less stressful it will be.

15. Finally, in those three sections on the body, *patikulamanasikara pabba*, *dhatumanasikāra pabba*, and *navasivathika pabba*, we need to contemplate on not only our own body (this is what *ajjhatta* means in these three sections), but also on the bodies of others (this is what *bahiddhā* means in these three sections).

- We can not only contemplate on other humans (famous, poor, rich, young, old, etc), but also on animals. It does not matter who or what it is, we all will eventually become dust. But, for many, this realization comes only after going through much effort in vain to keep the body “beautiful” via artificial means; then it could be too late.
- Therefore, *ajjhatta* and *bahiddhā* means somewhat different things in these three sections compared to other sections.

16.5 **Mahā Cattārīsaka Sutta (Discourse on the Great Forty)**

Revised April 3, 2016; Re-revised May 6, 2017; November 27, 2017; December 17, 2017; February 26, 2018

This *sutta* discusses two eightfold paths: A mundane path that leads to rebirth in the “good realms” (at or above the human realm) and the Noble Eightfold Path that leads to *Nibbāna*.

1. All *suttā* in one way or another describe the Path to *Nibbāna*; there are many ways to analyze the Path.
 - In this *sutta*, the emphasis is on the 20 “good factors”, 10 leading to “good rebirths” and 10 leading to *Nibbāna* (*Cooling Down of the mind*). The opposing 20 factors direct one away from *Nibbāna* (to be trapped in the four lowest realms or *apāyā*).
2. The Path to *Nibbāna* is normally abbreviated as *sīla* (virtue), *samādhi* (moral concentration), and *paññā* (wisdom).
 - Without some level of wisdom one will not even start thinking about the Path. There are some people, no matter how much they listen or read about the Buddha’s message, cannot see any benefit from it. Such people have no *sansāric* habit (“*gathi*”) built up from past lives, and their minds are totally covered; this is the strong form of *avijjā* called *moha*.
 - Therefore, without some level of wisdom (or *paññā*, not “book knowledge”) it is not possible to “see the Path”. When we talk about “seeing the Path”, it is not meant seeing with the eyes; it is seeing with wisdom.
 - Thus the correct order is *sīla*, *samādhi*, *paññā* (in the mundane Eightfold Path), and then start with higher *paññā* (with comprehension of *anicca*, *dukkha*, *anatta*) again in the Noble or *Lokuttara* Eightfold Path, i.e., *paññā*, *sīla*, *samādhi* towards *Ariya samādhi*, that leads to *sammā ñāṇa* and *sammā vimutti* (*Arahantship*). These are the 10 factors for *Nibbāna*.
 - This is discussed in “[Sīla, Samādhi, Paññā to Paññā, Sīla, Samādhi.](#)”
 - This is a cyclic process: when one completes the first round, one starts the next round with enhanced *paññā*, and can “see more”. The “seeing” will be complete only at the *Arahant* stage.
3. **There are four kinds of “seeing” that is with a person that is improved in the following order:** 1. **strong *micchā diṭṭhi* and engaging in *pāpa kamma* (people like serial killers)**, 2. moral people with some types of *micchā diṭṭhi* (most people today belong to this category), 3. **not comprehending *anicca*, *dukkha*, *anatta* (after getting rid of 10 types of *micchā diṭṭhi*)**, and 4. transcendental *sammā Diṭṭhi* (comprehending *anicca*, *dukkha*, *anatta* or vision for attaining *Nibbāna*).

When one’s mind is totally covered with defilements (when one has *moha*), one is likely to believe in all or some of the 10 types of *micchā diṭṭhi*:

1. no benefits in giving. [*natthi dinnam*]
2. no benefits in fulfilling one’s responsibilities. [*natthi yittham*]
3. respecting and making offerings to those with higher virtues has no merits. [*natthi hutam*]
4. *kamma* or deeds do not have good and bad *vipāka*. [*natthi sukata dukkaṭṭānaṃ kammānaṃ phalaṃ vipāko*]
5. this world does not exist. [*natthi ayam loko*]
6. *para loka* or the world of *gandhabba* does not exist. [*natthi paro loko*]
7. mother is not a special person. [*natthi mātā*]
8. father is not a special person. [*natthi pitā*]
9. there are no instantaneous (*opapathika*) births in other realms. [*natthi sattā opapātikā*]

10. there are no *samana brahmana* (basically *Ariyā* or *yogis*) who have cultivated their minds to be free of defilements and thus can see other realms and previous births. [*natthi loke samaṇabrāhmaṇā sammaggaṭā sammāpaṭipannā ye imaṅca lokam paraṅca lokam sayam abhiññā sacchikatvā pavedentī*]

[[WebLink: suttacentral: AN 3.117. Vipattisampadāsutta - Distress and Attainment Sutta](#) ‘(1) *natthi dinnam*, (2) *natthi yiṭṭham*, (3) *natthi hutam*, (4) *natthi sukata dukkaṭānam*, *kammānam phalam vipāko*, (5) *natthi ayaṃ loko*, (6) *natthi paro loko*, (7) *natthi mātā*, (8) *natthi pitā*, (9) *natthi sattā opapātikā*, (10) *natthi loke samaṇabrāhmaṇā sammaggaṭā sammāpaṭipannā ye imaṅca lokam paraṅca lokam sayam abhiññā sacchikatvā pavedentī*’]

See, “[Micchā Diṭṭhi, Gandhabba, and Sotāpanna Stage](#)” and “[Hidden World of the Gandhabba: Netherworld \(Para Loka\)](#)” for a discussion on *para loka*.

4. The 10 wrong factors that contribute to one’s downfall (*akusala kamma*) RESULT FROM the above 10 types of wrong views.

- One is not likely to see the consequences of immoral thoughts and intentions (*micchā saṅkappa*) in 3 categories: sensual lust (*kāma chanda*), ill-will (*vyapāda*), violence (*hinsā*).
- Thus one will utter 4 types of *micchā vaca* or wrong speech: lying (*musāvāda*), slandering (*pisuṇāvācā*), harsh speech (*parusāvācā* [*pharusāvācā*]), and empty speech (*sampappalāpa*).
- And one will engage in 3 types of immoral bodily actions (*micchā kammanta*): in killing living beings (*pānātipātā*), taking the not-given (*adinnādānā*), sexual misconduct and other extreme sensual activities (*kāmesu micchācārā*).

5. The more one does those 10 defiled actions by the mind, speech, and body, the stronger one’s conviction of the 10 types of *micchā diṭṭhi* will become. Thus one will be trapped in a downward Path.

- Thus one will be engaged in immoral livelihoods (*micchā ajiva*), make effort in such activities (*micchā vayama*), build-up that mindset (*micchā satī*), and solidify that kind of mindset (*micchā samādhi*).
- Those in turn will strengthen *micchā diṭṭhi*, *micchā saṅkappa*, *micchā vaca*, *micchā kammanta*.
- And so it goes on and on, pushing one downwards spiral.

6. Therefore, those two sets of 10 factors each will lead one in the wrong way towards unimaginable suffering in future lives, and it will be very difficult to break away from them.

- Sometimes acts of occasional kindness or charity could open one’s mind to the truth. This is probably the reason for the order: *sīla*, *samādhi*, *paññā*. Even occasional acts of virtue (*sīla*) can get one pointed in the right direction.

7. As one removes more and more types of *micchā diṭṭhi*, one will start gaining *sammā diṭṭhi*, which means not having those 10 types of *micchā diṭṭhi*.

- Once the 10 types of *micchā diṭṭhi* are removed, one starts comprehending *anicca*, *dukkha*, *anatta*, the correct interpretations. Of course, it will not help at all if *anicca* is interpreted as just “impermanence” and *anatta* as “no-self”.
- It is just like taking a medicine to cure a disease. If one is taking the wrong medicine, then no matter how long one takes it, that will not help.

8. So, the *sutta* explains that there are 2 types of *sammā diṭṭhi*: **mundane (*lokiya*), and transcendental (*lokuttara*)**.

Initially, one sees the perils of *micchā diṭṭhi* (and associated immoral acts), and starts turning to mundane *sammā diṭṭhi*: One sees that things happen for a reason, and one could get into bad situations and bad births by doing immoral acts. One is motivated to do moral deeds and to seek good rebirths. Now one does not have *moha*, but just *avijjā*.

- Thus one starts thinking moral thoughts (*sammā saṅkappa*), uttering moral speech (*sammā vaca*), abstain from immoral deeds (*sammā kammanta*).
- Thus one will be engaged in moral livelihoods (*sammā ajiva*), make effort in such activities (*sammā vayama*), build-up that mindset (*sammā sati*), and solidify that kind of mindset (*sammā samādhi*).
- This eight factors constitute the **mundane Eightfold Path**. One will be making progress towards “good rebirths”.

9. It is important to realize that those *dasa akusala* that are done by the body (killing, stealing, sexual misconduct) and speech (lying, slandering, harsh speech, gossiping) are tackled in the **mundane Eightfold Path**.

- This is specifically stated in the “[WebLink: suttacentral: Mahā Cattārīsaka Sutta \(MN 117\)](#).”
- Even though the English translation there is not good, this fact is clear in the English translation at that website: “[WebLink: suttacentral: The Great Forty](#).”

10. Then some of those on the mundane Eightfold Path will start seeing the unique message of the Buddha, which says that one can NEVER find permanent happiness in this world (*lokaya*).

- This is because, even if one makes sure to avoid the four lower realms (*apāyā*) in the next birth by following the mundane Noble Eightfold Path, one will not be assured of anything in the births after that. Because we have no idea under what circumstances we will be born in the next life even if it is human.
- Of course, one needs to be exposed the correct version of *Tilakkhaṇa*.

11. As long as one has not not attained the *Sotāpanna* stage of *Nibbāna*, it is inevitable that one is likely to be born in the *apāyā* in (probably distant) future. One may be born in the human or higher realms for a long time to come due to the moral acts done in this life, but once that “good energy” is spent, past bad *kamma vipāka* will inevitably come to the surface.

- Thus, as long as we are born anywhere in these 31 realms, it will eventually lead to *dukkha* (suffering).
- Thus it is unfruitful to strive for such mundane happiness as a human, *deva*, or *brahma*. In the long run, none of those births will provide permanent happiness. We cannot maintain anything to our satisfaction in the long run anywhere. This is the concept of *anicca*.
- This is in fact the concept of *anatta*: that there is no place in the whole wider world of 31 realms that one could find refuge.

12. The realization of these three characteristics (*anicca, dukkha, anatta*) of this world (*lokaya*) is the point at which one grasps the **lokuttara sammā diṭṭhi**.

- Then one starts thinking moral thoughts (*sammā saṅkappa*) on how to remove suffering FOREVER. Now one is not interested in merely seeking “good rebirths” because one realizes the futility of such efforts in the long term. This is **lokuttara sammā saṅkappa**.
- One stops uttering immoral speech (*sammā vaca*) and abstain from immoral deeds (*sammā kammanta*), because one realizes that there is NO POINT in doing those things, not just because they lead to bad births. They are now **lokuttara sammā vaca** and **lokuttara sammā kammanta**.
- These in turn will lead to **lokuttara** types of **sammā ajiva, sammā vayama, sammā sati, and sammā samādhi**.
- These eight factors constitute the **lokuttara Noble Eightfold Path** that will take one progressively to stages of “higher cooling down” or *Nibbāna* starting with the *Sotāpanna* stage and ending in the *Arahant* stage.
- *Avijjā* is gradually dispelled starting at the *Sotāpanna* stage and completely removed at the *Arahant* stage; simultaneously, wisdom (*paññā*) grows and becomes complete at the *Arahant* stage.

13. The uniqueness of Buddha Dhamma lies in the *lokuttara* Noble Eightfold Path. Other religions are focused on “how to live a moral life” (even if that has implications of permanent happiness in heaven), and that and more is embodied in the **mundane Noble Eightfold Path**.

- Buddha Dhamma says living a moral life is not enough to attain permanent happiness (because even heaven is not permanent according to Buddha Dhamma). Ultimately, it requires relinquishing all desires for worldly things. **But the mindset to seek *Nibbāna* via “relinquishing all desires for worldly things” is not even possible until one makes progress on the **mundane Noble Eightfold Path**. The mind needs to be purified to some extent even to realize the futility of existence anywhere in the 31 realms.**
- Through most of the recent past, the genuine *lokuttara* Noble Eightfold Path had been hidden together with the true nature of the world as described by the real meanings of *anicca*, *dukkha*, *anatta*; most have been practicing the **mundane Noble Eightfold Path**. It is easy for most people to connect with the **mundane Noble Eightfold Path** simply because it is mundane, i.e., concepts that we are already comfortable with.
- But as the Buddha said, his Dhamma “had never been heard before...”, as he emphasized in the *Dhamma Cakka Pavattana sutta*: “*pubbe ananussutesu dhammesu....*”

14. In summary, the forty factors are there because there are four pathways each with 10 outcomes: two types of wrong paths (one with 10 types of *micchā diṭṭhi* and another with strong *micchā diṭṭhi* with immoral behavior) and two types of “good paths” (one after getting rid of 10 types of *micchā diṭṭhi* and the next with starting to comprehend *anicca*, *dukkha*, *anatta*).

- The 10 outcomes in the Noble Path are: *sammā diṭṭhi*, *sammā saṅkappa*, *sammā vaca*, *sammā kammanta*, *sammā ajiva*, *sammā vayama*, *sammā sati*, *sammā samādhi*, *sammā ñāṇa*, and *sammā vimutti* (Arahantship).
- Towards the end of the Buddha says, “*Iti kho, bhikkhave, aṭṭhaṅgasamannāgato sekkho, dasaṅgasamannāgato arahā hoti..*” **Translated:** “Thus, *bhikkhus*, the path of the disciple in higher training (*Sotāpanna*, *Sakadāgāmi*, *Anāgāmi*) possesses eight factors, and the *Arahant* possesses ten factors.”
- The other three paths have corresponding 10 outcomes, leading to good or bad outcomes, but provide no permanent solution (of course the bad ones lead to unimaginable suffering).

15. The *Pāli* version of the *sutta* — as well as translations in several languages — is available at: [WebLink: suttacentral: Mahā Cattārīsaka Sutta](#).

- However, that translation is not complete, as mentioned above. **In particular, the distinction between the two types of *sammā diṭṭhi*, etc and two types of eightfold paths is not discussed there because most people today don’t understand the importance or the correct interpretation of *Tilakkhaṇa*.**
- Finally, another way to analyze this step-by-step process is discussed at: “[Micchā Diṭṭhi, Gandhabba, and Sotāpanna Stage](#).”

16.5.1 Mahācattārīsaka Sutta

Majjhima Nikāya 117

Mahācattārīsakasutta

Evam me sutam— ekam samayaṃ bhagavā sāvatthiyaṃ viharati jetavane anāthapiṇḍikassa ārāme. Tatra kho bhagavā bhikkhū āmantesi: “bhikkhavo”ti. “Bhadante”ti te bhikkhū bhagavato paccassosum. Bhagavā etadavoca: “ariyaṃ vo, bhikkhave, sammāsamādhiṃ desessāmi saupanisaṃ saporikkhāraṃ. Taṃ suṇātha, sādhukaṃ manasi karotha, bhāsissāmi”ti. “Evam, bhante”ti kho te bhikkhū bhagavato paccassosum. Bhagavā etadavoca:

“Katamo ca, bhikkhave, ariyo sammāsamādhi saupaniso sapaṛikkhāro? Seyyathidaṃ— sammādiṭṭhi, sammāsaṅkappo, sammāvācā, sammākammanto, sammāājīvo, sammāvāyāmo, sammāsati; yā kho, bhikkhave, imehi sattahaṅgehi cittaṃ ekaggatā paṛikkhatā—ayaṃ vuccati, bhikkhave, ariyo sammāsamādhi saupaniso itipi, sapaṛikkhāro itipi. Tatra, bhikkhave, sammādiṭṭhi pubbaṅgamā hoti. Kathañca, bhikkhave, sammādiṭṭhi pubbaṅgamā hoti? Micchādiṭṭhiṃ ‘micchādiṭṭhi’ ti pajānāti, sammādiṭṭhiṃ ‘sammādiṭṭhi’ ti pajānāti—sāssa hoti sammādiṭṭhi.

Katamā ca, bhikkhave, micchādiṭṭhi? ‘Natthi dinnam, natthi yittham, natthi hutam, natthi sukata dukkaṭānaṃ kammānaṃ phalaṃ vipāko, natthi ayaṃ loko, natthi paro loko, natthi mātā, natthi pitā, natthi sattā opapātikā, natthi loke samaṇabrāhmaṇā sammaggatā sammāpaṭipannā ye imaṅca lokaṃ paraṅca lokaṃ sayam abhiññā sacchikatvā pavedentī’ ti—ayaṃ, bhikkhave, micchādiṭṭhi.

Katamā ca, bhikkhave, sammādiṭṭhi? Sammādiṭṭhipahaṃ, bhikkhave, dvāyaṃ vadāmi—atthi, bhikkhave, sammādiṭṭhi sāsavā puññabhāgiyā upadhivepakkā; atthi, bhikkhave, sammādiṭṭhi ariyā anāsavā lokuttarā maggaṅgā. Katamā ca, bhikkhave, sammādiṭṭhi sāsavā puññabhāgiyā upadhivepakkā? ‘Atthi dinnam, atthi yittham, atthi hutam, atthi sukata dukkaṭānaṃ kammānaṃ phalaṃ vipāko, atthi ayaṃ loko, atthi paro loko, atthi mātā, atthi pitā, atthi sattā opapātikā, atthi loke samaṇabrāhmaṇā sammaggatā sammāpaṭipannā ye imaṅca lokaṃ paraṅca lokaṃ sayam abhiññā sacchikatvā pavedentī’ ti—ayaṃ, bhikkhave, sammādiṭṭhi sāsavā puññabhāgiyā upadhivepakkā.

Katamā ca, bhikkhave, sammādiṭṭhi ariyā anāsavā lokuttarā maggaṅgā? Yā kho, bhikkhave, ariyacittassa anāsavacittassa ariyamaggasamaṅgino ariyamaggaṃ bhāvayato paññā paññindriyaṃ paññābalaṃ dhamma-vicayasambojjhaṅgo sammādiṭṭhi maggaṅgam—ayaṃ vuccati, bhikkhave, sammādiṭṭhi ariyā anāsavā lokuttarā maggaṅgā. So micchādiṭṭhiyā pahānāya vāyamati, sammādiṭṭhiyā, upasampadāya, svāssa hoti sammāvāyāmo. So sato micchādiṭṭhiṃ pajahati, sato sammādiṭṭhiṃ upasampajja viharati, sāssa hoti sammāsati. Itiyime tayo dhammā sammādiṭṭhiṃ anuparidhāvanti anuparivattanti, seyyathidaṃ—sammādiṭṭhi, sammāvāyāmo, sammāsati.

Tatra, bhikkhave, sammādiṭṭhi pubbaṅgamā hoti. Kathañca, bhikkhave, sammādiṭṭhi pubbaṅgamā hoti? Micchāsaṅkappaṃ ‘micchāsaṅkappo’ ti pajānāti, sammāsaṅkappaṃ ‘sammāsaṅkappo’ ti pajānāti, sāssa hoti sammādiṭṭhi.

Katamo ca, bhikkhave, micchāsaṅkappo? Kāmasaṅkappo, byāpādasāṅkappo, vihiṃsāsaṅkappo—ayaṃ, bhikkhave, micchāsaṅkappo.

Katamo ca, bhikkhave, sammāsaṅkappo? Sammāsaṅkappampahaṃ, bhikkhave, dvāyaṃ vadāmi—atthi, bhikkhave, sammāsaṅkappo sāsavo puññabhāgiyo upadhivepakko; atthi, bhikkhave, sammāsaṅkappo ariyo anāsavo lokuttaro maggaṅgo. Katamo ca, bhikkhave, sammāsaṅkappo sāsavo puññabhāgiyo upadhivepakko? Nekkhammasāṅkappo, abyāpādasāṅkappo, avihiṃsāsaṅkappo: ‘ayaṃ, bhikkhave, sammāsaṅkappo sāsavo puññabhāgiyo upadhivepakko’.

Katamo ca, bhikkhave, sammāsaṅkappo ariyo anāsavo lokuttaro maggaṅgo? Yo kho, bhikkhave, ariyacittassa anāsavacittassa ariyamaggasamaṅgino ariyamaggaṃ bhāvayato takko vitakko saṅkappo appanā byappanā cetaso abhiniropanā vacīsaṅkhāro—ayaṃ, bhikkhave, sammāsaṅkappo ariyo anāsavo lokuttaro maggaṅgo. So micchāsaṅkappassa pahānāya vāyamati, sammāsaṅkappassa upasampadāya, svāssa hoti sammāvāyāmo. So sato micchāsaṅkappaṃ pajahati, sato sammāsaṅkappaṃ upasampajja viharati; sāssa hoti sammāsati. Itiyime tayo dhammā sammāsaṅkappaṃ anuparidhāvanti anuparivattanti, seyyathidaṃ—sammādiṭṭhi, sammāvāyāmo, sammāsati.

Tatra, bhikkhave, sammādiṭṭhi pubbaṅgamā hoti. Kathañca, bhikkhave, sammādiṭṭhi pubbaṅgamā hoti? Micchāvācaṃ ‘micchāvācā’ ti pajānāti, sammāvācaṃ ‘sammāvācā’ ti pajānāti; sāssa hoti sammādiṭṭhi. Katamā ca, bhikkhave, micchāvācā? Musāvādo, piṣuṇā vācā, pharusā vācā, samphappalāpo—ayaṃ, bhikkhave, micchāvācā. Katamā ca, bhikkhave, sammāvācā? Sammāvācāmpahaṃ, bhikkhave, dvāyaṃ vadāmi—atthi, bhikkhave, sammāvācā sāsavā puññabhāgiyā upadhivepakkā; atthi, bhikkhave, sammāvācā ariyā anāsavā

lokuttarā maggaṅgā. Katamā ca, bhikkhave, sammāvācā sāsavā puññabhāgiyā upadhivepakkā? Musāvādā veramaṇī, piṣuṇāya vācāya veramaṇī, pharusāya vācāya veramaṇī, samphappalāpā veramaṇī—ayaṃ, bhikkhave, sammāvācā sāsavā puññabhāgiyā upadhivepakkā. Katamā ca, bhikkhave, sammāvācā ariyā anāsavā lokuttarā maggaṅgā? Yā kho, bhikkhave, ariyacittassa anāsavacittassa ariyamaggasamaṅgino ariyamaggaṃ bhāvayato catūhi vacīduccaritehi ārati virati paṭivirati veramaṇī—ayaṃ, bhikkhave, sammāvācā ariyā anāsavā lokuttarā maggaṅgā. So micchāvācāya pahānāya vāyamati, sammāvācāya upasampadāya; svāssa hoti sammāvāyāmo. So sato micchāvācaṃ pajahati, sato sammāvācaṃ upasampajja viharati; sāssa hoti sammāsati. Itiyime tayo dhammā sammāvācaṃ anuparidhāvanti anuparivattanti, seyyathidaṃ—sammādiṭṭhi, sammāvāyāmo, sammāsati.

Tatra, bhikkhave, sammādiṭṭhi pubbaṅgamā hoti. Kathaṅca, bhikkhave, sammādiṭṭhi pubbaṅgamā hoti? - Micchākammantaṃ ‘micchākammanto’ ti pajānāti, sammākammantaṃ ‘sammākammanto’ ti pajānāti; sāssa hoti sammādiṭṭhi. Katamo ca, bhikkhave, micchākammanto? Pāṇātipāto, adinnādānaṃ, kāmesumicchācāro—ayaṃ, bhikkhave, micchākammanto. Katamo ca, bhikkhave, sammākammanto? Sammākammantaṃ pahāṃ, bhikkhave, dvāyaṃ vadāmi—atthi, bhikkhave, sammākammanto sāsavo puññabhāgiyo upadhivepakko; atthi, bhikkhave, sammākammanto ariyo anāsavo lokuttaro maggaṅgo. Katamo ca, bhikkhave, sammākammanto sāsavo puññabhāgiyo upadhivepakko? Pāṇātipātā veramaṇī, adinnādānā veramaṇī, kāmesumicchācārā veramaṇī—ayaṃ, bhikkhave, sammākammanto sāsavo puññabhāgiyo upadhivepakko. Katamo ca, bhikkhave, sammākammanto ariyo anāsavo lokuttaro maggaṅgo? Yā kho, bhikkhave, ariyacittassa anāsavacittassa ariyamaggasamaṅgino ariyamaggaṃ bhāvayato tīhi kāyaduccaritehi ārati virati paṭivirati veramaṇī—ayaṃ, bhikkhave, sammākammanto ariyo anāsavo lokuttaro maggaṅgo. So - micchākammantaṃ pahānāya vāyamati, sammākammantaṃ upasampadāya; svāssa hoti sammāvāyāmo. So sato micchākammantaṃ pajahati, sato sammākammantaṃ upasampajja viharati; sāssa hoti sammāsati. Itiyime tayo dhammā sammākammantaṃ anuparidhāvanti anuparivattanti, seyyathidaṃ—sammādiṭṭhi, sammāvāyāmo, sammāsati.

Tatra, bhikkhave, sammādiṭṭhi pubbaṅgamā hoti. Kathaṅca, bhikkhave, sammādiṭṭhi pubbaṅgamā hoti? Micchāājīvaṃ ‘micchāājīvo’ ti pajānāti, sammāājīvaṃ ‘sammāājīvo’ ti pajānāti; sāssa hoti sammādiṭṭhi. Katamo ca, bhikkhave, micchāājīvo? Kuhanā, lapanā, nemittikatā, nippesikatā, lābhena lābhaṃ nijjīsanatā—ayaṃ, bhikkhave, micchāājīvo. Katamo ca, bhikkhave, sammāājīvo? Sammāājīvampahaṃ, bhikkhave, dvāyaṃ vadāmi—atthi, bhikkhave, sammāājīvo sāsavo puññabhāgiyo upadhivepakko; atthi, bhikkhave, sammāājīvo ariyo anāsavo lokuttaro maggaṅgo. Katamo ca, bhikkhave, sammāājīvo sāsavo puññabhāgiyo upadhivepakko? Idha, bhikkhave, ariyasāvako micchāājīvaṃ pahāya sammāājīvena jīvikaṃ kappeti—ayaṃ, bhikkhave, sammāājīvo sāsavo puññabhāgiyo upadhivepakko. Katamo ca, bhikkhave, sammāājīvo ariyo anāsavo lokuttaro maggaṅgo? Yā kho, bhikkhave, ariyacittassa anāsavacittassa ariyamaggasamaṅgino ariyamaggaṃ bhāvayato micchāājīvā ārati virati paṭivirati veramaṇī—ayaṃ, bhikkhave, sammāājīvo ariyo anāsavo lokuttaro maggaṅgo. So micchāājīvaṃ pahānāya vāyamati, sammāājīvaṃ upasampadāya; svāssa hoti sammāvāyāmo. So sato micchāājīvaṃ pajahati, sato sammāājīvaṃ upasampajja viharati; sāssa hoti sammāsati. Itiyime tayo dhammā sammāājīvaṃ anuparidhāvanti anuparivattanti, seyyathidaṃ—sammādiṭṭhi, sammāvāyāmo, sammāsati.

Tatra, bhikkhave, sammādiṭṭhi pubbaṅgamā hoti. Kathaṅca, bhikkhave, sammādiṭṭhi pubbaṅgamā hoti? Sammādiṭṭhissa, bhikkhave, sammāsaṅkappo pahoti, sammāsaṅkappassa sammāvācā pahoti, sammāvācassa sammākammanto pahoti, sammākammantaṃ sammāājīvo pahoti, sammāājīvaṃ sammāvāyāmo pahoti, sammāvāyāmassa sammāsati pahoti, sammāsatisa sammāsamādhi pahoti, sammāsamādhissa sammāñāṇaṃ pahoti, sammāñāṇassa sammāvinutti pahoti. Iti kho, bhikkhave, aṭṭhaṅgasamannāgato sekkho, dasaṅga-samannāgato arahā hoti. Tatrapi sammāñāṇena aneke pāpakā akusalā dhammā vigatā bhāvanāpāripūriṃ gacchanti.

Tatra, bhikkhave, sammādiṭṭhi pubbaṅgamā hoti. Kathaṅca, bhikkhave, sammādiṭṭhi pubbaṅgamā hoti? Sammādiṭṭhissa, bhikkhave, micchādiṭṭhi nijjiṇṇā hoti. Ye ca micchādiṭṭhipaccayā aneke pāpakā akusalā dhammā sambhavanti te cassa nijjiṇṇā honti. Sammādiṭṭhipaccayā aneke kusalā dhammā bhāvanāpāripūriṃ gacchanti. Sammāsaṅkappassa, bhikkhave, micchāsaṅkappo nijjiṇṇo hoti ... pe ... sammāvācassa,

bhikkhave, micchāvācā nijjiṇṇā hoti ... sammākammantassa, bhikkhave, micchākammanto nijjiṇṇo hoti ... sammāājīvassa, bhikkhave, micchāājīvo nijjiṇṇo hoti ... sammāvāyāmassa, bhikkhave, micchāvāyāmo nijjiṇṇo hoti ... sammāsatisa, bhikkhave, micchāsati nijjiṇṇā hoti ... sammāsamādhissa, bhikkhave, micchāsamādhi nijjiṇṇo hoti ... sammāñāṇassa, bhikkhave, micchāñāṇaṃ nijjiṇṇaṃ hoti ... sammāvimuttassa, bhikkhave, micchāvimutti nijjiṇṇā hoti. Ye ca micchāvimuttipaccayā aneke pāpakā akusalā dhammā sambhavanti te cassa nijjiṇṇā honti. Sammāvimuttipaccayā ca aneke kusalā dhammā bhāvanāpāripūriṃ gacchanti.

Iti kho, bhikkhave, vīsati kusalapakkhā, vīsati akusalapakkhā—mahācattārīsako dhammapariyāyo pavattito appaṭivattiyo samaṇena vā brāhmaṇena vā devena vā mārena vā brahmunā vā kenaci vā lokasmiṃ.

Yo hi koci, bhikkhave, samaṇo vā brāhmaṇo vā imaṃ mahācattārīsakaṃ dhammapariyāyaṃ garahitabbaṃ paṭikkositabbaṃ maññeyya tassa diṭṭheva dhamme dasasahadhammikā vādānuvādā gārayhaṃ ṭhānaṃ āgacchanti—sammādiṭṭhiṃ bhavaṃ garahati, ye ca micchādiṭṭhī samaṇabrāhmaṇā te bhoto pujjā, te bhoto pāsaṃsā; sammāsaṅkappaṃ bhavaṃ garahati, ye ca micchāsaṅkappā samaṇabrāhmaṇā te bhoto pujjā, te bhoto pāsaṃsā; sammāvācaṃ bhavaṃ garahati ... pe ... sammākammantaṃ bhavaṃ garahati ... sammāājīvaṃ bhavaṃ garahati ... sammāvāyāmaṃ bhavaṃ garahati ... sammāsatiṃ bhavaṃ garahati ... sammāsamādhīṃ bhavaṃ garahati ... sammāñāṇaṃ bhavaṃ garahati ... sammāvimuttiṃ bhavaṃ garahati, ye ca micchāvimuttiṃ samaṇabrāhmaṇā te bhoto pujjā, te bhoto pāsaṃsā. Yo koci, bhikkhave, samaṇo vā brāhmaṇo vā imaṃ mahācattārīsakaṃ dhammapariyāyaṃ garahitabbaṃ paṭikkositabbaṃ maññeyya tassa diṭṭheva dhamme ime dasasahadhammikā vādānuvādā gārayhaṃ ṭhānaṃ āgacchanti. Yepi te, bhikkhave, ahesuṃ okkalā vassabhaññā ahētuvādā akiriyavādā natthikavādā tepi mahācattārīsakaṃ dhammapariyāyaṃ na garahitabbaṃ nappaṭikkositabbaṃ amaññiṃsu. Taṃ kissa hetu? Nindābyārosau-pārambhabhayā”ti.

Idamavoca bhagavā. Attamaṇā te bhikkhū bhagavato bhāsitaṃ abhinandunti.

Mahācattārīsakasuttaṃ niṭṭhitaṃ sattamaṃ.

Majjhima Nikāya 117

The Great Forty

Thus have I heard. On one occasion the Blessed One was living at Sāvattī in Jeta's Grove, Anāthapiṇḍika's Park. There he addressed the bhikkhus thus: “Bhikkhus.”—“Venerable sir,” they replied. The Blessed One said this:

“Bhikkhus, I shall teach you noble right concentration with its supports and its requisites. Listen and attend closely to what I shall say.”—“Yes, venerable sir,” the bhikkhus replied. The Blessed One said this:

“What, bhikkhus, is noble right concentration with its supports and its requisites, that is, right view, right intention, right speech, right action, right livelihood, right effort, and right mindfulness? Unification of mind equipped with these seven factors is called noble right concentration with its supports and its requisites.

View

“Therein, bhikkhus, right view comes first. And how does right view come first? One understands wrong view as wrong view and right view as right view: this is one's right view.

“And what, bhikkhus, is wrong view? ‘There is nothing given, nothing offered, nothing sacrificed; no fruit or result of good and bad actions; no this world, no other world; no mother, no father; no beings who are reborn spontaneously; no good and virtuous recluses and brahmins in the world who have realised for themselves by direct knowledge and declare this world and the other world.’ This is wrong view.

“And what, bhikkhus, is right view? Right view, I say, is twofold: there is right view that is affected by taints, partaking of merit, ripening in the acquisitions; and there is right view that is noble, taintless, supramundane, a factor of the path.

“And what, bhikkhus, is right view that is affected by the taints, partaking of merit, ripening in the acquisitions? ‘There is what is given and what is offered and what is sacrificed; there is fruit and result of good and bad actions; there is this world and the other world; there is mother and father; there are beings who are reborn spontaneously; there are in the world good and virtuous recluses and brahmins who have realised for themselves by direct knowledge and declare this world and the other world.’ This is right view affected by taints, partaking of merit, ripening in the acquisitions.

“And what, bhikkhus, is right view that is noble, taintless, supramundane, a factor of the path? The wisdom, the faculty of wisdom, the power of wisdom, the investigation-of-states enlightenment factor, the path factor of right view in one whose mind is noble, whose mind is taintless, who possesses the noble path and is developing the noble path: this is right view that is noble, taintless, supramundane, a factor of the path.

“One makes an effort to abandon wrong view and to enter upon right view: this is one’s right effort. Mindfully one abandons wrong view, mindfully one enters upon and abides in right view: this is one’s right mindfulness. Thus these three states run and circle around right view, that is, right view, right effort, and right mindfulness.

Intention

“Therein, bhikkhus, right view comes first. And how does right view come first? One understands wrong intention as wrong intention and right intention as right intention: this is one’s right view.

“And what, bhikkhus, is wrong intention? The intention of sensual desire, the intention of ill will, and the intention of cruelty: this is wrong intention.

“And what, bhikkhus, is right intention? Right intention, I say, is twofold: there is right intention that is affected by taints, partaking of merit, ripening in the acquisitions, and there is right intention that is noble, taintless, supramundane, a factor of the path.

“And what, bhikkhus, is right intention that is affected by taints, partaking of merit, ripening in the acquisitions? The intention of renunciation, the intention of non-ill will, and the intention of non-cruelty: this is right intention that is affected by taints...ripening in the acquisitions.

“And what, bhikkhus, is right intention that is noble, taintless, supramundane, a factor of the path? The thinking, thought, intention, mental absorption, mental fixity, directing of mind, verbal formation in one whose mind is noble, whose mind is taintless, who possesses the noble path and is developing the noble path: this is right intention that is noble...a factor of the path.

“One makes an effort to abandon wrong intention and to enter upon right intention: this is one’s right effort. Mindfully one abandons wrong intention, mindfully one enters upon and abides in right intention: this is one’s right mindfulness. Thus these three states run and circle around right intention, that is, right view, right effort, and right mindfulness.

Speech

“Therein, bhikkhus, right view comes first. And how does right view come first? One understands wrong speech as wrong speech and right speech as right speech: this is one’s right view.

“And what, bhikkhus, is wrong speech? False speech, malicious speech, harsh speech, and gossip: this is wrong speech.

“And what, bhikkhus, is right speech? Right speech, I say, is twofold: there is right speech that is affected by taints, partaking of merit, ripening in the acquisitions; and there is right speech that is noble, taintless, supramundane, a factor of the path.

“And what, bhikkhus, is right speech that is affected by taints, partaking of merit, ripening in the acquisitions? Abstinence from false speech, abstinence from malicious speech, abstinence from harsh speech, abstinence from gossip: this is right speech that is affected by taints...ripening in the acquisitions.

“And what, bhikkhus, is right speech that is noble, taintless, supramundane, a factor of the path? The desisting from the four kinds of verbal misconduct, the abstaining, refraining, abstinence from them in one whose mind is noble, whose mind is taintless, who possesses the noble path and is developing the noble path: this is right speech that is noble...a factor of the path.

“One makes an effort to abandon wrong speech and to enter upon right speech: this is one's right effort. Mindfully one abandons wrong speech, mindfully one enters upon and abides in right speech: this is one's right mindfulness. Thus these three states run and circle around right speech, that is, right view, right effort, and right mindfulness.

Action

“Therein, bhikkhus, right view comes first. And how does right view come first? One understands wrong action as wrong action and right action as right action: this is one's right view.

“And what, bhikkhus, is wrong action? Killing living beings, taking what is not given, and misconduct in sensual pleasures: this is wrong action.

“And what, bhikkhus, is right action? Right action, I say, is twofold: there is right action that is affected by taints, partaking of merit, ripening in the acquisitions; and there is right action that is noble, taintless, supramundane, a factor of the path.

“And what, bhikkhus, is right action that is affected by taints, partaking of merit, ripening in the acquisitions? Abstinence from killing living beings, abstinence from taking what is not given, abstinence from misconduct in sensual pleasures: this is right action that is affected by taints...ripening in the acquisitions.

“And what, bhikkhus, is right action that is noble, taintless, supramundane, a factor of the path? The desisting from the three kinds of bodily misconduct, the abstaining, refraining, abstinence from them in one whose mind is noble, whose mind is taintless, who possesses the noble path and is developing the noble path: this is right action that is noble...a factor of the path.

“One makes an effort to abandon wrong action and to enter upon right action: this is one's right effort. Mindfully one abandons wrong action, mindfully one enters upon and dwells in right action: this is one's right mindfulness. Thus these three states run and circle around right action, that is, right view, right effort, and right mindfulness.

Livelihood

“Therein, bhikkhus, right view comes first. And how does right view come first? One understands wrong livelihood as wrong livelihood and right livelihood as right livelihood: this is one's right view.

“And what, bhikkhus, is wrong livelihood? Scheming, talking, hinting, belittling, pursuing gain with gain: this is wrong livelihood.

“And what, bhikkhus, is right livelihood? Right livelihood, I say, is twofold: there is right livelihood that is affected by taints, partaking of merit, ripening in the acquisitions; and there is right livelihood that is noble, taintless, supramundane, a factor of the path.

“And what, bhikkhus, is right livelihood that is affected by taints, partaking of merit, ripening in the acquisitions? Here, bhikkhus, a noble disciple abandons wrong livelihood and gains his living by right livelihood: this is right livelihood that is affected by taints...ripening in the acquisitions.

“And what, bhikkhus, is right livelihood that is noble, taintless, supramundane, a factor of the path? The desisting from wrong livelihood, the abstaining, refraining, abstinence from it in one whose mind is noble, whose mind is taintless, who possesses the noble path and is developing the noble path: this is right livelihood that is noble...a factor of the path.

“One makes an effort to abandon wrong livelihood and to enter upon right livelihood: this is one’s right effort. Mindfully one abandons wrong livelihood, mindfully one enters upon and dwells in right livelihood: this is one’s right mindfulness. Thus these three states run and circle around right livelihood, that is, right view, right effort, and right mindfulness.

The Great Forty

“Therein, bhikkhus, right view comes first. And how does right view come first? In one of right view, right intention comes into being; in one of right intention, right speech comes into being; in one of right speech, right action comes into being; in one of right action, right livelihood comes into being; in one of right livelihood, right effort comes into being; in one of right effort, right mindfulness comes into being; in one of right mindfulness, right concentration comes into being; in one of right concentration, right knowledge comes into being; in one of right knowledge, right deliverance comes into being. Thus, bhikkhus, the path of the disciple in higher training possesses eight factors, the arahant possesses ten factors.

“Therein, bhikkhus, right view comes first. And how does right view come first? In one of right view, wrong view is abolished, and the many evil unwholesome states that originate with wrong view as condition are also abolished, and the many wholesome states that originate with right view as condition come to fulfilment by development.

“In one of right intention, wrong intention is abolished, and the many evil unwholesome states that originate with wrong intention as condition are also abolished, and the many wholesome states that originate with right intention as condition come to fulfilment by development.

“In one of right speech, wrong speech is abolished...In one of right action, wrong action is abolished...In one of right livelihood, wrong livelihood is abolished...In one of right effort, wrong effort is abolished...In one of right mindfulness, wrong mindfulness is abolished...In one of right concentration, wrong concentration is abolished...In one of right knowledge, wrong knowledge is abolished...In one of right deliverance, wrong deliverance is abolished, and the many evil unwholesome states that originate with wrong deliverance as condition are also abolished, and the many wholesome states that originate with right deliverance as condition come to fulfilment by development.

“Thus, bhikkhus, there are twenty factors on the side of the wholesome, and twenty factors on the side of the unwholesome. This Dhamma discourse on the Great Forty has been set rolling and cannot be stopped by any recluse or brahmin or god or Māra or Brahmā or anyone in the world.

“Bhikkhus, if any recluse or brahmin thinks that this Dhamma discourse on the Great Forty should be censured and rejected, then there are ten legitimate deductions from his assertions that would provide grounds for censuring him here and now. If that worthy one censures right view, then he would honour and praise those recluses and brahmins who are of wrong view. If that worthy one censures right intention, then he would honour and praise those recluses and brahmins who are of wrong intention. If that worthy one censures right speech... right action...right livelihood...right effort...right mindfulness...right concentration...right

knowledge...right deliverance, then he would honour and praise those recluses and brahmins who are of wrong deliverance. If any recluse or brahmin thinks that this Dhamma discourse on the Great Forty should be censured and rejected, then these are ten legitimate deductions from his assertions that would provide grounds for censuring him here and now.

“Bhikkhus, even those teachers from Okkala, Vassa and Bhañña, who held the doctrine of non-causality, the doctrine of non-doing, and the doctrine of nihilism, would not think that this Dhamma discourse on the Great Forty should be censured and rejected. Why is that? For fear of blame, attack, and confutation.”

That is what the Blessed One said. The bhikkhus were satisfied and delighted in the Blessed One's words.

16.6 Sutta Learning Sequence for the Present Day

November 30, 2016; revised October 29, 2019

Introduction

1. In this critical post, I point out that it is better to study *suttā* in the order that is the reverse of the time sequence of *sutta* delivery by the Buddha.

- As I discussed in the post, “[Animisa Locana Bodhi Poojā – A Prelude to Acts of Gratitude](#),” the Buddha spent the first few years of his ministry “paying back” those those who had helped him attain the *Buddhahood* through numerous previous lives.
- Those ranged from the five ascetics (to whom the Buddha delivered the first *desanā*) to King Siddhodana (his father, he went to see in the fifth year after attaining the Buddhahood). They and others in between had fulfilled most of the requirements to achieve the *Arahanthood* in previous lives. They were “ready” to attain the *Arahantship* and were able to comprehend the *Tilakkhaṇa* (*anicca, dukkha, anatta*) reasonably quickly.

Comprehending *Tilakkhaṇa* Is Not Easy

2. Grasping the *Tilakkhaṇa* is not easy for a normal human being. It takes many, many lives. In a given *Buddha Sāsana* (ministry), those who have fulfilled most of the requirements in previous lives attain *Arahanthood* first, without much effort. For example, the two chief disciples, Ven. Sariputta and Ven. Moggallana reached the *Sotāpanna* stage just by listening to a single verse and then attained the *Arahanthood* within two weeks.

- **Therefore, those discourses delivered in the first several years were “deep.” They could only be comprehended by those who had made progress on the path in previous lives.**
- The first *desanā*, *Dhammacappavattana Sutta*, was a summary of the “Buddhist doctrine” to put in terms of modern terminology. The second *desanā* was on the *anatta* nature of the world, *Anatta Lakkhana Sutta*. The “fire sermon” (*Adittapariyaya Sutta*) was on the “burning nature” of this world of 31 realms. The word “burning” implies to “*tāpa*” or “heat in the mind.” This word “*tāpa*” was discussed later in the *Mahā Satipatthāna Sutta*; see, “[Satipatthāna Sutta – Relevance to Suffering in This Life](#).”
- A large number of people (who were ready) attained *magga phala* within the first few years of the *Buddha Sāsana*. In the latter years it took longer and longer for people to attain *magga phala*. In the latter years, the Buddha delivered more and more discourses that were “less deep” and easier to grasp for those who were “less prepared”.
- For example, [Mahā Cattarisika Sutta](#) and [Mahā Satipatthāna Sutta](#) (which were delivered later) provide detailed accounts of the process, starting with basic concepts. However, those basic concepts have not discussed adequately. In some cases, translations are incorrect.
- Many *suttā* clarify even more fundamental aspects.

3. All those “deep *desanās*” delivered early by the Buddha require detailed explanations. Just word-by-word translations cannot explain the deeper meanings. That is why the meanings of the *Tilakkhaṇa* remain hidden.

- **Furthermore, understanding *Tilakkhaṇa* requires some fundamental — and essential — material covered in later *suttā* by the Buddha.**
- I plan to discuss more of the “less deep” *suttā* in this section in the future. I realized this point only recently while writing posts in the new “[Living Dhamma](#)” section.

Four Categories of People, Based on Their Capabilities

4. As pointed out by Buddha, there are three types of people who can comprehend *Tilakkhaṇa*, categorized according to their “inherent capabilities”. That has nothing to do with “book knowledge”, but has everything to do with one’s ingrained capabilities accumulated over many, many lives.

- The first category is *ugghaṭitañña* or “persons with high wisdom”; they could grasp concepts very easily. Then some belong to the *vipañcitañña* category, and they needed a bit more explanation to understand the concepts. The third category is *neyya*; they need detailed explanations (i.e., *patiniddesa*) to grasp a concept. People in the last group of “*padaparama*” are unable to comprehend Dhamma.

[*ugghaṭitaññu* : “one who already during a given explanation comes to penetrate the truth” (Pug.). This is one of four types of persons classified according to their ability of acquiring insight, mentioned in A. IV, 133. Cf. also *vipañcitaññu*, *neyya*, *pada-parama*. See [The Requisites of Enlightenment, by Ledi Sayadaw \(WHEEL 171/174\)](#). *vipañcitaññu* : “one who realizes the truth after explanation.” Thus is called one who realizes the truth only after detailed explanation of that which already had been said to him in a concise form. Cf. *ugghaṭitaññu*. *neyya* : “requiring guidance,” is said of a person “who through advice and questioning, through wise consideration, and through frequenting noble-minded friends, having intercourse with them, associating with them, gradually comes to penetrate the truth” (Pug. 162). Cf. *ugghaṭitaññu*. *pada-parama* : “one for whom the words are the utmost attainment.” “Whoever, though having learned much, speaking much, knowing many things by heart, and discoursing much, has not penetrated the truth, such a man is called by that name” (Pug. 163).]

- These categories are listed in the [WebLink: suttacentral: Ugghaṭitaññū Sutta \(AN 4.133\)](#) and discussed in, “[Sutta – Introduction](#).”
- **These days — 2600 years into the *Buddha Sāsana* of the Gotama Buddha — most people are in the third category of *neyya*. Therefore, it makes more sense for most people today to start at a more fundamental level and proceed to higher levels.**
- Trying to comprehend those “deep” *suttā* — without first grasping the material in the *suttā* that were delivered later in his life by the Buddha — is like trying to pass the university entrance examination without having a good primary and high school education.

“Living Dhamma” Section

5. The “[Living Dhamma](#)” section was started to provide a systematic way to proceed to higher levels starting at a fundamental level. I highly recommend to everyone to start there.

- If one is confident of the material in early posts in that section, they can proceed quickly to higher levels (later posts). Furthermore, if someone runs into difficulty at a recent post, one needs to go back to earlier posts and clarify those points.
- The Buddha had a unique ability to “see” the capability of each person. Therefore, he was able to deliver a discourse tailored to each individual. **No one today has that capability, despite false claims by some.** Thus, each person needs to realize one’s abilities and deficiencies and strive accordingly.

Need to Discuss Simper *Suttā* in the *Tipiṭaka*

6. There are hundreds of *suttā* in the *Tipiṭaka* that discuss key concepts at a basic level. It is quite unfortunate that even the *Theravadins* have set aside the *Tipiṭaka* and are using the *Visuddhimagga* of the Buddhaghosa as the “base.”

- With the current revival of pure Dhamma in Sri Lanka — initiated by Venerable Waharaka Abhayaratanalankara Thero — the value of the *Tipiṭaka* is becoming clear.

7. In the “[Sutta Interpretations](#)” section, I plan to discuss some of those long-forgotten *suttā* to explain key Pāli terms. I will briefly mention some of those *suttā* below.

- The *Nibbāna Sutta* in the *Samyutta Nikāya* clearly describes *Nibbāna* as, “.ragakkhayo, dosakkhayo, mohakkhayo, idam vuccathi Nibbananti.”

- One does not need to examine deep concepts like *sunyata* initially. However, even though those deeper meanings become clear upon grasping the basic ideas. See, “[What is Sunyata or Sunnata \(Emptiness\)?](#)”
- That is why I emphasized this at the beginning of the Meditation section: “[1. Introduction to Buddhist Meditation.](#)” One can actually experience the “cooling down” as one gets rid of greed, hate, and ignorance (of the true nature of the world) from one’s mind.

More Key Pāli Words

8. Another keyword is *anicca*, incorrectly translated as “impermanence”. It is very easy to see from the [Icca Sutta](#) (in the *Samyutta Nikāya*), that *icchā* or the opposite of *anicca* has nothing do with “permanence”. The *Sutta* states,

“..*Ichhāya bajjhati loko, icchā vinayāya muccati*

Ichhāya vippahānena, sabbam chindati bandhanan” ti.”

- That means the following, “The world is bound by *icchā* (cravings), and one needs to get rid of *icchā* to become disentangled; one becomes free of all entanglements by realizing *anicca* nature.” Of course, one removes cravings by comprehending *anicca* nature, i.e., that it is not possible to maintain things to one’s liking.
- *Ichhā* (pronounced *ichchā*) is a perception in one’s mind.

9. The *Dasakammapatha Sutta*, clearly states how people with similar *gati* tend to associate with each other and thus make those *gati* stronger.

- That is why one needs to dissociated from those who have bad *gati* and try to make associations with people with “good *gati*”; see, “[The Law of Attraction, Habits, Character \(Gathi\), and Cravings \(Āsavas\)](#)” and, at a deeper level in “[9. Key to Ānāpānasati – How to Change Habits and Character \(Gati\).](#)”

10. In the *Ginjakavasatha sutta* (*Samyutta Nikāya*), Buddha tells Ven. Ānanda that one can determine for oneself whether one has attained the *Sotāpanna* stage. Furthermore, one can declare that if one so desires.

- The deeper meaning of the five precepts discussed in the *Sikkapada vibhanaga* in the *Vibhangapakaranaya-2*. The deeper meaning of the fifth precept, “*surameraya majjapama dattana veramani...*” is described as discussed in the post, “[The Five Precepts – What the Buddha Meant by Them.](#)”

Many Key Words Are Based on “San”

11. The *Cūlahatthipadopama Sutta* (in the *Majjima Nikāya*) explains many words associated with “*san*”. Some of these “*san*” words are discussed in the section on “[san.](#)” More words in the post, “[What is “San”? Meaning of Sansāra \(or Samsāra\).](#)”

- Ven. Mahinda Thero explained that *sutta* to King Denampiyathissa when they first met.
- *Cūla* is for “small”. *Hatthi* is an elephant. *Padopama* comes from “*pada*” + “*upamā*,” or “from an example or simile”. The simile is about a person who came to the wrong conclusion about the size of an elephant, based on the size of the footprint on the ground left by that elephant.
- That *sutta* explains how people come to wrong conclusions about a given keyword by just taking in the “conventional” interpretation (for example, taking *anicca* to mean “impermanence,” whereas the actual meaning of *anicca* much more in-depth).
- I hope to discuss those and other “long-forgotten” and misinterpreted *suttā* that help us understand basic concepts first. Then it would be easier to tackle those deeper *suttā* that were delivered very early.

16.7 Dhammacakkappavattana Sutta

[Dhammacakkappavattana Sutta – Introduction](#)

[Essence of Buddhism – In the First Sutta](#)

16.7.1 Dhammacakkappavattana Sutta – Introduction

January 16, 2016; revised February 20, 2020

Introduction

Please download and print the pdf of the *sutta* (or open in another window) for reference. You may need to click the link on the new page again:

[Dhammacakkappavattana Sutta Text](#)

1. I have divided the *sutta* to 13 sections, and I will go through some parts in this essay. There are more posts on other section of the *sutta*. As explained in the “[Sutta – Introduction](#)” post, a *sutta* gives only a short summary of the original *desanā*. It needs detailed explanations.

- It may be helpful to listen to the chanting of the *sutta* by the venerable *Thero*, as it gives the correct pronunciations, and also how to chant it without “too much dragging” as done commonly (which will diminish its effects).
- I could not get my normal audio player to work, so the new player below just has a play button. There is no volume control, so you need to adjust volume on your end.

[WebLink: Listen to the Dhammacakkappavattana Sutta](#)

2. *Sutta* chanting can be much more effective if one recites it the right way AND also understand the meaning at least to some extent.

- It is possible that even a single *sutta* can provide Dhamma knowledge that one needs to attain *magga phala*. However, it must be analyzed correctly in detail (*paṭimaddesa* version); see, “[Sutta – Introduction](#).” Dhammacakkappavattana Sutta is especially important since it lays out the “blueprint” of Buddha Dhamma.

The Framework of Buddha Dhamma

3. Of course, this was the first *sutta* delivered by the Buddha, to the five ascetics Koṇḍañña, Bhaddiya, Vappa, Mahānāma, and Assaji. Thus, it has the framework or the foundation of Buddha Dhamma.

- The name of the *sutta* comes from the combination of three terms: *Dhamma*, *Cakka*, and *Pavattana*. *Dhamma* here means the Buddha Dhamma or the true nature of existence. *Cakka* means “seeing” or “to see”. *Pavattana* means to “set in motion” AND to “maintain”.
- Therefore, the *sutta* describes the **way to “see” the true nature of existence with wisdom**, not with the physical eye. Only a Buddha can discover the true nature, but an average human can comprehend it, once explained.

- As in many Pāli terms, the word “*dhammacakkappavattana*” comes from the combination of three above words, with an additional “p” just before *pavattana*. As we discussed before, *pañcakkhandha* is the combination of *pañca* with *khandha* with an additional “k” in tying up the two words.
- Sometimes the *sutta* is also called the *Dhamma Cakka Pavattana Sutta*.

Opening the “Dhamma Eye” to the World

4. Let us address a common mistranslation of the name of the *sutta*. The most common is “Setting the Wheel of Dhamma in Motion”. Here *cakka* (pronounced “chakka”), is translated as “wheel”. But the name of the *sutta* becomes quite apparent when one looks at section 9.

- In section 9 (see the [text](#)), **dhammacakkhun udapādi** means “eye to see the Dhamma was born” for the ascetic Kondanna (*āyasmato Koṇḍañña*). There is no way to associate a “wheel” here.
- Note that the main summary of the *sutta* ends with section 8. The following sections provide the following information. One is that the ascetic Koṇḍañña attained the *Sotāpanna* stage. The second is a description of various types of *devā* and *brahmā* who attended the delivery of the *sutta*; see #6 below. A large number of them attained various stages of *Nibbāna*.

Four Stages of *Nibbāna*

5. This *sutta* lays out the basic structure of Buddha Dhamma. Then it explains how one attains release from this world of 31 realms via successively attaining four stages of *Nibbāna*. That happens by getting through “three rounds” of bondages (*tiparivaṭṭa*) to this world: “*tī*” means “three”, “*vatta*” means “*vataya*” in Sinhala or “circle” in English.

- In section 8, it says, “..imesu catūsu ariyasaccesu evaṃ **tiparivaṭṭaṃ dvādasākāraṃ yathābhutaṃ ñānadassanaṃ...**” Here “*catusu*” means “four” and “*ariyasaccesu*” of course, means the “Noble Truths.” By comprehending the Four Noble Truths, one can overcome the three rounds of bondage and fulfill the 12 factors (“*dvādasākāraṃ*.”) Those 12 factors will be discussed in “[Tiparivattaya and Twelve Types of Ñāna \(Knowledge\)](#).”

Three “Rounds” or “circular Walls” to Overcome

6. “*Tiparivaṭṭa*” means the three rounds of bondage. The first is to be released from the *apāyā* (four lowest realms), via the *Sotāpanna* stage, by removing the wrong views about existence in the 31 realms.

- In the second round, one overcomes the *kāma loka* (realms 5 through 11, which include the human realm and 6 *Deva* realms). That happens via two stages. A *Sakadāgāmī* will not be reborn with bodies subjected to diseases. Thus, there will be no more rebirths for a *Sakadāgāmī* in the five lowest realms (*apāyā* and the human realms). Then, at the *Anāgāmī* stage, *kāma rāga* and *paṭigha* go away and one is released from births anywhere in the *kāma loka*.
- In the third round, any linkage to anywhere in the 31 realms is removed. The mind becomes free of attachment to any trace of matter, and the *Arahant* stage is attained. See, “[What Are Rūpa? \(Relation to Nibbāna\)](#).”

The 31 Realms of Existence

6. Section 11 is long and takes a significant part of the *sutta*. That section names the 6 *deva* realms and 15 out of 16 *rupi Brahma* realms. Most of this section has been truncated in many published versions of the *sutta*. However, this section is important for a couple of reasons.

- First, it clearly shows that the Buddha indeed described a “wider world” than experienced by us, consisting of 31 realms; see, “[The Grand Unified Theory of Dhamma](#)” and “[31 Realms of Existence](#).”

- Second, it says that beings from many those realms were present when the Buddha delivered the *desanā* overnight (over many hours) to the five ascetics. Starting from the 6 *deva* realms, it lists 15 *rūpi brahma* realms (except the *asañña* realms, where beings have only a physical body and thus cannot even listen to a *desanā*). It is said that numerous *Devā* and *Brahmā* attained various stages of *Nibbāna*.
- Section 11 starts with “*Bhummānaṃ devānaṃ saddaṃ sutvā Cātummahārājikā devā sadda manussāvesuṃ...*” Here “*bhummanāṃ devanaṃ*” means “*bhumatta Deva*.” They are part of the *Cātummaharajika Deva* realm, but are located at the Earth’s surface with humans (even though we cannot see them). They first became aware of the *desanā* and notified their higher-lying main realm. Section 11 lists how the news progressively propagated to higher-lying realms and eventually *Devā* from all those 21 realms came to listen to the *desanā*. ”
- As you can see those realms match the names listed in the following post on the web (note that all of them are referred to as *devas* in the *sutta*, regardless of whether they belong to the 6 *Deva* realms or the *rūpi Brahma* realms): “[31 Realms of Existence](#).”
- Of course, only 5 humans (the five ascetics) were present. Any being in the lowest four realms cannot comprehend Dhamma. Also, the *Brahmā* in the 4 *arūpi* realms do not have ears to listen to. Thus section 11 lists 21 realms. Not listed are the four lowest realms, the *asañña* realm, and the four *arūpi Brahma* realms. They appear in many other *suttā*.

The *Sutta* Provides Only a Summary

7. As I mentioned above, the *sutta* gives only a brief outline of the *desanā*. It was delivered over many hours, and the *sutta* is just an outline of that delivery.

- The *sutta* starts off with the customary “*Evaṃ me sutam*” (thus I heard) uttered by Ven. Ānanda at the *Dhamma Sangayana* where these *suttā* were categorized into sections in the *Tipiṭaka*.
- Section 1 is about the two extremes to be avoided: **kāmasukhallikānuyogo** (excess sense pleasures) and **attakilamathānuyogo** (engage in useless activities that make one go through hardships).
- Note that both extremes are labeled “*anattasanhito*.” This means anyone who follows those two extremes are unaware of the “*anatta*” nature. Thus they have *saññā*, or perceptions, that will LEAD TO “*anatta*” or being helpless in the rebirth process.
- And they both are “*dukkho*” and “*anariyo*”: they will be subjected to suffering and thus they are not *Ariyā* or Noble Ones.
- In addition, the extreme of **kāmasukhallikānuyogo** is also labeled *hīno*, *gammo*, *pothujjaniko*. Here, “*hīno*” means lowly; *gammo* means “uneducated” or “crass”. “*Pothu*” means bark or the outer shell of a tree trunk (which is of no value,) and “*janika*” means to produce. Thus a “*pothujjaniko*” means a person who is engaged in useless and unproductive activities. The Buddha often used the term *pothujjaniko* (or *pothujjano*) to described a person who value and crave sense pleasures.

The Middle Path

8. Most people are in the **kāmasukhallikānuyogo** mode, even if not in extreme. In fact, one gets closer to “middle” as one progressively become a *Sotāpanna anugāmi*, *Sotāpanna*, *Sakadāgāmī*, *Anāgāmī*. Then the “true middle” found only at *Arahanthood*.

- Thus ***majjhimā paṭipadā*** has a deeper meaning than just “middle path”. One has to realize the dangers of “getting drunk” (“*majji*” or intoxicated with sense pleasures). Here, “*mā*” there means “getting release from”, just like in “*sammā*” means “*san*” + “*mā*”; see, “[What is ‘San?’ Meaning of Saṃsāra \(or Samsāra\)](#).”
- This is why the **kāmasukhallikānuyogo** mode has the additional “labels” of *hīno*, *gammo*, *pothujjaniko*. Anyone “intoxicated” with sensory pleasures is a *hīno*, *gammo*, *pothujjaniko*. That mindset can be changed only by comprehending the “..Dhamma that has never been known to the

world.." or “*.pubbe ananussutesu dhammesu...*” That phrase is repeated many times in sections 4 through 7 for a reason.

- This is the reason why one cannot comprehend this Dhamma in a conventional way. One has to realize the true nature of the world: *anicca, dukkha, anatta*; see, “[Buddha Dhamma – In a Chart.](#)”

More posts on the *sutta* at, “[Dhammacakkappavattana Sutta.](#)”

16.7.1. Dhammacakkappavattana Sutta Text

1

Evaṃ me sutāṃ:

Ekaṃ samayaṃ Bhagavā **Bārāṇasīyaṃ viharati Isipatane Migadāye**. Tatra kho Bhagavā **pancavaggiye bhikkhū** āmantesi—

1. Dve me’, bhikkhave, antā pabbajitena **na sevitabbā** :

Katame dve:

i. Yo cāyaṃ kāmesu **kāmasukhallikānuyogo** —hīno, gammo, pothujjaniko, anariyo.

anattasanhito

ii. Yo cāyaṃ **attakilamathānuyogo** —dukkho, anariyo **anattasanhito** ,

ete te, bhikkhave, ubho ante anupagamma **majjhimā paṭipadā** Tathāgatena abhisambuddhā cakkhukaraṇī, ñāṇakaraṇī, upasamāya, abhiññāya, sambodhāya, nibbānāya sanvaṭṭati.

2. Katama ca sā, bhikkhave, **majjhimā paṭipadā** Tathāgatena

abhisambuddhā—cakkhukaraṇī ñāṇakaraṇī, upasamāya, abhiññāya, sambodhāya, nibbānāya sanvaṭṭati?

Ayam’eva **ariyo aṭṭhaṅgiko maggo** —seyyathidan:— Sammā diṭṭhi, sammā saṅkappo, sammā vācā, sammā kammanto, sammā ājīvo, sammā vāyāmo, sammā satī, sammā samādhi.

Ayan kho sā, bhikkhave, **majjhimā paṭipadā** Tathāgatena

abhisambuddhā—cakkhukaraṇī, ñāṇakaraṇī, upasamāya, abhiññāya, sambodhāya, nibbānāya sanvaṭṭati.

3. Idan kho pana, bhikkhave, dukkhan ariya saccan: — Jāti’pi dukkhā, jarā’pi dukkhā, vyādhi’pi dukkho, maraṇam’pi dukkhan, appiyehi sampayogo dukkho, piyehi vippayogo dukkho, yamp’icchan na labhati tam’pi dukkhan, saṅkhittena pañcupadānakkhandhā dukkhā.

Idan kho pana, bhikkhave, **dukkhasamudayan ariya saccan:** Yāyan taṇhā

ponobhavikā nandirāgasahagatā tatrataṭṭhābhīnandinī—seyyathidan:— kāmataṇhā, bhavataṇhā, vibhavataṇhā.

Idan kho pana, bhikkhave, **dukkhanirodhan ariya saccan**: Yo tassā yeva taṇhāya asesavirāgaṇirodho, chāgo, paṭinissaggo, mutti, anālayo.

Idan kho pana, bhikkhave, **dukkhanirodhagāminī paṭipadā ariya saccan**: — Ayameva ariyo aṭṭhaṅgiko maggo—seyyathidan:—sammā diṭṭhi, sammā saṅkappo, sammā vācā, sammā kammanto, sammā ājīvo, sammā vāyāmo, sammā sati, sammā samādhi.

4. (i) **Idan dukkhan ariyasaccan'ti me**, bhikkhave, pubbe ananussutesu dhammesu cakkhun udapādi, ñāṇan udapādi, paññā udapādi, vijjā udapādi, āloko udapādi.

(ii) Tan kho pan'idan dukkhan ariyasaccan **pariññeyyan'ti me**, bhikkhave, pubbe ananussutesu dhammesu cakkhun udapādi, ñāṇan udapādi, paññā, udapādi, vijjā udapādi, āloko udapādi.

(iii) Tan kho pan'idaṃ dukkhan ariyasaccan **pariññātan'ti me**, bhikkhave, pubbe ananussutesu dhammesu cakkhun udapādi, ñāṇan udapādi, paññā udapādi, vijjā udapādi, āloko udapādi.

5. (i) **Idan dukkhasamudayan ariyasaccan'ti me**, bhikkhave, pubbe ananussutesu dhammesu cakkhun udapādi, ñāṇan udapādi, paññā udapādi, vijjā udapādi, āloko udapādi.

(ii) Tan kho pan'idan dukkhasamudayan ariya saccan **pahātabban'ti me**, bhikkhave, pubbe ananussutesu dhammesu cakkhun udapādi, ñāṇan udapādi, paññā udapādi, vijjā udapādi, āloko udapādi.

(iii) Tan kho pan'idaṃ, dukkhasamudayan ariyasaccan **pahīnan'ti me**, bhikkhave, pubbe ananussutesu dhammesu cakkhun udapādi, ñāṇan udapādi, paññā udapādi, vijjā udapādi, āloko udapādi.

6. (i) **Idaṃ dukkhanirodhan ariyasaccan'ti me**, bhikkhave, pubbe ananussutesu dhammesu cakkhun udapādi, ñāṇan udapādi, paññā udapādi, vijjā udapādi, āloko udapādi.

(ii) Tan kho pan'idan dukkhanirodhan ariyasaccan **sacchikātabban'ti me**, bhikkhave, pubbe ananussutesu dhammesu cakkhun udapādi, ñāṇan udapādi, paññā udapādi, vijjā udapādi, āloko udapādi.

(iii) Tan kho pan'idan dukkhanirodhan ariyasaccan **sacchikatan'ti me**, bhikkhave, pubbe ananussutesu dhammesu cakkhun udapādi, ñāṇan udapādi, paññā udapādi, vijjā udapādi, āloko udapādi.

7. (i) **Idaṃ dukkha nirodhagāminī paṭipadā ariyasaccan'ti me**, bhikkhave, pubbe ananussutesu dhammesu cakkhun udapādi, ñāṇan udapādi, paññā udapādi, vijjā udapādi, āloko udapādi.

End of Dhammacakkappavattana Sutta

16.7.2 Essence of Buddhism – In the First Sutta

October 23, 2018; revised May 4, 2020

Introduction

1. In the very first discourse that he delivered, *Dhammacakkappavattana Sutta*, the Buddha laid out the “foundational aspects” or the essence of Buddha Dhamma.

- These days, there is some discussion about what is meant by *Nibbāna*. In particular, “secular Buddhists” who do not believe in rebirth try to provide their interpretations. But as we will discuss below, Buddha’s position is crystal clear from this *sutta*.
- Some people have doubts about the existence of beings in realms other than the human and animal realms, and whether life exists outside the Solar system, i.e., the Earth. This *sutta* clarifies both, as we will see below.
- I will point out several such vital aspects below.

A *Sutta* Is a Highly Condensed Summary

2. Some people think that the Buddha actually recited each *sutta* (as it appears in the *Tipiṭaka*) when delivering a discourse. That could be the reason that *suttā* are translated word-by-word by most people today. But that is far from the truth.

- For example, *Dhammacakkappavattana Sutta* was delivered to the five ascetics over several days. See, “[The Life of the Buddha](#)” by Bhikkhu Nānamoli.”
- Only Ven. Kondañña attained the *Sotāpanna* stage during the first night. **Then the material was discussed for several days.** The other four ascetics attained the *Sotāpanna* stage over several days.
- The above book contains many passages from the *Vinaya Piṭaka* of the *Tipiṭaka*, which provide many details not available in the *suttā*. It also provides the time-line of major *suttā* and significant events.

3. Therefore, the Buddha actually did not recite the *sutta* as it appears in the *Tipiṭaka*. That recital would have been finished within 15 minutes!

- It will take many people a lifetime to fully understand what is embedded in this *sutta*.
- It appears that the Buddha himself summarized the material in each *sutta* in a short concise way to a limited number of verses that were suitable for oral transmission (easy to remember); see, “[Sutta – Introduction](#).”
- We must remember that all the *suttā* in the *Tipiṭaka* were transmitted down orally by many generations. *Tipiṭaka* was written down about 500 years after the *Parinibbāna* of the Buddha. See, “[Preservation of the Dhamma](#).”

A *Sutta* Needs to be Explained in Detail

4. It is only a short summaries of a *suttā* that is in the *Tipiṭaka*. Many of the *suttā* are highly condensed and need to be discussed in detail. **It is not reasonable to assume that one could understand the *sutta* by just reading a word-by-word translation of a few pages of the *sutta*.**

- However, that is what happens these days. *Suttā* are translated word-by-word into English. This is a very bad practice. It is no different from just reciting a *sutta*!
- Some of these deep *suttā* need to be explained in detail. Even a single key verse needs to be explained in detail.

First Noble Truth in Just a Single Verse!

5. Now, let us look at how the Buddha summarized the First Noble Truth about suffering in that *sutta*.

Idaṃ kho pana, bhikkhave, dukkhaṃ ariya saccam:

jātipi dukkhā, jarāpi dukkhā, byādhipi dukkho, maraṇampi dukkhāṃ, appiyehi sampayogo dukkho, piyehi vippayogo dukkho, yampicchaṃ na labhati tampi dukkhāṃ—saṅkhittena pañcupādānakkhandhā dukkhā. [*khitta* :[pp. of khipati] thrown; overthrown; casted away; upset.]

Translated: *Bhikkhus*, What is the Noble Truth of Suffering?

“**[@1]Birth is suffering, getting old is suffering, getting sick is suffering, dying is suffering. [@2] Having to associate with things that one does not like is suffering and having to separate from those things one likes is suffering. [@3]If one does not get what one likes, that is suffering – [@4]**– in brief, the origin of suffering is the **craving** for the five aggregates of *rūpa, vedanā, saññā, saṅkhāra, viññāṇa* (*pañcupādānakkhandha*). All we crave for in this world are represented by *pañcupādānakkhandha* (*upādāna* or craving for the *pañcakkhandha*).

- There are four sections in that verse. I have highlighted alternating sections in order to explain each of the four below.

The Key Aspects of Suffering

6. The first part **[@1]** in bold indicates what we consider to be forms of suffering: Birth, getting old, getting sick, and dying.

- Each and every birth ends up in death. This is why each death is included in suffering.
- We also DO NOT LIKE to get old, to get sick, and we definitely do not like to die. If we have to experience any of them, that is suffering.
- What we WOULD LIKE is to stay young, not get old, not get sick, and not to die ever. If we can have those conditions fulfilled we will be forever happy.
- Therefore, it is clear that the suffering that the Buddha focused on in his first discourse was associated with the rebirth process.

Root Cause of Suffering – Not Getting What One Desires

7. **That is what the second part [@2] of the verse in #5 (not in bold) says:** Having to associate with things that one does not like is suffering and having to separate from those things one likes is suffering.

- If we can be born instantaneously at a young age (say, 15 to 25 years), and stay at that age without getting old or sick and never die, that is what we WOULD LIKE. But no matter how much we would like to associate with such a life, we will NEVER get it.
- Instead, we have to suffer at birth when getting old, when getting sick, and finally when dying. There is no way to dissociate from those four things that we do not like.
- But that is not the end of it. We will keep doing this over and over in the rebirth cycle. Furthermore, things can get much worse in the lowest four realms, including the animal realm.
- As long as we are trapped in the rebirth process, we will have to give up what we like most of the time, especially at death. Furthermore, we are forced to be associated with those four things that we do not like. Those are rebirth in undesired realms, getting old, getting sick, and dying.

8. Both those parts are combined into one succinct statement in the third part **[@3]** of the verse in #5 (in bold): “*yampiccaṃ na labhati tampi dukkhaṃ.*”

“*Yampiccaṃ na labhati tampi dukkhaṃ*” is actually a shortened version of the verse (that rhymes).

The full sentence is “*Yaṃ pi iccaṃ na labhati taṃ pi dukkhaṃ.*”

- “*Yaṃ pi iccaṃ*” means “whatever is **liked or craved** for”. “*Na labhati*” means “not getting”. “*taṃ pi dukkhaṃ*” means “that leads to suffering”.
- **Therefore, that verse simply says: “If one does not get what one craves or likes, that leads to suffering.”**
- **This is a more general statement and applies in any situation.** We can see that in our daily lives. We like to hang out with people we like and it is a stress to be with people that we do not like.

- Furthermore, the more one craves something, the more suffering one will endure at the end. But this requires a lot of discussions.

***Yampicchaṃ na labhati tampi dukkhaṃ* – Most Important Verse**

9. “*Yampiccaṃ nalabhati tampi dukkhaṃ*” is the most important verse in the first *sutta* delivered by the Buddha, *Dhammacakkappavattana Sutta*. It provides the key to understanding the Buddha’s message and led to the attaining of the *Sotāpanna* stage by the five ascetics.

- It should be noted that *icca* and *iccha* (ඉච්චි and ඉච්චිඡ in Sinhala) are used interchangeably in the *Tipiṭaka* under different *suttā*. The word “*iccha*” with the emphasis on the last syllable indicate “strong *icca*” or “strong attachment”.
- The word “*icca*” (liking) is closely related to “*taṇhā*” (getting attached). *Taṇhā* happens automatically because of *icca*.
- Not getting what one desires or craves is the opposite of “*icca*” or “*na icca*” or “*anicca*.” This is the same way that “*na āgami*” becomes “*Anāgāmi*” (“*na āgami*” means “not coming back”; but in the context of *Anāgāmi*, it means “not coming back to *kāma loka* or the lowest 11 realms. **Both these are examples of Pāli sandhi rules (connecting two words together).**
- The intrinsic nature of this world is “*anicca*,” i.e., we will never get what we crave for, and thus at the end (at least at death) we will leave all this behind and suffer, that is *dukkha*.
- There is another (and related) way to explain *anicca* as the opposite of “*nicca*”; see, “[Three Marks of Existence – English Discourses.](#)”

The Need for Detailed Explanations

10. As you can see, one single verse itself takes a lot of explaining. Even the above explanation addresses only the four major types of suffering in the rebirth process.

- One can go into much more detail. For example, suffering within a given life is discussed in, “[Does the First Noble Truth Describe only Suffering?](#),” which is taking a different perspective than in #6 above.
- For example, we know that during a life there is so much suffering too. Suffering during a human life may be much less compared to that during an animal life.
- Suffering in other three lower realms would be much higher than that in the animal realm.
- The need for detailed explanations is further clarified in, “[Satipatthāna Sutta – Structure.](#)”

“*Samkhittena Pañcupādānakkhandhā Dukkhā*”

11. The last part [[@4](#)] of the verse in #5 (not in bold), “*saṃkhittena pañcupādānakkhandhā dukkhā*” will take much more explaining. One needs to understand the five *khandhas* (*rūpa*, *vedanā*, *saññā*, *saṅkhāra*, *viññāṇa*) first, in order to even begin to understand this part.

- Note that *upādāna* is related closely to craving or *icca*. *Upādāna* means “pulling closer in one’s mind due to craving (*iccā*)”.
- The more one does *upādāna* with *vacī saṅkhāra* (because of one’s *iccā*), one’s *taṇhā* grows. Those three words have slightly different meanings, but are closely related.
- Until one sees this *anicca*, *dukkha*, *anatta* nature of this world, one will be trapped in the suffering-filled rebirth process.

Word-by-Word Translations Can be Dangerous

12. The other key point: Translating some key verses word-by-word can lead to bad unintended consequences. This is because many key Pāli words CANNOT be translated as a single English words. For example, we recently discussed why the word *rūpakkhanda* should not be translated as “form aggregate.” See, [“Difference Between Rūpa and Rūpakkhanda.”](#)

- The five ascetics were able to attain the *Sotāpanna* stage by understanding the detailed description of the material embedded in this *sutta*. That holds true today.
By the way, there is nothing in this *sutta* that says impermanence leads to suffering. The key words are *icca* and *anicca*.
- *Anicca* is not the same as Sanskrit “*anitya*” (which does mean impermanence), which in Pāli is “*aniyata*” or “*addhuvam*.” None of those three words appear in this *sutta*. In fact, I don’t think the word “*anicca*” appears directly in this *sutta* either; of course, it appears in many other *suttā* in the same context. **But the word “*anitya*” does not appear in a single *sutta* in the *Tipiṭaka*;** “*aniyata*” and “*addhuvam*” appear in a few *suttā* to actually indicate impermanence in other contexts. For example, “*jīvitam aniyatam, maraṇam niyatam.*”
- The root cause of suffering is explained with the word “*icca*” in this *sutta*, as I explained above.

Rebirth Process Is Irrefutable in Buddha Dhamma

13. After explaining the four Noble Truths (we briefly discussed just the First Noble Truth), the Buddha says in the middle of the *sutta*: “*Ñāṇaṅca pana me dassanaṃ udapādi: ‘akuppā me vimutti, ayamantimā jāti, natthi dāni punabbhavo’*”*ti.*”

Translated: “The knowledge and vision arose in me: ‘unshakable is the liberation of my mind. **This is my last birth.** There is no more renewed existence.’”

- That statement says the outcome of the discovery of that knowledge. The solution to future suffering. **It is the ending of the rebirth process. This will stop those four main causes of suffering discussed in #5 and #6.**
- So, my point is that this statement by itself confirm the following facts: (i) The Buddha was focused on stopping suffering in future lives. (Some of which in lower realms could be unimaginably harsh.) (ii) There is no “safe” rebirth anywhere in this world, whether it is a human, *Deva*, or a *Brahma* realm.

The 31 Realms of Existence

14. In fact, in the latter part of the *sutta*, the Buddha has listed most of those other realms that are in this world. “*Pavattite ca pana bhagavatā dhammacakke bhummā devā saddamanussāvesuṃ: ‘etaṃ bhagavatā bārāṇasiyaṃ isipatane miḡadāye anuttaraṃ dhammacakkaṃ pavattitaṃ appaṭivattiyaṃ samaṇena vā brāhmaṇena vā devena vā mārena vā brahmunā vā kenaci vā lokasmin’*”*ti.* *Bhummānaṃ devānaṃ saddaṃ sutvā cātumahārājikā devā...*”

- Detail at: [“Dhammacakkappavattana Sutta – Introduction.”](#)
- All those realms lie above the human realm. *Devā* and *Brahmā* from those realms had come there to listen to the discourse. While only five humans attained *magga phala* within those few days, millions of beings from other realms from our world (associated with the Earth) — as well as from 10,000 other worlds — attained *magga phala*.
- Of course, this *sutta* does not list the four lower realms. They are discussed in other *suttā*. The Buddha was just listing the names of the higher realms from which beings were present there to listen to his first Dhamma discourse.
- The 31 realms are listed at [“31 Realms of Existence.”](#)

Therefore, we can see that there is a lot of information embedded in this *sutta*. Further analysis in this subsection: “[Dhammacakkappavattana Sutta.](#)”

16.7.3 Majjhimā Paṭipadā – Way to Relinquish Attachments to this World

January 22, 2016; Revised January 23, 2016; July 19, 2020

Please read the first post on the *Dhammacakkappavattana Sutta* (also called *Dhamma Cakka Pavattana Sutta*) before reading this second post: “[Dhammacakkappavattana Sutta – Introduction.](#)”

1. In almost all English translations, *majjhimā paṭipadā* is termed the “middle way of the Buddha”. This gives the impression that all one needs to do is to avoid extreme sense pleasures and extreme hardships for the body. In general, that is true but the Buddha meant something deeper. One should live such a simple and comfortable life but should start seeing the dangers of craving for sense pleasures.

- Many Pāli words have two meanings: conventional (mundane) and transcendental (*lokuttara*). We saw that the Noble Eightfold Path can be interpreted either way: “[Buddha Dhamma – In a Chart](#)” or “[Mahā Cattārīsaka Sutta \(Discourse on the Great Forty\)](#).” As I explained in “[Sutta - Introduction](#),” I believe this was a strategy by the Buddha to facilitate at least the conventional transmission of the *Tipiṭaka* during times when *Ariyā* (Noble Persons) are few in number to explain the *lokuttara* meanings of key Pāli words.
- Thus *majjhimā paṭipadā* is the “middle path” in the conventional sense, and it is a good first step. But the *lokuttara* meaning is much deeper, and this *sutta* lays out the basic structure of how to explain the deeper meaning. Throughout his 45 years of his ministry, Buddha explained the details in various ways.
- One *lokuttara* (or deeper/transcendental) meaning of *majjhimā paṭipadā* is to “avoid being intoxicated by sense pleasures.” See, “[Need to Experience Suffering in Order to Understand it?](#)” Here we will examine it in detail to show that it is a gradual process. High levels of intoxication are removed via removing *micchā diṭṭhi* when attaining the *Sotāpanna* stage. After that, lower and lower intoxication levels removed as one gains more wisdom in steps.
- We will follow the text of the *sutta* in this pdf: [Dhammacakkappavattana Sutta-3](#)

2. First, I want to emphasize what is meant by “relinquish” in the title. It means “voluntarily giving up” and NOT to give up attachments to this world by sheer will or force. This is something most people do not comprehend either. **The mind will not give up things that it considers pleasurable unless there is a good reason.**

- Those reasons are what Buddha Dhamma is all about. One becomes a *Sotāpanna* by truly comprehending why it is not only unfruitful, but also DANGEROUS to attach to things that one perceives to be pleasurable. But even a *Sotāpanna* only has “seen” the truth of the “*anicca* nature” of this world of 31 realms.
- The actual “giving up” comes next, when one slowly start “giving up” voluntarily and progress through the next two stages of *Sakadāgāmī* and *Anāgāmī*, and eventually gives up all attachments at the *Arahant* stage.
- Thus one does not need to worry about giving up ANYTHING until reaching the *Sotāpanna* stage. Giving up happens automatically when one realizes the true nature of this world.

3. In the first verse of section 2 of the above pdf, it says, “*Bhikkhus*, what is the *majjhimā paṭipadā* declared by the *Tathāgatha* (Buddha) that leads to the vision, wisdom, calming down, special knowledge (*abhiññā*), comprehend “*san*” (*sambodhi*), and to *Nibbāna*?”

- “It is the Noble Eightfold Path with *Sammā diṭṭhi*, *sammā saṅkappa*, *sammā vaca*, *sammā kammanta*, *sammā ājīva*, *sammā vāyāma*, *sammā sati*, *sammā samādhi*.”
- In the third verse, he affirms that it is indeed the Path or the *majjhimā paṭipadā*.

4. In section 3, the Four Noble Truths are **briefly stated** (*uddesa*; see, “[Sutta -Introduction](#)”), and each can be described in detail filling thousands of books, depending on the level of detail.

- First, suffering is: “*Jāti’pi dukkhā, jarā’pi dukkhā,....*”. This verse we have already analyzed in “[Does the First Noble Truth Describe only Suffering?](#),” among others.
- The next verse succinctly states the causes for suffering (*dukkha samudhaya*): “the root cause is *taṇhā*. The tendency to attach to various things (*yayaṃ taṇhā*), make *bhava* (*ponobbhavikā*) through valuing such things (*nandirāga*) and giving priority to them (*abhinandini*). These things are: craving for sense pleasures (*kāma taṇhā*), *bhava taṇhā*, and *vibhava taṇhā*.” The three types of *taṇhā* are discussed at: “[Kāma Tanhā, Bhava Tanhā, Vibhava Tanhā](#).”
- The third verse is the truth about how to eliminate those causes: “By removing *taṇhā* without a trace (*veva taṇhāya asesavirāga-nirodho*), by giving without expecting anything back (*cāgo*), by cutting off all bonds (*paṭinissaggo*), by becoming un-entangled (*mutti*), by removing all attachments (*anālayo*)”.
- And the fourth is the way to do that, i.e., via the Noble Eightfold Path that was stated in #3 above.
- There are other posts that further describe the above four Noble Truths in more detail. You can use the “Search” box on top right or scan the “[Pure Dhamma – Sitemap](#)” to locate relevant posts. There are so many ways to present the material.

5. Sections 4 through 7 describe how the Buddha attained the Buddhahood via comprehending *tiparivaṭṭa* (three walls of bondage) that keep one trapped in the rebirth process. That process of generating new rebirths is described by *Paṭicca Samuppāda*. That has never been known to the world (except during the times of previous Buddhas): “.*pubbe ananussutesu dhammesu...*”.

- We discussed the term *tiparivaṭṭa* or the “three rounds of bondage” briefly in the previous post. We will discuss it in more detail in the next post.
- I would like to first discuss the term, “.*pubbe ananussutesu dhammesu cakkhuṃ udapādi, ñāṇaṃ udapādi, paññā udapādi, vijjā udapādi, āloko udapādi...*”.

6. When the Buddha attained the Buddhahood via comprehending this Dhamma that has never been known to the world, five types of special knowledge arose in him.

Those are *cakkhu*, *ñāṇa*, *paññā*, *vijjā*, and *āloka*.

- Here “*cakkhu*” is the “Dhamma eye”, the ability to “see” the true nature of this world. We can loosely translate *ñāṇa* and *paññā* as “knowledge” and “wisdom”.
- The next one is “*vijjā*” (the Sanskrit word is “*vidyā*”). This is the “ultimate science” about the world, what I called the “[Grand Unified Theory of Dhamma](#).” A Buddha is the greatest scientist that comes to the world very infrequently.
- *Simultaneously with the comprehension of vijjā, one is totally removed from “this material world” or “āloka” (“ā” + “loka”).* The word “*āloka*” has other meanings, including “light”, which we will discuss later.

7. Those five factors arise simultaneously in a Buddha upon attaining the Buddhahood, but all others attain them in stages. For a normal human being:

- “*Cakkhuṃ udapādi*” or “arising of the Dhamma eye” occurs upon attaining the *Sotāpanna* stage, i.e., *sammā diṭṭhi*.
- “*Nanaṃ udapādi*” takes place upon attaining the *Sakadāgāmī* stage.
- “*Paññā udapādi*” takes place upon attaining the *Anāgāmī* stage.
- “*Vijjā udapādi*” takes place upon attaining the *Arahant* stage, where “*aloko udapādi*” takes place simultaneously.

8. In section 9, it is stated, “..āyasmato Koṇḍaññaassa virajaṃ vītamalaṃ **dhammacakkhuṃ udapādi**—*yaṃ kiñci samudayadhammaṃ sabbaṃ taṃ nirodhadhamman’ti*”.

- Upon hearing this first *desanā*, the ascetic Koṇḍanna became a *Sotāpanna* and , “**dhamma cakkhuṃ udapādi**” or “Dhamma eye arose in him”.
- The next part of the verse, “*ya.m kiñci samudayadhamma.m sabba.m ta.m nirodhadhamman’ti*” states what that Dhamma eye grasped: “any Dhamma that gives rise to this world (*samudaya dhamma*), is a Dhamma that can be eliminated (i.e., it is a *nirodha dhamma*)”.
- Thus at the *Sotāpanna* stage, one can “see” how this “*nirodha*” is done. Actually doing it leads to the next stages *Nibbāna*, and eventually to the *Arahanthood*.
- One gets to the *Sotāpanna* stage (overcoming the first round of the *tiparivaṭṭa*) by comprehending the wider world view, and by seeing the fruitlessness of “high levels of intoxication” just through that understanding.

9. When a *Sotāpanna* acquires the second knowledge (“*Ñāṇaṃ udapādi*”), that is when he/she really “**STARTS to see the *anicca* nature a bit more by cutting through apparent pleasures of the world with the Dhamma eye**”. This process continues through the next phase “*Paññā udapādi*” when one is able to really see the adverse effects and the dangers of any sense pleasures and attains the *Anāgāmī* stage.

- Thus, as you can see, the actual “giving up” happens in a gradual and natural way. One does not need to, and one should not try to, give up sense pleasures by sheer will power (except of course those acts that are called “*pāpa kamma*” i.e., that lead to the suffering of other beings).
- For example, one does not need to feel guilty about eating a nice meal, having a nice house to live in, etc. Those are the results of previous good *kamma vipāka*. But what one needs to do is to reduce the CRAVING for such things by comprehending the *anicca* nature of this world, i.e., by learning Dhamma and by contemplating. One would realize that cravings/desires for worldly things are fruitless.

10. I can give a simple example from my experience. A few years ago, my wife and I noticed that we had not watched television for many weeks. We decided it was pointless to keep paying for the cable service and canceled the service (We still read the news on the internet). Thus we had not deliberately stopped watching television. We had gradually stopped watching even without us noticing it for several weeks. Of course, there have been more changes like that since then. I just wanted to mention this to emphasize that Buddha Dhamma is not just a theory. It can be experienced: “..*sandiṭṭhiko, akāliko, ehipassiko*...”.

- Many of you may wonder why is it a good thing to stop watching TV (“that is something I enjoy after a hard day at work”). But that is a perception we all get used to. I remember being very agitated at night watching TV coverage of the 2008 US presidential election season. It is more enjoyable to listen to or read Dhamma.
- **Please note that I am not saying that one needs to stop watching TV to attain *magga phala* or that one who has attained the *Sotāpanna* stage would necessarily not watch TV.** There was a *Sotāpanna* (named Sarakāni) during the time of the Buddha who could not give up his drinking habit as I mentioned in another post. Only at the *Anāgāmī stage that one gives up kāma rāga (sense pleasures) as mentioned above*. But each person could reduce or even give up some sense pleasures upon attaining the *Sotāpanna* stage, depending on one’s personality (*gati*).

11. I also would like to point out that one should not restrict one’s time just to learn Dhamma. **One should also engage in meritorious deeds and make an homage to the Buddha, Dhamma, Saṅgha as well. Those activities help get the mind to a state suitable to receive and comprehend Dhamma.**

- This is a subtle aspect that was discussed in the “[Anantara and Samanantara Paccaya](#),” and a few other posts. Just like a seed needs suitable conditions (soil, water, sunlight, etc) to germinate and grow, one needs to make necessary conditions for the mind to be receptive to deep and subtle concepts by doing meritorious deeds that make one’s mind joyful and calm. Engaging in giving (*dāna*) and living a moral life (*sīla*) help enormously with *Bhāvanā* (contemplation and comprehension).

16.7.4 Tiparivaṭṭa and Twelve Types of Ñāṇa (Knowledge)

January 29, 2016; revised January 7, 2019; February 22, 2020

Introduction

1. We discussed the *tiparivaṭṭa* (**three rounds of bondage**) briefly in the post "[Dhammacakkappavattana Sutta – Introduction](#)." Here we will discuss it in a bit more depth.

- We remind ourselves that the Buddha delivered this *sutta* to the five ascetics right after attaining the *Buddhahood*. The five ascetics first refused to believe that the ascetic Siddhartha had attained the *Buddhahood*. This and other details of Buddha's life described in the *Vinaya Piṭaka*, "[Going forth \(Pabbajjā\)](#)." This particular account is in the sub-section, "ON THE GROUP OF FIVE."
- According to that account, the five ascetics first refused to believe that ascetic Gotama had attained the *Buddhahood*. They did not believe Buddha's words!
- Some people ask me whether there is a way to know some other person has attained the *Sotāpanna* stage. Those five ascetics, who were with the ascetic Siddhartha for five years, could not even believe Buddha's own words. How can any of us figure out whether another person has attained *magga phala*? Unless that person declares it, there is no way to know. Even then, there is no way to verify it. Now let us get back to the *sutta*.

Four Noble Truths Comprehended in Three Rounds (*Tiparivaṭṭa*)

2. At each round of the three rounds (*tiparivaṭṭa*), three pieces of knowledge about the Four Noble Truths arose in the Buddha. Those 12 pieces of knowledge stated in section 4 through 7 of the *sutta*.

- We will follow the text of the *sutta* (you may want to print it out so that you can refer to each section): [Dhammacakkappavattana Sutta Text](#).
- Of course the Buddha attained all 12 types of knowledges together upon attaining the *Buddhahood*, but we (normal humans) achieve them in four stages of *Sotāpanna*, *Sakadāgāmi*, *Anāgāmi*, and *Arahant*.

The Three Rounds or Barriers

3. There are three rounds or barriers (*ti + parivaṭṭa*) to overcome: (1) The *apāyā* or the four lowest realms, (2) *kāma loka* (human realm and the six *deva* realms), (3) *rūpa loka* (16 *rūpi brahma* realms) and *arūpa loka* (4 *arūpi brahma* realms).

- At each round, one comprehends the Four Noble Truths to a certain extent.
- For example, when one becomes a *Sotāpanna* and overcomes the first round (barrier), he/she understands **all Four Noble truths** to some extent. When one becomes an *Anāgāmi* by overcoming the second round, he/she has understood **all Four Noble truths** to a higher level, and it is complete at the *Arahant* stage.
- The Four Noble Truths are discussed at, "[Four Noble Truths – Suffering and Its Elimination](#)."

First Noble Truth in Three Rounds

4. First is the knowledge about the suffering in the wider world of 31 realms, as stated in verse 4(i) (*Idan dukkhan ariyasaccan'ti me*). This Dhamma had never been known to the world. That is what a average human comprehends when he/she attains the *Sotāpanna* stage, and overcomes the first round of bondage in the three rounds (*tiparivaṭṭa*), i.e., becomes free of rebirths in the *apāyā*.

- Then that knowledge becomes even more evident when one starts to lose attachments to this world; verse 4(ii). That is the second round of *tiparivaṭṭa* overcome at the *Anāgāmi* stage. The keyword is

“*pariññeyyan’ti*,” which means “seeing with less attachment to sense cravings” or “*pirisindha*” (“*piri*” or liking + “*sindha*” or removed in Sinhala). Thus an *Anāgāmī* will never be reborn in the *kāma loka* (i.e., overcome the second round of *tiparivaṭṭa*). [*pariññeyya*: [nt.] what should be known accurately]

- The last round is when “seeing” is done with all cravings removed, as stated by “*pariññātan’ti*.” This happens to a human when attaining the *Arahant* stage. But here it is stated, “*pariññātan’ti me*,” as stated by the Buddha, where “*me*” means “I” in verse 4(ii). That will become more clear in section 8. [*pariññāta*: [pp. of *parijānāti*] known for certain; comprehended; known accurately.]
- These three types of knowledge are about the First Noble Truth, *dukkha sacca*.

Second Noble Truth in Three Rounds

5. Section 5 describes three pieces of knowledge for Second Noble Truth, the causes for suffering (*dukkha samudaya*). The Four Noble Truths are succinctly stated in Section 3.

- At the second round of the *tiparivaṭṭa* the **root cause** for suffering identified as “*taṇhā*”; verse 5(i): *Idan dukkhasamudayan ariyasaccan’ti me*. This is the knowledge a *Sotāpanna* acquires simultaneously with round 1 for *dukkha sacca*. See, “[Tanhā – How We Attach Via Greed, Hate, and Ignorance](#)” for a discussion on *taṇhā*.
- In the second round, one realizes that cause for suffering is attachments to all sensory pleasures (*kāma rāga*): “*pahātabban’ti*,” where “*pahā*” means “to remove”. For an average human, this knowledge comes in two stages of *Sakadāgāmī* and *Anāgāmī*; verse 5(ii). [*pahātabba* : which must be discarded, to be eliminated.]
- In the third round, at the *Arahant* stage, one realizes without any doubt that any *taṇhā* is a cause for suffering: “*pahīnan’ti*”; verse 5(iii). [*pahīna* : [pp. of *pajahati*] eliminated; abandoned; destroyed.]
- These three types of knowledge are about the Second Noble Truth, *dukkha samudaya sacca*.

Third Noble Truth in Three Rounds

6. Section 6 describes the three pieces of knowledge for Third Noble Truth, stopping causes for suffering (*dukkha nirodhaya*).

- At the first round of the *tiparivaṭṭa* one realizes that *taṇhā* must be removed to end the suffering; *Idaṃ dukkhanirodhan ariyasaccan’ti me*. As stated in section 3: “..*Yo tassā yeva taṇhāya asesa-virāga-nirodho, chāgo, paṭinissaggo, mutti, anālayo...*” This was discussed in the previous post, “[Majjima Patipada – Way to Relinquish Attachments to this World](#).” That realization sets in at preliminary level in the first round (i.e., *Sotāpanna* stage.) verse 6(i).
- In the second round, the need to lose all attachments to sensory pleasures (*kāma rāga*) is realized: “*sacchikātabban’ti*.” For a normal human, this knowledge comes in two stages of *Sakadāgāmī* and *Anāgāmī*, when one actually starts seeing the perils of *kāma rāga*; verse 6(ii). [*sacchikātabba*: [pt. p. of *sacchikaroti*] realising.]
- In the third round, one realizes without any doubt that any type of *taṇhā* (including *bhava taṇhā* and *vibhava taṇhā*) must be removed: “*sacchikatan’ti*”; verse 6(iii). [*sacchikata*: [pp. of *sacchikaroti*] realised; experienced for oneself.]

Fourth Noble Truth in Three Rounds

7. The way to accomplish this *nirodhaya* comes in three rounds, as stated in section 7.

- The Noble Eightfold Path as the way to liberation is first grasped in the first round. For a normal human, this knowledge is gained when attaining the *Sotāpanna* stage: *Idaṃ dukkha nirodhagāmini paṭipadā ariyasaccan’ti me*. One “sees” the Path through the “Dhamma eye”: verse 7(i). An enormous amount of

defilements disappear just with this “clear vision”. [*dukkha nirodhagāmini paṭipadā = magga*] [*nirodha*: [m.] extinction; cessation; the final truth.] [*paṭipadā*, (f.) [fr. paṭi+pad] means of reaching a goal or destination, path, way, means, method, mode of progress.]

- Then in the second round, it is realized that one must cultivate the Noble Eightfold Path (*bhāvanā*) to remove the root causes (verse 7(ii)): *bhāvetabban'ti* [*bhāvetabba*: [pt. p. of bhāveti] should be cultivated.]
- In the third round, it is realized that one has completed that task, and there is nothing else to be done (verse 7(iii)): *bhāvitān'ti* [*bhāvita*: [pp. of bhāveti] increased; cultivated; developed.]
- However, as I mentioned above, all 12 types of knowledge arose in the Buddha simultaneously, upon attaining the Buddhahood.

Declaring the Attainment of the Buddhahood

8. In section 8, the Buddha says: “I had NOT previously declared the Buddhahood since I had not attained all 12 types of knowledge...” Here, “*na suvisuddham ahoṣi*” means “had **not** accomplished it completely”.

- In the next phrase, the Buddha declares that he has now done that (*suvisuddham ahoṣi*), and that he is declaring to the “.. world of humans, *Devā, Brahmā,..*” that he has attained the Buddhahood.
- In the next verse (Section 9,) he declares: “the vision arose in me (*dassanaṃ udapādi*) , unmovable calm mindset arose in me (*akuppā me vimutti*), this is my last birth (*ayaṃantimā jāti*), and there will be no more *bhava* for me (*natthi' dāni punabbhavo*).”
- Lastly: “*Idamavoca Bhagavā*”: “Thus declared the Buddha.”

The Last Long Section

9. Section 10 stats that one of the five ascetics, Koṇḍañña, attained the *Sotāpanna* stage at the conclusion of the *desanā*. This section was discussed in the previous post, “[Majjima Patipada – Way to Relinquish Attachments to this World.](#)”

- Then those *Devā* and *Brahmā* who attended the *desanā* identified in a repetitive manner; see, “[Dhammacakkappavattana Sutta – Introduction.](#)”
- Note that this *sutta* mentions many of the 31 realms. Large numbers of *Devā* and *Brahmā* from most of those realms were present to hear the first discourse. I have marked in blue those different realms.

Path to Be Followed Sequentially

10. **The important thing to understand is that one needs to go through these stages sequentially** (only a Buddha goes through them at once). Some people try to get rid of “the perception of a self” even before the *Sotāpanna* stage. A “self” is going to be there until any kind of “*gati*” are still there. With the “*apāya gati*” removed at the *Sotāpanna* stage, one overcomes the first stage. “*Kāma gati*” reduce at the *Sakadāgāmī* stage, and eliminated at the *Anāgāmī* stage, thus overcoming the second round of bondage.

- The two *saṃyojanā* of *māna* and *uddhacca* go away only at the *Arahant* stage together with the other three *saṃyojanā* of *rūpa rāga*, *arūpa rāga*, and *avijjā*. *Māna* is the perception, “I need to be treated well because I am superior in some way.” The tendency to get at least irritated when not respected is *uddhacca*.
- However, the levels of *māna*, *uddhacca*, *avijjā* that an *Anāgāmī* has, are at much reduced level. They are gradually decrease through various stages of *Nibbāna* and disappear at the *Arahant* stage.
- Thus the critical step is to understand the nature of the wider world of 31 realms and get through the first round of bondage. That releases one from rebirths in the *apāyā* where the dangers are the highest. The only way to do that is to learn and contemplate the true and pure Dhamma. **Relinquishing sense pleasures**

comes naturally after that. trying to give up sense pleasures forcefully before the *Sotāpanna* stage will only lead to frustration.

11. A normal human, no matter how intelligent, cannot grasp the dangers of existence in the wider world of 31 realms because of various forms of wrong views or *micchā diṭṭhi*. A Buddha discovers the existence of those realms and the unbearable suffering encountered (especially in the *apāyā*).

- Until one gets rid of the those wrong views and attain the *Sotāpanna* stage, it is impossible to “clearly see” the dangers of sense cravings.

***Suttā* Should Not Be Translated Word-by-Word**

12. That is why a *sutta* cannot be translated word by word. A *sutta*, states the key ideas or steps. The key ideas need detailed explanations. This *sutta*, even though delivered overnight, is summarized in a few pages.

- The Buddha must have described what we discussed here plus much more during the several hours of delivery of the *sutta*. In the next post, we will try to discuss some details making the connection to concepts that we have already discussed in other sections.
- As we have seen, the same holds for other *suttā* and for *Paṭicca Samuppāda*. Just listing the eleven steps in *Paṭicca Samuppāda* will have no benefit. The steps in *Paṭicca Samuppāda* vary according to each individual *Paṭicca Samuppāda* cycle of relevance (*akusala-mūla*, *kusala-mūla*, etc.) Yet, the steps are same.

16.7.5 Relinquishing Defilement via Three Rounds and Four Stages

February 4, 2016; revised September 12, 2019

***Tiparivattaya* – Three Rounds of Bondage to This World**

1. Here we will link the concepts like *tiparivattaya* in the *sutta* to other basic ideas that we have discussed in other sections throughout the site.

- I want to emphasize that “relinquish” means “giving up voluntarily, through acquired wisdom.”
- When one acquires wisdom, one realizes that defilement arise due to cravings for sense pleasures.
- The real danger is when cravings for sense pleasures lead to bad *kamma* (such as killing) that makes one eligible for the *apāyā*.

2. The Buddha gained all 12 types of knowledge at once in attaining the Buddhahood. However, an average human being will go through the *tiparivattaya* (or the three rounds of bondage) via four stages of *Nibbāna*. We can compare this to building a new complex structure.

- A *Sotāpanna* overcomes the **first round** by gaining the basic knowledge on the Four Noble Truths. Those are: what suffering is, the causes for suffering, stopping the causes from taking place, and the way to stop causes. It is seeing the plan to construct a building. All the details are in that blueprint.
- Let us continue with the analogy of constructing a building. The *Sakadāgāmi* stage is starting to build the building. With the basic structure finished, one is at the *Anāgāmi* stage. That overcomes the **second round**.
- When the building is all finished with the finer details, that is like attaining the *Arahant* stage. One has overcome the **third round**. There is nothing more to be done.

Sotāpanna Anugāmi

3. Even though the above analogy gives the basic idea, we need to examine it in more detail. It is the *Sotāpanna Anugāmi* (one who is striving to become a *Sotāpanna*) who does the bulk of the work. He/she needs to learn the necessary background on “how to design and build the building.”

- He/she cannot do that without learning the critical fundamentals from a Noble Person who has gone through at least one of the three rounds (or one of the four stages).
- Thus to become a *Sotāpanna Anugāmi*, one must learn the true nature of the world from an *Ariya* (at least a *Sotāpanna*). There are several posts on this issue. One can find by doing a keyword search or by looking through the posts under “[Sotāpanna stage of Nibbāna](#).”

4. To become a *Sotāpanna Anugāmi*, one first needs to get rid of the ten types of *micchā diṭṭhi*; see, “[Micchā Diṭṭhi, Gandhabba, and Sotāpanna Stage](#).”

- First, the mind needs to grasp that it has to be devoid of the extreme levels of greed (*lobha*), hate (*dosa*). That leads to a gradual reduction of total ignorance (*moha*) via learning the right message of the Buddha, i.e., one needs to see the dangers in acting with *lobha*, *dosa*, *moha*.
- One cannot grasp the dangers of the rebirth process if one does not believe that the four lowest realms with unimaginable suffering exist. Those who are striving to become *Sotāpanna* need to carefully read about what constitutes *micchā diṭṭhi*, for example, “[Key to Sotāpanna Stage – Diṭṭhi and Vicikicca](#).”

5. A subtle (but stronger) level of *micchā diṭṭhi* remains until one starts comprehending *Tilakkhaṇa* (*anicca*, *dukkha*, *anatta*). That means one needs to begin understanding that it is not possible to achieve AND maintain ANYTHING to one's satisfaction.

- Just by having learned the true nature of this world (*anicca*, *dukkha*, *anatta*), a *Sotāpanna Anugāmi* gradually removes a bulk of defilement and attains the *Sotāpanna* stage. Now he/she can see the Path to the *Arahanthood*.
- It is important to note that he/she did not have to remove any attachments BY FORCE. All he/she did was to comprehend Dhamma to the level to see not only the unfruitfulness but the dangers of the rebirth process. See, “[Is It Necessary for a Buddhist to Eliminate Sensual Desires?](#)”

***Sotāpanna* stage – First Round of Bondage Overcome**

6. When one attains the *Sotāpanna* stage, one significantly reduces *lobha* (extreme greed), *dosa* (intense hate), and *moha* (sheer ignorance). They cut to the levels of *rāga* (attachment to worldly pleasures), *paṭigha* (tendency to become irritated when one does not get one wants), and *avijjā* (not fully knowing the true nature of the world). These terms discussed in “[Lobha, Dosa, Moha versus Raga, Patigha, Avijjā](#).”

- By going through this first round of the *tiparivattaya*, a *Sotāpanna* removes the bulk of defilement. See, “[Why a Sotāpanna is Better off than any King, Emperor, or a Billionaire](#).” That illustrates **how one is capable of doing immoral acts that makes one to be eligible for the *apāyā***, just because one has *micchā diṭṭhi*.
- It is essential to realize that there are many people with *micchā diṭṭhi* who go through their lives without doing any such horrible acts. **However, the possibility to do such an act remains with one through future lives until one attains the *Sotāpanna* stage. That is what is meant by *anusaya*, the hidden defilement. They can be removed only via learning and comprehending Dhamma.**

7. What is the reason that a *Sotāpanna* WILL NOT do any highly immoral act that makes him/her eligible to be born in the *apāyā*? It is not something he/she does consciously. Such decisions come automatically. That is the result of comprehending *anicca* (unfruitful) nature of this world.

It sinks into one's mind that no matter what one can gain by doing such an act, it is going to far more dire consequences in the future. Not only that, but “what is the point of harming another being for anything in this world that one will have to eventually give up anyway?”

- It sinks to one's mind that no matter what one can gain by doing such immoral actions, it will lead to far more dire consequences in the future. Not only that but “what is the point of harming another being for anything in this world?.” One will have to give up that eventually, when one dies!
- For example, one may kill someone and get a million dollars without getting caught, and may live a luxurious life. But he/she will pay for it by being born in the *apāyā* for millions of years to come.
- When one comprehends the *anicca* nature, one realizes deep down the foolishness (and the dangers) of such acts. *Anusaya* (craving) for such action will be removed when one attains the *Sotāpanna* stage. One would have shed such “*gati*” or character without a trace left. Again, there are many posts on these concepts.

The Second Round of the *tiparivattaya*

8. The second round of the *tiparivattaya* is tackled in by a *Sotāpanna* in two steps. First, to become a *Sakadāgāmī* and then to become an *Anāgāmī*. An *Anāgāmī* has gone through the second round.

- Remember that a *Sotāpanna* has reduced *lobha*, *dosa*, *moha* to the levels of *rāga*, *paṭigha*, and *avijjā*; see #4 above. *Rāga* means the attachments for things in this world, which are three basic types: (i) *Kāma rāga* means attachment to sense pleasures, i.e., those available in *kāma loka*. (ii) *Rūpa rāga* means attachment to *jhānic* pleasures in *rūpa loka*, and (iii) *Arūpa rāga* means attachment to *jhānic* pleasures in *arūpa loka*.
- *Kāma rāga* is actually of two “strengths”: “*klesha kāma*” [*klesha* is in Sinhala (*kilesā* is in Pāli)] means attachment to sense pleasures, and “*vatthu kāma*” (“*vatthu*” means “property”) is stronger because one also wants to own such sense objects.
- When a *Sotāpanna* sees the perils of sense pleasures and the tendency to angry (*paṭigha*), both *kāma rāga* and *paṭigha* are first reduced to the levels of a *Sakadāgāmī*. Here, one actually loses the “*vatthu kāma*” completely. Thus, a *Sakadāgāmī* is said to be “healthy forever” because he will never be born with a body that is subject to diseases. That means he will never be born at or below the human realm.
- As one sees the perils of *kāma assāda* (sensory pleasures) starting at the *Sotāpanna* stage, one begins to see the world more clearly; see, “[Assāda, Ādīnava, Nissarana – Introduction.](#)”

9. A *Sakadāgāmī* makes more progress via contemplating the drawbacks or perils (*ādīnava*) of sense pleasures and overcomes the second round of bondage to become an *Anāgāmī*. Thus at this stage one eliminates the “*klesha kāma*” [*klesha* is in Sinhala (*kilesā* is in Pāli)] component of the *kāma rāga*, AND remainder of *paṭigha*.

- Thus an *Anāgāmī* has given up all attachments to the *kāma loka* (those including the human and *deva* realms), and hence will not be born anywhere in *kāma loka*.

The Third Round

10. Now we can see that an *Anāgāmī* has only the *rūpa rāga* and *arūpa rāga* remaining with him/her (which are low levels of greed). Furthermore, there is no trace of hate (*dosa*) or friction (*paṭigha*) left. Thus only rebirths in the *brahma realms* are possible for an *Anāgāmī*. Of course, there is still some of *avijjā* left-over too.

- When an *Anāgāmī* overcomes those remaining defilement from his/her mind, the mind becomes purified. Then one attains the *Arahant* stage of *Nibbāna* by overcoming the third round of the *tiparivattaya*.

11. We are bound to the perpetual cycle of rebirths via ten fetters called “*sanyojana* = “san+yojana”; see, “[What is “San”? Meaning of Sansāra \(or Samsāra\)](#)”; *yojana* means bond. *Sanyojana* is sometimes called *saṃyojana*.

- Those ten *sanyojana* (or *saṃyojana*) are also gradually removed as one goes through the three rounds or *tiparivattaya* in four stages.

- At the *Sotāpanna* stage, one removes the two *sanyojana* of *sakkāya diṭṭhi* and *silabbata paramasa* by removing *micchā diṭṭhi*. One also removes the *vicikicchā sanyojana* that is associated with *moha*, and thus reduces *moha* to *avijjā*.
12. At the *Sakadāgāmī* stage, one reduces the two *sanyojana* of *kāma rāga* and *paṭigha*. Those two entirely removed by attaining the *Anāgāmī* stage.
- In terms of *sanyojana*, an *Anāgāmī* has five left to remove: *rūpa rāga*, *arūpa rāga*, *māna*, *uddhacca*, and *avijjā*. With the removal of those, one attains the *Arahanthood*.

Summary

13. Thus we can see that there are many types of analyses one can do. They all mean the same thing at the end. One needs to first comprehend the three characteristics of this world (*anicca*, *dukkha*, *anatta*) to some extent to reach the *Sotāpanna* stage. That is the first round of *tiparivattaya*. Then going through the second and third rounds of bondage via the next three stages of *Nibbāna* leads to the complete comprehension of *anicca*, *dukkha*, *anatta*. That leads to stopping the *sansāric* (or *samsāric*) journey filled with so much suffering.

14. Therefore, the whole journey is a truth-seeking mission about this world of 31 realms. That suffering can be intense in some realms. But one's comprehension of suffering is minimal at the beginning. The more one understands the true nature; one's mind AUTOMATICALLY gives up attachments to this world VOLUNTARILY.

- This is why *majjhimā paṭipadā* is not just “middle path” as discussed in a previous post in this series: [“Majjhimā Patipadā – Way to Relinquish Attachments to this World.”](#)

15. Thus, the *Dhammacakkappavattana sutta* (or *Dhamma Cakka Pavattana sutta*) gives the blueprint of what Buddha Dhamma is all about. What the Buddha did in the following 45 years was to describe this blueprint in detail in various ways.

- More details on the material in this post at [“Tiparivattaya and Twelve Types of Ñāna \(Knowledge\).”](#)
- One could scan through all the posts at: [Pure Dhamma – Sitemap](#)

16.8 Anguttara Nikāya – Suttā on Key Concepts

June 20, 2018

Āṅguttara Nikāya has many short *suttā* (note that plural of *sutta* is *suttā*) with key information; see, “[Nikāya in the Sutta Pitaka](#).” In this subsection, we will discuss many such *suttā* at various levels.

“[Dasa Akusala/Dasa Kusala – Basis of Buddha Dhamma](#)“

“[Dasa Akusala/Dasa Kusala – Basis of Buddha Dhamma – 2](#)“

16.8.1 Dasa Akusala/Dasa Kusala – Basis of Buddha Dhamma

June 20, 2018

1. *Dasa kusala* and *dasa akusala* are the foundations of Buddha Dhamma. Nature’s laws are based on them.

- A wide variety of synonyms are given for *dasa kusala* and *dasa akusala* in a number of short *suttā* in *Āṅguttara Nikāya*; see, “[Āṅguttara Nikāya – Suttā on Key Concepts](#).”
- *Dasa akusala* corrupt a mind and they lead to *sansāric* suffering.
- *Dasa kusala* purify a mind and they lead to permanent happiness (*Nibbāna*).

2. We can easily see connections to a number of **key Pāli words and concepts** with this information.

- The most potent of the *dasa akusala* is *micchā diṭṭhi*, which basically corrupts the mind and lead to other nine types of *akusala*. As we have discussed, *micchā diṭṭhi* is of two types: 10 types of *micchā diṭṭhi* and being unaware of *Tilakkhaṇa*.
- As one first starts getting rid of the 10 types of *micchā diṭṭhi*, one’s tendency to do other nine types of *akusala* will decrease. This is the same as saying that one will be cultivating *sammā diṭṭhi* and the tendency to do other nine types of *kusala* will also increase.
- One is fully on the mundane path when one gets rid of the 10 types of *micchā diṭṭhi*. One switches to the Noble Path when one starts comprehending *Tilakkhaṇa*.

3. This is why *dasa kusala* and *dasa akusala* are really the foundation of Buddha Dhamma. All deeper concepts like *anatta* are embedded in these; see, “[Dasa Akusala and Anatta – The Critical Link](#).”

- I had used two other *suttā* (note that plural of *sutta* is *suttā*) not listed below to point out the connection to *anatta* in that post.
- The other concepts listed below: *Dhamma/Adhamma*, *Ariya dhamma/Anariya dhamma*, *Saddhamma* (beneficial *dhamma*)/*Assaddhamma*, *Sappurisa* (moral) *dhamma* /*Asappurisa dhamma*, *Sādhu* (praiseworthy)/*Asādhu*, *Tapaniya* (lead to a stressful mind) /*Atapaniya*, *Acayagāmi* (lead to rebirth)/*Apacayagāmi*, *Dukkudrayo* (lead to suffering) *dhamma* /*Sukkudrayo dhamma*, *Ariyo magga/Anariya magga*.
- Several other concepts become clear from other *suttā*, showing connections to other concepts. I may add more *suttā*, as I find them.

Pali

English

Kusala Sutta (AN 10.180)

“*Kusalañca vo, bhikkhave, desessāmi akusalañca. Taṃ suṇātha ... pe ... katamañca, bhikkhave, akusalaṃ? Pāṇātipāto ... pe ... micchādiṭṭhi—idaṃ vuccati, bhikkhave, akusalaṃ.*”

Akusala: taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views (**defined in terms of *dasa akusala***).

Pali

English

Katamañca, bhikkhave, kusalam? Pāṇātipātā veramaṇī ... pe ... sammādiṭṭhi—idaṃ vuccati, bhikkhave, kusalan”ti.

Kusala: Opposites: see, “[Kusala and Akusala Kamma, Puñña and Pāpa Kamma](#)”

Akusala Sutta (AN 10.136)

“Akusalañca vo, bhikkhave, desessāmi kusalañca. Taṃ suṇātha ... pe ... katamañca, bhikkhave, akusalam? Micchādiṭṭhi ... pe ... micchāvimutti—idaṃ vuccati, bhikkhave, akusalam. Katamañca, bhikkhave, kusalam? Sammādiṭṭhi ... pe ... sammāvimutti—idaṃ vuccati, bhikkhave, kusalan”ti.

Akusala: Wrong views, wrong thoughts, wrong speech, wrong actions, wrong livelihood, wrong effort, wrong mindset, wrong *samadhi*, wrong understanding, wrong *vimutti* (defined in terms of *micchā* path).
Kusala: Opposites in the Noble Eightfold Path.

We see that *Kusala/Akusala* can be defined in two ways (*dasa akusala/dasa kusala* or *micchā* path/Noble Path), as shown by the above two *suttā*. The same is true for all other terms discussed below. However, I am listing only those *suttā* with the *dasa akusala/dasa kusala* definition below, in order to save space.

Dhamma Sutta (AN 10.182)

“Dhammañca vo, bhikkhave, desessāmi adhammañca. Taṃ suṇātha ... pe ... katamo ca, bhikkhave, adhammo? Pāṇātipāto ... pe ... micchādiṭṭhi—ayaṃ vuccati, bhikkhave, adhammo.

Adhammo: taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views.

Katamo ca, bhikkhave, dhammo? Pāṇātipātā veramaṇī ... pe ... sammādiṭṭhi—ayaṃ vuccati, bhikkhave, dhammo”ti.

Dhammo: Opposites: see, “[Kusala and Akusala Kamma, Puñña and Pāpa Kamma](#)”

Ariyadhamma Sutta (AN 10.179)

“Ariyadhammañca vo, bhikkhave, desessāmi anariya-dhammañca. Taṃ suṇātha ... pe ... katamo ca, bhikkhave, anariyo dhammo? Pāṇātipāto ... pe ... micchādiṭṭhi—ayaṃ vuccati, bhikkhave, anariyo dhammo.

Anariyadhammo: taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views.

Katamo ca, bhikkhave, ariyo dhammo? Pāṇātipātā veramaṇī ... pe ... sammādiṭṭhi—ayaṃ vuccati, bhikkhave, ariyo dhammo”ti.

Ariyadhammo: Opposites: see, “[Kusala and Akusala Kamma, Puñña and Pāpa Kamma](#)”

Saddhamma Sutta (AN 10.191)

“Saddhammañca vo, bhikkhave, desessāmi asaddhammañca. Taṃ suṇātha ... pe ... katamo ca, bhikkhave, asaddhammo? Pāṇātipāto ... pe ... micchādiṭṭhi—ayaṃ vuccati, bhikkhave, asaddhammo.

Asaddhammo (Asath/Bad dhamma): taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views.

Pali

English

Katamo ca, bhikkhave, saddhammo? Pāṇātipātā veramaṇī ... pe ... sammādiṭṭhi—ayaṃ vuccati, bhikkhave, saddhammo”ti.

Saddhammo (Sath/Buddha dhamma):

Opposites: see, “[Kusala and Akusala Kamma, Puñña and Pāpa Kamma](#)”

Sappurisadhamma Sutta (AN 10.192)

“Sappurisadhammaṅca vo, bhikkhave, desessāmi asappurisadhammaṅca. Taṃ suṇātha ... pe ... katamo ca, bhikkhave, asappurisadhammo? Pāṇātipāto ... pe ... micchādiṭṭhi—ayaṃ vuccati, bhikkhave, asappurisa-dhammo.

Asappurisa dhammo (Asath purisa or wicked person's dhamma): taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views.

Katamo ca, bhikkhave, sappurisadhammo? Pāṇātipātā veramaṇī ... pe ... sammādiṭṭhi—ayaṃ vuccati, bhikkhave, sappurisadhammo”ti.

Sappurisa dhammo (Sath purisa or Moral person's dhamma): Opposites: see, “[Kusala and Akusala Kamma, Puñña and Pāpa Kamma](#)”

Sadhu Sutta (AN 10.178)

“Katamaṅca, bhikkhave, asādhu? Pāṇātipāto, adinnādānaṃ, kāmesumicchācāro, musāvādo, piṣuṇā vācā, pharusā vācā, samphappalāpo, abhijjhā, byāpādo, micchādiṭṭhi—idaṃ vuccati, bhikkhave, asādhu.

Blameful (Asādhu): taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views.

Katamaṅca, bhikkhave, sādhu? Pāṇātipātā veramaṇī, adinnādānā veramaṇī, kāmesumicchācārā veramaṇī, musāvādā veramaṇī, piṣuṇāya vācāya veramaṇī, pharusāya vācāya veramaṇī, samphappalāpā veramaṇī, anabhijjhā, abyāpādo, sammādiṭṭhi—idaṃ vuccati, bhikkhave, sādhu”ti.

Praiseworthy (Sādhu): Opposites: see, “[Kusala and Akusala Kamma, Puñña and Pāpa Kamma](#)”

Tapaniya Sutta (AN 10.185)

“Tapanīyaṅca vo, bhikkhave, dhammaṃ desessāmi atapanīyaṅca. Taṃ suṇātha ... pe ... katamo ca, bhikkhave, tapanīyo dhammo? Pāṇātipāto ... pe ... micchādiṭṭhi—ayaṃ vuccati, bhikkhave, tapanīyo dhammo.

Stressful (Lead to heating the mind)

(Tapanīyo): taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views.

Katamo ca, bhikkhave, atapanīyo dhammo? Pāṇātipātā veramaṇī ... pe ... sammādiṭṭhi—ayaṃ vuccati, bhikkhave, atapanīyo dhammo”ti.

Calming (Lead to cooling the mind)

(Atapanīyo): Opposites: see, “[Kusala and Akusala Kamma, Puñña and Pāpa Kamma](#)”

Ācayagāmi Sutta (AN 10.186)

“Ācayagāmiṅca vo, bhikkhave, dhammaṃ desessāmi apacayagāmiṅca. Taṃ suṇātha ... pe ... katamo ca, bhikkhave, ācayagāmi dhammo? Pāṇātipāto ... pe ... micchādiṭṭhi—ayaṃ vuccati, bhikkhave, ācayagāmi

Lead to rebirth (Ācayagāmi Dhammo): taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views.

Pali

English

dhammo.

*Katamo ca, bhikkhave, apacayagāmī dhammo?
Pāṇātipātā veramaṇī ... pe ... sammādiṭṭhi—ayaṃ
vuccati, bhikkhave, apacayagāmī dhammo”ti.*

Calming (Lead to Nibbāna) (*Apacayagāmī Dhammo*): Opposites: see, “[Kusala and Akusala Kamma, Puñña and Pāpa Kamma](#)”

Dukkhudraya Sutta (AN 10.187)

*“Dukkhudrayaṅca vo, bhikkhave, dhammaṃ desessāmi
sukhudrayaṅca. Taṃ suṇātha ... pe ... katamo ca,
bhikkhave, dukkhudrayo dhammo? Pāṇātipāto ... pe
... micchādiṭṭhi—ayaṃ vuccati, bhikkhave,
dukkhudrayo dhammo.*

Lead to suffering (*Dukkhudrayo Dhammo*): taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views.

*Katamo ca, bhikkhave, sukhudrayo dhammo?
Pāṇātipātā veramaṇī ... pe ... sammādiṭṭhi—ayaṃ
vuccati, bhikkhave, sukhudrayo dhammo”ti.*

Calming (Lead to Sukha/Nibbāna) (*Sukhudrayo Dhammo*): Opposites: see, “[Kusala and Akusala Kamma, Puñña and Pāpa Kamma](#)”

Vipāka Sutta (AN 10.188)

*“Dukkhavipākaṅca vo, bhikkhave, dhammaṃ
desessāmi sukhavipākaṅca. Taṃ suṇātha ... pe ...
katamo ca, bhikkhave, dukkhavipāko dhammo?
Pāṇātipāto ... pe ... micchādiṭṭhi—ayaṃ vuccati,
bhikkhave, dukkhavipāko dhammo.*

***Dukkhavipāko dhammo*:** taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views.

*Katamo ca, bhikkhave, sukhavipāko dhammo?
Pāṇātipātā veramaṇī ... pe ... sammādiṭṭhi—ayaṃ
vuccati, bhikkhave, sukhavipāko dhammo”ti.*

***Sukhavipāko dhammo*:** Opposites: see, “[Kusala and Akusala Kamma, Puñña and Pāpa Kamma](#)”

Ariyamagga Sutta (AN 10.189)

*“Ariyamaggaṅca vo, bhikkhave, desessāmi anariya-
maggaṅca. Taṃ suṇātha ... pe ... katamo ca,
bhikkhave, anariyo maggo? Pāṇātipāto ... pe ...
micchādiṭṭhi—ayaṃ vuccati, bhikkhave, anariyo
maggo.*

***Anariyo maggo*:** taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views.

*Katamo ca, bhikkhave, ariyo maggo? Pāṇātipātā
veramaṇī ... pe ... sammādiṭṭhi—ayaṃ vuccati,
bhikkhave, ariyo maggo”ti.*

***Ariyo maggo*:** Opposites: see, “[Kusala and Akusala Kamma, Puñña and Pāpa Kamma](#)”

Kaṇhamagga Sutta (AN 10.190)

*“Kaṇhamaggaṅca vo, bhikkhave, desessāmi
sukkamaggaṅca. Taṃ suṇātha ... pe ... katamo ca,
bhikkhave, kaṇho maggo? Pāṇātipāto ... pe ...
micchādiṭṭhi—ayaṃ vuccati, bhikkhave, kaṇho maggo.*

***Kaṇho maggo (Dark path)*:** taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views.

Pali

Katamo ca, bhikkhave, sukko maggo? Pāṇātipātā veramaṇī ... pe ... sammādiṭṭhi— ayaṃ vuccati, bhikkhave, sukko maggo”ti.

English

Sukko maggo (Bright path): Opposites: see, “[Kusala and Akusala Kamma, Puñña and Pāpa Kamma](#)”

16.8.2 Dasa Akusala/Dasa Kusala – Basis of Buddha Dhamma – 2

June 27, 2018

This is the second post in a series. The first post: “[Dasa Akusala/Dasa Kusala – Basis of Buddha Dhamma.](#)”

1. *Dasa kusala* and *dasa akusala* are the foundations of Buddha Dhamma. Nature’s laws are based on them.

- A wide variety of synonyms are given for *dasa kusala* and *dasa akusala* in a number of short *suttā* in *Aṅguttara Nikāya*; see, “[Aṅguttara Nikāya – Suttā on Key Concepts.](#)”
- *Dasa akusala* corrupt a mind and they lead to *sansāric* suffering.
- *Dasa kusala* purify a mind and they lead to permanent happiness (*Nibbāna*).

2. We can easily see connections to a number of **key Pāli words and concepts** with this information.

- The most potent of the *dasa akusala* is *micchā diṭṭhi*, which basically corrupts the mind and lead to other nine types of *akusala*. As we have discussed, *micchā diṭṭhi* is of two types: 10 types of *micchā diṭṭhi* and being unaware of the deeper laws of Nature including *Tilakkhaṇa* (sometimes *asubha* nature is also included, in addition to the *anicca, dukkha, anatta* nature).
- As one first starts getting rid of the 10 types of *micchā diṭṭhi*, one’s tendency to do other nine types of *akusala* will decrease. This is the same as saying that one will be cultivating *sammā diṭṭhi* and the tendency to do other nine types of *kusala* will also increase.
- One is fully on the mundane path when one gets rid of the 10 types of *micchā diṭṭhi*. One switches to the Noble Path when one starts comprehending *Tilakkhaṇa*.

3. This is why *dasa kusala* and *dasa kusala* are really the foundation of Buddha Dhamma. All deeper concepts like *anatta* are embedded in these; see, “[Dasa Akusala and Anatta – The Critical Link.](#)”

- I had used the first two *suttā* (note that plural of *sutta* is *suttā*) listed below to point out the connection to *anatta* in that post.
- The other *suttā* listed below involve several more of **deeper** concepts: *Attho(Atto)*, *Āsava*, *Sāvajja* (Blameworthy), *Uppādetabba* (should arise in a mind), *Āsevitabba* (to be associated with), *Bhāvetabba* (to be used), *Bahulikatabba* (to be used frequently), *Anussarītabba* (to be thought about or contemplated).
- In the previous post I discussed *suttā* involving the following **basic** concepts: *Dhamma/Adhamma*, *Ariya dhamma/Anariya dhamma*, *Saddhamma* (beneficial *dhamma*)/*Assaddhamma*, *Sappurisa* (moral) *dhamma* /*Asappurisa dhamma*, *Sādhu* (praiseworthy)/*Asādhu*, *Tapaniya* (lead to a stressful mind) /*Atapaniya*, *Acayagāmi* (lead to rebirth)/*Apacayagāmi*, *Dukkudrayo* (lead to suffering) *dhamma* /*Sukkudrayo dhamma*, *Ariyo magga/Anariya magga*;

see, “[Dasa Akusala/Dasa Kusala – Basis of Buddha Dhamma.](#)”

- In future posts I will discuss other *suttā*, showing connections to other concepts.

Pali

English

Attha Sutta (AN 10.181)

“*Atthañca vo, bhikkhave, desessāmi anattañca. Taṃ suñātha, sādhukaṃ manasi karotha, bhāssissāmi*”ti. “*Evaṃ, bhante*”ti kho te bhikkhū bhagavato paccassosum. Bhagavā etadavoca: “*katamo ca, bhikkhave, **anatto**? Pāṇātipāto, adinnādānaṃ, kāmesumicchācāro, musāvādo, pisunā vācā, pharusā vācā, samphappalāpo, abhijjhā, byāpādo, micchādīṭṭhi—ayaṃ vuccati, bhikkhave, anatto.*”

*Katamo ca, bhikkhave, **attho**? Pāṇātipātā veramaṇī, adinnādānā veramaṇī, kāmesumicchācārā veramaṇī, musāvādā veramaṇī, pisunāya vācāya veramaṇī, pharusāya vācāya veramaṇī, samphappalāpā veramaṇī, anabhijjhā, abyāpādo, sammādīṭṭhi—ayaṃ vuccati, bhikkhave, attho*”ti.

Attha Sutta (AN 10.137)

“*Atthañca vo, bhikkhave, desessāmi anattañca. Taṃ suñātha, sādhukaṃ manasi karotha, bhāssissāmi*”ti. “*Evaṃ, bhante*”ti kho te bhikkhū bhagavato paccassosum. Bhagavā etadavoca: “*katamo ca, bhikkhave, **anatto**? Micchāsaṅkappo, micchāvācā, micchākammanto, micchājīvo, micchāvāyāmo, micchāsati, micchāsamādhi, micchāñāṇaṃ, micchāvimutti—ayaṃ vuccati, bhikkhave, anatto.*”

*Katamo ca, bhikkhave, **attho**? Sammādīṭṭhi, sammāsaṅkappo, sammāvācā sammākammanto, sammājīvo, sammāvāyāmo, sammāsati, sammāsamādhi, sammāñāṇaṃ, sammāvimutti—ayaṃ vuccati, bhikkhave, attho*”ti.

We see that *attho/anatto* can be defined in two ways (*dasa akusala/dasa kusala* or *micchā* path/Noble Path), as shown by the above two *suttā*. The same is true for all other terms discussed below. However, in order to save space, I will just provide the name of the *sutta* on the right that gives the definition in terms of *micchā* path/Noble Path.

Āsava Sutta (AN 10.183) and Sāsava Sutta (AN 10.139)

“*Sāsavañca vo, bhikkhave, dhammaṃ desessāmi anāsavañca. Taṃ suñātha ... pe ... katamo ca, bhikkhave, **sāsavo dhammo**? Pāṇātipāto ... pe ... micchādīṭṭhi—ayaṃ vuccati, bhikkhave, sāsavo dhammo.*”

Anatto (One without refuge/protection): taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views (**defined in terms of *dasa akusala***).

Attho (One with refuge/protection): Opposites: see, "[Dasa Akusala and Anatta – The Critical Link](#)"

Anatto (One w/o refuge or protection): Wrong views, wrong thoughts, wrong speech, wrong actions, wrong livelihood, wrong effort, wrong mindset, wrong *samadhi*, wrong understanding, wrong *vimutti* (defined in terms of *micchā* path).

Attho (One with refuge/protection): Opposites in the Noble Eightfold Path.

Sāsava Dhamma (that help cultivate āsava): Wrong views, wrong thoughts, wrong speech, wrong actions, wrong livelihood, wrong effort, wrong mindset, wrong *samadhi*, wrong understanding, wrong *vimutti* (**defined in terms of *micchā* path**).

Pali

*Katamo ca, bhikkhave, anāsavo dhammo?
Pāṇātipātā veramaṇī ... pe ... sammādiṭṭhi—
ayaṃ vuccati, bhikkhave, anāsavo dhammo”ti.*

Sāvajja Sutta (AN 10.184) AND Sāvajja Sutta (AN 10.140)

*“Sāvajjaṅca vo, bhikkhave, dhammaṃ desessāmi
anavajjaṅca. Taṃ suṇātha ... pe ... katamo ca,
bhikkhave, sāvajjo dhammo? Pāṇātipāto ... pe ...
micchādiṭṭhi—ayaṃ vuccati, bhikkhave, sāvajjo
dhammo.*

*Katamo ca, bhikkhave, anavajjo dhammo?
Pāṇātipātā veramaṇī ... pe ... sammādiṭṭhi—
ayaṃ vuccati, bhikkhave, anavajjo dhammo”ti.*

English

Anāsava Dhamma (that remove āsava):
Opposites in the Noble Eightfold Path.

Sāvajja Dhammo (blameworthy): taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views.

Anavajjo dhammo (praiseworthy): Opposites: see, "[Kusala and Akusala Kamma, Puñña and Pāpa Kamma](#)"

Uppādetabbadhamma Sutta (AN 10.193) AND Uppādetabba Sutta (AN 10.149)

*“Uppādetabbaṅca vo, bhikkhave, dhammaṃ
desessāmi na uppādetabbaṅca. Taṃ suṇātha ... pe
... katamo ca, bhikkhave, na uppādetabbo
dhammo? Pāṇātipāto ... pe ... micchādiṭṭhi—
ayaṃ vuccati, bhikkhave, na uppādetabbo
dhammo.*

*Katamo ca, bhikkhave, uppādetabbo dhammo?
Pāṇātipātā veramaṇī ... pe ... sammādiṭṭhi—ayaṃ
vuccati, bhikkhave, uppādetabbo dhammo”ti.*

na Uppādetabbo Dhammo (dhamma that should not arise): taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views.

Uppādetabba Dhammo (dhamma that should arise): Opposites: see, "[Kusala and Akusala Kamma, Puñña and Pāpa Kamma](#)"

Āsevitabbadhamma Sutta (AN 10.194) and Āsevitabba Sutta (AN 10.150)

*“Āsevitabbaṅca vo, bhikkhave, dhammaṃ
desessāmi nāsevitabbaṅca. Taṃ suṇātha ... pe ...
katamo ca, bhikkhave, nāsevitabbo dhammo?
Pāṇātipāto ... pe ... micchādiṭṭhi—ayaṃ vuccati,
bhikkhave, nāsevitabbo dhammo.*

*Katamo ca, bhikkhave, āsevitabbo dhammo?
Pāṇātipātā veramaṇī ... pe ... sammādiṭṭhi—ayaṃ
vuccati, bhikkhave, āsevitabbo dhammo”ti.*

Nāsevitabba dhammo (dhamma that one should not be associated with): taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views.

Āsevitabbadha dhammo (dhamma that one should be associated with): Opposites: see, "[Kusala and Akusala Kamma, Puñña and Pāpa Kamma](#)"

Bhāvetabbadhamma Sutta (AN 10.195) AND Bhāvetabba Sutta (AN 10.151)

*“Bhāvetabbaṅca vo, bhikkhave, dhammaṃ
desessāmi na bhāvetabbaṅca. Taṃ suṇātha ... pe
... katamo ca, bhikkhave, na bhāvetabbo
dhammo? Pāṇātipāto ... pe ... micchādiṭṭhi—
ayaṃ vuccati, bhikkhave, na bhāvetabbo
dhammo.*

Katamo ca, bhikkhave, bhāvetabbo dhammo?

Dhamma thould not be used (na bhāvetabbo dhammo): taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views.

Dhamma that should be used (bhāvetabbo dhammo): Opposites: see, "[Kusala and Akusala Kamma, Puñña and Pāpa Kamma](#)"

Pali

English

Pāṇātipātā veramaṇī ... pe ... sammādiṭṭhi—ayaṃ vuccati, bhikkhave, bhāvetabbo dhammo”ti.

Bahulīkātabba Sutta (AN 10.196) AND Bahulīkattabba Sutta (AN 10.152)

*“Bahulīkātabbañca vo, bhikkhave, dhammaṃ desessāmi na bahulīkātabbañca. Taṃ suṇātha ... pe ... katamo ca, bhikkhave, **na bahulīkātabbo dhammo?** Pāṇātipāto ... pe ... micchādiṭṭhi—ayaṃ vuccati, bhikkhave, na bahulīkātabbo dhammo.*

*Katamo ca, bhikkhave, **bahulīkātabbo dhammo?** Pāṇātipātā veramaṇī ... pe ... sammādiṭṭhi—ayaṃ vuccati, bhikkhave, bahulīkātabbo dhammo”ti.*

Dhamma that should not be frequently associated with (*na bahulīkātabbo dhammo*): taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views.

Dhamma that should be frequently associated with (*bahulīkātabbo dhammo*): Opposites: see, "[Kusala and Akusala Kamma, Puñña and Pāpa Kamma](#)"

Sacchikātabba Sutta (AN 10.198) AND Sacchikātabba Sutta (AN 10.154)

*“Sacchikātabbañca vo, bhikkhave, dhammaṃ desessāmi na sacchikātabbañca. Taṃ suṇātha ... pe ... katamo ca, bhikkhave, **na sacchikātabbo dhammo?** Pāṇātipāto ... pe ... micchādiṭṭhi—ayaṃ vuccati, bhikkhave, na sacchikātabbo dhammo.*

*Katamo ca, bhikkhave, **sacchikātabbo dhammo?** Pāṇātipātā veramaṇī ... pe ... sammādiṭṭhi—ayaṃ vuccati, bhikkhave, sacchikātabbo dhammo”ti.*

Dhamma that should not be experienced (*na sacchikātabbo dhammo Dhammo*): taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views.

(Dhamma that should be experienced (*sacchikātabbo dhammo*): Opposites: see, "[Kusala and Akusala Kamma, Puñña and Pāpa Kamma](#)"

Anussarītabbadhamma Sutta (AN 10.197) AND Anussarītabba Sutta (AN 10.153)

*“Anussarītabbañca vo, bhikkhave, dhammaṃ desessāmi nānussarītabbañca. Taṃ suṇātha ... pe ... katamo ca, bhikkhave, **nānussarītabbo dhammo?** Pāṇātipāto ... pe ... micchādiṭṭhi—ayaṃ vuccati, bhikkhave, nānussarītabbo dhammo.*

*Katamo ca, bhikkhave, **anussarītabbo dhammo?** Pāṇātipātā veramaṇī ... pe ... sammādiṭṭhi—ayaṃ vuccati, bhikkhave, anussarītabbo dhammo”ti.*

Dhamma that should not be thought about (*na anussarītabbo dhammo*): taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views.

Dhamma that should be thought about (*anussarītabbo dhammo*): Opposites: see, "[Kusala and Akusala Kamma, Puñña and Pāpa Kamma](#)"

16.9 Na Cetanākaraniya Sutta

May 21, 2018; revised May 23, 2018

1. “*Na Cetanākaraniya Sutta*” is the correct name of the *sutta*, NOT “*Cetanākaraniya Sutta*” as it entitled at several websites including the Sutta Central website: “[WebLink: suttacentral: Cetanākaraniyasutta \(AN 11.2\)](#).” The English translation there is entitled accordingly and erroneously: “Making a Wish”.

- *Cetana* is what one intends or wishes; *karaniya* means “what one should do”, and “*na*” means “not”. What the *sutta* is teaching is “Just by wishing such and such one will not get to *Nibbāna*.”
- The correct title appears in the Pāli/Sinhala Buddha JayanathīTipitaka Series XXIII, *Anguttara Nikāya* (Part 6, p.586).
- Therefore, the English title of the *sutta* should be something like “Making a Wish Will Not Work”.

2. It is a fairly short *sutta*. So, I decided to translate the full *sutta* and put it side-by-side with the Pāli version, so that one can see how it is translated.

- As mentioned above, there is no point in just chanting or repeating to oneself, “May I be free of this, May I be that”, etc.
- One needs to map out what needs to be done to stop future suffering and follow that path. There are no easy solutions like sitting down in a quiet place and just chanting or even meditating, even though that should be a part of the whole process.
- This step-by-step process is summarized clearly in the *sutta*.
- I have put in bold every other verse, so it would be easier to match the English and Pāli verses.

“For a person engaged in moral conduct (*sīla*), *“Sīlavato, bhikkhave, sīlasampannessa na and is thus moral and virtuous, there is no need to wish (cetanā): “May I be able to act with a calm mind”.* It is in the nature of things that agitation of the mind does not arise in a person engaged in *sīla*, and is virtuous.

“For a person free from an agitated mind, *Avippaṭṭisarissa, bhikkhave, na cetanāya there is no need to wish (cetanā): “May happiness arise in me”.* It is in the nature of things that happiness (tranquility) arises in a person free from agitation in the mind.

“For a person with happiness (tranquility of mind), *Pamuditassa, bhikkhave, na cetanāya there is no need to wish (cetanā): “May joy arise in me”.* It is in the nature of things that joy arises in a person with a peaceful mind.

“For a joyful person, *Pṭīmanassa, bhikkhave, na cetanāya (cetanā): “May I feel lightness in the body”.* It is in the nature of things that a joyful person attains bodily lightness (*passaddhi*).

“For a person with bodily lightness, *Passaddhakāyassa, bhikkhave, na cetanāya need to wish (cetanā): “May I experience sukha”.* It is in the nature of things that a person with bodily lightness experiences *sukha*.

“For a person experiencing *sukha*, **there is no need to wish (*cetanā*)**: “May my mind get to *samādhi*.” It is in the nature of things that the mind of a person experiencing *sukha* gets to *samādhi*.

“For a person who gets to *samādhi*, **there is no need to wish (*cetanā*)**: “May I know and see the true nature of things in this world (*yathābhūta ñāna* or comprehension of *Tilakkhaṇa*)”. It is in the nature of things that a person who gets to *samādhi* will see the true nature of this world. (Here it is assumed that one is exposed *Tilakkhaṇa* from an *Ariya*; see #3, #4 below).

“For a person with *yathābhūta ñāna*, **there is no need to wish (*cetanā*)**: “May I not be attracted to temptations in this world (*virāga*).” It is in the nature of things that a person who knows and sees things as they actually are, will be dispassionate towards things in this world.

“For a person who thus naturally dispassionate, **there is no need to wish (*cetanā*)**: “May I be free of cravings for things in this world”. It is in the nature of things that a person who dispassionate through understanding of the real nature of things will be free of cravings.

“For a person who is free of cravings, **there is no need to wish (*cetanā*)**: “May I realize the knowledge of the final release from all suffering (*vimuttiñāṇadassana*)”. It is in the nature of things that a person who is free of cravings will attain the final release from all suffering.

“In this way, *bhikkhus*, freedom from cravings (dispassion) has release from all suffering as its reward, Disenchantment has dispassion as its reward, *yathābhūta ñāna* has , disenchantment as its reward, *samādhi* has *yathābhūta ñāna* as its reward, *sukha* has *samādhi* as its reward, bodily lightness (*passaddhi*) has *sukha* as its reward, calm mind has bodily lightness as its reward. Joy has calm mind as its reward, freedom from an agitated mind has joy as its reward, moral conduct has freedom from an agitated mind as its reward.

Sukhino, bhikkhave, na cetanāya karaṇīyaṃ: ‘cittaṃ me samādhīyatū’ti. Dhammatā esā, bhikkhave, yaṃ sukhino cittaṃ samādhīyati.

Samāhitassa, bhikkhave, na cetanāya karaṇīyaṃ: ‘yathābhūtaṃ jānāmi passāmī’ti. Dhammatā esā, bhikkhave, yaṃ samāhito yathābhūtaṃ jānāti passati.

Yathābhūtaṃ, bhikkhave, jānato passato na cetanāya karaṇīyaṃ: ‘nibbindāmī’ti. Dhammatā esā, bhikkhave, yaṃ yathābhūtaṃ jānaṃ passaṃ nibbindati.

Nibbinassa, bhikkhave, na cetanāya karaṇīyaṃ: ‘virajjāmī’ti. Dhammatā esā, bhikkhave, yaṃ nibbinno virajjati.

Virattassa, bhikkhave, na cetanāya karaṇīyaṃ: ‘vimuttiñāṇadassanaṃ sacchikaromī’ti. Dhammatā esā, bhikkhave, yaṃ viratto vimuttiñāṇadassanaṃ sacchikaroti.

Iti kho, bhikkhave, virāgo vimuttiñāṇadassanatto vimuttiñāṇadassanānisamsa, nibbidā virāgatthā virāgānisamsā, yathābhūtañāṇadassanaṃ nibbidatthaṃ nibbidānisamsaṃ, samādhi yathābhūtañāṇadassanatto yathābhūtañāṇadassanānisamsa, sukhaṃ samādhatthaṃ samādhānisamsaṃ, passaddhi sukhatthā sukhānisamsā, pīti passaddhatthā passaddhānisamsā, pāmojjaṃ pūtatthaṃ pītānisamsaṃ, avippaṭisāro pāmojjattho pāmojjānisamsa, kusalāni sīlāni avippaṭisārattāni avippaṭisārānisamsāni. Iti kho,

“In this way, dhamma qualities cultivate and fulfill *bhikkhave, dhammā dhamme abhisandenti*, more dhamma qualities in the Noble Path in getting *dhammā dhamme paripūrenti apārā pāraṃ* to from this shore to the Far shore (*Nibbāna*).” *gamanāyā”ti*.

3. The path to *Nibbāna* is not a straight step-by-step process in a linear fashion. Rather, a given person cycles through the steps over and over until the *Arahant phala* moment is attained.

- One starts with mundane *sīla*, and can get to early stages of *samādhi* even without hearing about *Tilakkhaṇa*. **One cannot proceed beyond that with just *sīla*, which is on shaky grounds until one comprehends *Tilakkhaṇa*.**
- Once one starts comprehending *Tilakkhaṇa* (and becomes a *Sotāpanna/Sotāpanna Anugāmi*), one’s *sīla* (moral conduct) will become unbreakable: **It is called *Ariyakānta sīla*.**
- That is when one really gets into the Noble Eightfold Path.

4. In other words, there are two paths: One starts on the mundane path and with the comprehension of *Tilakkhaṇa*, one switches over to the Noble Path; see, “[Buddha Dhamma – In a Chart](#).”

- Only a *Sammasambuddha* or a *pacceka Buddha* can figure out (or comprehend) *Tilakkhaṇa*, by themselves; all others have to learn *Tilakkhaṇa* from an *Ariya*.

5. Another key thing to note is that there is no mention about the need to attain *jhānā*.

Jhānā are a special kind of *samādhi*. It is good to cultivate *jhānā*, but they are not necessary to attain *magga phala*.

And there are an innumerable types of *samādhi*; one gets to *Ariya samādhi* (conducive to attain *Nibbāna*) with the comprehension of *Tilakkhaṇa*.

6. Key words:

- ***Avippaṭṭisāra* (විපිලිසර බව (vigilance) in Sinhala [vipilisara bava in Sinhala]):** One’s mind is normally agitated. It tends to go everywhere. This is why it is hard for most people to comprehend Dhamma. When one really focus on maintaining moral conduct (*sīla*) and stays away from *dasa akusala*, this agitation of the mind will gradually diminish, and one will be able to concentrate on a given concept for longer times. [*Avippaṭṭisāra* ; [a + vippaṭṭisāra] absence of regret or remorse]
- ***pāmojja* (සතුට or අරම ජේය (wellness) in Sinhala [satuta or pramodaya in Sinhala]):** Happiness or tranquility of mind is the closest English translation. This is below the “joyful state of mind” or *pīti* (පීතී in Sinhala [pīti in Sinhala]).
- ***passambhati/passaddha*:** calming down (lightness) of the physical body (කායික සෘහලුච්ච [kāyika s̄ahælluva] (physically light)).
- ***nibbindati*:** get weary of, unsatisfied with (කලකිරීම [kalakirīma] (disappointment)).
- ***virajjati* (related to *virāga*): absence of cravings.**
- ***vimutti*:** becomes free of suffering, final release (විමුක්ති [vimukti] (liberation)).

16.10 Paṭhama Mettā Sutta

June 7, 2018; revised June 8, 2018; September 13, 2018; August 30, 2020

1. [WebLink: suttacentral: Pathama Mettā Sutta \(AN 4.125\)](#) clearly states the difference between *jhānā* cultivated by Noble Persons (*Ariyā*) and those who are merely on the mundane path (*assutavā puthujjano*). Here *assutavā puthujjano* means one who has not comprehended *Tilakkhaṇa*; one MUST have removed the 10 types of *micchā diṭṭhi* even to cultivate *anāriya jhāna*.

- Since *jhānic* states represent the same *rūpāvacara* realms, the *jhānic* experience could be the same for both *Ariya* and *anāriya jhāna* (I am not certain).
- However, the critical difference is that Noble Persons (who have cultivated *jhāna*) NEVER come back to *kāma loka* and attain *Parinibbāna*, while the *anāriyās* come back to *kāma loka*, and could be born in the *apāyā* too.
- That is because the *Ariyā* have REMOVED *kāma rāga (ucceda pahāna)*, while *anāriyās* have only SUPPRESSED them (*vikkhambhana pahāna*).

[*pahāna* : ‘overcoming’, abandoning. There are 5 kinds of overcoming:

- (1) overcoming by repression (*vikkhambhana-pahāna*), i.e. the temporary suspension of the 5 hindrances (*nīvarana*, q.v.) during the absorptions,
- (2) overcoming by the opposite (*tadanga-pahāna*),
- (3) overcoming by destruction (*samuccheda-pahāna*),
- (4) overcoming by tranquillization (*patipassaddhi-pahāna*),
- (5) overcoming by escape (*nissarana-pahāna*).

[*nissaraṇa* : [nt.] 1. going out; departure; 2. escape.]

- (1) “Among these, ‘overcoming by repression’ is the pushing back of adverse things, such as the 5 mental hindrances (*nīvarana* q.v.), etc., through this or that mental concentration (*samādhi*, q.v.), just as a pot thrown into moss-clad water pushes the moss aside....
- (2) “ ‘Overcoming by the opposite’ is the overcoming by opposing this or that thing that is to be overcome, by this or that factor of knowledge belonging to insight (*vipassanā* q.v.), just as a lighted lamp dispels the darkness of the night. In this way, the personality-belief (*sakkāyadiṭṭhi*, s. *diṭṭhi*) is overcome by determining the mental and corporeal phenomena ... the view of uncausedness of existence by investigation into the conditions... the idea of eternity by contemplation of impermanency ... the idea of happiness by contemplation of misery....
- (3) “If through the knowledge of the noble path (s. *ariyapuggala*) the fetters and other evil things cannot continue any longer, just like a tree destroyed by lightning, then such an overcoming is called ‘overcoming by destruction’ ” (Vis.M. XXII, 110f).
- (4) When, after the disappearing of the fetters at the entrance into the paths, the fetters, from the moment of fruition (*phala*) onwards, are forever extinct and stilled, such overcoming is called the ‘overcoming by tranquillization’.
- (5) “The ‘overcoming by escape’ is identical with the extinction and Nibbāna” (Pts.M. I. 27). (App.)]

2. The *Brahma Vihāra* in Buddha Dhamma are four types: *mettā* (loving-kindness), *karuṇā* (compassion, the opposite of *karuṇā* is anger), *muditā* (empathetic joy), and *upekkhā* (equanimity towards all beings).

- The four realms correspond to the four highest-intensity *rūpāvacara jhāna* levels (in *sutta* categorization of *jhāna*).
- We can clearly see the concept of *gati*; most translators do not even know what that word means.
- Instead of translating the *sutta* word-by-word, I have just provided the meaning of each verse.

| | Pāli | English |
|---|--|---|
| 1 | Cattārome, bhikkhave, puggalā santo saṃvijjamānā lokasmiṃ. Katame cattāro? | Bhikkhus, there are four types of "cooled down" individuals (santo) to be found existing in the world. Which four? |
| 2 | <i>Idha, bhikkhave, ekacco puggalo mettāsahagatena cetasā ekaṃ disaṃ pharitvā viharati, tathā dutiyaṃ tathā tatiyaṃ tathā catutthaṃ. Iti uddhamadho tiriyaṃ sabbadhi sabbattatāya sabbāvantaṃ lokaṃ mettāsahagatena cetasā vipulena mahaggatena appamāṇena averena abyāpajjena pharitvā viharati. So tadassādeti, taṃ nikāmeti, tena ca vittiṃ āpajjati.</i> | <i>Bhikkhus, There is an individual who cultivates mettā bhavana in four directions. Thus he keeps pervading above, below, and all around the universe with compassion.</i> |
| 3 | <i>Tattha ʒhito tadadhimutto tabbahulavihārī aparihīno kālaṃ kurumāno brahmakāyikānaṃ devānaṃ saḥabyataṃ upapajjati. Brahmakāyikānaṃ, bhikkhave, devānaṃ kappo āyuppamāṇaṃ. Tattha puthujjano yāvātāyukaṃ ʒhatvā yāvatakaṃ tesāṃ devānaṃ āyuppamāṇaṃ taṃ sabbāṃ khepetvā nirayampi gacchati tiracchānayanimpi gacchati pettivisayampi gacchati.</i> | When he dies, he is reborn in the realm Brahmakayika realm. Those devas have a life-span of an eon (<i>Maha Kappa</i>). An anāriya person having stayed there, having used up all the life-span of those devas, can be reborn in hell, animal womb, or the state of the hungry ghosts. |
| 4 | <i>Bhagavato pana sāvako tattha yāvātāyukaṃ ʒhatvā yāvatakaṃ tesāṃ devānaṃ āyuppamāṇaṃ taṃ sabbāṃ khepetvā tasmimyeva bhava parinibbāyati. Ayaṃ kho, bhikkhave, vireso ayaṃ adhippayāso idaṃ nānākaraṇaṃ sutavato ariyasāvakassa assutavatā puthujjanena, yadidaṃ gatiyā upapattiyā sati.</i> | But a disciple of the Blessed One (an <i>Ariya</i>), having used up all the life-span of those devas, attains Parinibbana there. The difference is in the gati between a Noble Person and an <i>anāriya</i> (<i>assutavatā puthujjanena</i>). |
| 5 | <i>Puna caparaṃ, bhikkhave, idhekacco puggalo karuṇāsahagatena cetasā ekaṃ disaṃ pharitvā viharati,..(rest of the verse same as that of 2 above).</i> | <i>Again, Bhikkhus, There is an individual who cultivates karuna bhavana in four directions (rest same as in 2 above).</i> |
| 6 | <i>Tattha ʒhito tadadhimutto tabbahulavihārī aparihīno kālaṃ kurumāno ābhassarānaṃ devānaṃ saḥabyataṃ upapajjati. Ābhassarānaṃ, bhikkhave, devānaṃ dve kappā āyuppamāṇaṃ. Tattha puthujjano yāvātāyukaṃ ʒhatvā yāvatakaṃ tesāṃ devānaṃ āyuppamāṇaṃ taṃ sabbāṃ khepetvā nirayampi gacchati tiracchānayanimpi gacchati pettivisayampi gacchati.</i> | When he dies, he is reborn in the <i>Abhassara</i> realm. Those devas have a life-span of 8 eons (<i>Maha Kappa</i>). An anāriya person having stayed there, having used up all the life-span of those devas, can be reborn in hell, animal womb, or the state of the hungry ghosts. |
| 7 | <i>Bhagavato pana sāvako tattha yāvātāyukaṃ ʒhatvā yāvatakaṃ tesāṃ devānaṃ āyuppamāṇaṃ taṃ sabbāṃ khepetvā tasmimyeva bhava parinibbāyati. Ayaṃ kho, bhikkhave, vireso ayaṃ adhippayāso idaṃ nānākaraṇaṃ sutavato ariyasāvakassa</i> | But a disciple of the Blessed One (an <i>Ariya</i>), having used up all the life-span of those devas, attains Parinibbana there. The difference is in the gati between an the noble ones and an <i>anāriya</i> (<i>assutavatā puthujjanena</i>). |

| | | |
|----|---|---|
| | <i>assutavatā puthujjanena, yadidaṃ gatiyā upapattiyā sati.</i> | |
| 8 | <i>Puna caparaṃ, bhikkhave, idhekacco puggalo muditāsahagatena cetasā ekaṃ disaṃ pharivā viharati,..(rest of the verse same as that of 2 above).</i> | <i>Again, Bhikkhus, There is an individual who cultivates mudita bhavana in four directions.</i> |
| 9 | <i>Tattha thito tadadhimutto tabbahulavihārī aparihīno kālaṃ kurumāno Subhakinha devānaṃ sahabyataṃ upapajjati. Subhakinha, bhikkhave, devānaṃ cattāro kappā āyuppamāṇaṃ. Tattha puthujjano yāvatāyukaṃ thatvā yāvatakaṃ tesāṃ devānaṃ āyuppamāṇaṃ taṃ sabbaṃ khepetvā nirayampi gacchati tiracchānayanimpi gacchati pettivisayampi gacchati.</i> | When he dies, he is reborn in the <i>Subhakinha</i> realm. Those <i>devas</i> have a life-span of 4 eons (<i>Maha Kappa</i>). An anāriya person having stayed there, having used up all the life-span of those <i>devas</i> , can be reborn in hell, animal womb, or the state of the hungry ghosts. |
| 10 | <i>Bhagavato pana sāvako tattha yāvatāyukaṃ thatvā yāvatakaṃ tesāṃ devānaṃ āyuppamāṇaṃ taṃ sabbaṃ khepetvā tasmīnyeva bhava parinibbāyati. Ayaṃ kho, bhikkhave, viseso ayaṃ adhippayāso idaṃ nānākaraṇaṃ sutavato ariyasāvakassa assutavatā puthujjanena, yadidaṃ gatiyā upapattiyā sati.</i> | But a disciple of the Blessed One (an <i>Ariya</i>), having used up all the life-span of those <i>devas</i> , attains <i>Parinibbana</i> there . The difference is in the gati between an the noble ones and an <i>anāriya</i> (<i>assutavatā puthujjanena</i>). |
| 11 | <i>Puna caparaṃ, bhikkhave, idhekacco puggalo upekkhāsahagatena cetasā ekaṃ disaṃ pharivā viharati,..(rest of the verse same as that of 2 above)</i> | <i>Again, Bhikkhus, There is an individual who cultivates upekkha bhavana in four directions.</i> |
| 12 | <i>Tattha thito tadadhimutto tabbahulavihārī aparihīno kālaṃ kurumāno vehapphalānaṃ devānaṃ sahabyataṃ upapajjati. Vehapphalānaṃ, bhikkhave, devānaṃ pañca kappasatāni āyuppamāṇaṃ. Tattha puthujjano yāvatāyukaṃ thatvā yāvatakaṃ tesāṃ devānaṃ āyuppamāṇaṃ taṃ sabbaṃ khepetvā nirayampi gacchati tiracchānayanimpi gacchati pettivisayampi gacchati.</i> | When he dies, he is reborn in the <i>Vehapphala</i> realm. Those <i>devas</i> have a life-span of 500 eons (<i>Maha Kappa</i>). An anāriya person having stayed there, having used up all the life-span of those <i>devas</i> , can be reborn in hell, animal womb, or the state of the hungry ghosts. |
| 13 | <i>Bhagavato pana sāvako tattha yāvatāyukaṃ thatvā yāvatakaṃ tesāṃ devānaṃ āyuppamāṇaṃ taṃ sabbaṃ khepetvā tasmīnyeva bhava parinibbāyati. Ayaṃ kho, bhikkhave, viseso ayaṃ adhippayāso idaṃ nānākaraṇaṃ sutavato ariyasāvakassa assutavatā puthujjanena, yadidaṃ gatiyā upapattiyā sati.</i> | But a disciple of the Blessed One (an <i>Ariya</i>), having used up all the life-span of those <i>devas</i> , attains <i>Parinibbana</i> there . The difference is in the gati between an the noble ones and an <i>anāriya</i> (<i>assutavatā puthujjanena</i>). |
| 14 | <i>Ayaṃ kho, bhikkhave, viseso ayaṃ adhippayāso idaṃ nānākaraṇaṃ sutavato ariyasāvakassa assutavatā puthujjanena, yadidaṃ gatiyā upapattiyā sati. Ime kho,</i> | <i>Bhikkhus, this is the difference in outcomes due to difference in gati between a Noble Person and an <i>anāriya</i> (<i>assutavatā puthujjanena</i>).</i> |

| | |
|---|--|
| <i>bhikkhave, cattāro puggalā santo saṃvijjamānā lokasmin”ti.</i> | |
|---|--|

Notes:

1. The four *jhānic* states attained by an *Ariya* discussed in this *sutta* are from *anāriya jhāna*. Therefore, they are *jhānic* states attained specifically by a *Sotāpanna*, by SUPPRESSING *kāma rāga*. If a *Sotāpanna* attained even the first *Ariya jhāna*, then he/she would be born not in those four realms, but in the realms reserved for those who attained the *Anāgami phala* (realms #23 through #27; see, “[31 Realms of Existence](#).”)
2. Note that by cultivating *mettā*, *karuṇā*, *muditā*, and *upekkhā bhāvanā*, one is born in *Brahmakāyika*, *Abhassara*, *Subhakinha*, and *Vehappala Brahma* realms with lifetimes of 20000, 40000, 60000, and 84000 *kappā*.
3. For more information on *jhānā*, see “[Samādhi, Jhāna \(Dhyāna\), Magga Phala](#)” and “[Power of the Human Mind](#).”
4. Information on 31 realms comes from *suttā* like this one. I have corrected the lifetimes of these four *rūpāvacara* realms in the post, “[31 Realms of Existence](#).”
5. Discussion at : “[WebLink: Pathama Mettā Sutta \(AN 4.125\)](#).”

16.11 **Kukkuravatika Sutta (Majjhima Nikāya 57) – Kammakkhaya**

June 11, 2018; revised April 12, 2020

What Is Meant by *Kammakkhaya*?

1. *Kammakkhaya* is a bit difficult concept to understand. [WebLink: suttacentral: Kukkuravatika Sutta \(Majjhima Nikaya 57\)](#) explains it briefly, and also clarifies how *pāpa (kaṇha) kamma* and *puñña (sukka) kamma* lead to bad and good *kamma vipāka* in various realms. *Kusala kamma* (also called *khammakkhayāya kamma in this sutta*) lead to *kammakkhaya* or “effectively nullifying” *kamma vipāka*.

- *Kaṇha* means “dark or black” (Sinhala word is “*kalla*”), and *sukka* is “white or bright” (Sinhala “*sudu*”). The King of Gods is named “*Sakka*” because he is engaged in *sukka (puñña) kamma*.
- Please read the post, “[Kanha \(Dark\) and Sukka \(Bright\) Kamma and Kammakkhaya](#)” before reading this one, because all these are discussed in detail there. You will not be able to understand this post without reading that.

Kukkuravatika Sutta (MN 57) – Introduction

2. The first half of the *sutta* describes the background, which led the Buddha to analyze various types of *kamma*. We will first go through the essence of the first half, just stating the essence.

- *Suttā* become boring only because the translators basically translate the whole *sutta* word-by-word. There are many repetitive statements in a *sutta* (done for various reasons, the effective oral transmission being one), and it is not necessary to translate word-by-word.
- Furthermore, it is better to provide the essence of a verse rather than translating word-by-word, which can lead to wrong interpretations in some cases.

3. “*Evaṃ me sutam— ekam samayaṃ bhagavā kolyesu viharati haliddavasanaṃ nāma kolyānaṃ nigamo. Atha kho puṇṇo ca kolyaputto govatiko acelo ca seniyo kukkuravatiko yena bhagavā tenupasaṅkamimsu; upasaṅkamitvā puṇṇo kolyaputto govatiko bhagavantam abhivādetvā ekamantaṃ nisīdi. Acelo pana seniyo kukkuravatiko bhagavatā saddhiṃ sammodi. Sammodanīyaṃ kathaṃ sāraṇīyaṃ vītisāretvā kukkurova palikujjivāekamantaṃ nisīdi. Ekamantaṃ nisinno kho puṇṇo kolyaputto govatiko bhagavantam etadavoca: “ayaṃ, bhante, acelo seniyo kukkuravatiko dukkarakārako chamānikkhitaṃ bhojanaṃ bhuñjati. Tassa taṃ kukkuravataṃ dīgharattaṃ samattaṃ samādinnaṃ. Tassa kā gati, ko abhisamparāyo”ti? “Alaṃ, puṇṇa, tiṭṭhatetaṃ; mā maṃ etaṃ pucchī”ti. Dutiyampi kho puṇṇo kolyaputto govatiko ... pe ... tatiyampi kho puṇṇo kolyaputto govatiko bhagavantam etadavoca: “ayaṃ, bhante, acelo seniyo kukkuravatiko dukkarakārako chamānikkhitaṃ bhojanaṃ bhuñjati. Tassa taṃ kukkuravataṃ dīgharattaṃ samattaṃ samādinnaṃ. Tassa kā gati, ko abhisamparāyo”ti?”*

- **Translated:** “Thus have I heard. On one occasion the Buddha was living in the Koliyan country where there was a town of the Koliyans named Haliddavasana. Then Puṇṇa, an ascetic **who lived like an ox** (*govatiko*-this was a cult based on the belief that one can attain *Nibbāna* by subjecting the body to harsh living like an ox), and also Seniya, an ascetic **who lived like a dog** (*kukkuravatiko*), went to see the Buddha. Puṇṇa, the ox-mimicking ascetic, said to the Buddha: “Venerable sir, this Seniya is a naked dog-ascetic who does what is hard to do: he eats his food when it is thrown to the ground; he does everything like a dog. He has been practicing that for a long time. **What will be his rebirth? What will be his future gati?**”
- “Enough, Puṇṇa, let that be. Do not ask me that.” But Puṇṇa asked the question three times.

“Dog Gati” Leads to “Dog Births”

4. “*Addhā kho te ahaṃ, puṇṇa, na labhāmi. Alaṃ, puṇṇa, tiṭṭhatetaṃ; mā maṃ etaṃ pucchīti; api ca tyāhaṃ byākarissāmi. Idha, puṇṇa, ekacco kukkuravataṃ bhāveti paripuṇṇaṃ abbokiṇṇaṃ, kukkurasīlaṃ bhāveti paripuṇṇaṃ abbokiṇṇaṃ, kukkuracittaṃ bhāveti paripuṇṇaṃ abbokiṇṇaṃ, kukkurākappaṃ bhāveti paripuṇṇaṃ abbokiṇṇaṃ. So kukkuravataṃ bhāvetvā paripuṇṇaṃ abbokiṇṇaṃ, kukkurasīlaṃ bhāvetvā paripuṇṇaṃ abbokiṇṇaṃ, kukkuracittaṃ bhāvetvā paripuṇṇaṃ abbokiṇṇaṃ, kukkurākappaṃ bhāvetvā paripuṇṇaṃ abbokiṇṇaṃ kāyassa bhedaṃ paraṃ maraṇā kukkurānaṃ saḥabyataṃ upapajjati. Sace kho panassa evaṃdiṭṭhi hoti: ‘imināhaṃ sīlena vā vatena vā tapena vā brahmacariyena vā devo vā bhavissāmi devaññataro vā’ti, sāssa hoti micchādiṭṭhi. Micchādiṭṭhissa kho ahaṃ, puṇṇa, dvinnaṃ gatīnaṃ aññatarāṃ gatīṃ vadāmi—nirayaṃ vā tiracchānayoṇiṃ vā. Iti kho, puṇṇa, sampajjamānaṃ kukkuravataṃ kukkurānaṃ saḥabyataṃ upaneti, vipajjamānaṃ nirayan’*ti. *Evaṃ vutte, acelo seniyo kukkuravatiko parodi, assūni pavattesi.*”

- **Translated:** Finally, the Buddha gave the answer. “Here, Puṇṇa, someone develops the dog-behavior fully; he develops the dog-habits fully; he develops the dog-mindset fully; then he cultivates dog-behavior fully. If so, at his death, he will be reborn a dog. But if he also has a view as this: ‘By this observance of ‘holy life’, I shall be born a god,’ then he will have a wrong view too. Now there are two destinations for one with a wrong view: hell or the animal realm. So, Puṇṇa, if his dog-mimicking succeeds, it will lead to a birth as a dog; if it fails, it will lead him to a birth in hell (*niraya*) due to wrong views.”
- When this was said, Seniya the naked dog-duty ascetic cried out and burst into tears.

5. “*Atha kho bhagavā puṇṇaṃ koliyaputtaṃ govatikaṃ etadavoca: “etaṃ kho te ahaṃ, puṇṇa, nālatthaṃ. Alaṃ, puṇṇa, tiṭṭhatetaṃ; mā maṃ etaṃ pucchī”*ti. “*Nāhaṃ, bhante, etaṃ rodāmi yaṃ maṃ bhagavā evamāha; api ca me idaṃ, bhante, kukkuravataṃ dīgharattaṃ samattaṃ samādinnaṃ. Ayaṃ, bhante, puṇṇo koliyaputto govatiko. Tassa taṃ govataṃ dīgharattaṃ samattaṃ samādinnaṃ. Tassa kā gati, ko abhisamparāyo*”ti? “*Alaṃ, seniya, tiṭṭhatetaṃ; mā maṃ etaṃ pucchī”*ti. *Dutiyaṃ pi kho acelo seniyo ... pe ... tatiyaṃ pi kho acelo seniyo kukkuravatiko bhagavantaṃ etadavoca: “ayaṃ, bhante, puṇṇo koliyaputto govatiko. Tassa taṃ govataṃ dīgharattaṃ samattaṃ samādinnaṃ. Tassa kā gati, ko abhisamparāyo*”ti?”

- **Translated:** Then the Blessed One told Puṇṇa: “Puṇṇa, I could not persuade you when I said: ‘Enough, Puṇṇa, let that be. Do not ask me that.’” Then Seniya the naked-dog ascetic said: “Venerable sir, I am not crying because the Blessed One has said this about me, but because I have wasted my time practicing this foolish method. Venerable sir, this Puṇṇa is an ox-ascetic. He has long taken up and practiced living like an ox. **What will be his birth? What will be his future gati?**” “Enough, Seniya, let that be. Do not ask me that.” A second time and a third-time Seniya asked the same question.

Gati of an Ox Leads to Birth of an Ox

6. “*Addhā kho te ahaṃ, seniya, na labhāmi. Alaṃ, seniya, tiṭṭhatetaṃ; mā maṃ etaṃ pucchīti; api ca tyāhaṃ byākarissāmi. Idha, seniya, ekacco govataṃ bhāveti paripuṇṇaṃ abbokiṇṇaṃ, gosīlaṃ bhāveti paripuṇṇaṃ abbokiṇṇaṃ, gocittaṃ bhāveti paripuṇṇaṃ abbokiṇṇaṃ, gavākappaṃ bhāveti paripuṇṇaṃ abbokiṇṇaṃ. So govataṃ bhāvetvā paripuṇṇaṃ abbokiṇṇaṃ, gosīlaṃ bhāvetvā paripuṇṇaṃ abbokiṇṇaṃ, gocittaṃ bhāvetvā paripuṇṇaṃ abbokiṇṇaṃ, gavākappaṃ bhāvetvā paripuṇṇaṃ abbokiṇṇaṃ kāyassa bhedaṃ paraṃ maraṇā gunnaṃ saḥabyataṃ upapajjati. Sace kho panassa evaṃdiṭṭhi hoti: ‘imināhaṃ sīlena vā vatena vā tapena vā brahmacariyena vā devo vā bhavissāmi devaññataro vā’ti, sāssa hoti micchādiṭṭhi. Micchādiṭṭhissa kho ahaṃ, seniya, dvinnaṃ gatīnaṃ aññatarāṃ gatīṃ vadāmi—nirayaṃ vā tiracchānayoṇiṃ vā. Iti kho, seniya, sampajjamānaṃ govataṃ gunnaṃ saḥabyataṃ upaneti, vipajjamānaṃ nirayan’*ti. *Evaṃ vutte, puṇṇo koliyaputto govatiko parodi, assūni pavattesi.*”

- **Translated:** Finally, the Buddha gave the answer. “Here, Seniya, someone develops the ox-behavior fully; he develops the ox-habits fully; he develops the ox-mindset fully; then he cultivates ox-behavior fully. If so, at his death, he will be reborn an ox. But if he also has a view as this: ‘By this observance of

“holy life”, I shall be born a god,’ then he will have a wrong view too. Now there are two destinations for one with wrong views: hell or the animal realm. So, Seniya, if his ox-mimicking succeeds, it will lead to a birth as an ox; if it fails, it will lead him to a birth in hell (*niraya*) due to wrong views.”

- When this was said, Puṇṇa the ox-duty ascetic cried out and burst into tears.

7. “*Atha kho bhagavā acelaṃ seniyaṃ kukkuravatikaṃ etadavoca: “etaṃ kho te ahaṃ, seniya, nālatthaṃ. Alaṃ, seniya, tiṭṭhatetaṃ; mā maṃ etaṃ pucchi”ti. “Nāhaṃ, bhante, etaṃ rodāmi yaṃ maṃ bhagavā evamāha; api ca me idaṃ, bhante, govataṃ dīgharattaṃ samattaṃ samādinnaṃ. Evaṃ pasanno ahaṃ, bhante, bhagavati; pahoti bhagavā tathā dhammaṃ desetum yathā ahaṃ cevimaṃ govataṃ pajaheyyaṃ, ayañceva acelo seniyo kukkuravatiko taṃ kukkuravataṃ pajaheyyā”ti. “Tena hi, puṇṇa, suṇāhi, sādhukaṃ manasi karohi, bhāsissāmi”ti. “Evaṃ, bhante”ti kho puṇṇo koliyaputto govatiko bhagavato paccassosi. Bhagavā etadavoca: “*

- **Translated:** “Then the Blessed One told Seniya the naked dog-duty ascetic: “Seniya, I could not persuade you when I said: ‘Enough, Seniya, let that be. Do not ask me that.’”
- Then Puṇṇa the ox-duty ascetic said: “Venerable sir, I am not crying because the Blessed One has said this about me, but because I have wasted my time practicing this foolish *sīla*. Venerable sir, I have confidence in the Blessed One thus: ‘The Blessed One is capable of teaching us the Dhamma the right way’
- “Then, Puṇṇa, listen and attend closely to what I shall say.”—“Yes, venerable sir,” he replied. The Blessed One said this:

Four Types of *Kamma*

8. “*Cattārimāni, puṇṇa, kammāni mayā sayāṃ abhiññā sacchikatvā paviditāni. Katamāni cattāri? Atthi, puṇṇa, kammaṃ kaṇhaṃ kaṇhavipākaṃ; atthi, puṇṇa, kammaṃ sukkaṃ sukkavipākaṃ; atthi, puṇṇa, kammaṃ kaṇhasukkaṃ kaṇhasukkavipākaṃ; atthi, puṇṇa, kammaṃ akaṇhaṃ asukkaṃ akaṇhaasukkavipākaṃ, kammakkhayāya saṃvattati.*”

- **Translated:** “Puṇṇa, there are four kinds of actions (*kamma*) proclaimed by me after realizing them for myself. What are the four? There is dark action (*kaṇha* or *pāpa kamma*) with a dark result. A bright action (*sukka* or *puñña kamma*) brings a bright result. A dark-and-bright action (*kaṇhasukkaṃ*) brings a dark-and-bright result (*kaṇhasukkavipākaṃ*.) Then there is action that is neither dark nor bright with neither-dark-nor-bright result, an **action that leads to the destruction of defilements** (*kammakkhayāya* or *kusala kamma*).”

“Dark” *Kamma* With “Dark” Results

9. “*Katamañca, puṇṇa, kammaṃ kaṇhaṃ kaṇhavipākaṃ? Idha, puṇṇa, ekacco sabyābajjhaṃ kāyasaṅkhāraṃ abhisaṅkharoti, sabyābajjhaṃ vacīsaṅkhāraṃ abhisaṅkharoti, sabyābajjhaṃ manosaṅkhāraṃ abhisaṅkharoti. So sabyābajjhaṃ kāyasaṅkhāraṃ abhisaṅkharitvā, sabyābajjhaṃ vacīsaṅkhāraṃ abhisaṅkharitvā, sabyābajjhaṃ manosaṅkhāraṃ abhisaṅkharitvā, sabyābajjhaṃ lokaṃ upapajjati. Tameṇaṃ sabyābajjhaṃ lokaṃ upapannaṃ samānaṃ sabyābajjhā phassā phusanti. So sabyābajjhehi phassehi phuṭṭho samāno sabyābajjhaṃ vedanaṃ vedeti ekantadukkhaṃ, seyyathāpi sattā nerayikā. Iti kho, puṇṇa, bhūtā bhūtassa upapatti hoti; yaṃ karoti tena upapajjati, upapannameṇaṃ phassā phusanti. Evampāhaṃ, puṇṇa, ‘kammadāyādā sattā’ti vadāmi. Idaṃ vuccati, puṇṇa, kammaṃ kaṇhaṃ kaṇhavipākaṃ. (1)”*

- **Translated:** “And what, Puṇṇa, is dark action with dark result? Here someone generates a ***dukkhita*** (*sabyābajjhaṃ* or **destined to or bound by *dukha***) *kāyasaṅkhāra*, a *dukkhita vacīsaṅkhāra*, a *dukkhita manosaṅkhāra*. Having generated such *dukkhita abhisaṅkhāra*, he is reborn in an *apāya*. When he is reborn in an *apāya*, he contacts appropriate *dukkhita* (painful) sense contacts. Being touched by such painful contacts, he feels painful feelings, exclusively painful, as in the case of the beings in **hell** (*apāya*). Thus a being’s rebirth is due to a being’s own actions: one gets a rebirth through the

actions one has performed. Thus I say beings are the heirs of their actions. This is called dark action with dark result.”

“Bright” Kamma With “Bright” Results

10. “*Katamañca, puñña, kammaṃ sukkaṃ sukkavipākaṃ? Idha, puñña, ekacco abyābajjhaṃ kāyasañkhāraṃ abhisankharoti, abyābajjhaṃ vacīsañkhāraṃ abhisankharoti, abyābajjhaṃ manosañkhāraṃ abhisankharoti. So abyābajjhaṃ kāyasañkhāraṃ abhisankharitvā, abyābajjhaṃ vacīsañkhāraṃ abhisankharitvā, abyābajjhaṃ manosañkhāraṃ abhisankharitvā abyābajjhaṃ lokaṃ upapajjati. Tameṇaṃ abyābajjhaṃ lokaṃ upapannaṃ samānaṃ abyābajjhā phassā phusanti. So abyābajjhehi phassehi phuṭṭho samāno abyābajjhaṃ vedanaṃ vedeti ekantasukhaṃ, seyyathāpi devā subhakiṇhā. Iti kho, puñña, bhūtā bhūtassa upapatti hoti; yaṃ karoti tena upapajjati, upapannameṇaṃ phassā phusanti. Evampāhaṃ, puñña, ‘kammadāyādā sattā’ ti vadāmi. Idaṃ vuccati, puñña, kammaṃ sukkaṃ sukkavipākaṃ. (2)’*”

- **Translated:** “And what, Puñña, is bright action with bright result? Here someone generates a **sukkhita** (**abyābajjhaṃ** or **destined to or bound by sukha**) **kāyasañkhāra**, a **sukkhita vacīsañkhāra**, a **sukkhita manosañkhāra**. Having generated such **sukkhita abhisankhara**, he is reborn in realm with happiness (**sukkhita**). When he is reborn in a such a realm, he contacts appropriate **sukkhita** sense contacts. Being touched by such **sukkhita** contacts, he feels **sukha** feelings, as in the case of **subhakinha deva** realm. Thus a being’s rebirth is due to a being’s own actions: one gets a rebirth through the actions one has performed. Thus I say beings are the heirs of their actions. This is called bright action with bright result”

“Dark and Bright” Kamma With “Dark and Bright” Results

11. “*Katamañca, puñña, kammaṃ kaṇhasukkaṃ kaṇhasukkavipākaṃ? Idha, puñña, ekacco sabyābajjhampi abyābajjhampi kāyasañkhāraṃ abhisankharoti, sabyābajjhampi abyābajjhampi vacīsañkhāraṃ abhisankharoti, sabyābajjhampi abyābajjhampi manosañkhāraṃ abhisankharoti. So sabyābajjhampi abyābajjhampi kāyasañkhāraṃ abhisankharitvā, sabyābajjhampi abyābajjhampi vacīsañkhāraṃ abhisankharitvā, sabyābajjhampi abyābajjhampi manosañkhāraṃ abhisankharitvā sabyābajjhampi abyābajjhampi lokaṃ upapajjati. Tameṇaṃ sabyābajjhampi abyābajjhampi lokaṃ upapannaṃ samānaṃ sabyābajjhāpi abyābajjhāpi phassā phusanti. So sabyābajjhehipi abyābajjhehipi phassehi phuṭṭho samāno sabyābajjhampi abyābajjhampi vedanaṃ vedeti vokiṇṇasukhadukkaṃ, seyyathāpi manussā ekacce ca devā ekacce ca vinipātikā. Iti kho, puñña, bhūtā bhūtassa upapatti hoti; yaṃ karoti tena upapajjati. Upapannameṇaṃ phassā phusanti. Evampāhaṃ, puñña, ‘kammadāyādā sattā’ ti vadāmi. Idaṃ vuccati, puñña, kammaṃ kaṇhasukkaṃ kaṇhasukkavipākaṃ. (3)’*”

- **Translated:** “And what, Puñña, is dark-and-bright action with a dark-and-bright result? Here someone generates **abhisankhara** of both types. Then he is reborn in a realm with both happiness (**sukkhita**) and suffering (**dukkhita**). When he is reborn in a such a realm, he contacts appropriate **sukkhita** and **dukkhita** sense contacts. Being touched by such contacts, he feels **sukha** and **dukha** feelings interchangeably, as in the case of **human, deva, and vinipātika** realms. Thus a being’s rebirth is due to a being’s own actions: one gets a rebirth through the actions one has performed. Thus I say beings are the heirs of their actions. This is called dark-and-bright action with dark-and-bright result”. [**vinipātika** : (adj.) [fr. vinipāta] destined to suffer in purgatory, liable to punishment after death.]

Neither Dark nor Bright Kamma

12. “*Katamañca, puñña, kammaṃ akaṇhaṃ asukkaṃ akaṇhaasukkavipākaṃ, kammakkhayāya samvattati? Tatra, puñña, yamidaṃ kammaṃ kaṇhaṃ kaṇhavipākaṃ tassa pahānāya yā cetanā, yamidaṃ kammaṃ sukkaṃ sukkavipākaṃ tassa pahānāya yā cetanā, yamidaṃ kammaṃ kaṇhasukkaṃ kaṇhasukkavipākaṃ tassa pahānāya yā cetanā—idaṃ vuccati, puñña, kammaṃ*

akaṇhaṃ asukkaṃ akaṇhaasukkavipākaṃ, kammakkhayāya saṃvattatīti. Imāni kho, puṇṇa, cattāri kammāni mayā sayamaṃ abhiññā sacchikatvā paveditāni”ti. (4)”

- **Translated:** “And what, Puṇṇa, is an action that is neither dark nor bright with the neither-dark-nor-bright result, action that leads to the **destruction of defilements (and āsava/anusaya)**? Therein, the volition (*cetana*) for abandoning the kind of action that is dark with dark result, and the volition for abandoning the kind of action that is bright with a bright result, and the volition for abandoning the kind of action that is dark and bright with a dark-and-bright result (**i.e., does not lead to rebirth in any realm**): this is called action (*kamma*) that is neither dark nor bright with a neither-dark-nor-bright result, an action that leads to the destruction of **defilements (and āsava/anusaya)**. **These are the four kinds of *kamma* proclaimed by me after realizing them for myself with direct knowledge.**”
- **It is important to realize that such *cetana* AUTOMATICALLY arises in those who have realized the “unsatisfactory and dangerous nature” of this world of 31 realms, i.e., *Tilakkhaṇa*.**
- **In that context, it is also important to understand that *cetana* is NOT conventional “intention”, but is how good and bad mental factors (*cetasika*) AUTOMATICALLY arise in one’s thoughts based on one’s *gati*.**
- Those last two bullet points are the most important teachings from the *sutta*. This is explained in detail in the post, “[Kanha \(Dark\) and Sukka \(Bright\) Kamma and Kammakkhaya.](#)”

Puṇṇa and Seniya Understood

13. “*Evam vutte, puṇṇo koliyaputto govatiko bhagavantam etadavoca: “abhikkantam, bhante, abhikkantam, bhante. Seyyathāpi, bhante ... pe ... upāsakaṃ maṃ bhagavā dhāretu ajjatagge pāṇupetaṃ saraṇaṃ gatan”ti. Acelo pana seniyo kukkuravatiko bhagavantam etadavoca: “abhikkantam, bhante, abhikkantam, bhante. Seyyathāpi, bhante ... pe ... pakāsito. Esāham, bhante, bhagavantam saraṇaṃ gacchāmi dhammañca bhikkhusaṅghañca. Labheyyāham, bhante, bhagavato santike pabbajjam, labheyyam upasampadan”ti. “Yo kho, seniya, aññatitthiyapubbo imasmim dhammavinaye ākaṅkhati pabbajjam, ākaṅkhati upasampadam so cattāro māse parivasati. Catunnam māsānam accayena āradhacittā bhikkhū pabbājenti, upasampādentī bhikkhubhāvāya. Api ca mettha puggalavemattatā veditā”ti.*”

- **Translated:** When this was said, Puṇṇa said to the Blessed One: “Magnificent, venerable sir! The Blessed One has made the Dhamma clear in many ways...From today let the Blessed One accept me as a lay follower who has gone to him for refuge for life.”
- Seniya said to the Blessed One: “Magnificent, venerable sir! The Blessed One has made the Dhamma clear in many ways, as though an upside-down vessel was turned to the upside, revealing what was hidden, or showing the way to one who was lost or holding up a lamp in the dark for those with eyesight to see. I take refuge in the Blessed One, the Dhamma, and the Saṅgha. May I receive the going forth under the Blessed One?”
- “Seniya, one who formerly belonged to another sect and desires the going forth and the full admission in this Buddha Sasana lives on probation for four months. At the end of four months, if the *bhikkhus* are satisfied with him, they give him the going forth and the full admission to the *bhikkhus*’ state. But I recognize individual differences in this matter.”

Seniya became an *Arahant*

14. “*Sace, bhante, aññatitthiyapubbā imasmim dhammavinaye ākaṅkhantā pabbajjam ākaṅkhantā upasampadam te cattāro māse parivasanti catunnam māsānam accayena āradhacittā bhikkhū pabbājenti upasampādentī bhikkhubhāvāya, aham cattāri vassāni parivasissāmi catunnam vassānam accayena āradhacittā bhikkhū pabbājentu, upasampādentu bhikkhubhāvāya”ti.*

Alattha kho acelo seniyo kukkuravatiko bhagavato santike pabbajjam, alattha upasampadam. Acirūpasampanno kho panāyasmā seniyo eko vūpakaṭṭho appamatto ātāpī pahitatto viharanto nacirasseva—yassatthāya kulaputtā sammadeva agārasmā anagāriyam pabbajanti, Tadanuttaram—brahmacariyapariyosānam diṭṭheva dhamme sayam abhiññā sacchikatvā upasampajja vihāsi.

“Khīṇā jāti, vusitaṃ brahmacariyam, kataṃ karaṇīyam, nāparam itthattāyā”ti abbhaññāsi. Aññataro kho panāyasmā seniyo arahataṃ ahoṣīti.”

- **Translated:** “Venerable sir, if those who formerly belonged to another sect and desire the going forth and the full admission in this Dhamma and Discipline live on probation for four months, and if at the end of the four months the *bhikkhus* being satisfied with them to give them the going forth and the full admission to the *bhikkhus*’ state, then I will live on probation for four years. At the end of the four years if the *bhikkhus* are satisfied with me, let them give me the going forth and the full admission to the *bhikkhus*’ state.”
- Then Seniya the naked dog-ascetic received the going forth under the Blessed One, and he received the full admission. And soon, not long after his full admission, dwelling alone, withdrawn, diligent, ardent, and resolute, the venerable Seniya became an *Arahant*.

16.12 **Buddhism and Evolution – Aggañña Sutta (DN 27)**

January 24, 2019; revised January 30, 2019; July 30, 2019; February 16, 2020; August 24, 2020 (#5 – #7)

Introduction

1. *Aggañña Sutta* is one of several complex *suttā* that requires a lengthy explanation. To understand the *sutta*, one needs to have a broad background in Buddha Dhamma. I have been very reluctant to write even this post, because it could lead to many questions in many people who do not yet have that necessary background.

- “*Agga*” means “highest,” and thus, the word “*Aggañña*” means “highest knowledge,” in this case, about our world.
- The Buddha delivered the *Aggañña sutta* to two *brahmins* (Vāsetṭha and Bhāradvāja), to explain the “human origins.” That not only *Vedic Brahmins* – but ALL LIVING BEINGS – on this Earth came from *Brahma* realms at the beginning of the Earth. In other words, each and every living being on this Earth right now was a *Brahma* at the beginning of the present Earth).
- I must forewarn that some features are in contradiction to existing “scientific theories.” Please do not bring them up. I am aware of them. That is why I have been reluctant to write this post.
- However, there are some benefits, at least for those who have faith in Dhamma, in seeing how self-consistent Buddha Dhamma is.

Summary of *Sutta*

2. Following is a brief summary:

- (i). The universe has no traceable beginning, just like for life.
- (ii). The universe has “clusters or groups” of stars. Our Solar system is one of 10,000 “star systems” (*cakkavāla* or planetary systems; *chakrawāta* in Sinhala). There is an infinite number of such *cakkavāla* in the universe.
- (iii). When a star in the vicinity of our Sun blows up in a few billion years, that blast will destroy 10,000 other star systems in the neighborhood. Such a “star explosion” has a particular name, a supernova, in modern science.
- (iv). Such a cluster of 10,000 world-systems blows up from time to time in the universe. Again, scientists observed such supernovae every year.
- (v). What science does not know yet is that those destroyed star systems re-formed over billions of years.
- (vi). Not all 31 realms get destroyed when our Solar system blows up at the end of a *mahā kappa*. Higher lying *Brahma* worlds (where there is very little of “destructible matter”) survive. That is where all living beings on this Earth ends up before the destruction of the Earth.
- (vii). How all living beings end up in the *Brahma* realms is a long story by itself.
- (viii). Then when the Earth is re-forms, those *Brahmā* — at the end of their lifetimes in those worlds — are reborn as humans with very light, *Brahma*-like bodies at first.
- (ix). Then the life on Earth evolves to other lifeforms too. That is a “reverse evolution” compared to the “theory of evolution” currently accepted by science. After billions of years, the realms below the *Ābhassara Brahma* realm will be destroyed again. After billions of more years, it will re-form.
- (x). So, that is the life cycle. It happens all over the universe at any given time. That is why scientists observe several supernovae even in our own galaxy each year (which has billions of *cakkavāla*).

Model of the Universe

3. Therefore, life exists in an infinite number of “star systems” where a star provides the energy to sustain life. In our “Solar system”, life exists in 31 realms centered on Earth that are located inside, on the surface, and extending out into space. Of course, the Sun is our star.

- In the post “[31 Realms of Existence](#),” these 31 realms are listed. The information there comes from several *suttā*. In particular, the “[Dhammacakkappavattana Sutta](#)” names many of those spheres. Most versions of the *sutta* just skip that section. The following pdf file has the full text of the *sutta* can be accessed in : [WebLink: PDF Download: Dhammacakkappavattana Sutta-3](#).

4. A Buddha appears only in one *cakkavāla* out of that cluster of 10,000 such *cakkavāla* in that group; that is our Earth. *Brahmā* and *devas* from those 10,000 systems (*dasa sahasi lokadhātu*) can come and listen to Dhamma on the Earth.

- Of course, humans from those worlds do not have access to Buddha Dhamma.
- So, we can see how rare it is for a human to be able to “have access” to Buddha Dhamma. Even on our Earth, there are many *mahā kappā* without a single Buddha appearing!

Model of the Solar System (*Cakkavāla*)

5. The Buddha stated that the length of one *kappa* or *kalpa* in Sinhala) unimaginably long. He gave the following comparison. In than the time, a man can wear away a mountain of solid granite one *yojanā* (about 7 miles) around and one *yojanā* high, by stroking it once every hundred years with a silk cloth.

- The [WebLink: suttacentral: Pabbata Sutta \(SN 15.5\)](#); has the above analogy; see, “[Samsāric Time Scale, Buddhist Cosmology, and the Big Bang Theory](#).”

6. A *mahā kappa* consists of 4 “*antakkappa*,” as explained in the [WebLink: suttacentral: Kappa Sutta \(AN 4.156\)](#):

“*Cattārimāni, bhikkhave, kappāssa asaṅkhyeyyāni. Katamāni cattāri? Yadā, bhikkhave, kappo samvattati,..kappo samvatṭo tiṭṭhati,..kappo vivattati,..kappo vivatṭo tiṭṭhati, ..*”

- “There are four incalculable *kappā*. **Destruction** takes place for a *kappa*, **remains in that state (void)** for a *kappa*, **re-formation** takes place over a *kappa*, and then it **exists in that state (the Earth as we know it)** for a *kappa*.”
- **That last stage is where the Earth is now.**
- Each incalculable *kappa* has **20 kappā**.

7. The Solar system will last another 5 billion or so. Thus the total time in the existence of the current Sun (and Earth) is about 10 billion years according to modern science. That is the **existence phase** lasting 20 *kappā*, assuming that the current scientific estimate is correct.

- The other three *kappā* take 10 billion years each, and that is how the time for a complete cycle takes 40 billion years.
- The Earth (and the whole Solar system) keeps going through this cyclic process that takes roughly 40 billion years per cycle, i.e., for a *mahā kappa* (with the above assumption.)
- This cycle will keep repeating. There was no “Big Bang” beginning.

Migration of Living Beings at Destruction/Re-Formation of Earth

8. When the Sun dies in the future, it will start expanding and will expand to reach the Earth. Long before that, all life on Earth would have been destroyed.

- So, what happens to all the living beings on Earth? We remember that while humans and animals live on the Earth, those beings belonging to the other three lower realms live on or underneath the Earth's surface. All those will perish.
- It is a long story, but all those beings move to higher realms as the Earth starts to get hot.

9. We remember that the *deva* and *Brahma* realms lie above the Earth. But the “density” at those realms are well below the “density” of things at the surface. As we know, *deva* bodies are much less dense than human bodies, and *Brahma* “bodies” are even more subtle.

- One critical thing we learn from science is that “more dense stuff” burn first. For example, in an incinerator, we can burn anything dense. But of course, gases are not get burned (i.e., not decomposed.)
- There is virtually nothing much of what we call “material” in those realms. Whatever is there will be gradually decay and replaced by other “fine matter.” Of course, all beings in those realms will have long but finite lifetimes too.
- The deduction is that all those realms above the *Ābhassara Brahma* realm will not be destroyed in the destruction phase. That is why the lifetimes of some *Brahmā* are many *mahā kappā*.

10. The bottom line is that eventually, all realms below the *Ābhassara Brahma* realm will be destroyed. By that time, all the living beings would have “migrated” up to that realm.

- How do all these living beings, including those in the *apāyā*, migrate to higher realms?
- That is related to the fact that when the Earth starts getting “hot,” those “mind pleasing sense objects” will be destroyed over time. Living beings will have less and less “sense attractions,” and thus, their minds will be temporarily freed from “*upādāna*.”
- That needs a detailed explanation, but those who understand *Paṭicca Samuppāda* may be able to at least a glimpse of how it happens.

11. When the Earth is re-formed about 20 billion years after its destruction (10 billion years remaining in the destructed state, and 10 billion years for the re-formation,) those *Brahmā* will start coming down to those newly-formed lower realms.

- That also will take some explaining. But the critical point is that with time, old “*gati*” (which have been lying dormant as *anusaya*) start to re-surface, and the activation of *Paṭicca Samuppāda* cycles will ensure those “downward paths.”

Conflicts with Current Scientific Theories

12. Now, we immediately run into difficulties with the **current scientific knowledge** of Earth's history. According to current understanding, first humans appeared only about 2 million years ago. Note that a billion years is 1000 million years!

- Therefore, what we described above is a “reverse evolution” compared to the “theory of evolution” currently accepted by science.
- We need to go back only 500 years to see how a prevailing world view changed and became compatible with Buddha Dhamma. See #13 below.
- I have discussed how Buddha Dhamma has so far withstood past such “contradictions”; see, “[Dhamma and Science – Introduction](#).” I just hope the next revision in science will happen during my lifetime.

13. For example, only 500 years ago, the accepted “world view” was that Earth was at the center of the universe with all the stars were embedded in a “[WebLink: wikipedia.org:celestial spheres](http://wikipedia.org:celestial_spheres).”

- If someone tried to explain that the Earth was actually rotating around the Sun, he would have had a hard time. In fact, Galileo spent the rest of his life in solitary confinement after providing evidence that the Earth was rotating around the Sun.

- Of course, no one will be prosecuted for proposing any theory these days. Still, they will not be taken seriously by the scientific community.
- As new experiments/observations provide further evidence, an accepted scientific view changes to accommodate the new evidence. For example, the above change in the world view took place after the invention of the telescope by Galileo.
- Of course, it is only rational to adopt that scientific method for mundane purposes. That is the only way science can make progress.
- However, when one comprehends Buddha Dhamma, one can get to a better understanding of our world.

The Rarity of Buddha Dhamma in the World

14. There have been four Buddhas in this *mahā kappā*, and one more Buddha will appear before the destruction of this Earth and the Solar system.

- Then after 30 billion more years, the Earth will come to existence again in this cyclic process (not exactly the same Earth).

15. In the [WebLink: suttacentral: Vepullapabbatta Sutta \(SN 15.20\)](#), the Buddha provides the names of the three Buddhas **on this Earth** (in this *mahā kappā*) before him: Kakusandha, Koṇāgama, and Kassapa. He describes how a particular mountain had three different names and three different heights during those Buddha's times.

- The point there is that those Buddhas had been on this Earth at times far part from each other. Considering that the age of the Earth is about 4.5 billion years, it is reasonable to assume that they were about a billion years apart.
- One piece of evidence in the *Tipiṭaka* for material from previous Buddhas had been transmitted via *Vedic* teachings (with superficial meanings) is given in the post, "[Arogyā Paramā Lābhā..](#)" (see #8 there).

16. By the way, the existence of Buddha Kassapa before the Buddha Gotama help explain many questions that people have on the connection between *Vedic* terms and Buddhist terms. Some examples are kamma (*karma*), *Bhikkhu* (*Bhikshu*), *paññā* (*pragnā*), *jhāna* (*dhyāna*), *Nibbāna* (*Nirvāna*), and so on.

- After the end of the Kassapa Buddha *Sāsana*, his teachings were transmitted as *Vedic* teachings, of course, without the deeper meanings. I will need to write some posts just on this issue.
- A good example is the *Ānāpāna bhāvanā*, which got transmitted as "breath meditation".
- After re-gaining Buddha Kassapa's interpretation during the time of our Buddha, by the current time, the *Vedic* description has retaken hold again. It will be restored in the coming years, But, of course, it will again disappear to be re-discovered by the Maitreya Buddha in the future.

17. Furthermore, there have been only 7 Buddhas within the past 91 *mahā kappā*; see, "[WebLink: suttacentral: Mahāpadāna Sutta \(DN 14\)](#)."

- There have been 30 *mahā kappā* without a single Buddha before the current *mahā kappā*. That is 1200 billion years years or over a trillion years!
- An even in this *kappā*, the Gotama Buddha *Sāsana* would last only 5000 years, a negligible time in terms of a *kappā*. **Thar is why we should not waste this rare opportunity.**

Origins of the World – Limits of Inquiry

18. The human mind is naturally curious. We want to know everything, especially regarding this wondrous place called the universe. It is mind-boggling, but exciting at the same time. I used to spend a lot of time reading science fiction as well as speculations about the origins of the universe, etc. when I was growing up.

- One time, Ven. Moggallāna, who was only second to the Buddha in psychic (*abhiññā*) powers, wanted to explore the universe and see for himself how far he could go. He got lost! Buddha had to come to his rescue.
- Then there is the account about a *yogi*, Rohitassa, who developed *abhiññā* powers. He wanted to see the end of the world and took off looking for it, got lost and died. He was reborn a *deva*, came to see the Buddha and told the Buddha about his quest. See, “[WebLink: accesstoinsight.org: Rohitassa Sutta: To Rohitassa.](http://www.accesstoinsight.org/suttacentral/an/04/077.html)”

19. Cosmology is one of the things that the Buddha declared “unthinkable (*acinteyya*)” for an average human; see, “[WebLink: suttacentral: Acinteyya Sutta \(AN 4.77\)](http://www.suttacentral.net/an/04/077.html)”:

“There are these four things that should not to be conjectured about and would bring **anxiety and madness** to anyone who speculates. Which four? (i) capabilities of a Buddha, (ii) subject of *jhānā*, (iii) detailed knowledge of *kamma/kamma vipāka*, (iv) origins of the world.

- One can spend a lifetime looking into the details of those subjects, and getting no where.
- However, as we saw above, some insights can be gained by having a rough idea about those subjects. One gets into trouble when one tries to get into details.
- We will explore some more aspects in the future, that are beneficial for progressing on the Path.

20. Please keep that in mind when you make comments at the discussion forum. There are a few things we can learn from the *sutta*, but it is useless to get into arguments about how **it contradicts scientific findings at the present time**.

- I have opened a new topic, “Post on “[WebLink: puredhamma.net/forums: Buddhism and Evolution – Aggañña Sutta \(DN 27\)](http://www.puredhamma.net/forums/buddhism-and-evolution-aggañña-sutta-dn-27)” for comments and questions at the discussion forum.
- Also, please read the post carefully before making a comment or asking a question. There is a lot of material there.

July 12, 2019: I have started a new subsection, “[Origin of Life](#)” to discuss the necessary background material for future posts on the *Aggañña Sutta*.

16.13 Tapussa Sutta (AN 9.41) – Akuppā Cētōvimutti

February 28, 2019; #21 added March 1, 2019

1. Most *suttā* have been translated word by word, without paying attention to the context or to the underlying teachings. I hope this *sutta* translation will convey what I mean by that statement.

- This *sutta* basically explains why it is necessary to reduce cravings for sense pleasures and to stay away from *dasa akusala* — and eventually to get rid of them — if one wants to cultivate *Ariya jhāna*.
- **Just suppressing** sense cravings (*kāma rāga*) induces *jhāna* too; see, “[Jhānic Experience in Detail – Sāmaññaphala Sutta \(DN 2\)](#).”
- However, to attain *Nibbāna (akuppā cetovimutti)*, one needs to remove those cravings at each *jhānic* state; see, “[Ascendance to Nibbāna via Jhāna \(Dhyāna\)](#).” In this post, we discuss the step-by-step process.
- Still, **getting rid** of sense cravings (*kāma rāga*), is not an easy task. It needs to be done by contemplating on the drawbacks (and dangers) of them — called *ādīnava* (pronounced “aadeenava”) — , and also the benefits (*ānisamsa*) of giving up such cravings (renunciation); see, “[Mundane versus Supramundane Jhāna](#).”

2. One could follow the Pāli version while reading: “[WebLink: suttacentral: Tapussa Sutta \(AN 9.41\)](#)” and the “[WebLink: suttacentral: English Translation](#)” and “[WebLink: suttacentral: Sinhala Translation](#)” at that same website. It is a useful website, but translations are not correct for some key Pāli words.

- *Suttā* are designed to be extremely repetitive, and that enabled faithful oral transmission over the first 500 years. But, **in the written form**, it is not necessary to translate the whole *sutta* word-by-word to understand its message. In fact, that could be very boring reading.
- So, I will start off with lengthy translation at first, and cut it short as I proceed to the end in order to make it readable, yet (hopefully) provide the key ideas.
- We also need to keep in mind that the *Bodhisatta* before becoming the Buddha, had learned how to get to all the *jhānā* from other *yogis*. One can attain *cetovimutti* (highest *jhāna*) by such *anāriya* techniques like breath meditation, but those *jhānā* are not stable. As described below, the Buddha figured out to cultivate unbreakable (stable) *jhāna* and attain the *Buddhahood* with *akuppā cetovimutti*.
- That is the process described in this *sutta*, which we discuss now.

3. Thus I have heard. On one occasion, the Blessed One was staying in Malla near a Mallan town named Uruvelakappa. Then early in the morning the Blessed One, having put on his robes and carrying his bowl and outer robe, went to Uruvelakappa for alms. Having gone into Uruvelakappa for alms, after his meal, on his return from his alms round, he said to Ven. Ānanda, “Stay here, Ānanda, while I go to the forest for the day’s abiding.”

- “As you say, lord,” Ven. Ānanda replied.
- Then the Blessed One went to the forest and sat down at the root of a tree for the day’s abiding.

4. Then Tapussa the householder went to Ven. Ānanda and, on arrival, having bowed down to him, sat to one side. As he was sitting there, he said to Ven. Ānanda: “Venerable Ānanda, we are householders who indulge in sensuality, delight in sensual pleasures, enjoy sensual pleasures, rejoice in sensual pleasures. For us, staying away from sensual pleasures — or renunciation — seems like jumping off of a cliff (it is hard to contemplate). Yet I’ve heard that in this Buddha *Sāsana* there are young *bhikkhus* (monks) who have given up sense pleasures and have attained peace of mind and ultimate release from suffering. How are those *bhikkhus* different from most people like us?”

- “This is true, householder. Let’s go ask the Blessed One to explain this”.

5. Then Ven. Ānanda, together with Tapussa the householder, went to the Blessed One and, on arrival, having bowed down to him, sat to one side. Then Ven. Ānanda said to the Blessed One: “*Bhante*, Tapussa the householder, here, has said to me, ‘we are householders who indulge in sensuality, delight in sensual pleasures, enjoy sensual pleasures, rejoice in sensual pleasures. **For us, staying away from sensual pleasures — or renunciation — seems like unappealing as jumping off of a cliff.** Yet I’ve heard that in this Buddha *Sāsana* there are young monks who have given up sense pleasures and have attained peace of mind and ultimate release from suffering. How are these monks different from most people like us?”

6. “So it is, Ānanda. So it is. Even I myself, before attaining the Buddhahood, when I was still an unawakened *Bodhisatta*, I thought: ‘abstaining from sensual pleasures (*nekkhamma*) is good, peace of mind (*viveka*) is good’. But such thoughts free of sense cravings (*nekkhamme cittam*) would not sink in (*na pakkhandati*), would not purify (*na pasidati*), would not calm down (*na santitthati*) my mind, and it would not become liberated (*na vimuccati*)”.

- Then a thought occurred to me: “What is the reason that such thoughts free of sense cravings (*nekkhamme cittam*) would not sink in (*na pakkhandati*), would not purify (*na pasidati*), calm down, would not calm down (*na santitthati*) my mind so that it would not become liberated (*na vimuccati*)?”
- Then this thought occurred to me: “I have not seen the dangers/drawbacks (*ādinava*) of sensual pleasures; I have not contemplated the dangers/drawbacks of sensual pleasures at depth (*abahulikato*). I have not understood the rewards of renunciation (*nekkhamme ānisamsa*). I have not contemplated at depth (*anāsevita*) the rewards of renunciation. That’s why my mind would not become liberated (*na vimuccati*).”
- Then this thought occurred to me: “If, I see the dangers of sensual pleasures and the benefits of renunciation of sense pleasures, such thoughts free of sense cravings (*nekkhamme cittam*) will sink in (*pakkhandati*), will purify (*pasidati*), will calm down (*santitthati*) my mind so that it will become liberated (*vimuccati*)”.

My comment: One needs to pay attention here to the Buddha describing to Tapussa how he had thought about the above thought process. But, he figured out exactly how to do that only on the night of attaining the *Buddhahood*:

7. “**At a later time — *aparena samyena* — (the night of attaining the *Buddhahood*)**, having seen the drawback of sensual pleasures, I pursued that theme; I contemplated on the drawbacks of sense pleasures, and understood the rewards of renunciation, and **understood the solution of getting rid of cravings (*āsāvās*)**. Then my mind firmly held such a mindset, calmed down, and was released from such sensual thoughts.

- Above paragraph describes what happened on the night of the Enlightenment when he finally realized *āsavakkhaya ñāna*, how to remove *āsāvās* by contemplating on *Tilakkhaṇa*; see, “[The Way to Nibbāna – Removal of Asavas.](#)”
- As we know, he went through six years of various types of suffering to discover *āsavakkhaya ñāna*.
- **Now we get back to the difficulties faced by the *Bodhisatta* in the intervening six years in trying to make the first *jhāna* unbreakable or stable.**

8. “Withdrawn from sensuality (*vivicca kāmehi*), withdrawn from immoral (*vivicca akusala dhammehi*), I entered and remained in the vicinity of the **first *jhāna*** with rapture and pleasure born from that restfulness (*vivekajam*), **accompanied by *savitakka/savicara* (*nekkhamma/avihimsa* thoughts).**”

- “However, I was still beset with recurring perceptions of sensuality (*kāmasahagatā saññāmanasikārā samudācaranti*). That was a suffering for me. Just as pain arises as an affliction for a healthy person, even so, those recurring sensual thoughts was an affliction for me”.

(Note that the *Bodhisatta* experienced this problem early when he learned how to get to *jhānā* by his early *anāriya* teachers: Alara Kalama and Uddaka Ramaputta. He developed the pathway

during those intervening six years, but successfully implemented it only on the night of Enlightenment via *āsavakkhaya ñāna*).

9. “**At a later time (the night of attaining the Buddhahood)**, having seen the drawback of *vitakka*, I pursued that theme; I contemplated on the drawbacks of *vitakka*, and understood the rewards of *avitakka*, **when I understood the benefits of getting rid of cravings (*āsāvās*)**. Then my mind firmly held such a mindset, calmed down, and was released from such sensual thoughts.

- Now we get back to the difficulties faced by the *Bodhisatta* with the second *jhāna*, before the night of the Enlightenment.

10. “Then I thought: ‘I should get to the *samādhi*-generated (*samādhijam*) **second *jhāna*** that is free of these thoughts burdened with (*vitakka/vicāra*)’”. **Here it is important to realize that *vitakka* means to have the mind set on a defiled thought object and *vicāra* means to keep it there.**

- “However, in the **second *jhāna***, such thoughts free of *vitakka* (i.e., *avitakka*) would not sink in, would not purify, calm down, would not calm down my mind so that it would not become liberated (*avitakke cittaṃ na pakkhandati nappasīdati na santiṭṭhati na vimuccati*)”.
- Then this thought occurred to me: “I have not seen the dangers/drawbacks (*ādinava*) of *vitakka*; I have not contemplated the dangers/drawbacks of *vitakka* at depth (*abahulikato*). I have not understood the rewards of *avitakka* (*avitakke ānisamsa*). I have not contemplated at depth (*anāsevita*) the rewards of *avitakka*. That’s why my mind would not become liberated (*na vimuccati*)”.
- “**At a later time (the night of attaining the Buddhahood)**, I was able to enter and stay in the vicinity of the **second *jhāna*** that was devoid of such defiled thoughts (*vitakka*) and with *pīti* and *sukha*.”

11. This is a recurring theme for the rest of the *sutta*. The difficulty encountered at each *jhāna* level starting from the next verse, and the solution found on the night of Enlightenment.

- I am going to skip a few repeating steps here, for the third and fourth *jhāna*.

12. I was able to enter and stay in the vicinity of the **third *jhāna*** that was devoid of *pīti* but with *sukha*.

- However, even then the perception of *pīti* kept arising in me (*pītiśahagata sannamanasikara samudacaranti*). That was an affliction for me. Just as pain arises as an affliction for a healthy person, even so, those recurring *pīti* was an affliction for me.
- “**At a later time (the night of attaining the Buddhahood)**, verse is skipped here.

13. I was able to enter and stay in the vicinity of the **fourth *jhāna*** that was devoid of *sukha* but with *upekkha*.

- However, even then the perception of *upekkhā sukha* kept arising in me (*upekkhasukhasahagata sannamanasikara samudacaranti*). That was an affliction for me. Just as pain arises as an affliction for a healthy person, even so those recurring *upekkhā sukha* was an affliction for me.
- “**At a later time (the night of attaining the Buddhahood)**, verse is skipped here.
- Now we get to the *arūpāvacara jhāna*, and the steps are basically the same.

14. I was able to enter and stay in the vicinity of ***ākāsānañcāyatana*** by thinking, “Infinite space,” and transcending of perceptions of *rūpa*, with the disappearance of perceptions of *pañigha*, and not heeding various *ārammaṇa* (*‘yannūnāhaṃ sabbaso rūpasaññānaṃ samatikkamā paṭighasaññānaṃ atthaṅgamā nānattasaññānaṃ amanasikārā*”).

- However, even in the vicinity of *ākāsānañcāyatana*, perceptions of *rūpa* kept arising in me, and that was an affliction for me (*..iminā vihārena viharato rūpasahagatā saññāmanasikārā samudācaranti. Svassa me hoti ābādho*).

15. “**At a later time (the night of attaining the *Buddhahood*)**, having seen the drawback of forms (*rūpa*), I pursued that theme; I contemplated on the drawbacks of *rūpa*, and understood the rewards of *ākāsānañcāyatana*, **when I understood the benefits of getting rid of cravings (*āsāvās*)**. Then my mind firmly held such a mindset, calmed down, and was released from such sensual thoughts.

16. I was able to enter what I thought was *viññāṇañcāyatana*, the infinitude of consciousness.

- “As I remained there, I was beset with attention to perceptions dealing with the dimension of the infinitude of space (*ākāsānañcāyatanasahagatā saññāmanasikārā samudācaranti*). That was an affliction for me. Just as pain arises as an affliction for a healthy person, even so the attention to perceptions dealing with the dimension of the infinitude of space that beset me was an affliction for me.

17. So at a later time, having seen the drawback of the dimension of the infinitude of space (*ākāsānañcāyatana*), I pursued that theme; having understood the reward of the dimension of the infinitude of consciousness (*viññāṇañcāyatana*), I familiarized myself with it. My heart leaped up at the dimension of the infinitude of consciousness, grew confident, steadfast, and firm, seeing it as peace. With the complete transcending of the dimension of the infinitude of space, [perceiving,] ‘Infinite consciousness,’ I entered and remained in the dimension of the infinitude of consciousness.

- The *sutta* goes through the rest of the *arupavacara jhāna*. At each stage, the Buddha on the night of Enlightenment was able to REMOVE each *jhāna* factor, not just bypass it as in *anāriya jhāna*.
- **This was done by contemplating on the *anicca, dukkha, anatta* nature of each *jhānic* state.**

18. “So at a later time, having seen the drawback of the **dimension of neither perception nor non-perception (*nevasaññānāsaññāyatana*)**, I pursued that theme; ... With the complete transcending of the dimension of neither perception nor non-perception, I entered and remained in the **cessation of perception and feeling (*saññāvedayitanirodha*)**. **And as I saw with discernment, the mental fermentations (*āsavā*) were totally eliminated.**

- It is important to note that *saññāvedayita nirodha* cannot be attained via *anāriya jhāna*. This is *Nibbāna* experienced by a living *Arahant*.

19. “Ānanda, **as long as I had not attained and emerged from these nine step-by-step dwelling-attainments in forward and backward order in this way, I did not claim to have attained the *Buddhahood*** that is supreme in the cosmos with its *Devās, Mārās*, and *Brahmā*, with its contemplatives and *brāhmans*, with its royalty and common people.

- But as soon as I had attained and emerged from these nine step-by-step dwelling-attainments in forward and backward order in this way, then I did claim to have directly awakened to the right self-awakening supreme state in the cosmos with its *Devās, Mārās*, and *Brahmā*, with its contemplatives and *brāhmans*, its royalty and common people. Knowledge and vision arose in me: ‘My release is unshakable (*akuppā me cetovimutti*), **This is the last birth and there is now no rebirths (*ayamantimā jāti, natthi dāni punabbhavo*”’*ti*).**

20. That is the step-by-step process of getting to the “total detachment” from the 31 realms of this world via successive *Ariya jhānic* states. That ultimate release of the mind attained this way is called *akuppā cetovimutti*.

- Of course, one can get to the same ultimate state (*Arahanthood*), without going through *jhāna*, and that is called *paññāvimutti*; see, “[Pannāvimutti – Arahanthood without Jhāna.](#)”
- It is also clear that a *paññāvimutti* *Arahant* cannot get to the *saññāvedayita nirodha* state during his/her lifetime.

21. The efforts by the *Bodhisatta* to figure out how to remove *āsavā* (including *kāma rāga*) — mainly by inflicting many bodily sufferings — for six years, are described in detail in the following two *suttā*: “[WebLink: suttacentral: Bodhirājakumāra Sutta \(MN 85\)](#)” and “[WebLink: suttacentral: Mahāsaccaka Sutta \(MN 36\)](#).”

16.14 Yamaka Sutta (SN 22.85) – Arahantood Is Not Annihilation but End of Suffering

May 23, 2019; revised March 20, 2020

Introduction

The Pāli version of the *Yamaka Sutta* can be found at: [“WebLink: suttacentral: Yamaka Sutta \(SN 22.85\).”](#) This is an important *sutta* which clearly explains what *Nibbāna* is and what the Buddha’s description of a living being is. It makes it clear that a “living being” exists “in this world” only as long as its craving for the five aggregates exists (which is inevitably accompanied by a lot of suffering). There is no “real person” that exists to be annihilated.

- On one occasion the Venerable Sāriputta was dwelling at Sāvatti in Jetavanārāma built by Anathapiṇḍika. At that time the following wrong view had arisen in a *bhikkhu* named Yamaka. “As I understand, a *bhikkhu* who attains the *Arahantood* would not exist after death and thus would be annihilated.”
- A number of *bhikkhus* heard that such a wrong view had arisen in *bhikkhu* Yamaka. They approached the Venerable Yamaka and exchanged greetings with him, after which they sat down to one side and said to him: “Is it true, friend Yamaka, that such a view as this has arisen in you: ‘As I understand the Dhamma taught by the Blessed One, a *bhikkhu* whose *āsavā* are destroyed would not exist after death and thus would be annihilated?’”
- “Exactly so, friends. As I understand the Dhamma taught by the Blessed One, a *bhikkhu* whose *āsavā* are destroyed would not exist after death and thus would be annihilated.”
- “Friend Yamaka, do not speak thus. Do not misrepresent the Blessed One. It is not good to misrepresent the Blessed One. The Blessed One would not speak thus: ‘A *bhikkhu* whose *āsavā* are destroyed would not exist after death and thus would be annihilated.’”

2. Although he was admonished by other *bhikkhus* in this way, *Bhikkhu* Yamaka still held on to that wrong view and declared: “As I understand the Dhamma taught by the Blessed One, a *bhikkhu* whose *āsavā* are destroyed is annihilated and does not exist after death.”

- Since those *bhikkhus* were unable to detach the Venerable Yamaka from that wrong view, they left and approached Venerable Sāriputta, and told him all that occurred, adding: “It would be good if the Venerable Sāriputta would approach *bhikkhu* Yamaka and explain to him out of compassion for him.” Venerable Sāriputta consented by silence.

Analysis by Ven. Sāriputta -1

3. Then, in the evening, the Venerable Sāriputta emerged from seclusion. He approached the Venerable Yamaka and exchanged greetings with him, after which he sat down to one side and said to him: “Is it true, friend Yamaka, that such a wrong view as this has arisen in you: ‘As I understand the Dhamma taught by the Blessed One, a *bhikkhu* whose *āsavā* are destroyed is annihilated and does not exist after death?’”

“Exactly so, friend.”

- “What do you think, friend Yamaka, is **form (*rūpa*)** *nicca* or *anicca* (can or cannot be maintained as one likes)?” — “*anicca*, friend.” ... “If something is *anicca* does it lead to *sukha* or *dukha*?” — “It leads to *dukha*, friend.”

“If something is of *anicca, viparināma* nature, then it cannot be maintained as one likes and is subjected to unexpected changes. Would it be appropriate to take that to be me, to be mine, or my *attā* (“self” is the translation used in English)?” — “That is not appropriate, friend”.

- “What do you think, friend Yamaka, is *vedanā*, *saññā*, *saṅkhāra*, *viññāṇa* – are they *nicca* or *anicca*?”—“*anicca*, friend.”...“If something is *anicca* does it lead to *sukha* or *dukha*?”— “*dukha*, friend”.

“If something is of *anicca*, *viparināma* nature, is it appropriate to take that to be me, to be mine, or my *attā*?” – “No, friend”.

(**My comment:** Thus it is clear that it does not make sense to take any or all five ENTITIES of *rūpa*, *vedanā*, *saññā*, *saṅkhāra*, *viññāṇa* as me, as mine, or my *attā*.)

Analysis by Ven. Sāriputta -2

4. Now Ven. Sāriputta goes one step further.

- “Whatever kind of form there is, Yamaka, whether past, future, or present, internal or external, gross or subtle, inferior or superior, far or near: this is called the form aggregate (*rūpakkhandha*). It is not appropriate to take any of those as “me, to be mine, or my *attā*.” The same is true for the other four aggregates”.
- “When one comprehends this Yamaka, one will not take any of those five aggregates as “me, to be mine, or my *attā*.” Then one will be liberated”.
- “What do you think, friend Yamaka, do you regard the body (part of *rūpakkhandha*) as a living being?”—“No, friend.”—“Do you regard *vedanā*, *saññā*, *saṅkhāra*, or *viññāṇa* as a living being?”—“No, friend.”

(**My comment:** Thus it is clear that it does not make sense to take any or all five AGGREGATES of *rūpa*, *vedanā*, *saññā*, *saṅkhāra*, *viññāṇa* as me, as mine, or my *attā*.)

Analysis by Ven. Sariputta -3

5. Now Ven. Sariputta goes one step further).

- “What do you think, friend Yamaka, do you regard a living being as in its body?”—“No, friend.”—“Do you regard a living being as apart from its body?”—“No, friend.”—“Do you regard a living being as in its *vedanā*? As apart from its *vedanā*? In *saññā*? As apart from *saññā*? In its *saṅkhāra*? As apart from *saṅkhāra*? In its *viññāṇa*? As apart from its *viññāṇa*?”—“No, friend.”
- “What do you think, friend Yamaka, do you regard *rūpa*, *vedanā*, *saññā*, *saṅkhāra*, and *viññāṇa*, taken together, as a living being?”—“No, friend.”
- “What do you think, friend Yamaka, do you regard a living being as one who is without *rūpa*, without *vedanā*, without *saññā*, without *saṅkhāra*, without *viññāṇa*?”—“No, friend.”
- “But, friend, when a living being is not understood by you to be real and actual here in this very life, is it appropriate for you to declare: ‘As I understand the Dhamma taught by the Blessed One, a *bhikkhu* whose *āsavās* are destroyed is annihilated and does not exist after death?’”
- “Formerly, friend Sāriputta, when I was ignorant, I did hold that wrong view, but now that I have heard this Dhamma teaching of the Venerable Sāriputta I have abandoned that wrong view and have made the breakthrough to the Dhamma.”

My Comments

6. The following are My comments:

1. This is the main point of the whole *sutta*. It is not possible to talk about the destruction or annihilation of a “person” or a “living being” that does not truly exist.

2. We conventionally talk about a person, but in reality, there is no such “person”, just a collection of five aggregates that keeps CHANGING at every moment according to *Paṭicca Samuppāda*; see, “[Paṭicca Samuppāda – Overview](#)”).
3. This incessant continuation of the five aggregates hopping from one realm to another among the 31 realms can be called a “life-stream”. The Buddha said that he could not see a discernible beginning of such a life-stream. We all have existed from a beginning that cannot be traced back. During most of that time, we have suffered so much in the four lower realms. We could say that death of an *Arahant* is the end of that “life-stream” (and end of suffering!); see, “[What Reincarnates? – Concept of a Life-stream](#)”).

Analysis by Ven. Sariputta -4

7. Now, Ven. Sariputta wants to make sure that Ven. Yamaka has fully understood.

- “Suppose, friend Yamaka, they were to ask you: ‘Friend Yamaka, when a *bhikkhu* is an *Arahant*, one whose *āsavās* are destroyed, what happens to him with the breakup of the body, after death?’—being asked thus, what would you answer?”
- “If they were to ask me this, friend, I would answer thus: ‘Friends, form is of *anicca* nature; anything of *anicca* nature leads to suffering and passing away. In the same way, *vedanā*, *saññā*, *saṅkhāra*, and *viññāṇa* are all of *anicca* nature; anything of *anicca* nature leads to suffering and passing away. I would answer that way’.
- “*Sādhu Sādhu*, friend Yamaka!”

Summary

8. There is more in the *sutta*. But the main point is in the above section.

This is why the Buddha rejected both extremes of the existence of an existing “self” or denial of an existence.

- At every moment there is an existence, complete with *vedanā* (suffering/pleasures); those *vedanā* arise momentarily and pass away. But there is no *attā* or a “self” that is unchanging.
- But the problem is that those *vedanā* are real, and for the most part are *dukha vedanā*, not *sukha vedanā*, in the long run in the rebirth process.
- In order to stop any *dukha vedanā* from arising, one MUST terminate the continuation of the arising of the five aggregates, i.e., the rebirth process. It is not possible to have *sukha vedanā* AND to be free of *dukha vedanā* anywhere in the 31 realms.
- Arising of the five aggregates is inevitable as long as *avijjā* is present. As long as *avijjā* is there, the *Paṭicca Samuppāda* process continues (and leads to suffering.) Removal of *avijjā* happens at the *Arahant* stage with optimization of *paññā* (wisdom.)
- For an *Arahant* with that optimized *paññā*, this vision becomes crystal clear. Thus he/she would not grasp (*upādāna*) a new *bhava* at the *cuti-paṭisandhi* moment. That is how this incessant continuation of a life-stream comes to an end. It is not an annihilation of a “person”; it is the end of suffering!

9. The moment-to-moment change of the five aggregates happens automatically (based on one’s *gati*), via the “[Idappaccayatā Paṭicca Samuppāda](#)” process.

- This is why it is important to learn Buddha Dhamma, get rid of “bad *gati*,” and to cultivate “good *gati*”: “[9. Key to Anapanasati – How to Change Habits and Character \(Gathi\)](#).” Then one’s five aggregates will automatically evolve in the direction of *Nibbāna*.
- That is the same as following the Eightfold Path: *Sammā Diṭṭhi*, *Sammā Saṅkappa*, ...*Sammā Samādhī*.

XVII Myths or Realities?

April 29, 2016

1. In this section, I plan to address some **concepts and practices** in Buddha Dhamma that appear to be myths and/or contradictions to many. Some are indeed myths, but some are not. And sometimes it depends on the interpretation. There are two aspects to some of these **practices**.

- It is hard for people from various religions to understand why Buddhists pay respect to *Bodhi* trees or *pagodas* (*chetiya*) which look like pyramids with different shapes.
- On the other hand, even many Buddhists who worship them do not really know why they are doing it.
- Some of the practices are outright myths, like the belief that one can attain *Nibbāna* by doing breath meditation; there is no basis to that. How can one remove defilements (greed, hate, ignorance) by concentrating on the breath?
- However, some of them can be shown to be **verifiable and inter-consistent fundamentals of nature: realities or verities**.

2. Then there are other **concepts** like a *Bodhisattava* getting “*niyata vivarana*,” or confirmation from another Buddha that he WILL become a Buddha at such and such a time. How does that tally with the concept that one can change one's future drastically by even a single act, and that *kamma* is not deterministic?

3. The value and strength of Buddha Dhamma comes from its unshakable foundational concepts (axioms) and inter-consistency. There is nothing inconsistent in the practices or concepts in true and pure Buddha Dhamma.

- But it requires some background material in order to be able to discuss some of these issues. Buddha Dhamma cannot be assessed with conventional thinking. One needs to comprehend the basics of Buddha Dhamma first.
- The more one understands the basic premises, the easier it will become for one to sort out myths from realities.
- After two years of posting essays on key concepts, we are at a stage to start discussing some of these issues. With time, we will have enough background to cover more of these issues.

17.1 Animisa Locana Bodhi Poojā – A Prelude to Acts of Gratitude

April 29, 2016; December 1, 2017

1. The conventional interpretation of *Animisa Locana Bodhi Poojā* (here “*locana*” is pronounced “*lochana*”) is that Buddha paid his gratitude to the sacred *Bodhi* tree that gave him shade when he attained Enlightenment (Buddhahood). In current literature, it is described as the Buddha spending the second week after attaining Enlightenment — looking at that *Bodhi* tree even without blinking — as an act of gratitude for sheltering him during that Noble effort.

- It is true that the *Bodhi* tree was (and still is) a special tree, and has many unique properties which we will discuss in a future post.
- But there is no basis to the interpretation that he was looking at the *Bodhi* tree without even blinking. There the word “*animisa*” is incorrectly translated as “unblinking”. **What he did during that week was related to his acts of gratitude that were to follow.**

2. *Nimisa* or *nimesa* is a moment, and *animisa* is “without pausing for even a moment”. “*Lo*” is for the “*lokaya*” or “world”, “*ca*” is for the *citta* (thoughts), and thus “*locana*” is basically contemplation, in this case about his long path to the Buddhahood (*bodhi* is the “path to Enlightenment”, thus the name 37 *Bodhipakshika Dhamma*, where “*pākshika*” means “relevant to” or “associated with”. The current English translation is 37 Factors of Enlightenment, which is not too far off).

- What the Buddha did during that *Animisa Locana Bodhi Poojā* (for 7 days) was to trace back to the time that he started fulfilling the requirement for the Buddhahood (*pāramitā*), i.e., scanned the memory records (*nama gotta*) of his previous lives to see who helped him during that whole time.
- Records of our past remain intact basically forever; see, “[Namagotta, Bhava, Kamma Bija, and Mano Thalaya \(Mind Plane\)](#)” and “[Recent Evidence for Unbroken Memory Records \(HSAM\)](#).”
- After leaving the site of the *Bodhi* tree, he spent the first several years (and even at later times) locating those who helped him during that whole time and helped them attain *Nibbāna*. We will discuss some cases below.

3. It is said that it took the Buddha (or rather the *Bodhisattva*) a “*sāra asenkkheyya kalpa lakhayak*” to fulfilled the requirements (*pāramitā*) to attain the Buddhahood. See, “[Difference between a Wish and a Determination \(Paramita\)](#)” for a simple explanation of *paramita*.

There are four *asenkkheyya kalpas* in a *mahā kalpa*, and “*lakhayak*” is 100,000. But human beings live in *kāma loka* only during one *asenkkheyya kalpa* and during the other three *asenkkheyya kalpas* the *kāma lokas* (and some of the lower lying *rūpa lokas*) are destroyed and re-formed. We will discuss this in detail later.

- Thus in calculating the *pāramitā* time, “*asenkkheyya kalpa lakhayak*” actually takes the time of a *mahā kalpa*. I have not yet been able to find out what “*sāra*” means to my satisfaction even though I have come across some estimates. Thus, the time taken to fulfill the *pāramitā* was some number (“*sāra*”) of hundred thousand *mahā kalpas*.
- However, there are other data points that give us an idea how long that is. According to the *Tipiṭaka*, there have been 512,000 Buddhas that appeared in our world during the time Buddha Gotama to fulfill his *pāramitā*.
- There have been only 7 Buddhas during the past 31 *mahā kalpas*, and with the Maithreya Buddha that is expected to appear before the end of this *mahā kalpa*, there would be 8 Buddhas in those 31 *mahā kalpas*. Thus if we assume there is roughly a Buddha appearing for every four *mahā kalpas*, then the time taken for our *Bodhisattva* to complete the *pāramitā* would be roughly two million *mahā kalpas*. If we take a *mahā kalpa* to be about 30 billion years (see, “[Sansāric Time Scale](#)”), then this time would be around 60 trillion years!

- Regardless of the actual time taken, it can be assumed to be truly mind-boggling. Working nonstop (that is what “*animisa*” means), it took the Buddha fully seven days to cover this time span (recall the *nama gotta*).
 - Of course many of the key people had been with him in repeated lives; this is why it took so long (seven days) for the Buddha to go through those records.
4. When the Buddha left the site of the *Bodhi* tree seven weeks after attaining the Buddhahood, he immediately started “paying back debts” to them.
- **This highlights the importance in paying back debts and showing gratitude for those who come to help; see, “[Kamma, Debt, and Meditation](#).”**
 - One of the ten wrong views is the belief that there is no merit in paying back debts or showing gratitude; see, “[Three Kinds of Ditthi, Eightfold Paths, and Samādhi](#),” and “[Wrong Views \(Micchā Ditthi\) – A Simpler Analysis](#).”
 - Buddha’s own actions were to highlight the importance of getting rid of that wrong view.
5. It is said that he first wanted to pay back his most recent “teachers”: Alara Kalama and Uddaka Ramaputta. Unfortunately, both had died recently and both had been born in the *arūpa loka* (they had both cultivated *anāriya arūpa jhānā*). In *arūpa loka*, beings do not have eyes or ears, and thus are unable to learn Dhamma. Thus the Buddha was not able to help them.
- Next, he thought about the five ascetics (Kondanna, Bhaddiya, Vappa, Mahānāma, and Assaji) who had attended to him while he was practicing austerities for six years. It is those five ascetics that the Buddha delivered the first and second discourses at the Deer Park at Isipathana: *Dhammacakkappavattana Sutta* and the *Anatta Lakkhana Sutta* (*Anatta* is the third of the *Tilakkhaṇa: anicca, dukkha, anatta*). They all became *Arahants* after the two discourses.
 - Then the Buddha sought out and preached Dhamma to Yasā, a son of a wealthy brahmin, who lived nearby. Yasā and 54 friends of his became *Bhikkhus* and soon attained the *Arahantship*.
6. It is also important to note that most of those who helped the *Bodhisattva* in his efforts, had also filled versions of *pāramitā* to be major disciples of the Buddha. They themselves had worked towards liberation (*Nibbāna*) in previous lives.
- This is why most of them were able to attain the *Arahanthood* or various stages of *Nibbāna* in short times.
 - Even these days, it is easier for some than others because of their past efforts. Thus no one should be discouraged in their efforts. The efforts will pay off in time, possibly even later in this life or in future lives.
7. By the time the Buddha left Isipathana, there were thus 60 *Arahants* in his *Sāsana*. After sending them in different directions to propagate his message of liberation, the Buddha himself left towards Uruvela, to meet the three Kassapa brothers and their followers who had been with him in numerous lives in the long past.
- On the way there, he intercepted 30 young wealthy men who were looking for a woman who had robbed them of their valuables. That was not an accidental meeting either. All 30 of them had encounters with the Buddha in previous lives and were ready to comprehend the Dhamma. They all attained *Arahanthood* shortly.
8. Upon arriving in Urevala, the Buddha had to spend a considerable time and effort to convince the Kassapa brothers that were not *Arahants*. They were *yogis* who were under the impression that they had already attained liberation, and were very reluctant to embrace the Buddha Dhamma. Finally, they became disciples of the Buddha and all 1000 of them attained the *Arahanthood* upon hearing the *Aditta Pariyaya Sutta*.

- Then the Buddha traveled with those 1000 *Arahants* to Rajagaha, the capital of the Kingdom of Magadha. King Bimbisara became a *Sotāpanna* and offered the Buddha his first monastery, the Bamboo Grove in Rajagaha.

9. While the Buddha was residing in the Bamboo Grove two brahmins, Upatissa and Kolita, met Assaji Thero (who was one of the five ascetics), and became *Sotāpannas* upon hearing a single verse from the Assaji Thero. Then they came to see the Buddha and requested to become *bhikkhus*, and attained the *Arahanthood* within two weeks.

- Of course they became the two chief disciples of the Buddha: Ven. Sariputta and Ven. Moggallana.

10. Then the Buddha, accompanied by the *bhikkhus*, made the way to Kapilavatthu, his father's Kingdom. Here, he was able to help numerous people who had been together with him many, many lives in the past.

- By the way, it is those who have mutual debts to each other who are born into the same family and share common relatives and friends. Thus one's obligations are mostly in that order. Of course one is most indebted to one's parents.
- Just so this will not convey the wrong message, this is not to condone the common practice of "giving perks" to family and friends by misusing government resources, done by many politicians today. One should give only things of one's own.

11. Thus the first several years of Buddha's life was dedicated to helping those who had been with him and helped him in many ways through multiple rebirths in his endeavor to become a Buddha. Of course, neither a *Bodhisattva* (until becoming a Buddha) nor his helpers "knew" that was the case beforehand. That is how nature works. The next post in this series discusses this issue.

- It is easy to see that people with same interests always tend to stay together, because they have similar *gathi*. This is a very deep concept that we have encountered many times. A simple explanation is given in the post, "[The Law of Attraction, Habits, Character \(Gathi\), and Cravings \(Āsavas\)](#)."

12. King Suddhodana, Prince Siddhartha's father, attained the *Arahanthood* just before passing away about five years after the Enlightenment of the Buddha.

- The Buddha, as a mark of gratitude to his mother who was born as a *deva* in *Tavatimsa deva* realm, preached the *Abhidhamma* to his mother together with other *devas* continuously for three months. The principal topics of *Abhidhamma* were then repeated by the Buddha to Venerable Sariputta, who subsequently worked with his clan of 500 *bhikkhus* to compile the *Abhidhamma Piṭaka* that we have today.
- Of course, both Princess Yasodhara and Prince Rahula entered the monastic order and attained *Arahanthood* too.
- Numerous other relatives entered the monastic order and attained various stages of *Nibbāna*.
- A fairly good book that goes through this timeline is "The Life of the Buddha" by Bhikkhu Nanamoli. It is important to note that the *Tipiṭaka* itself does not show the actual timeline of events; it is categorized according to other criteria.

13. Sometimes, it is not only those who help each other, but also arch enemies that follow each other through the cycle of rebirths (*samsāra*). While almost all other relatives of the Buddha (Prince Siddhartha) were able to attain *Nibbāna*, there were a few who could not overcome their deeply-embedded hatred towards the Buddha.

- The best examples were Devadatta and King Suppabuddha, who were the brother and father, respectively, of Princess Yasodhara. They both eventually ended up in the *niraya* (hell) for committing violent acts towards the Buddha.

Next, "[Paramita and Niyata Vivarana – Myths or Realities?](#)",

17.2 Pāramitā and Niyata Vivarana – Myths or Realities?

April 29, 2016; revised November 22, 2018

1. Pāli is a “phonetic language”, meaning it does not have grammar rules. Most meanings come from sounds. This is why many people get into trouble trying to apply grammar rules to Pāli.

- Luckily, most Pāli words have related Sinhala words, so one with a good Sinhala knowledge and the basics of Buddha Dhamma can understand many Pāli terms. This is called “*pada nirukthi*” or clarifying via using some key phrases and sounds. (But it takes a special knowledge or “*patisambidha ñāṇa*” of a *jāti Sotāpanna* to glean the meanings of key words like *anicca*, *dukkha*, *anatta*, without anyone’s help).
- The word, “*pāramitā*” comes from “*pireema*,” or to fulfill. There are certain conditions that have to be met while one is purifying one’s mind to become a Buddha; actually, the 80 great disciples (*mahā savaka*) of the Buddha also have to fulfill less stringent conditions.
- Attaining *magga phala* — including *Arahantship* — do not have such requirements. Yet, those also require cleansing one’s mind over multiple lives. No goals can be achieved without an effort. Even when one wins a lottery, there is a reason (a good *kamma vipāka* from previous lives).
- See, “[Difference between a Wish and a Determination \(Paramita\)](#)” for a simple explanation of *pāramitā*.

2. The above paragraphs may give the impression that one “knows” that one is fulfilling *pāramitā* to be a Buddha or a great disciple. **They do not know that they are gradually fulfilling such requirements.** It is only when a *Bodhisattva* reaches a certain stage of progress, he gets told by Buddhas at those times:

- First he gets “*aniyata vivarana*” meaning he is told by a Buddha that he is likely to become a Buddha in the future, because has acquired “Buddha *gathi*” through his moral *gathi* and his drive for finding truth in past lives.
- Then when more “Buddha *gathi*” are acquired and firmly established with time, a later Buddha may give “*niyata vivarana*,” i.e., that he will definitely become a Buddha.
- We discussed this in detail in the post, “[Animisa Locana Bodhi Poojā – A Prelude to Acts of Gratitude.](#)”

3. At first it seems that this “*niyata vivarana*” appears to say that the future can be deterministic. But in most cases, future is not deterministic; one can change one’s future drastically by one’s determined efforts; see, “[What is Karma? – Is Everything Determined by Karma?](#).”

- The key lies in one’s *gathi* (*āsava* and *anusaya* are related). It is comparatively easy to remove/change those *gathi* that one has acquired recently, but the longer one acts according to those *gathi*, they become deeply-embedded. One gets “*niyata vivarana*” when one’s Buddha *gathi* are unshakable, so to speak.
- This is closely related to the fact that when one attains any stage of a *magga phala*, that is never removed in future rebirths.

4. To give a very simple example, a child who has just memorized, but not grasped the concept of adding, may be able to give the correct answer if that particular addition has been memorized. But a child who has grasped the concept of addition can add any two numbers, and that “knowledge base” cannot be removed from him.

- This is the same thing that happens when one attains the *Sotāpanna* stage of *Nibbāna*, for example. When one grasps the fact that nothing in these 31 realms can be maintained to one’s satisfaction for long times, That “base level of comprehension of the nature of this world” is not going to change ever, even though future lives.

- With that level of understanding, one does not have to consciously think to avoid the drastic immoral actions that make one eligible to be born in the *apāyā*; thoughts of such actions never come to a *Sotāpanna*'s mind.
5. In another example from the *Tipiṭaka*, once there was going to be a war between two factions. *Bhikkhus* asked Ven. Sariputta which side was going to win, and Ven. Sariputta named the winning side.
- But when the war was fought months later, the other side won. The *bhikkhus* were perplexed; how can a prediction of Ven. Sariputta be wrong? They went and asked the Buddha. The Buddha said that Ven. Sariputta's prediction was correct based on the conditions at that time. But as unforeseeable factors came into play, the outcome changed.
6. The world is extremely complex, and it is not possible to make predictions most of the time. In fact, this is related to the *anicca* nature: any *saṅkhata* (*sankata* in Sinhala) can undergo unexpected change, called *viparinama*.
- But some *gathi* and *kamma* can become so strong that it becomes virtually impossible to change the outcome. For example, if one kills one's parent, it is not possible to avoid birth in the *apāyā* in the very next birth.
 - In the same way, when one's views about this world become clear to some level, and one can truly "see" the dangers of births in the *apāyā*, or the unfruitfulness of such actions, one's mind become permanently averse to such actions. That is when one becomes a *Sotāpanna*.
 - Through the next two stages (*Sakadāgāmi* and *Anāgāmi*), one's mind becomes purified to the extent that one will cease to enjoy sense pleasures automatically, and then one will never be born in *kāma loka*. At the *Arahant* stage, one see the dangers of rebirth anywhere in the 31 realms.
7. But all those stages can be attained only if one is taught the correct path by a Noble Person, who has attained one of the four stages of *Nibbāna*. The special aspect of a Buddha is the ability to figure out that without anybody's instructions. And the mind of a Buddha is much more pure than that of an *Arahant*.
- Even when one attains the *Arahanthood*, some *sansāric* habits remain. Those are not defilements but just habits in the sense of doing something in a particular way, for example. Many such cases are mentioned in the *Tipiṭaka*. One *Arahant* could not remove the habit of addressing others in an inappropriate manner, even though there was no malice involved. Another *Arahant* had the habit of jumping over puddles on the road.
 - But the mind of a Buddha was perfect. Not even a minor behavioral problem could be detected in a Buddha.
8. This can be compared to removing dirt from a glass of water. One could filter the water and get rid the big pieces of contaminants first. Then one could use better filters to remove even smaller particles. Now there may not be any visible contamination. But for all practical purposes, the water is clean and that can be compared to an *Arahant*.
- But there may be still some contaminant molecules there that can be uncovered only with a chemical analysis. Perfectly pure water without even a single molecule of a contaminant can be compared to the purity level of a Buddha.
 - In fact, another meaning of "*pāramitā*" is "*pereema*" or "to filter". As one keeps filtering out contaminants (defilements) from one's mind it becomes more and more pure. Filtering to the ultimate level is fulfilling "*pāramitā*."
9. A person who eventually become a Buddha starts off as a scientist or a philosopher in today's terminology. It is started via one of two paths and both need to be fulfilled: "*kim sacca gavesi, kim kusala gavesi*": investigations of truth and morality.

- *Sacca* (pronounced “sachcha”) means the truth; “*kusala*” is of course morals, and “*gavesi*” is one who investigates. One starts off with the intention of finding the how the nature works, and also what are morals and the origins of morals.
- Even today, we can assign such labels to many of the scientists and philosophers. Of course only a minute fraction of them will eventually become a Buddha or a great disciple, but that is how one starts.

10. That habit (*gathi*) of looking into the truth and morals grows through successive lives. Most of them drop off due to external influences, and due to unexpected circumstances. But those few who get to cultivate those *gathi* keep cultivating them. As I said before, one may not had even heard of a Buddha for many eons while cultivating such *gathi* inadvertently. It is just that when one on the right (or even wrong) path, nature starts guiding one: “*Dhammo ha ve rakkathi dhammacari.*”

- By the way, one could start as a man or a woman, but the Buddhahood is attained by only a man. This and several other things “that would not happen” are discussed in the “[WebLink: suttacentral: Bahudhātuka Sutta \(MN 115\).](#)”
- In our rebirths process, one could change sex. Actually, the sex change can happen even during a lifetime (these days such transgenders are common).
- In the rebirth process, we all have been born a man and a woman innumerable times. If I remember correctly, the *Bodhisatva* was a woman when she started cultivating *pāramitā* to becomes Buddha. But at some point (probably after getting *niyata vivarana*), he had been a male.
- There is a slight difference between male and female. That may not be politically correct to say these days, but that is the reality. One is a man or a woman because one has cultivated the corresponding *gati*. No matter how many laws are passed, the military is always going to be dominated by men, for example.

11. In the *Tipiṭaka*, it says the usual progression of one’s character (*gathi*) buildup is *dāna* (giving), *seela* (moral conduct), *bhāvanā* (mostly loving kindness towards others), and culminating in *paññā* (wisdom).

- While these main ones are being cultivated, there are others that simultaneously cultivate, and there are actually ten of them called *dasa pāramitā*. The others are: *virīya* (effort), *khanti* (patience), *adhittana* (determination), *metta* (loving kindness), *nekkhamma* (renunciation), and *upekkha* (equanimity).
- The process has been analyzed in great detail. For example, each of those ten grow into higher stages: *upa pāramitā* (middle) and *aramatta pāramitā* (ultimate). As one keeps making progress through successive lives, such *gathi* get amplified and one makes advances to those higher stages.
- As we saw in the previous post, “[Animisa Locana Bodhi Poojā – A Prelude to Acts of Gratitude,](#)” it takes an unimaginably long time to purify the mind and get to the perfect mind of a Buddha.

12. As an example, let us consider the *dāna pāramitā*. Here one starts with mundane giving (*dāna*), i.e., giving to the needy, to animals, to elders and *yogis*, etc.

- Then one advances to the *abhaya dāna*. Here one comprehends the fact that each and every sentient being values one’s life the most, and thus does everything possible to save lives. It has even a deeper meaning too: *abhaya* means remove “*bhaya*” or fright. Thus the *metta pāramitā* grows simultaneously too. Most categories are inter-related, and grow together.
- The highest is *dhamma dāna*. It of course starts with teaching morals to others, and living an exemplary life. It is when one becomes a Buddha, that one start teaching the Buddha Dhamma (the way to eliminate *bhava* or “*bhava udda*” and to attain *Nibbāna*).

13. As I said before, such instructions about *dasa pāramitā* are not known to the world for even through eons. There are many *mahā kalpas* where not a single Buddha is born. Thus it is not like following a set instructions. Those qualities grow as one’s *sansāric gathi* without even realizing that one is fulfilling such requirements.

- Even today, we can see many people, regardless of their religions or cultures, engage in such activities. Many of today's scientists, teachers, physicians, philanthropists, etc. could be in such early stages.
- Thus we should always respect and honor those who live such exemplary lives regardless of their religions or cultures or any other categorization. One is considered "suitable for paying respects" only based on one's actions.

14. It is informative to see why there are special categories of five Buddhas, seven Buddhas, 24 Buddhas, and 28 Buddhas in Buddhist literature. All these Buddhas are named and discussed in the following Wikipedia article:

[WebLink: WIKI: List of the named Buddhas](#)

- After striving for a long time as discussed in #3 above, our *Bodhisattva* first obtained "*niyata vivarana*" that he will definitely become a Buddha in the future, from Buddha Dipankara, who was the 24th Buddha preceding Buddha Gotama. A *Bodhisattva* customarily obtains "*niyata vivarana*" from 24 Buddhas before attaining the Buddhahood. The last Buddha that our *Bodhisattva* obtained "*niyata vivarana*" was from Buddha Kassapa.
- Before obtaining "*niyata vivarana*," our *Bodhisattva* obtained "*aniyata vivarana*" or "not confirmed, but very likely" from three Buddhas named Tannankara, Medhankara, and Saranankara. As the *Bodhisattva* kept fulfilling the requirements, they were first fulfilled during the time of Buddha Deepankara, as mentioned above.
- The special aspect of the seven Buddhas is that those were the most recent Buddhas. There have been four Buddhas (Kakusanda, Konagama, Kassapa, Gotama) in this *mahā kalpa*, and there were 30 *mahā kalpas* prior to that which did not have even a single Buddha. In the *mahā kalpa* before that there were 2 Buddhas (Siki and Vessabhu); Prior to that there was only a single Buddha in the *mahā kalpa* that was 91 *mahā kalpa* earlier. **So, there have been only 7 Buddhas within the past 91 *mahā kalpas*, and the timeline are discussed in the "[WebLink: Suttacentral: Mahapadana Sutta \(DN 14\)](#)."**
- The present *mahā kalpa* is a very special one, having the maximum number (five) of Buddhas in a given *mahā kalpa*. We have had four Buddhas so far, and there is going to be one more, Buddha Maithreya, before this *mahā kalpa* comes to an end.

15. Finally, *pāramitā* are also associated with one striving to become one of the 80 disciples of a future Buddha.

- Furthermore, one striving to attain the *Arahanthood* (or *Nibbāna*) is also fulfilling *pāramitā*.

17.3 Tisarana Vandana and Its Effects on One's Gathi

May 28, 2016

1. Many people consider the recital of *namaskaraya* followed by the 24 supreme qualities of the Buddha, Dhamma, Saṅgha (*Tiratana vandanā* or *Tisarana vandanā*) in three possible ways: (i) recite them mechanically (and erroneously), (ii) disregard them as unimportant, or (iii) even consider the practice as “mythical” per benefits of their recital.

- These qualities are called “*suvisi guna*,” where *suvisi* means 24 and *guna* are the qualities.
- These qualities (and the meanings of the words *Tisarana Vandana*) are discussed briefly in “[Supreme Qualities of Buddha, Dhamma, Saṅgha](#)”; correct way to recite them are also discussed there.

2. As I have discussed in many posts, there are many things in this world that we do not really understand. Many of the Buddhist practices have become “mystical” simply because their true interpretations as well as their correct usage have been lost. This current topic is a good example. One can reap many benefits by understanding the true meanings of these phrases AND by reciting them correctly. I have experienced these benefits.

- Now, this does not mean one can attain *Nibbāna* (or the *Sotāpanna* stage) by reciting them day and night. This is simply one of the many tools available to calm the mind and to slowly but surely change one's character (*gathi*) over time.
- As everything else with Buddha Dhamma, it is all in one's mind. If one has the motivation and the drive to learn and apply these tools, they can bring many benefits not only in this life but in future lives. But it is not like taking a pill for a headache; one cannot expect results quickly. We have developed “bad *gathi*” over beginning-less rebirths and it is not easy to change them quickly.

3. First of all, we all have seen how it is possible to convey a given message by just changing the tone. The words, “come here” can give different meanings based on the way how the words are uttered. When a parent says, “come here” to a child with love and affection, the child would be delighted to oblige. The same parent can get angry at the same child and yell, “COME HERE!”, the child is likely to cringe and back out afraid of a possible spanking.

- The “*gathi* sound” (“*gathi handa*” in Sinhala) in the two cases were totally different even though the words were the same; see below. The way the same phrase was uttered made a difference to the child's mind.

4. Many Pāli words have a different kind of power too; certain words can influence the mind strongly. As we will discuss in future posts, the early humans had a single language called Magadhi from which Pāli words originated. It was a universal language with the effects conveyed by the way the words were pronounced.

- This is why I mentioned in other posts also that Pāli is a phonetic language. Grammar rules are secondary.
- Just by listening to a recital of a *pirith desanā* (i.e., recital of *suttā*) can make a change in one's mindset, which may be even visible to others. There is a subliminal message (*saññā*) in the *suttā* that the mind can grasp, even if the person may not understand what is being said.
- **The words themselves, how they are uttered, and even who utters them, are “embedded” in “*gathi* sounds”.**

5. There are several such examples mentioned in the *Tipiṭaka*. A famous example is about a frog who was attentively listening to a discourse of the Buddha. Of course a frog could not understand what the Buddha was saying. But the “*gathi* sound” (“*gathi handa*” in Sinhala) that came from the Buddha combined with *sansāric gathi* of the frog led the frog to attentively listen to the pleasing sound from the Buddha and to have a pleasant mindset.

- While listening to the discourse, the frog was accidentally killed by the walking stick of a person there, and the frog was born in a *deva loka* instantaneously. His name was Manduka *deva* and he immediately realized how he was born there. He came back to listen to the same discourse and attained a *magga phala*.
- Then there were a bunch of bats who resided in a cave that was used by *Bhikkhus* who used to recite *pirith* every night. Those bats were all said to have born as children in the same village and to have attained *Arahantship* later. There are few other accounts as well.

6. These may sound like myths, but when one learns Abhidhamma and understands the power of a “*somanassa saḥagata citta*”, (or a “thought with joy”), one could make the connection. We all, including animals who had been humans at some point in the past, have accumulated good *kamma* seeds as well as bad ones from the past.

- One of the factors that comes into play at the dying moment is the state of the mind. If the mind is highly perturbed or is “covered with” *panca nivarana* (see, “[Key to Calming the Mind – The Five Hindrances](#)”), then it allows conditions for a bad *kamma* seed to come into play. But while listening to *Dhamma* or *pirith*, those *panca nivarana* are temporarily suspended and that allows for a good *kamma* seed to come into play; see, “[Patisandhi Citta – How the Next Life is Determined According to Gathi.](#)”
- One’s *gathi* are not fixed. Even a person with many immoral *gathi* has some moral ones as well. What kind of *gathi* operates at a given moment depends on one’s state of mind.

7. Now we can come back to the issue of “*gathi* sound” that we mentioned in #5 above. *Tisarana vandanā* especially has the power to change one’s mindset, if recited correctly.

- Entities with same *gathi* always naturally tend to be close to other entities with same *gathi*. This can be clearly seen anywhere. People who like sports get together. People like to party all the time, hang out with others who like to do the same. This is discussed in a simple but illustrative post: “[The Law of Attraction, Habits, Character \(Gathi\), and Cravings \(Āsavas\).](#)”
- This is why in Asian Buddhist countries it is customary to turn on *pirith* (recital of *suttā*) on the radio in the mornings and/or at night. This is supposed to keep undesired beings away and attract benevolent beings to the houses. It is actually effective if done properly. Those *pretas* with immoral *gathi* do not like to hang around when such chanting are being played. On the other hand, *devas* of the lowest realm (*Bhummatāka devas*) like to stay close to such sounds/environments.

8. Another related property is “*gathi ruva*” or “*gathi* picture”. The obvious example is a picture of a Buddha, not the distorted laughing Buddha, but the serene Buddhas like shown below.

- This is why most meditators keep a Buddha statue in the meditation room. It is just another factor that helps in getting to the right mindset.
- Then there is “*gathi* suvanda” or “*gathi* smell”. Burning incense gives an odor that is also compatible with a meditation environment. A perfume on the other hand, is a distraction. A good perfume is compatible when going out on a date; that sets a compatible environment for sense pleasures.
- All these subtle things add up to make a difference. And how much of a difference depends on the person too. Some people do not need any of such “incentives” to get onto even *jhānā*. But for some others they could make a difference.

9. In order to establish this point we can think about a “party atmosphere” compared to a “meditation atmosphere”. When someone organizes a party or a dance, one decorates the room with bright colors, eye catching pictures, sensual fragrances, loud music, etc. That is the environment with “matching *gathi*” for such an event. That would be a disastrous setting for a meditation session; one would not be able to concentrate at all.

- On the other hand, a meditation atmosphere is not compatible for a dance. One cannot dance to *pirith* or to *Tisarana vandanā*. It provides a setting that is calm and peaceful, and conducive for contemplation.
- Another aspect is that people when attracted to *Dhamma* will start skipping parties as I have. I would rather stay home and learn *Dhamma* rather than going to a noisy environment let alone a party.
- One will start associating with different people too, if one seriously gets into *Dhamma*. It is not done by sheer will power; rather it just happens because one’s *gathi* change. It is just natural for “likes to get together with likes”, the Law of Attraction: “[The Law of Attraction, Habits, Character \(Gathi\), and Cravings \(Āsavas\).](#)”

10. This concept actually works at a deeper level too. We emit electromagnetic radiation (*cittaja rūpa*) according out *gathi* and mindset at a given moment. Whatever the types of *Dhamma* that are attracted at

any given time are compatible with that state of the mind. A deeper discussion is at “[What are Dhamma? – A Deeper Analysis.](#)”

- For example, when we are angry we never receive more good thoughts. If we are arguing with someone, what always comes to mind are just bad thoughts, bad memories about that person.
- On the other hand, when we are calm and in a joyful mood, we mostly think about good memories.
- When one is at a funeral, one’s thoughts and complexion becomes attuned to that environment: one sees and hears people crying, and one gets sad and one’s face shows that as well; one does not feel like laughing. On the other hand, when one is at a party it is totally opposite atmosphere, and one feels like laughing and dancing.
- Other people can also be affected by our mindset. It is quite pleasant to look at a Buddhist monk. They just have that calm demeanor which is part of their cultivated *gathi*. In fact, our bodies also change over time according our *gathi*. There are other people whom we can instantly recognize as “rough characters”.
- This is a deep subject with many complexities and even exceptions. But I hope I have been able to convey the basic idea.

11. When one is reciting *Tisarana vandanā* correctly in a suitable environment, one’s *gathi* will change at least during that short time for the better. One will be able to grasp deeper concepts during meditation following the recitation. When one does this over a long time, one’s salient *gathi* will gradually change too.

- I know mine have changed over the past several years, and in particular within the past several months. It is a process that needs a bit of time to get traction, and then the results becomes clear one day. When I first wrote the original post (which I just revised), my enthusiasm for reciting *Tisarana vandanā* was not that high.
- However, I do not want to over emphasize this aspect. It can be considered a tool that could make a difference for some people.

12. For those who may be trying to cultivate the *anicca saññā* (i.e., comprehend what is meant by *anicca, dukkha, anatta*), reciting *Namasakaraya* followed by *Tisarana vandanā* could be helpful. I am providing the recordings below.

- The Buddha has also stated that when one is in a dangerous situation or gets frightened by something, reciting *Budu Guna (Ithipi so Bhagavā.....)* can help getting rid of the fear. One could recite this just before going to bed and it might help with falling asleep; again, it depends on one’s own *gathi*, how faithfully one does it, whether it is done with *saddhā*, etc.

Here is a recital of the *Namaskaraya* by the Venerable Thero (you need to adjust volume control on your computer). It is normally recited three times:

[WebLink: Listen to the verses of Namaskaraya recital](#)

Here is a recording of the *Tisarana vandana* by the Venerable Thero (You need to control the volume level on your computer):

17.4 Does the Hell (Niraya) Exist?

December 18, 2015; revised August 29, 2019

Introduction

1. The Buddha described a “much wider” world of 31 realms, compared to the just two realms (human and animal) that we experience. See, [“The Grand Unified Theory of Dhamma.”](#)

- The Buddhist worldview is not a theory or speculation. The Buddha could “see” each of the 31 realms of this world. He could “see” how a life-stream moves from one realm to another based on *kamma vipāka* and prevailing conditions, i.e., *Paṭicca Samuppāda*.
- Many *suttā* describe Buddha's and his disciples' visits to *brahma* and *deva* planes. Others describe visits of *brahmā* and *devas* to the human world (mainly to listen to the discourses of the Buddha and to ask questions from the Buddha). In the latter category, there are 81 *suttā* in the [“WebLink: suttacentral: Devatā Saṃyutta \(SN 1.1 ~ 1.81\)”](#) and 111 *suttā* in the [“WebLink: suttacentral: Devaputta Saṃyutta \(SN 2.1 ~ 2.30\)”](#) in the *Saṃyutta Nikāya*.

2. Even though *devas* and *brahmā* do not have to face much suffering during their lifetimes, those lives have finite lifetimes. When they die, they are mostly born in the lower realms.

- The importance of those realms is that living beings spend most of their time in the rebirth process in those *apāyā*. See, [“How the Buddha Described the Chance of Rebirth in the Human Realm.”](#)
- Several *suttā* discuss the unbearable suffering in hell and other lower realms; see below. Also, see my post on August 28, 2019, at the discussion forum on, [“WebLink: Pure Dhamma Forums: Questions on Posts in the “Origin of Life” Subsection.”](#) It discusses “life in hell”.
- The following book provides vivid details of life in hell, compatible with the description in the *suttā*: “A Guided Tour of Hell – A Graphic Memoir” by Samuel Bercholz (2016). He first describes an “out-of-body experience” that is similar to many given by others (seeing his body from above), but the second experience is a “trip to the hell”.

3. Here we will discuss more indirect evidence from our experiences for the existence of hell (*niraya*). This post also provides a bit more information on the way to clarifying the role (and importance) of the human brain.

- Beings in most realms do not have the capacity to change their destiny; they just pay off their past *kamma*, whether good *kamma* in *deva* or *brahma* realms or bad *kamma* in the human and lower realms (*apāyā*).
- **Among living beings, it is mostly humans who can mold their future**; they are the ones who can cultivate *citta* with high *javana* power. They are ones who do (*abhi*)*saṅkhāra* that lead to both good and bad rebirths (via improving the character or “*gati*”). They either enjoy the fruits of those in good realms or pay for them in the *apāyā*, and eventually — after long times — come back to the human realm. That is what all of us have been doing from an untraceable beginning.

Genuine Hell Sounds or Not?

4. Here is a well-circulated youtube video that claims to playback the “sounds of hell” recorded in a deep underground mine in Siberia. I must warn that these sounds are horrific, even though the recording is likely to be a fake; see below.

[WebLink: youtube: Siberia Hell sounds](#)

There is a post describing the background of this video: [WebLink: skeptoid.com: The Siberian Hell Sounds](#) and refers to the following youtube video proving that the above video is a hoax:

- If it is a fake (as it appears to be), it does not make sense to try to fool people by making videos such as above. One should realize that truth always comes out at the end.
- Still, debunking the “hell sounds” video does not prove that the hell does not exist either.

Do We Need Firsthand Experience on the Existence of Hell?

5. We should ask the following question. Is it necessary for us to directly observe something with our five physical senses to believe its existence?

- When many people hear about the *apāyā* — other than the animal realm that we can see — or heavenly worlds of *devas*, they refuse even to consider their existence. That is because “they cannot see those realms.” (By the way, there are four *apāyā* (*niraya*, *preta*, *asura*, or animal).
- But science disproves that contention. Science was not aware of the existence of billions of galaxies and an uncountable number of planetary systems like our solar system until the 20th century. Then better instruments became available; see, “[Wrong Views \(Miccha Dīṭṭhi\) – A Simpler Analysis](#).” There are many such examples given in the “[Dhamma and Science](#)” section.
- However, the Buddha was able to see those realities 2500 years ago by purifying his mind. We can also “see” the existence of some of these realms if we can cultivate *abhiññā* powers.
- It is not a good idea to refuse to consider anything that cannot be confirmed with one’s direct experiences. That is discussed in detail in several posts, including “[Wrong Views \(Miccha Dīṭṭhi\) – A Simpler Analysis](#).”

Description of Life in Hell in the *Suttā*

6. I am going to summarize what we can glean from the *suttā* (plural of *sutta* is *suttā*) in the Tipiṭaka of the four *apāyā* and other realms including the *niraya* (or the hell). The general layout of the 31 domains was summarized in the post, “[The Grand Unified Theory of Dhamma](#).”

- The *niraya* is in the deep interior of the Earth. The “hell beings” have solid bodies that can withstand various forms of torture. A “hell being” is born via *opapatika* birth, with a full physical body capable of experiencing the suffering.
- The hell-wardens who impart those sufferings to the hell beings are also living beings. They are born in the *niraya* because of their “*gati*” (character qualities) due to the “*saṅkhāra*” that they developed in previous lives. Their bodies are tolerant of the harsh conditions in the *niraya*. They do not suffer like hell-beings.
- There are many posts in the website on “*gati*.” For an introduction, see, “[The Law of Attraction, Habits, Character \(Gati\), and Cravings \(Āsavas\)](#).”
- “[WebLink: suttacentral: Devadūta Sutta \(MN 130\)](#)” describes “hells” or “*niraya*.” A translation at: “[WebLink: suttacentral: Devaduta Sutta: The Deva Messengers](#).” A similar *sutta* about some realms located close to Earth is the “[WebLink: suttacentral: Ātānāṭiya Sutta \(DN 23\)](#).” A translation at, “[WebLink: suttacentral: The Ātānāṭiya Discourse \(DN 23\)](#).”

7. *Devadūta Sutta* explains in vivid detail how the hell-wardens torture a hell being. There is a king Yama (or probably many kings) in each *niraya* (there are several). He interrogates some of the newly arrived hell-beings “who were at the borderline” and just barely made it to the hell. He reminds him/her of the opportunities that he/she had to understand the bad consequences of their actions.

- It is important to note that the king Yama interrogates only those new arrivals that are from the human realm. There is an uncountable number of beings born in the *niraya* from other *apāyā*. They move from one *apāyā* to another until a rare opportunity comes to get out of the *apāyā*.

- Such a Yama king is born there also according to the “*gati*” they had cultivated in previous lives; see below. Like all other living beings, those hell wardens and king Yama have finite lifetimes.

Based on Experience – Not Speculation

8. It is significant to note the ending of the *sutta*, where the Buddha says, “I tell you this, monks, not from having heard it from another contemplative or *brahman*. On the contrary, I tell you this just as I have known for myself, seen for myself, understood for myself.” That is what I mean when I say all that the Buddha had experienced what he taught. He could “see” all of 31 realms.

- Of course, we have to have faith in the Buddha to believe that. However, we can see that all he had taught is self-consistent. There are no contradictions; see, “[Buddha Dhamma: Non-Perceivability and Self-Consistency.](#)”

9. There are close comparisons in the world that we experience. A good example is the comparison of policemen to the hell-wardens. They both like to punish those who have done immoral acts. Being a policeman is not easy; they are under stress, and it is not easy to deal with rough criminals. Not everyone can be a policeman (or policewoman).

- They have cultivated “*gati*” or habits that do not tolerate “bad behavior.” They always think about ways to find and bring to justice those who do immoral deeds.
- King Yama is like a criminal judge; he also has similar *gati* comparable to hell-wardens but does not engage in personally punishing the culprits.

Body Types in Different Realms

10. A discussion on the body types can illustrate the point that the specific *kamma vipāka* prepares the physical body. Each body type can experience *vipāka* in according to *gati* of that being.

- The hell-being is born in a *niraya* to experience the *kamma vipāka* corresponding to *kamma* done with hate, like killing or torturing others. But that *kamma* was done after cultivating “hate *saṅkhāra*” for long times.
- A *preta*’s body is in such a way to experience hunger; many have huge bodies with tiny mouths so that they can never satisfy hunger. One is born a *preta* because one has cultivated “*preta saṅkhāra*.” One will always be thinking about sense pleasures and also crave for what others have. That applies not just to the poor. One can be wealthy, but still may not be satisfied with what one has. On the other hand, there may be a poor person who is satisfied with what he/she has and does not cultivate “*preta saṅkhāra*.”
- The “*asuras*” are those who have cultivated “*asura saṅkhāra*,” i.e., those who like to get “free rides.” They depend on others for their needs and are too lazy to work and make a living. Those who steal or embezzle money from others also have similar *gati*.
- Animals (called “*thirisan*” because they have all three “*san*” of *lobha*, *dosa*, *moha*) have a mixture of those *gati*; see, “[What is ‘San’?](#)”
- One cultivates particular *saṅkhāra* because one has a specific character or *gati*. And the more *saṅkhāra* one does (thinking, speaking, and doing certain things), the more established *gati* become, which in turn leads to corresponding *jāti* (births); see, “[Gati to Bhava to Jāti – Ours to Control.](#)”

Comparison with Modern Science

11. In the post “[The Grand Unified Theory of Dhamma](#),” the 31 realms were represented by spherical shells with a sphere in the middle and the bodies of the beings in lower realms were higher in general than the bodies of the living beings in the higher realms. Each “inhabited” planetary system has all 31 realms. But most planetary systems are not “inhabited.”

- Scientists say that the nearest planetary system to the solar system is Alpha Centauri, which is located 4.37 light-years away; see, [WebLink: wikipedia: Alpha Centauri](#). A light-year is a distance traveled by light in a YEAR at the speed of 299 792 458 m/s (186,000 miles/second).
- That is a humongous distance that cannot be traveled with current technology or any technology in the foreseeable future. It would take 100 years to reach that star system; see [WebLink: wikipedia: Project Longshot](#). Thus it is doubtful that we will verify the existence of life in other planetary systems during our lives.
- However, there are other living beings in the solar system itself that science has not found. That is in agreement with scientists' admission that only 4% of the mass of the universe is explainable by science.

12. The *niraya* or *hell* is located deep inside the Earth, and those beings have very dense bodies.

- The other three *apāyā* are located at and close to the surface of the Earth. Of course, the animals live among humans, and *asuras* are said to live mostly in the oceans. The *petas* also live on the surface of the Earth just like us, but normally we cannot see them. They all have body densities comparable to humans, except for *petas*. Some *petas* have “fine bodies” suffer not via bodily punishments, but mentally: they can recall the past lives and bad deeds that led to the *preta bhava*.
- There are three other human realms close to the Earth that we cannot see. Most *deva* realms lie well-above the surface of the Earth. The *brahma* realms are even further out. Of course, *devas* have much less dense bodies than humans, and *brahmas*' bodies are finer at higher realms. At the highest *brahma* realm, an *arupa brahma* has only one *suddhatthaka*, the *hadaya vatthu*; see, “[The Origin of Matter – Suddhatthaka](#).”
- The body types in the 31 realms have been discussed in the previous post: [Body Types in 31 Realms – Importance of Manomaya Kaya](#).

Births Correspond to Gati (Character Qualities)

13. Roughly speaking, we can say beings with more immoral “*gati*” are born with denser bodies inside or on the surface of the Earth. Their thick bodies are used to impart *kamma vipāka* either via torture or via bodily ailments and diseases.

- The beings in the *deva* and *brahma* realms, who have less and less dense bodies do not suffer bodily ailments. At the end of their *kammic* energy, they disappear and are born at the next realm appropriate for the most potent *kamma* seed they have. It could be in a lower sphere, including the *niraya* (unless they had attained at least the *Sotāpanna* stage).
- Thus beings with better and better “*gati*,” i.e., “*deva gati*” and “*brahma gati*” are located further and further away from the surface of the Earth, and those hell-beings with the “worst *gati*” are located below the surface of the Earth.

14. Therefore, each living being can be said to “carry his/her dhamma”; here, dhamma means “to bear.” More precisely, each *bhava* carries its *dhamma*, and when the *bhava* changes, the types of *dhamma* one carries changes.

- A hell being is carrying a heavy load and has the most significant burden. *Devas* carry very light loads, they have negligible suffering during that lifetime, and *brahmā* even lower.
- But the load carried by a being cannot always be determined by the body density. Some *petas* have light bodies and their *kamma vipāka* are imparted by the mind, not physically via the body.

Our Own Experiences

15. We all have seen some children when they don't get their way and become mad, fall on the floor and cry. It is as if they want to go towards the *niraya* (sometimes they bang their heads on the floor). That is a reflection of their “*gati*” AT THAT MOMENT.

- In the same way, they (and even adults) jump up with joy. It is as if they are trying to go up towards the higher realms. Again it is a reflection of their “joyous *gati*” at that moment.
- Another example is the behavior of criminals. We all have seen pictures of criminals when they come to the court of law: their heads are lower. They feel a heavy burden.
- On the other hand, when we have done something exemplary, we feel good and keep our heads high. Our bodies feel lighter too.
- These may not be Earth-shattering observations, but they are consistent with the Buddha's world view.

16. Thus each of us can momentarily live in the *apāyā* or higher *deva* and *brahma* realms.

- I am sure anyone can recall such moments. When we get outraged, we burn inside, our bodies even get heated, faces get reddish, and we sweat. It is not a pretty sight to see a furious person or even a child.
- On the other hand, when we are calm and relaxed, especially after doing a moral deed, we feel good, and our body language reflects that. We are confident; we feel lighter, and also are “cooled down” inside. It is always a pleasure to look at Buddhist monks.

17. Thus even though we may not see the beings in the other realms, many indicators are consistent with the “bigger world picture” of the Buddha. We have reasons from our experiences to believe the existence of such realms. That may be a small part of the whole story, but indirect pieces of evidence like this are always consistent with Buddha Dhamma; we will discuss more in the future. These are things that one can contemplate during insight meditation and verify for oneself.

17.5 Can Buddhist Meditation be Dangerous?

June 17, 2016

1. A friend of mine alerted me to a recent article on possible dangers of mindful meditation:

[Weblink: BBCRadio: Is Mindfulness Meditation Dangerous?](#)

- It seems that there are possible dangers in not only “mindful meditation” but other types of meditation too. I did a Google search and found that there are many articles, videos, and podcasts on the subject. You can do the same just to get an idea (try, “dangers of meditation” and “dangers of meditation youtube”).
 - There is a recent book, “The Buddha Pill” by Miguel Farias (2015), which downplays benefits of meditation and also points to some reported bad outcomes.
 - There is a vast amount of misinformation out there. So, I thought of writing down my own thoughts based on the Buddha Dhamma that I understand and practice. In genuine Buddhist meditation too, one may encounter some discomforts as I will discuss below. But those are temporary and definitely not dangerous.
2. **First of all, 99% of “Buddhist meditation programs” that are being taught and practiced today are not compatible with Buddha Dhamma, the original teachings of the Buddha.** Let us first discuss this point.
- The goal of the Buddha was NOT to teach practices and methods by which to attain temporary relief from daily stresses of life. Such procedures had been in practice even when the Buddha (Prince Siddhartha) was born 2500 years ago.
 - For example, breath meditation used by even Theravāda Buddhists today was a practice that was rejected by the Buddha; see, “[Bhāvanā \(Meditation\)](#)” section and in particular, “[6. Ānāpānasati Bhāvanā \(Introduction\)](#),” which discusses breath meditation.
3. I do not either dispute or agree with the findings reported in the above articles or the above book. I do not know those specific cases, and it does not matter either because those meditation techniques are not “Buddhist meditations”.
- There are many varieties of meditation techniques used by so-called “Buddhist meditators”; most are a waste of time and some are definitely bad. **For example, one of the dangerous techniques is to try remove all thoughts that comes to one’s mind. One could lose memory (and perception) if this is done for a long time.**
 - The Buddha said to stop IMMORAL thoughts, not ALL thoughts. There is a big difference between the two. Furthermore, he encouraged cultivating moral thoughts (*Ānāpāna* is “āna” AND “pāna”; see, “[6. Ānāpānasati Bhāvanā \(Introduction\)](#).”)
4. The suffering that the Buddha really focused on was the *sansāric* suffering, i.e., unimaginable suffering in some realms of this world which consists of 31 realms; see, “[The Grand Unified Theory of Dhamma](#)” or other posts on suffering.
- For a normal human, It is not possible to avoid births in the future in the four lowest realms (*apāyā*) filled with suffering without attaining at least the *Sotāpanna* stage of *Nibbāna*. Not only any bad actions done in this life, but bad actions done in previous lives can contribute. We have been lucky to get this human life due to a past good action (*kamma*), but all of us have done both good and bad actions in our deep past.
 - **Future births in the *apāyā* is stopped not by “erasing” those past bad *kamma*, but mainly by a subtle mechanism which involves understanding the Buddha’s world view.**
 - This website is all about explaining that complex process, but I can state what the end result is: **the solution is to remove greed and hate from our minds which happens to a large extent when one**

comprehends the “bigger world picture” of the Buddha (which is called getting rid of ignorance of the correct world view or attaining *sammā ditṭhi*).

5. Thus one could take one of three approaches:

- One could learn pure Buddha Dhamma, the original teachings of the Buddha, and understand his world view. When one learns and comprehends this wider world view, one can clearly see the possibility of much suffering in future lives.
- The other approach is to believe in the above stated conclusion, i.e., that getting rid of greed and hate from one's mind will remove future suffering, and to start working on it.
- But there is a third approach, which is to do both in parallel.

6. The third approach above is the best approach since it accelerates the process of cleansing. Furthermore, one can experience relief from not only future suffering but also in this life.

- However, it must be understood that it is not possible to remove all types of suffering in this life by meditation. What we experience in this life are results of what we have done in the past. It is possible to avoid some bad outcomes but not all; see, “[What is Kamma? – Is Everything Determined by Kamma?](#).”
- **Another fact which is not discussed correctly is that there could be some physical discomfort one can experience when one really gets into deep meditation.** But this is not dangerous at all, and is actually an indication that one is actually progressing!
- The best way to convey the information is to describe my own experience (at least parts of it). Even though each person's experience will be different, there are some common themes.

7. First of all, one does not even need to understand what *Nibbāna* is in order to get started. Even though it is possible to describe what *Nibbāna* is (there are many posts at the site), **it is not easy to truly comprehend what is meant by stopping rebirth process, especially at early stages.**

- As an example, a child in the primary school may say she wants to be a scientist; that is her goal, because she has heard that it is a good occupation. But she has no idea what a scientist does.
- In the same way, most Buddhists know that *Nibbāna* is a coveted and worthy goal, but have no idea what it is. Most have not even thought much about it. They know that it involves stopping the rebirth process, but if pressed some may even say they do not “really want to attain *Nibbāna* yet; I want to enjoy life a bit more”. That is because it is not easy to comprehend the dangers of such “enjoyments”.
- However, the above child knows that she has to work hard and get good grades in school in order to become a scientist in the future. As she makes progress through the primary, secondary, and high school, she will gradually get a better idea of what becoming a scientist means and involves. It becomes even more clear when she gets a university education, and finally she may enter graduate school to actually become one.
- Most Buddhists can be compared to that child stuck in the primary or secondary school: they refrain from immoral actions to some extent, but have not proceeded any further due to a number of reasons: lack of time, lack of understanding the urgency to do something before one gets old and the brain starts slowing down, etc.

8. On the other hand, most beginners to Buddhist meditation may not have any idea what *Nibbāna* is or even may not believe in the rebirth process. **And one does not need to.**

- As I have tried to explain in many posts, *Nibbāna* has many levels starting from just a relaxed state of mind all the way to stopping the rebirth process. One needs to proceed gradually, experiencing the increasing level of relief on the way.
- Any reasonably moral person can see the benefits of living a moral life. Most religions teach how to live a moral life, at least to some degree.

- The first thing to do is to try extending this way of moral living by incorporating factors that may not necessarily taught in other religions; for example, killing animals is not considered immoral in many of the major religions.
- Killing other people for any perceived benefit is an inconceivably bad idea. We have to stop calling such ideas as “religious” regardless of the “religious label” attached. One would be bound for the worst sufferings imaginable for billions of years.

9. I think we live in a world today that is too “politically correct”. We are afraid to even give our honest points of view for the fear of being labelled “insensitive to other religions or cultures”. We should be free to point out and condemn immoral and harmful actions.

- For me there are no religious or cultural boundaries; we live this life for about 100 years and may be reborn in a different culture which may follow a different religion; [“Implications of the Rebirth Process in Daily Life and in Society.”](#) However, it is not good to impose sudden cultural changes that could lead to major disruptions in societies.
- My intention is to make as much progress as possible in this short time left, and to help others who may be interested.
- I also think it is a disservice not to share with others something that one has experienced to be of value. It is of course up to others even to bother reading about it.

10. Going back to our discussion, one should **try to avoid** things that we know deep inside to be bad: **engaging in dishonest and harmful behavior**. This of course has many facets and levels. So, one should start stopping actions such as: taking advantage of others in any way, engaging in sexual **misconduct**, avoiding drugs and cutting down on alcohol, etc.

- This gradual process is describe in detail in the first several posts in the [“Bhāvanā \(Meditation\)”](#) section. What I like to do here is to point out some key points that I think could be useful.

11. **It is obvious that meditation, at least in beginning, does not require one to even sit down.** Before one gets to that stage, one needs to remove some cobwebs from the mind that have accumulated over time.

- Some people cannot sit down and concentrate anyway; the mind likes to wander around. **This “agitation” is due to greed and hate, even though it may not be obvious.** What breath meditation does is to force the mind to concentrate on breathing in order to stop this wandering temporarily.
- And it does work for some people. But any calming effect is temporary. One may feel good during a meditation retreat, but when coming back to real life, the mind goes back to the agitated state.
- Thus if one just does the standard “breath meditation” (without doing crazy things like trying to stop all thoughts) it is unlikely that they will experience any bad psychological effects, but it is bad in the sense of being an utter waste of time in the long run.
- Many people I know to be meditators are stuck in this stage for tens of years, enjoying the temporary relaxation **and refusing to get out of that “comfort zone”**. By their own accounts, they have not made significant progress. But for some reason, they are still “being hopeful”.

12. **Genuine Buddhist meditation is focused on long term effects.** As the title of the book in #1 above implies, many people believe that going to a meditation session is like taking a pill for a headache; one is after a quick, temporary solution.

- Buddhist meditation starts with stopping immoral activities that one can clearly see, such as those mentioned in # 8 and #10 above.
- If one can persevere for a few weeks or months (depending on how much “cobwebs” are there), one should start experiencing a better state of mind. One will be able to concentrate on a given task (even a mundane task) better. In a few months one can look back and see that one has changed in some ways.
- Then one can incorporate more “good habits” and discard more bad habits. One will start seeing the futility of lying

- By the way, one will be able to absorb more from the posts at this site with time too.

13. As time goes, one can try “sitting down” meditation sessions. Just sit in a quiet room away from disturbances, and think about a Dhamma concept. One could even read a post and contemplate on it while reading.

- Actually, this is what I did in my early days. I would be sitting at my desk and either reading a book or listening to a discourse on the internet from my teacher Thero. As I contemplated and started comprehending some concepts, I felt joyful in the mind, and I could start feeling a lightness in the body with time.

14. This is the beginning of a process that the Buddha described as, “*preethi manassa kāyo passaddathi, passadda kāyo sukhanthiyathi, sukhino samādhīyathi.*” That means, “joy in the mind (from absorbing Dhamma) leads to lightness in the body, lightness in the body leads to happiness (*nirāmisā sukha*), and that leads to *samādhī* (enhanced concentration and a relaxed mind)”.

- Once one starts feeling joy in the mind and lightness in the body, there is no stopping. Because now one can clearly see the benefits.
- Then it becomes easier to grasp deeper concepts, which in turn leads to more joy, etc. and the whole process repeats and accelerates.
- However, how much progress one makes depends on many factors. Some have practiced meditation in previous lives and they progress relatively fast. Regardless of the actual time taken, most should be able to make at least some progress. **If it appears that one has not cultivated meditation in previous lives, it is time to start now.**

15. **When one is making more progress (especially when one begins to grasp *anicca, dukkha, anatta*), there could be some physical discomforts that one can feel.** When I started feeling those, luckily I had heard about that from my teacher Thero’s discourses (**by the way, I have not met the Thero or talked to him personally; both times I went to Sri Lanka he was not available**).

- Different people feel this kind of discomfort in different body parts above the waist. I am not talking about leg pains due to sitting cross-legged, etc. If a given posture becomes uncomfortable, one just needs to change the posture: one could straighten out the legs or go for a walk. Some people can sit cross-legged for longer times simply because they are more flexible or have had more practice. Mine started in the head, throat, and hands. They were not painful at all; they are more like pressure waves. But if one did not know that it could happen, one could be concerned. Because it happens only during formal sit-down meditation sessions.
- Other possible “symptoms of progress” are sweating and becoming thirsty (if this is the case, keep a glass of water close-by). Yes. all these are good symptoms; **they indicate that the body is beginning to respond.**
- This was my first personal confirmation that it is not the body that gives rise to consciousness. **It is ALWAYS the mind that controls the body. My mind decides when I want to do a meditation session. Furthermore, I can change my body sensations with my thoughts!**
- I have not yet heard anyone else experience it, but my body freezes when I get into *jhānā* (up to the third). It really freezes, like a statue. If someone comes and tries to pull my hands apart, it is difficult for them to do. But when I decide to stop the session, the body unfreezes within seconds. This is undeniable evidence that the mind can control the body.
- The explanation for these (and other types of) experiences involves the concept of the *gandhabba* that I have been discussing for some time now. These are discussed in, “[Possible Effects in Meditation – Kundalini Awakening.](#)”

17.6 Boy Who Remembered Pāli Suttas for 1500 Years

November 21, 2018; April 25, 2020

Introduction

1. This is a true story about a boy (Dhammaruwan) who recited complex and lengthy Pāli *suttā* at five years of age, which sounded very different from current chantings. Furthermore, he remembers accounts of his previous life 1500 years ago, when he accompanied the famous Buddhaghosa on his trip to Sri Lanka.

- Dhammaruwan was born on November 18, 1968, in Matale, Sri Lanka. At the age of about two years he would sit in meditation and then start chanting. At times he would speak in a language not understood by his mother, who tried to hush him up.
- His step-father encouraged the boy to continue and regularly made recordings of the chants.
- These accounts come from the book, “[WebLink: wisdompubs.org: Rebirth in Early Buddhism and Current Research](http://www.wisdompubs.org)” by *Bhikkhu* Anālayo (2018), and [WebLink: discourse.suttacentral: Skype interview with Ven. Bhikkhu Bodhi, 16th September 2014](https://discourse.suttacentral.net). Both *Bhikkhus* have had long-term interactions with Dhammaruwan.

Previous Life in India – 1500 Years Ago

2. According to Dhammaruwan’s memories, he learned the Pāli chants in a former lifetime in India, where he had been born as the son of a *Brāhmin* and trained in memorization of the *Vedas*. He had gone forth as a Buddhist monk and become a student of the eminent monk Buddhaghosa at Nālandā, India. For a historical time line, see, “[Buddhaghosa and Visuddhimagga – Historical Background.](#)”

- **My comment:** This means Dhammaruwan was born a human over 1500 years ago: That is another piece of evidence that a human *bhava* can last thousands of years during which one may be reborn with a human body many times. In between those rebirths, one would be in the *gandhabba* state, just with the mental body; see, “[Bhava and Jāti – States of Existence and Births Therein](#)” and “[Gandhabba \(Manomaya Kāya\)- Introduction.](#)” Further more, both Dhammaruwan in that previous life and Buddhaghosa were *Vedic Brāhmins* before converting to Buddhism. That is how those breath and *kasina* meditations got into Buddhism. See, “[Is Ānāpānasati Breath Meditation?](#).”

3. After being trained as a *bhāṇaka* (a reciter), he was chosen to accompany Buddhaghosa from India to Sri Lanka. Having come to Sri Lanka, he stayed with Buddhaghosa at the Mahāvihāra in Anurādhapura, of which he remembers various details.

- These recordings of Dhammaruwan are strong evidence for rebirth. How could a child of age 3-5 even remember such complex Pāli words?
- The way he recites the *suttā* — the way he pronounces Pāli words — is better than most *bhikkhus* today. But the recitals sound different from those that we hear these days; instead of monotonic chants of today, keywords stand out in this recital style.
- One can clearly see that Dhammaruwan, as an adult, chants just like any other adult today; see #6 below.

Recitals From 1500 Years Ago

4. Here is a youtube video of a few of his recitals:

[WebLink: youtube: Dhammaruwan - Maha Mangala, Karaniya Metta and Ratana Sutta](https://www.youtube.com/watch?v=...)

Here are recordings of several *suttā*, with downloadable links:

Dhammacakkappavattana Sutta:

[WebLink: Dhammacakkappavattana Sutta Download](#)

Mahā Mangala, Ratana, and Karaniya Metta Suttā:

[WebLink: Mahā Mangala, Ratana, and Karaniya Metta Suttā Download](#)

Bojjhanga Sutta:

[WebLink: Bojjhanga Sutta Download](#)

Information From *Bhikkhu Bodhi* Interview

5. The following is an excerpt from the interview mentioned above with *Bhikkhu Bodhi* in 2104, which had a discussion on Dhammaruwan about a quarter of the way into the interview:

“There is almost no other rational explanation [apart from real past life memories] for how he could know these *suttā*. The sceptic might say he must have listened to monks chanting them over the radio. We might accept that explanation if he had recited the *Metta Sutta* (Sn 1.8), the *Mangala Sutta* (Sn 2.4), or the *Ratana Sutta* (Sn 2.1), or maybe even the *Dhammacakkappavattana Sutta*. But even that would be somewhat stretching the bounds of credulity: that a 3 or 5 year old boy should be reciting the whole *Dhammacakka Sutta* (SN 56.11) just by listening to it on the radio, without any text in front of him. But as a 7 or 8 year old he also chanted the entire *Girimānanda Sutta* (AN 10.60), and that is just so rarely chanted by monks on the radio. And then there is a recording of him reciting passages from the *Paṭṭhāna*, the book of conditional relations in the *Abhidhamma*. I didn't compare his recitation with the text, because he doesn't say which portion he's reciting ... the *Paṭṭhāna* consists of six or seven volumes of very repetitive text with just minor variations.

Then his intonation is very different from the contemporary Sri Lankan style of chanting. Just by listening, you can tell it's coming from another era. It's not the modern style of Sri Lankan chanting. And then there's something very interesting. I don't think anything has been published or spread around about this. Years ago I was listening to his recitation of the *Mahānidāna Sutta* (DN 15) with the PTS Pāli edition in front of me, where they have footnotes with variant readings. I found that in a number of places where there were differences between the Sinhala and the Burmese script editions he was reciting in accordance with the Burmese script edition. But not always: there were a few places where there were differences, and he was following the Sinhala edition. But in maybe 65% of the cases where there was a difference, he was following the Burmese script edition”.

“Old Recital Ability” Lost at Age Twelve

6. Dhammaruwan lost this ability to recite in this particular fashion after about 12 years of age. These days, when he chants the same *suttā*, he recites them like current *bhikkhus* recite them.

- Even in those early years, he was not able to recite in that “special way” at any time. According to *Bhikkhu Bodhi*: “You know, you'd ask him, “Ruwan recite such and such a text,” and he was not able to do it. But occasionally he would say to his adopted father, Bertie: “Uncle, uncle, I'm starting to remember. I'm starting to remember!” Then Bertie would get the tape recorder and set it up and record his recitation.”
- Therefore, the ability to recite that way was not there all the time, even in those early years.
- Now, of course he has lost those memories and recites those *suttā* just like anyone else recites them these days.

Here is a recording of the *Karaniya Metta Sutta* as an adult (chanting starts @2 minutes):

[WebLink: Karaniya Metta Sutta as an adult Sutta Download](#)

Related Information

7. Bhikkhu Anālayo's book has complete transcripts of all the recorded *suttā* that Dhammaruwan recited; see, pp. 167-237.

- Other rebirth stories and evidence for rebirth are discussed in, "[Evidence for Rebirth.](#)"

In the following video, a child describes her life as a *deva* during the time of the Buddha (in Sinhala.) She says the Buddha was different than depicted in the current statues (@21 minutes).

17.7 Do Buddhists Pray and Engage in Idol Worshipping?

May 5, 2019

These are issues that are a bit hard to understand for those who do not have a deeper understanding of Buddha Dhamma.

1. First of all, paying respects to the Buddha (and symbols representing him) cannot be equated with “prayer” in many other religions. Praying is associated with making a request from a higher being (a God, a Brahma, etc), and those requests are for making one’s life better, to solve a mundane problem one has, or asking for a material gain.

- The prayers are requests to the gods for mundane things and protection. The gods are asked to bestow health, wealth, material things, and to provide for various needs; they are also asked to forgive one’s transgressions.
- In some cases, offerings are made to the higher being(s) first, and then one prays for whatever one desires, as in Hinduism (nowadays, this is practiced even in some Buddhist temples).
- Buddhists do not pray. They engage in meditation, contemplating the true nature of this suffering-filled world. There is nothing in this world that is worth craving (and thus praying for).

2. On the other hand, the primary goal of a Buddhist is to stop the rebirth process and attain *Nibbāna*; see, [“A Buddhist or a Bhaddhaya?”](#)

This itself is hard for many to understand, especially for those who do not believe in the rebirth process. But the Buddha taught that one’s existence does not end at the death of physical body; one will be reborn endlessly in one of 31 realms “in this world”; see, [“Buddhism without Rebirth and Nibbāna?”](#)

- Rebirth process continues as long as one thinks that existence in this world is fruitful and, some day, will lead to true happiness. The Buddha explained that acting with greed, hate, and ignorance causes this wrong perception.
- One part of ignorance is not believing in rebirth.
- Suffering is present at any of those 31 realms and thus suffering exists even in the highest *brahma* realms; see, [“31 Realms Associated with the Earth.”](#)
- Therefore, the goal of a true Buddhist is to stop the rebirth process all together. This is done by cleansing one’s mind. Learning the world view of the Buddha and following his Noble Eightfold Path, which includes contemplation (meditation) and living moral life (*sīla*), will lead to cleansing of the mind; see, [“Living Dhamma.”](#)

3. Therefore, there is nothing to ask from the Buddha; the Buddha no longer lives in this world. It is actually quite the opposite. Understanding Buddha’s teachings (Buddha Dhamma) leads to the realization that there is nothing in this world that is worth craving or desiring for. In fact, it is those cravings that trap one in the rebirth process.

- The only way to stop future suffering is to learn the true nature of this world and see not only the futility (unfruitfulness), but also the dangers in craving for worldly things.
- A Buddhist never asks favors from the Buddha nor requests forgiveness for any immoral deeds committed. A true Buddhist tries to abstain from immoral deeds, speech, and thoughts by controlling one’s mind, i.e., by being mindful; see, [“Mahā Satipatthāna Sutta.”](#)
- So, why do Buddhists pay respects to symbols representing the Buddha?

4. A big part of a life of a Buddhist is to “pay back debts” and also pay respects to those with higher wisdom. One of the first acts of the Buddha after his attaining Enlightenment was to look back at previous lives and to recall who helped him (in past lives) in his efforts to attain the *Buddhahood*; see, [“Animisa Locana Bodhi Poojā – A Prelude to Acts of Gratitude.”](#)

- Then he spent a significant part of his early years after Enlightenment to seek and teach Dhamma to those people, as explained in the above post.
 - True comprehension of Buddha Dhamma leads to the realization that the greatest gift one could have is to receive the true and pure Buddha Dhamma: the way to stop even a trace of suffering from arising.
 - The worship of the Buddha (using symbols that represent him) means paying homage, veneration and devotion to him and what he represents, and not to a stone statue, a picture, etc.
5. There is a second — and equally important — aspect of paying respects to the Buddha. This is more to be experienced. When I was child in Sri Lanka, our family used to go to the temple regularly, especially on Full Moon days when *bhikkhu* would deliver a discourse (*desanā*).
- We would go to the temple ahead the scheduled delivery of the *desanā*, and would offer flowers to the Buddha, light some oil lamps and incense, and recite several *gāthās* while make those “offerings”. Then we would sit and listen to an hour-long *desanā* by a *bhikkhu*.
 - That really helps calm the mind and get in to a mindset where one is able to forget about the day-to-day stresses and comprehend the *desanā*.
 - The calm and serene image of the Buddha is conducive to calming one’s mind, and the offerings of pretty flowers symbolize one’s intention of not being attached (and not to crave for) worldly things.
6. Some people say that Buddhists worship statues, in the sense of believing that those statues have some inherent magical power.
- But such ideas are quite incorrect. Buddhists do not ‘worship’ Buddha statues any more than Christians worship the cross or Muslims the Kaaba.
 - Like the cross and the Kaaba, a Buddha statue, a *Bodhi* tree, or a *stūpa* is a symbol that can be seen as helpful in showing devotion, uplifting and calming the mind, and thus enables one to meditate with a calm mind.
7. Now let us discuss the significance/purpose of making offerings.
- There are many kinds of offerings: meals to the *bhikkhus* are the most meritorious among the “giving” (*dāna*) category.
 - Making offerings to the Buddha is also done traditionally; small portions of the food that is prepared for the *Bhikkhus* is first offered in the name of the Buddha, before the food is offered to the *bhikkhus*.
 - Giving to poor or anyone in need and even feeding hungry animals are all meritorious deeds.
8. Making offerings to *devas* is just another category. The mechanism of how that works is hard to imagine for most people.
- I remember listening to a *desanā* by Waharaka *Thero*, where he mentioned that those food offerings can be used by higher *devas* to feed their underlings (there are different levels, just like in the human world). He mentioned that when people offer nice-smelling fruits etc, just after the offering, the aroma would be gone (if it is done right). That means the “essence” (*ojā*) of the food has been extracted.
 - However, one does not need to offer large quantities. The higher *devas* can make the offering to “multiply” to feed many.
 - I don’t want to get into that issue right now, since this is not a critical issue, and could bring out more questions than answers. There are many things about other realms (as well as about our own realm) that we do not fully understand.
9. Offering flowers, incense, etc do not belong to that “*dāna*” category discussed in #7 and #8 above.
- In Buddhist temples, such “offerings” are made to the Buddha.

- In reality, these “offerings of the second kind” setup the necessary background for the mind to grasp the Buddha Dhamma, and thus to lead to “*bhava uddha*” (stopping existences in any of the 31 realms), which is the real meaning of “Buddha”; see, “[A Buddhist or a Bhauddhaya?](#)”
- For example, those flowers symbolize the *anicca* nature. They are pretty when they offered, but in a couple of days they become wrinkled and eventually wither away. One is supposed not to admire the beauty of the flowers, but to contemplate on the *anicca* nature clearly displayed by the decay of those flowers; see, “[Anicca, Dukkha, Anatta.](#)”
- The incense offered emit an odor that conducive to meditation. Even though it is a pleasing odor, it is very different from those fragrances that one wears to a party, which has the tendency to encourage “seeking sense pleasures”.
- In other words, those fragrances worn to a party lead to sensual thoughts, whereas the smell of incenses is conducive to meditation, since it helps calm the mind.

10. Lighting of candles or oil lamps also provide a suitable background for meditation and contemplation. Light symbolizes wisdom.

- Comprehending Buddha Dhamma leads to the opening of the “*Dhamma eye*”, and enables one to “see the true nature of the world of 31 realms”, i.e., existence in any of those realms is NOT devoid of suffering.
- Furthermore, an oil lamp symbolizes the how the rebirth process is maintained by cravings. Just as oil keeps an oil lamp burning, cravings (*tanhā*) fuel the rebirth process.

11. Finally, the practice of paying respects to the Buddha using symbols representing him was started at the time of the Buddha. There are at least two accounts in the *Tipiṭaka* where the Buddha himself recommended this practice.

- First, in the *Mahāparinibbāna Sutta*, when it was getting close to the *Parinibbāna* (death) of the Buddha, Ven. Ananda asked him how people can pay respects to the Buddha after his *Parinibbāna*.
- The Buddha advised: “..*stūpās* should be made for the Buddha at the crossroads. People can offer flowers, incense, etc and pay respects, and that will be for their benefit and happiness”.
- Here is the relevant section: [WebLink: suttacentral: DN 16 Mahāparinibbāna Sutta \(29. Ānandapucchākathā\)](#), where it is stated: “..*Cātumahāpathe tathāgatassa thūpo kātabbo. Tattha ye mālaṃ vā gandhaṃ vā cuṇṇakaṃ vā āropessanti vā abhivādessanti vā cittaṃ vā pasādessanti tesam taṃ bhavissati dīgharattaṃ hitāya sukhāya.*”

12. There is another *sutta* which describes how planting of *Bodhi* trees was recommended by the Buddha himself too: When the Buddha was absent from *Jetavanārāma*, devotees naturally missed him, so Ven. Ananda, Buddha's attendant, asked the Buddha what in his absence might be used to pay homage to him.

- The Buddha answered that bodily relics, things reminiscent of him and things that he had used, in particular the great *Bodhi* tree under which he had attained Enlightenment.
- Ven. Ananda then had a seed of the *Bodhi* Tree brought to *Jetavanārāma* and planted so that it would be, as the Buddha himself said, as if the Buddha were constantly present at *Jetavanārāma*.
- This account is in the [WebLink: suttacentral: Kāliṅgabodhijātaka](#); see the English translation: “[WebLink: suttacentral: Kalinga-Bodhi Jātaka.](#)”

The bottom line is that just like giving (*dāna*) or living a moral life, paying respects to the Buddha via any of those different ways cannot directly lead to *Nibbāna (magga phala)*. But all of them can help set the background for one to get to the mindset that makes it easier to comprehend the deep *Dhamma* of the Buddha.

18.1 Parinibbāna of Waharaka Thero

March 9, 2017; Pictures of *dhāthu* added June 10, 2017; Revised September 7, 2017; February 6, 2018; *desanā on jhāna/magga phala* added April 28, 2018; revised #4, #5 on July 18, 2020

1. It is with great sadness that I report the *Parinibbāna* of my Noble teacher, Waharaka Abhyaratanalankara *Thero* a month ago, on February 9, 2017.

- Even though he had not confirmed attaining the *Arahanthood*, several years ago he had declared that he would not be reborn again. That means he would at least reach the *Antara Parinibbāna* state; see the video below.
- The *Antara Parinibbāna* state is reached when someone dies with three *saṃyojana* of *kāma rāga*, *rūpa rāga*, and *arūpa rāga* removed. (But without the removal of *māna*, *uddhacca*, and *avijjā saṃyojana*. Then one cannot grasp a new *bhava* in any of the 31 realms).
- The *gandhabba* would still survive the death of the body and come out and stay alive until the *kammic* energy for the human *bhava* is exhausted. At that time, since a new *bhava* cannot be grasped, the actual *anupadisesa Nibbāna* will take place. That is explained at the discussion forum topic “[Antara Parinibbana](#)” and also in the post, “[Gandhabba State – Evidence from Tipitaka](#).”
- From the accounts below, it appears that he did attain *Parinibbāna* (i.e., bypassed the *Antara Parinibbāna* state) at the dying moment.

2. When the news came out first, it was not clear whether the *Thero* had passed away or whether he was in *Nirodha Samāpatti*. Breathing stops while one is in *Nirodha Samāpatti*, but the body does not get cold. The body was warm for six days, but then it started to get cold. Therefore, his death was not declared for six days.

- Even though I made trips to Sri Lanka in 2014 and 2015, both times, I did not get an opportunity to meet him because he was not well.

3. He was the first person to extract the true meanings of the critical Pāli words in the *Tipitaka* in recent times— after hundreds of years.

- It appears that his *Patisambhidhā Nāṇa* (the knowledge to extract the meanings of words) was at the same level as many of renowned *Arahants* at the time of the Buddha.

4. As I discussed in the post, “[Four Conditions for Attaining Sotāpanna Magga/Phala](#),” one has to learn the correct Dhamma from a Buddha or a true disciple of the Buddha. He was able to bridge a gap that will hopefully last until the end of the *Buddha Sāsana* (Ministry) of Buddha Gotama, i.e., for 2400 years from now for a total of 5000 years.

- I am grateful to his followers in Sri Lanka (Ven. Attidiye Sudheethadheera Thero and others) who made recordings of thousands of hours of his *desanās* over the years. They have organized those recordings here: “[WebLink: waharaka.com: Waharaka Sadaham Desana](http://WebLink:waharaka.com:WaharakaSadahamDesana)” (updated September 11, 2017).
 - Unfortunately, those are available only in the Sinhala language. I will do my best to convey these actual teachings in English on this website.
 - I was able to meet Ven. Walasmulle Abhaya and Ven. Attidiye Sudheethadheera (both of whom were laypeople at that time) on a trip to Sri Lanka in early 2014 and also in 2015. They provided me with many *desanā* recordings before they became available on the internet. I am also grateful to Dr. Neranga Abeysinghe, with whom I had many discussions. He also updated me on recent events of Waharaka Thero’s last days.
 - Ven. Walasmulle Abhaya conducts regular *desanās* and meditation sessions. Recordings of those at: “[WebLink: Nirapekshathwayemaga.](http://WebLink:Nirapekshathwayemaga)”
 - **September 7, 2017:** Just yesterday, I came to know about Ven. Rathupasketiye Vimukthirathana in Sri Lanka. His *desanas* (in Sinhala) at: “[WebLink: youtube: Ariya Asankathaya.](http://WebLink:youtube:AriyaAsankathaya)”
 - **August 15, 2019:** I have forgotten to add a link to a good set of English *desanas*: “[WebLink: youtube: Dharmayai Obai Sermons – English \(From 2017-07-30\).](http://WebLink:youtube:DharmayaiObaiSermons-English(From2017-07-30))” I have not met this *Venerable*, but these *desanas* are based on Waharaka interpretations.
 - **July 18, 2020: Cultivating *jhāna* is a good way to make progress on the Path.** However, initially, those *jhānā* are *anariya* in nature. As one makes progress, they will be converted to *Ariya jhāna*. Some people may be under the false impression that getting into *jhāna* necessarily means *magga phala*. Furthermore, even the first *Ariya jhāna* requires the REMOVAL of *kāma rāga*. See, “[Samādhi, Jhāna \(Dhyāna\), Magga Phala.](#)”
5. **April 28, 2018:** Here is a *desanā* by Waharaka Thero where he present clear evidence that *jhāna* is not necessary to attain *magga phala* (it is in the Sinhala language):
- [WebLink: Download “Are Jhāna Required for Magga-Phala”](#)
- The main point the Thero makes is that we know that there are *jāti Sotāpannas* born in the human realm. But if a *jhāna* were REQUIRED to attain the *Sotāpanna* stage, then that person WOULD NOT be born in the human realm, but in a *brahma* realm corresponding that *jhāna*.
 - Furthermore, just by listening to correct Buddha Dhamma and/or attaining *jhāna* does not make one become a *Sotāpanna*. The Thero points out that Devadatta ended up in an *apāya*, even though he had not only cultivated *jhāna* but had supernormal powers (*iddhi*) too. Devadatta obviously listened to many discourses from the Buddha but was not able to attain the *Sotāpanna* stage of *Nibbāna*.
 -
6. I must also express my gratitude to Ven. Meevanapalane Dhammalankara, who had been in close association with the Waharaka Thero. I first came across these correct interpretations when I came across one of his *desanās* on the internet on July 30, 2013.
- Ven. Meevanapalane Dhammalankara’s *desanās* at: “[WebLink: Sirisaddharmaya](http://WebLink:Sirisaddharmaya)”
 - However, he has also deviated from Waharaka interpretations in some cases. Also, he started a discussion on whether the Buddha was born in Sri Lanka, against the advice of Waharaka Thero.
7. June 6, 2017: I received some pictures of “*dhātu*” collected after the cremation of Waharaka Thero’s body. Some of an *Arahant*’s bones becomes crystallized. These are called “*dhātu*” and they cannot be destroyed by fire or anything else. I selected the following two pictures out of many sent by Ven. Attidiye Sudheethadheera Thero and Dr. Neranga Abeysinghe.

8. By the way, here is a historical picture of the “Tooth relic” of the Buddha kept at the “*Daladā Maligāwa*” in Kandy, Sri Lanka:

- Such *Dhāthu* of the Buddha or an Arahant are considered to be indestructible up to the end of the current “*Buddha Sāsana*,” which will last roughly another 2500 years.

9. Here are two youtube videos of the funeral of the most venerable *Thero* (the speech by Mr. Chandana Siriwardhana — where he stated the possibility of *Antarā Parinibbāna* of the *Thero* — is in Sinhala language):

[WebLink: youtube: අහයරතනාලංකාර හිමි ආඥානේ ලද දහමේ පණිවිඩයන් - හලේ බලේ ජිවිම සමපදක - නිකාය වන්දන භිවර්ධන මහතා](#)

18.2 Pure Dhamma – Sinhala Translation

January 24, 2017; more sections added December 2, 2017

1. Professor J. M. R. Sarath Bandara, who is a retired professor at the University of Peradeniya, Sri Lanka, has kindly taken upon the task to translate the Pure Dhamma site to Sinhala language.

- With his mastering of both Sinhala and English languages, this translation is very much superior to the word-by-word translation provided by the Google Translator plugin for WordPress.
- Therefore, I will remove Sinhala as an option in the Google Translator.

2. The pdf files for different sections at the website are given below. Only some of the sections have been translated so far, and there could be gaps in those sections as well.

- As he translates more posts and sections, the updated files will be uploaded here.

3. We have left the English titles for each section below as they appear at the website. That will make it easier to refer back to the original English posts.

- The links in the Sinhala translation to various websites — and especially videos — may not work. One can access those in the original English posts.

Much merits to Professor Sarath Bandara and his family for this meritorious deed!

18.3 Pure Dhamma – German Website

October 21, 2017

1. Puredhamma.net, which discusses Buddha's teachings per *Tipiṭaka*, is now available in German, thanks to Mr. Tobias Große in Heilbad Heiligenstadt, Germany. Here is the link:

<https://puredhamma/de>

- Mr. Große has spent a lot of time studying Buddha Dhamma, and he tells me that he has read almost all posts at the puredhamma.net site and many posts more than once. From the questions that I have been getting from him over the past year, I feel that he has grasped the key concepts and is quite capable of expressing those concepts in German.
- As of today, he has translated three main sections, and will continue to add more sections until the two sites are “in sync”.
- He is also willing to answer questions; there is a “Comment” bar at the bottom of each page.

2. Even though the “Google Translator” at the top right of the puredhamma.net site is a useful resource that can be used to translate the site material to many languages, it is done by a mechanical process, which basically translates word for word.

- Such a word for word translation sometimes gives incorrect interpretations, especially since key Pāli words with deep meanings are involved. Therefore, the “Google Translator” is not very reliable. I will remove German as an option for the “Google Translator” in a couple of months after enough sections are available at <https://puredhamma/de>.

3. Finally, it has been a pleasure to interact with Mr. Große and his family over the past year or so. His wife and children are also fully engaged and it is heartwarming to see how much they have advanced, and their enthusiasm for this meritorious project. Much merits to the whole family for their efforts!

18.4.1 Google Translations to Other Languages

October 2, 2016

1. Couple of days ago, I installed the capability to translate the whole site into different languages. A different language can be selected in the “Google Translate” button right above this post.

- I received input from a couple of people. Based on those, it seems that translation is 60%-80% good for Chinese translation.

2. The main problem is that with “word-to-word” translations, meanings can get lost. So, please use the translations only if necessary. For example, it may able to provide translation of some words that are not familiar.

- **Therefore, it is a good idea to use the English version as much as possible. I really worry about meanings getting lost in the translation.**

3. There are other languages that can be added. I did not want to add too many at this early stage, especially until I get some feedback on the usefulness. **I would appreciate feedback on the accuracy/usefulness of these translations, in the comments box below.**

- **If you like other languages to be added, also please comment below.** Just type the language(s) you like. I think you need to add your email address too, in order to avoid spam. Comments are not published. I normally respond only if a question is asked.

18.4.2 Pure Dhamma Discussion Forum Guidelines

December 12, 2017; revised December 17, 2017; January 23, 2018; January 7, 2019

A link to the Forum is provided at the lower right in the main menu.

1. In order to post questions or answers (i.e., to participate in discussions), one will need to register first. **But anyone can read existing posts without registering.**

To Register:

Click on the “Forum” at the very end of the main menu or [FORUM](#) to enter the Forum.

1. Click on the **“Register” button (in red)** at the LOGIN box and enter a username and an email address and submit.
2. It will say that it will send you a link and then display a “WORDPRESS” screen. CLOSE that screen. Do not do anything with that screen.
3. You will get an email to that address within minutes. Open your email browser and click on the link that was sent to you. The link in that email WILL EXPIRE within a certain time, so you need to use it before it expires. (If you don't see an email within minutes, check you “Junk” folder).
4. **If you don't get an email within 5 minutes, send me an email and I can setup a temporary password for you. It is easy to do and you can then reset to anew password. This is the easiest way.**
5. It will ask to enter the username that you selected earlier and you also need to choose a password. Once you hit enter, you may get another “WORDPRESS” screen. CLOSE that screen. Do not do anything with that screen.
6. Enter the Forum and login with that username/password at the “Forum Login” box.

When first registered, one will receive an email with a link to setup your own password. **One needs to use that link within 15 minutes or so (I am guessing, I don't know exactly how much time is allowed), because that link expires. Check you Junk folder if you do not see an email within minutes.**

- **If it does not work within a few tries, DO NOT keep trying.** After 5 tries or so, the system will lock you out and then it becomes more difficult. Please send me an email at lal@puredhamma.net, and I can help you.
2. If one forgets the password at a later time, a new password can be generated by clicking on the red **“Lost Password” link** at the Login box.
 - **Even an unregistered person would be able to read the posts by others on any topic. One needs to register to ask a question or to post a reply to another's question.**
 - Please respect the viewpoints of others. No one knows everything (except for a Buddha), and we should help each other in uncovering the truth.
 3. Mr. Seng Kiat Ng from Singapore has kindly agreed to act as a moderator. He will be able to move topics to “better matching” forums and also to open up new forums as necessary. He is doing this in addition to maintaining and updating the eBook; much merits to him and his family!
 - Within a forum, anyone who is registered can open a new topic. Please find the forum that seems to match; we can add more forums if needed.
 - **Any question even remotely connected to Buddha Dhamma (Buddhism) is welcome. There are people of very different levels of exposure to Buddhism.**
 - If you feel uncomfortable posting here initially, please send it to me at lal@puredhamma.net.
 - But I encourage everyone to participate because there will be people who can benefit from information at different levels. Also, it is critical to comprehend basic concepts; otherwise it will be difficult to make progress.
 4. I can set the time one has to come back and edit a given post, and it is currently set at one hour. This allows one to think about one's comment and change it, if needed. Please think carefully before making

comments. It is not a good idea to write too many posts on the same issue. I try to write my response in a Word document and post it when I feel comfortable. Even then I may have to come back and revise.

- This is in no way to restrict discussions. We just need to try to make our points without repeating. I have seen online forums where people just go back and forth “trying to push their views” without making any progress for themselves or helping others learn.

5. **Replying to a question:** If one hits the **reply button**, one can directly respond to a comment by that specific person (i.e., one’s comment will appear below that comment or that thread). Then a reader will need to scan to find the new comment (especially if there are newer threads at the bottom).

- If one just types in the **default window**, then the comment will appear at the very end of the discussion, as a new thread. Anyone will be able to see that as the latest comment, but then one needs to refer to the comment that he/she is responding to.
- You can figure this out by looking at the posts already there.

6. A discussion forum for the Pure Dhamma website is beneficial in several aspects:

- I receive many good questions via email. When I reply to that email, only that person will get the information, and in many cases it could be of interest to so many others.
- There could be “gaps” in a given section. A given section at the website starts at a base level with initial posts and move to deeper stages with subsequent posts. If one has a question about a certain post, one could open a new topic with the post name.
- I also plan to have some information access threads on topics like “Pāli Resources”. I will post some key tools available at this site as well as at other sites, and users can add more information to it.
- This forum will also give an opportunity for others with different opinions to express their viewpoints (i.e., how they interpret a given *Sutta* or a verse in the *Dhammapada*, etc). **In most cases, there can be more than one explanation.**
- Sometimes, each individual may have their own interpretation even if it looks incorrect to others. No one should expect others to come to agreement with one’s viewpoint. **It is up to each person to decide for him/herself.**
- Thoughtful, logical, and respectful discussions can be an important part of the learning process.

7. Following the Path is not merely following some set precepts or blindly following a “*guru*.” One needs to engage in stimulating discussions with oneself first (contemplation), and also with others. It is an intellectual process.

- I hope this forum will be a “virtual community center” which will help people with different levels of exposure to Buddha Dhamma to come together and grow together.
- In my own experience, I know that when trying to answer a question posed by another person — who is looking at the issue from a totally different point of view — forces me to look at the issue from a different angle. I have learned many things over the past few years that way.

8. The Buddha was the greatest scientist to be born, and we are trying to recover those deep teachings that have been buried over many centuries. Thanks to my late Noble teacher, Waharaka Thero (“[Parinibbāna of Waharaka Thero](#)”), true meanings of key concepts (eg., *anicca*, *anatta*, *viññāṇa*) have been uncovered.

- We need to maintain this momentum and make it easier for the future generations to access the pure and original teachings of the Buddha.

9. Finally, I keep the right to delete any posts that are not appropriate for the forum. I make such decisions based on the goal of this website (to teach Buddha’s original teachings per Tipiṭaka), and it will be for the benefit of the general audience.

18.4.3 How to Reply to a Forum Question

- If one just types in the **default window**, then the comment will appear at the very end of the discussion, as a new thread. Anyone will be able to see that as the latest comment, but then one needs to refer to the comment that he/she is responding to.
- If one hits the **reply button**, one can directly respond to a comment by that specific person (i.e., one's comment will appear below that comment or that thread). Then a reader will need to scan to find the new comment (especially if there are newer threads at the bottom).
- You can figure this out by looking at the postings by others that are already there.
- Once a reply is submitted, it can be revised within the next hour only. After that it will be locked and one needs to submit a new reply if needed.

[“Discourse 5 – Tilakkhaṇa and Micchā Diṭṭhi”](#) added to [Three Marks of Existence – English Discourses](#) – 3/2/2018 (in the “[Anicca, Dukkha, Anatta](#)” section). This is the last one in this series.

[“Discourse 4 – Sakkāya Diṭṭhi – What is “a Person”?”](#) added to [Three Marks of Existence – English Discourses](#) – 2/27/2018 (in the “[Anicca, Dukkha, Anatta](#)” section).

[“Discourse 3 – Distorted Perceptions or Saññā Vipallāsa”](#) added to [Three Marks of Existence – English Discourses](#) – 2/19/2018 (in the “[Anicca, Dukkha, Anatta](#)” section).

[Nirodha Samāpatti, Phala Samāpatti, Jhāna, and Jhāna Samāpatti](#) – 2/13/2018 (in the “[Living Dhamma](#)” section).

[“Discourse 2 – Icca, Nicca, Anicca”](#) added to [Three Marks of Existence – English Discourses](#) – 2/10/2018 (in the “[Anicca, Dukkha, Anatta](#)” section).

[“Discourse 1 – Nicca, Sukkha, Atta”](#) in the [Three Marks of Existence – English Discourses](#) – 2/3/2018 (in the “[Anicca, Dukkha, Anatta](#)” section).

[Three Marks of Existence – English Discourses](#) – 2/3/2018 (in the “[Anicca, Dukkha, Anatta](#)” section).

[Citta, Mano, Viññāna – Stages of a Thought](#) – 1/24/2018 (in the “[Living Dhamma](#)” section).

[Bhava and Bhavaṅga – Simply Explained!](#) 1/19/2018 (in the “[Living Dhamma](#)” section).

[Does Bodily Pain Arise Only Due to Kamma Vipāka?](#) 1/12/2018 (in the “[Living Dhamma](#)” section).

[Anidassana Viññāna – What It Really Means](#) – 1/6/2018 (in the “[Living Dhamma](#)” section).

[Pure Dhamma – Reflections on 2017](#) – 1/1/2018

18.4.8 Essays – 2017

[Bhūta and Yathābhūta – What Do They Really Mean](#) – 12/28/2017 (in the “[Rūpa Aggregate](#)” subsection of “[Living Dhamma](#)” section).

12/17/2017: Puredhamma Discussion Forum is now open: “[Pure Dhamma Discussion Forum Guidelines](#).”

[Kamma Viññāna and Nāmarūpa Paricceda Ñāna](#) – 12/12/2017 (in the “[Nāmarūpa Formation](#)” subsection of “[Living Dhamma](#)” section).

[Tipitaka Commentaries – Helpful or Misleading?](#) – 12/6/2017 (in the “[Historical Background](#)” section).

[Pure Dhamma – Sinhala Translation](#) – 12/2/2017 (More sections added by Prof. Sarath Bandara).

[Kamma Viññāna – Link Between Mind and Matter](#) – 11/30/2017 (in the “[Nāma & Rūpa to Nāmarūpa](#)” subsection of “[Living Dhamma](#)” section).

[Root of All Suffering – Ten Immoral Actions](#) – 11/14/2017 (in the new “[Dhamma with Less Pāli](#)” subsection of “[Living Dhamma](#)” section).

[Kāma Guna, Kāma, Kāma Rāga, Kāmacandha](#) – 11/9/2017 (in the “[Assāda, Ādīnava, Nissarana](#)” subsection of “[Sotāpanna Stage of Nibbāna](#)”).

[Difference Between Dhammā and Saṅkhāra](#) – 11/5/2017 (This is an old post in the section “[Key Dhamma Concepts](#).” I basically re-wrote the post. This is a much better version).

[Assāda, Ādīnava, Nissarana – Introduction](#) – 11/1/2017 (in the NEW “[Assāda, Ādīnava, Nissarana](#)” subsection of “[Sotāpanna Stage of Nibbāna](#)”).

[Pure Dhamma – German Website](#) – 10/21/2017

[Avyākata Paṭicca Samuppāda for Vipāka Viññāna](#) – 10/17/2017 (in the “[Paṭicca Samuppāda Cycles](#)” subsection).

[Samādhi, Jhāna, Magga Phala – Introduction](#) – 10/12/17 (in the new subsection “[Samādhi, Jhāna \(Dhyāna\), Magga Phala](#)” of the “[Living Dhamma](#)” section).

[Mundane versus Supramundane Jhāna](#) – 10/12/17 (in the new subsection “[Samādhi, Jhāna \(Dhyāna\), Magga Phala](#)” of the “[Living Dhamma](#)” section).

[Ascendance to Nibbāna via Jhāna \(dhyāna\)](#) – 10/4/17 (in the “[Transition to Noble Eightfold Path](#)” subsection of the “[Living Dhamma](#)” section).

[Abnormal Births Due to Gandhabba Transformations](#) – 9/30/17 (in the “[Mental Body – Gandhabba](#)” subsection of the “[Living Dhamma](#)” section).

[Gandhabba State – Evidence from Tipitaka](#) – 9/16/17 (in the “[Mental Body – Gandhabba](#)” subsection of the “[Living Dhamma](#)” section).

[Sīla, Samādhi, Paññā to Paññā, Sīla, Samādhi](#) – 9/2/17 (in the “[Transition to Noble Eightfold Path](#)” subsection).

[Anicca – Worthlessness of Worldly Things](#) – 8/20/17 (in the “[Anicca – True Meaning](#)” subsection).

[Dasa Samyojana – Bonds in Rebirth Process](#) – 8/6/17 (in the “[Bhāvanā \(Meditation\)](#)” section).

[The Infinity Problem in Buddhism](#) – 7/15/17 (in the “[Dhamma and Philosophy](#)” section).

[List of “San” Words and Other Pāli Roots](#) – 6/29/17 (in the “[Tables and Summaries](#)” section).

[Pure Dhamma Discussion Forum Guidelines](#) – 6/22/17

[Saṅkhāra and Kammā, Viññāna and Kamma Bīja](#) – 6/16/17 (in the “[San](#)” section).

[User’s Guide to Pure Dhamma Website](#) – 6/8/17 (in “[Buddha Dhamma](#)” section).

[Is Ānāpānasati Breath Meditation?](#) – 6/2/17 (in “[Bhāvanā \(Meditation\)](#)” section).

[Viññāna – What It Really Means](#) – 5/26/17 (in “[Living Dhamma](#)” section).

[Working of Kammā – Critical Role of Conditions](#) – 5/21/17 (in “[Living Dhamma](#)” section).

[What are rūpa? – Dhamma are rūpa too!](#) – 5/13/17 (in “[Living Dhamma](#)” section).

[Micchā Ditthi, Gandhabbayā, and Sotāpanna Stage](#) – 5/6/17 (in “[Living Dhamma](#)” section).

[Buddhaghosa’s Visuddhimagga – A Focused Analysis](#) – 4/29/17 – 4/29/17 (in the “Historical Background” section).

[Misinterpretation of Anicca and Anatta by Early European Scholars](#) – 4/29/17 (This replaces a recent post, “Answers to Criticism of Pure Dhamma Interpretations”).

I have also combined two previous posts, “Theravada – Problems with Current Interpretations of Key Concepts” and “Historical Timelines of Buddha Dhamma and Sri Lanka – End of Sinhala Commentaries” to make a new post, “[Incorrect Theravāda Interpretations – Historical Timeline](#)” —4/29/17.

[Are There Procedures for Attaining Magga Phala, Jhāna and Abhiññā?](#) – 4/23/17 (in the “[Power of the Human Mind](#)” section)

[Answers to Criticism of Pure Dhamma Interpretations – 4/16/17](#) (in the “[Historical Background](#)” section).

[Pabhassara Citta, Radiant Mind, and Bhavaṅga – 4/13/17](#) (in the “[Abhidhamma](#)” section).

[Buddhaghosa and Visuddhimagga – Historical Background – 4/8/17](#) (in the “[Historical Background](#)” section)

[Dasa Akusala and Anatta – The Critical Link – 4/2/17](#) (in the “[Anicca, Dukkha, Anatta](#)” section)

[Difference Between Jhāna and Stages of Nibbāna – 3/24/17](#) (in the “[Power of the Human Mind](#)” section)

[Anatta – the Opposite of Which Atta? – 3/17/17](#) (in the “[Anicca, Dukkha, Anatta](#)” section)

[Sakkāya Ditthi is Personality \(Me\) View? – 3/10/17](#) (in the “[Sotāpanna Stage of Nibbāna](#)” section)

[Parinibbāna of Waharaka Thero – 3/9/17](#)

[Pāli Dictionaries – Are They Reliable? – 3/4/17](#) (in the “[Sutta Interpretations](#)” section)- Revised 3/7/17.

[Attā Hi Attano Nātho – 3/4/17](#) (in the “[Dhammapada](#)” section).

[Saṅkhāra – What It Really Means – 2/25/17](#) (in the new “Four Aggregates” subsection in the “[Living Dhamma](#)” section).

[Vedanā – What It Really Means – 2/18/17](#) (in the new “What is Vedanā (Feelings)?” subsection in the “[Living Dhamma](#)” section).

[Satara Āhāra for Mental Body or Gandhabbayā – 2/11/17](#) (in the new “Mental Body – Gandhabbaya” subsection in the “[Living Dhamma](#)” section).

[Mental Body \(Gandhabbayā\) – Personal Accounts – 2/5/17](#) (in the “[What is Saññā \(Perception\)?](#)” subsection in the “[Living Dhamma](#)” section).

[Vipallāsa \(Ditthi, Saññā, Citta\) Affect Saṅkhāra – 1/28/17](#) (in the “What is Saññā (Perception)?” subsection in the “[Living Dhamma](#)” section).

Also, a really good Sinhala translation of many sections of the website by Professor Sarath Bandara is now available: “[Pure Dhamma – Sinhala Translation.](#)”

[Future Suffering – Why It Arises – 01/22/17](#) (in the “[What is Saññā \(Perception\)?](#)” subsection in the “[Living Dhamma](#)” section)

[Sexual Orientation – Effects of Kamma and Gathi \(Saṅkhāra\) - 1/14/17](#) (in the “[Living Dhamma – Fundamentals](#)” subsection in the “[Living Dhamma](#)” section)

[Nikāya in the Sutta Pitaka – 1/7/17](#) (in the “[Sutta Interpretations](#)” section)

[Pure Dhamma – Reflections on 2016 – 01/01/17](#)

[April – July 2017](#)

[January – March 2017](#)

18.4.9 Essays – 2016

[December 2016](#)

[November 2016](#)

[October 2016](#)

[September 2016](#)

[August 2016](#)

[July 2016](#)

[June 2016](#)

[May 2016](#)

[April 2016](#)

[March 2016](#)

[February 2016](#)

[January 2016](#)

18.4.9. **January 2016**

1

[Tiparivattaya and Twelve Types of Ñāna \(Knowledge\)](#) – 1/29/16 (Dhamma Cakka Pavattana sutta in the Sutta Interpretations section)

[Majjima Patipada – Way to Relinquish Attachments to this World](#) – 1/22/16 (Dhamma Cakka Pavattana sutta in the Sutta Interpretations section). Revised 1/23/16.

[Dhammacakkappavattana Sutta – Introduction](#) – 1/16/16 (in the Sutta Interpretations section).

[Popup Pāli Glossary with Pronunciation](#) – 1/7/16. There will be no new essay this weekend.

[Pancupadanakkhandha – It is All Mental](#) – 1/1/16 (in the “The Five Aggregates (Paññakkhandha)” section).

18.4.9. **February 2016**

2

[Nibbatti Lakkhana in Udayavaya Ñāna](#) – 2/26/16 (under the Sotāpanna Stage of Nibbāna)

[Hidden World of the Gandhabbayā: Netherworld \(Paralowa\)](#) – 2/18/16 (in Manomaya Kāya section)

[Udayavaya Ñāna – Introduction](#) – 2/12/16 (under the Sotāpanna Stage of Nibbāna)

[Relinquishing Defilements via Three Rounds and Four Stages](#) – 2/4/16 (Dhamma Cakka Pavattana sutta in the Sutta Interpretations section)

18.4.9. **March 2016**

3

[Getting to Samādhi via Formal Meditation Sessions](#) – 3/25/16 (in Meditation section)

[Āhāra \(Food\) in Udayavaya Ñāna](#) – 3/19/16 (under the Sotāpanna Stage of Nibbāna; new subsection on Udayavaya Ñāna)

[How Perceived Pleasures \(Assāda\) lead to Dukkha](#) – 3/11/16 (Under Āsvada (Mind-Made Pleasures), Ādeenava (Bad Outcomes), Nissarana (Relinquish))

[Craving for Pornography – How to Reduce the Tendency](#) – 3/4/16 (Under Discussion of Comments)

18.4.9. **April 2016**

4

4/29/2016 New Section: [Myths or Realities?](#)

Two posts: [Animisa Locana Bodhi Poojawa – A Prelude to Acts of Gratitude](#)

and [Paramita and Niyata Vivarana – Myths or Realities?](#)

[Brain – Interface between Mind and Body](#) – 4/22/16 (in the Abhidhamma section. Don't be discouraged even if you don't have any exposure to Abhidhamma; I am trying to make Abhidhamma easy to grasp. No need to memorize anything)

[What are Dhamma? – A Deeper Analysis](#) – 4/15/16 (in the Abhidhamma section)

[Two Versions of 37 Factors of Enlightenment](#) – 4/8/16 (in “Anicca, Dukkha, Anatta” subsection under “Key Dhamma Concepts”)

[Why are Tilakkhana not Included in 37 Factors of Enlightenment?](#) – 4/1/16 (in “Anicca, Dukkha, Anatta” subsection under “Key Dhamma Concepts”)

[Getting to Samādhi via Formal Meditation Sessions](#) – 3/25/16 (in Meditation section)

[Āhāra \(Food\) in Udayavaya Ñāna](#) – 3/19/16 (under the Sotāpanna Stage of Nibbāna; new subsection on Udayavaya Ñāna)

[How Perceived Pleasures \(Assāda\) lead to Dukkha](#) – 3/11/16 (Under Āsvada (Mind-Made Pleasures), Ādeenava (Bad Outcomes), Nissarana (Relinquish))

[Craving for Pornography – How to Reduce the Tendency](#) – 3/4/16 (Under Discussion of Comments)

18.4.9. **May 2016**

5

[Supreme Qualities of Buddha, Dhamma, Saṅgha](#) – 5/28/16 (This is a re-write of a previous short post).

[Tisarana Vandana and Its Effects on One's Gathi](#) – 5/28/16

5/20/2016 New Subsection: [The Grand Unified Theory of Dhamma](#), which includes two old posts and a new post: [31 Realms Associated with the Earth](#). New post in Tables and Summaries section: [31 Realms of Existence](#)

[Our Two Worlds: Material and Immaterial](#) – 5/14/16 (in Buddha Dhamma section)

[Indriya and Āyatana – Big Difference](#) – 5/7/16 (in the Key Dhamma Concepts section)

18.4.9. **June 2016**

6

[Possible Effects in Meditation – Kundalini Awakening](#) – 6/25/16 (In the section on Bhāvanā (Meditation))

[Can Buddhist Meditation be Dangerous?](#) – 6/17/16 (In the section on Myths or Realities)

[Gandhabbayā Sensing the World – With and Without a Physical Body](#) – 6/11/16 (In the subsection on the Grand Unified Theory of Dhamma)

[Gandhabbayā – Only in Human and Animal Realms](#) – 6/4/16 (In the subsection on the Grand Unified Theory of Dhamma)

18.4.9. **July 2016**

7

[Antarabhava and Gandhabbayā](#) – 7/29/16 (In the section Myths or Realities?)

[Udayavaya Ñāna – Importance of the Cittaja Kaya](#) – 7/22/16 (In the subsection on the Udayavaya Ñāna in the Sotāpanna stage of Nobbana)

New section: Abhidhamma via Science (Changed to [Inconsistencies with Science](#) on 06Mar2018) and a new post: [Vision \(Cakkhu Viññāna\) is Not Just Seeing](#) – 7/15/16

[Nibbāna in the Big Picture](#) – 7/8/16 (In the subsection on the Grand Unified Theory of Dhamma)

[Hetu-Phala, Paccuppanna, and Paticca Samuppāda](#) – 7/2/16 (In the section [Sorting out Some Key Pāli Terms \(Tanhā, Lobha, Dosa, Moha, etc\)](#))

18.4.9. August 2016

8

Started a new section: [Living Dhamma](#). The subsection “New Approach to Meditation” was deleted and those posts are now in this section. New post in this section: [What Are Kilesa \(Mental Impurities\)? – Connection to Cetasika](#) – 8/26/16

[Starting on the Path Even without Belief in Rebirth](#) (Nirāmisā Sukha to Nibbāna Suva – The Key Step) – 8/19/16

New subsection in the “Bhāvanā (Meditation)” section : [Living Dhamma](#) and a new post in it: [Peace of Mind to Nibbāna – The Key Step](#) – 8/12/16

Also, Pāli Glossary replaced by two posts with over 400 Pāli words:

[Pāli Glossary – \(A-K\)](#) and [Pāli Glossary – \(L-Z\)](#) – 8/12/16

and, updated version of [Popup Pāli Glossary with Pronunciation](#) – 8/12/16

[Living Dhamma – Introduction](#) – 8/5/16 (In the section Bhāvanā (Meditation))

18.4.9. September 2016

9

[Noble Eightfold Path – Role of Sobhana Cetasika](#) – 9/30/16 (in the “Living Dhamma” section)

[How Are Gathi and Kilesa Incorporated into Thoughts?](#) – 9/22/16 (in the “Living Dhamma” section)

[Satipatthāna Sutta – Relevance to Suffering in This Life](#) – 9/10/16 (in the “Living Dhamma” section)

Two new posts:

[Nibbāna “Exists”, but Not in This World](#) – 9/2/16 (in the “Nibbana” subsection)

[Suffering in This Life – Role of Mental Impurities](#) – 9/2/16 (in the “Living Dhamma” section)

18.4.9. October 2016

10

[Suffering in This Life and Paticca Samuppāda](#) – 10/28/16 (in the “[Living Dhamma](#)” section)

Started a new **subsection**: [Patthāna Dhammā](#) in the Paṭicca Sumuppada section. New post in this section: [Patthāna Dhamma – Connection to Cause and Effect \(Hetu Phala\)](#) – 10/22/16

September 30, 2016: I just installed Google Translator at top right of the website. I have setup only a few languages for now. I would appreciate feedback on the quality of the translations. Also, if you need a language that is not there, please let me know and I can add. You can use the “Comments” box below to provide input.

[Micchā Ditthi – Connection to Hethu Phala \(Cause and Effect\)](#) – 10/18/16 (in the “Living Dhamma” section)

[Getting to Samādhi](#) – 10/7/16 (in the “[Living Dhamma](#)” section)

18.4.9. November 2016

11

[Sutta Learning Sequence for the Present Day](#) – 11/30/16 (in [Sutta Interpretations](#) section).

[Asevana and Annamanna Paccaya](#) – 11/20/16 (in [Patthāna Dhammā](#) subsection in the Paṭicca Sumuppada section).

[Correct Meaning of Vacī Saṅkhāra](#) – 11/10/16 (in the “[Sorting out Some Key Pāli Terms](#)” sub section of the “Key Dhamma Concepts” section)

18.4.9. **December 2016**

12

[Saññā – What It Really Means](#) – 12/31/16 (in the “[What is Saññā \(Perception\)?](#)” subsection in the “[Living Dhamma](#)” section)

[Our Mental Body – Gandhabbayā](#) – 12/26/16 (in the “[What is Saññā \(Perception\)?](#)” subsection in the “[Living Dhamma](#)” section)

[Suffering in This Life and Paticca Samuppāda II](#) – 12/7/16 (in the “[Living Dhamma](#)” section)

18.4.10 **Essays – 2015**

[December 2015](#)

[November 2015](#)

[October 2015](#)

[September 2015](#)

[August 2015](#)

[July 2015](#)

[June 2015](#)

[May 2015](#)

[April 2015](#)

[March 2015](#)

[February 2015](#)

[January 2015](#)

18.4.1 **December 2015**

0.1

[Panñakkhandha or Five Aggregates – A Misinterpreted Concept](#) – 12/25/15 (in the “The Five Aggregates (Panñakkhandha)” section).

[Does the Hell \(Niraya\) Exist?](#) – 12/18/15 (in the “Role of the Brain in Human Consciousness” section).

[Feelings: Sukha, Dukha, Somanassa, and Domanassa](#) – 12/11/15 (in the Paṭicca Samuppāda section).

[13. Kammattana \(Recitations\) for the Sotāpanna Stage](#) – 12/5/15 in the Bhāvanā (Meditation) section

18.4.1 November 2015

0.2

[The Origin of Matter – Suddhatthaka](#) – 11/27/15 (in the Abhidhamma section)

[Kāma Assāda Start with Phassa Paccayā Vedanā or Samphassa Ja Vedanā](#) – 11/19/15 (in Paṭicca Samuppāda Section)

[12. Key Factors to be Considered when “Meditating” for the Sotāpanna Stage](#) – 11/13/15 (in the Meditation section).

[How Are Paticca Samuppāda Cycles Initiated?](#) – 11/6/15 (in the Paṭicca Samuppāda section).

18.4.1 October 2015

0.3

[Do Things Just Happen? – The Hidden Causes](#) – 10/30/15 (in the Moral Living and Fundamentals section).

[“Self” and “no-self”: A Simple Analysis – Do We Always Act with Avijjā?](#) – 10/23/15 (in the Comments/Reviews section).

[Is Buddha Dhamma \(Buddhism\) a Religion?](#) – 10/21/15 (in the Dhamma and Philosophy section).

Āsvada (Mind-Made Pleasures), Ādeenava (Bad Outcomes), Nissarana (Relinquish) – 10/16/15 (New subsection with the following two posts under it)

Āsvada, Ādeenava, Nissarana – Introduction -10/16/15

[What is “Kāma”? It is not Sex](#) – 10/16/15

[How to Cultivate the Anicca Saññā](#) – 10/8/15 (I revised the original post with this title and made two posts; most of the new material is in this first post and is better to be read first)

[How to Cultivate the Anicca Saññā – II](#) – 10/8/15

[Logical Proof that Impermanence is Incorrect Translation of Anicca](#) – 10/8/15

I have also added audio files to [“Pāli Glossary”](#) – 10/6/15

[Is Eating Meat an Akusala Kamma \(Immoral Deed\)?](#) – 10/2/15

18.4.1 September 2015

0.4

[Would Nibbāna be Possible if Impermanence is the Cause of Suffering?](#) – 9/25/15

[Anicca vata Sankhara...](#) – 9/17/15

[What is Intention in Kamma?](#) – 9/11/15 (in a new section on “Discussion of Comments” under “Comments/Reviews”).

[Nirāmisa Sukha – In a Chart](#) – 9/4/15

[Learning Buddha Dhamma Leads to Nirāmisa Sukha](#) – 9/4/15

18.4.1 August 2015

0.5

[What is the only Akusala Removed by a Sotāpanna?](#) – 8/28/15

[Cetasika – Connection to Gathi](#) – 8/20/15

[Body Types in 31 Realms – Importance of Manomaya Kāya](#) – 8/13/15

18.5 Buddha Dhamma – In a Chart

I have made a single page chart that shows the uniqueness of the Buddha's message, and also outlines the Path that he suggested clearly.

The pdf file can be saved or printed for reference:

[WebLink: PDF File: Buddha Dhamma – In a Chart](#)

Discussion of the chart is at:

[What is Unique in Buddha Dhamma?](#)

18.6 Pure Dhamma Essays in Book Format

For those who may like to read the posts in epub book format, please download it at the below website:

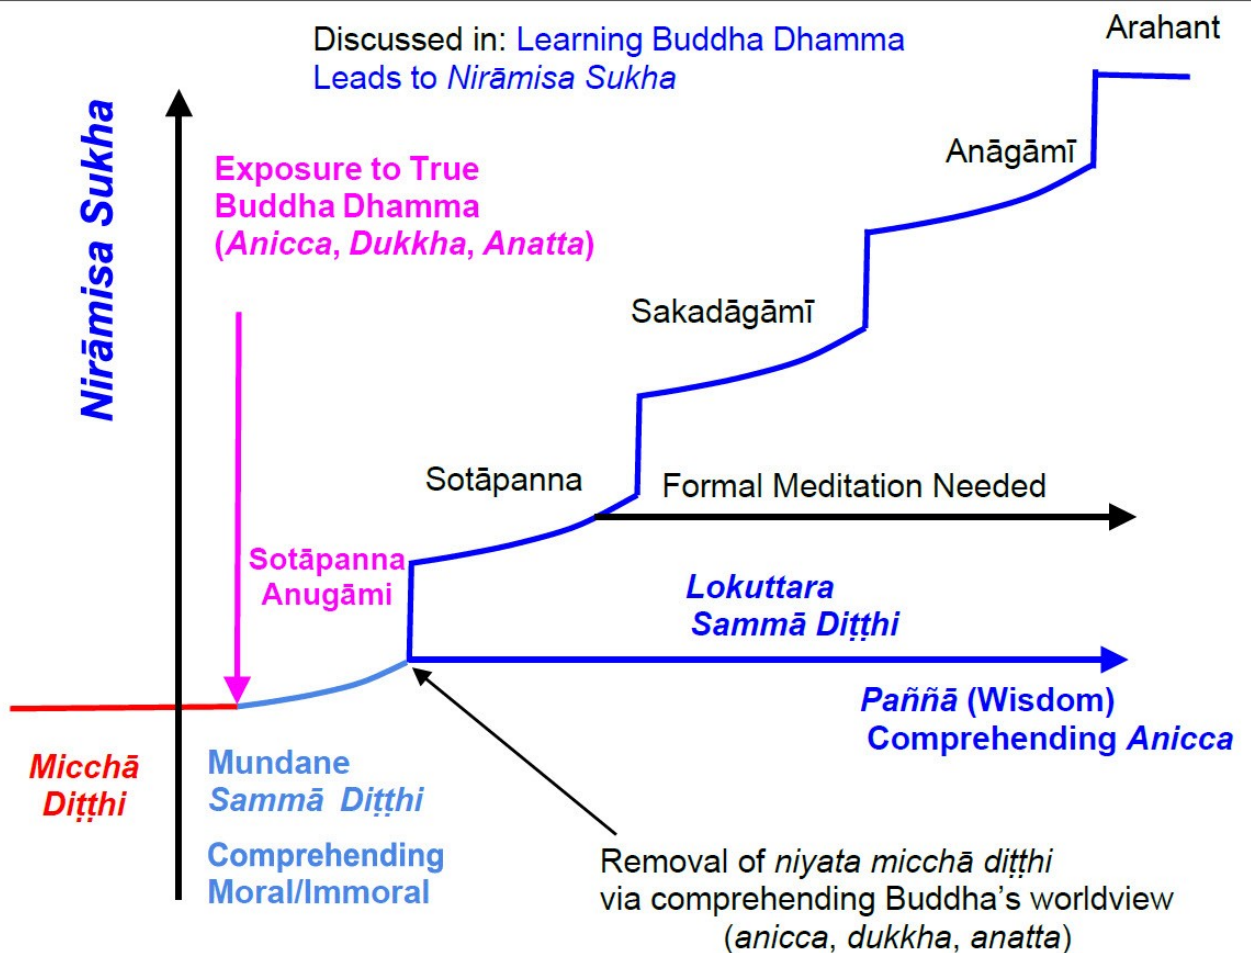

[WebLink: Pure Dhamma Essays in Book Format](#)

18.7 Nirāmisā Sukha – In a Chart

There are several posts at the site on “*nirāmisā sukha*.” It is NOT a feeling (*vedanā*) in the sense of a sense pleasure; it does not belong in the *vedanā cetasika*. It is a “sense of relief” when one starts realizing the “burdens” associated with sense pleasures.

- The closest analogy (if one can be given) is the feeling one gets when one is relieved of an headache that one had since birth.

I have made a single page chart that shows how the *nirāmisā sukha* starts as one starts when one first hears the true message of the Buddha and starts comprehending it, and becomes a *Sotāpanna Anugāmi*. Then it makes permanent stepwise jumps at the four stages of *Nibbāna* culminating in the *Arahanthood*.

The pdf file can be saved or printed for reference:

[WebLink: PDF File: Nirāmisā Sukha – In a Chart](#)

Discussion of the chart is at:

[Learning Buddha Dhamma Leads to Nirāmisā Sukha](#)

18.8 Popup Pali Glossary with Pronunciation

February 20, 2020: Updated #5 URL Link for Windows and Mobile iPhone/iPad. Added at #5 and #7 – Plain Dictionary for Mobile Android. (by Seng Kiat Ng)

August 12, 2016: Mr. Seng Kiat Ng added the new words in the two new posts “[Pāli Glossary – \(A-K\)](#)” and “[Pāli Glossary – \(L-Z\)](#)” to the pop-up dictionary, so that there are now a **total of 414 Pāli words**. Please download the two new files in #3 below and delete the old files, if you have already installed the GoldenDict dictionary.

- Installation instructions are given below for those who have not installed the pop-up GoldenDict dictionary, but would like to do so.

January 7, 2016

This post was written by Mr. Seng Kiat Ng. Much merits to him and his family for this meritorious work. This is a very useful feature that can be used with any other site as well (by downloading other dictionaries; see below).

- Please remember that once you download the files as he instructed, **you will be able to highlight a Pāli word (178 words as of today) in any of the posts at the site and a popup screen will display the English meaning. You also be able to hear the Pāli pronunciation if clicked on the audio button.**
- The old [Pāli Glossary](#) (with the same 178 words) is still there in case anyone wants to peruse there; the audio files have been removed since they take too long to download.

1. We will be using the GoldenDict online dictionary platform. First, one needs to install it on one's computer and then download the two Puredhamma Pāli dictionary files to a folder on one's computer.

- Other online or downloadable (free) dictionaries can also be used as described below.

2. Goto <http://goldendict.org/download.php> and choose the version suitable for you. I chose the first option to download the Windows version.

- Download the .exe file and double click to run it and install it.
- Mine was installed in the C:\Program Files (X86)\GoldenDict directory. There should a “GoldenDict.exe” file there. This is the “clickable icon” that will open the application. It does not automatically create this “clickable icon” on the desktop, so right click on that and make a copy on the desktop for convenience.
- Now the GoldenDict application can be opened by double clicking that link on the desktop.

3. Next download the two files (one text, one audio) for the Pāli dictionary from Puredhamma.net to a folder in your computer (could be the same “GoldenDict” folder above).

- [Pure-Dhamma-Pāli-English Glossary \[399 words\] 25Feb2020.mdx](#) (Text) **Updated 25Feb2020**
- [Pure-Dhamma-Pāli-English Glossary \[399 words\] 25Feb2020.mdd](#) (Audio) **Updated 25Feb2020**

You may want to close any other screens (other than the one with the “Download” button) that pop up with advertisements. Wait until the “Download” button becomes “clickable”.

4. Now open the GoldenDict as instructed in #2 above.

- Go to “Edit” and choose “Dictionaries” and then choose the **folder** that you put the above two Pāli Glossary files.
- Now, right next to the “search button” on GoldenDict, there is the “scan popup” option selection button indicated by a “pen like” symbol. Click on it to enable scan popups.

- Now, open any page on Puredhamma.net and select a Pāli word. **If you are running Windows Explorer**, just placing the cursor on the word will make the dictionary popup (if that word is one of the 414 words that are so far in the Pāli dictionary). Try “anicca” in a post to test because that word is there.
- **If you have Google Chrome**, you need to select the word (highlight) and hit CTRL+C+C (hold CTRL button and hit C twice) for it to popup.
- There is a “speaker” symbol there in the popup and you can click on it to play back the audio file (pronunciation).
- In order for the popup dictionary to work, GoldenDict must be opened at the same time.

5. Here is a complete list of options to download the GoldenDict platform:

- Windows [GoldenDict-1.5.0-RC-517](#)
- Mac OS X [GoldenDict Early Access Builds for Mac OS X](#)
- Linux [GoldenDict Eng-Rus-En v1.1](#)

Other Dictionary:

- Mobile Android [Plain Dictionary BlueDict](#)
- Mobile iPhone/iPad [MDict \(Windows, Android, IOS, Tools, Dictionary files\)](#)

6. You can use the GoldenDict platform to access other online or downloadable dictionaries (to be used either with this site or any other site). Some can be chosen at the “Edit” menu. Go to “Edit” and choose “Dictionaries” and on the second row of that screen there are some online dictionaries that you can choose from.

- More information at the [GoldenDict.org](#) site.
- If you have two or more dictionaries loaded, then the popup will display translations provided by all of them (if that word is in them).

7. Other than GoldenDict, the following two platforms also could be used.

- [Plain Dictionary \(Android – Free, unlimited Dictionary with no advertisement\)](#)
- [BlueDict \(Android – Free; limited to 10 Dictionaries and with advertisement\)](#)
- [MDict \(Windows/iPhone/iPad/Windows Mobile/Android – Free with limitations\)](#)

18.9 Reflections on 2019

January 1, 2020

1. Puredhamma.net completed a full six years online. There are over 600 posts at the site. It may look challenging to navigate through.

- It may be difficult to get an idea about the layout of the website, especially for those who are using a mobile phone or a tablet. I recommend reviewing the "[Pure Dhamma – Sitemap](#)."
- I just went through the whole site and collected all the posts under specific sections and subsections.

2. I very much want to highlight the fact that Buddha Dhamma is not about hiding in a remote place and shying away from society or subjecting oneself to harsh living.

- It is not those enticing or seducing things that make us do immoral things and make our minds stressed in turn. rather it is our own defiled *gati* (habits/character) making us do immoral things.
- One with a purified mind can live in the most seductive place and yet not be perturbed.
- But to get there, one needs **some self-control** to stay away from such extremes initially. **Learning pure Dhamma is the only way to break through that first barrier.** Once the *Sotapanna* stage is attained, one will never go back.

3. In his very first discourse to the five ascetics, the Buddha explained that there is nothing in this world that is worth to be taken as "mine." The First Noble Truth is not about the suffering that we experience in this life. In fact, some people may not even experience that much suffering in this life until the end.

- Rather, what the Buddha said is that we create CAUSES to bring about FUTURE SUFFERING if we ATTACH to worldly pleasures. We are not any different than a fish biting into a tasty bait, say, a worm. That fish does not see the hook hidden in the "delicious worm." It will be subjected to much suffering once it bites the worm, and the hook attaches to its mouth.
- The difficulty in our case is that the deeds we do to get those sensory pleasures may not show their CONSEQUENCES in this life. That is why it is useless to follow Buddha Dhamma if one does not believe in rebirth or *kamma/vipāka*.
- As long as we CRAVE for sensual pleasures (that is different from just experiencing them,) we WILL be born with bodies that are subjected to diseases, decay, and eventual death. See, "[Is It Necessary for a Buddhist to Eliminate Sensual Desires?](#)"

4. I had an experience that really "opened my eyes" early in 2019. A brain tumor about 2-3 cm in diameter was found in the frontal lobe of my brain. Within 5 weeks they were able to operate and remove the tumor. Luckily, it was non-cancerous.

- That experience was a reminder of how fickle this life is. I was lucky to be able to survive with just losing my sense of smell. If it was not found, the tumor could have grown more and damaged my vision too.
- We all should work towards *Nibbāna* as if we have only a short time to live. In fact, that was the last advice of the Buddha before his *Parinibbāna*: '*vayadhammā saṅkhārā, appamādena sampādetthā*'"ti.

5. I discussed this key point in a recent post, "[Icchā \(Cravings\) Lead to Upādāna and to Eventual Suffering](#)." I highly recommend reading the new series of posts on "[Origin of Life](#)" and, in particular, the subsection there "[Paticca Samuppāda – Not 'Self' or 'No-Self'](#)"

- However, those of you who are not familiar with the fundamentals of Buddha dhamma (Buddhism), I recommend first reviewing the "[Pure Dhamma – Sitemap](#)" and reading on the earlier sections there, or any sections of interest.
- First, one needs to get an idea of what Buddha Dhamma is.

6. I am appreciative of many kind comments on the usefulness of the site, and about personal achievements. That gives me confidence that there are people who can see the value of Pure Dhamma and can make genuine progress.

- Special thanks to Seng Kiat Ng from Singapore for putting together all the posts in an eBook format and for updating it every week as I write new posts and update old posts. He has done that for a few years now. He is also helping manage the discussion forum. The link to the eBook at, “[Pure Dhamma Essays in Book Format.](#)”
- Tobias Große in Heilbad Heiligenstadt, Germany, has now translated many pages of pure dhamma to German. Here is the link: <https://puredhamma/de>
- Puredhamma.net is now available in Korean, thanks to Mr. Ja-nyun Kim and his son who is the manager (DHK) of the Puredhamma Study Group Cafe (<https://cafe.naver.com/puredhamma>). The link to the website is <https://puredhamma.kr>
- There are few others who are working on translations to their own languages.
- There are also several other disciples of the Waharaka *Thero* who are working diligently to deliver the true teachings of the Buddha in the Sinhala (and English) languages; see, “[Parinibbāna of Waharaka Thēro.](#)” We have also discussed others at the discussion forum.
- Christian Schoenrock has organized a group in Eastern Europe. He also has a forum discussing Pure Dhamma in English that is open to everyone: <https://discordapp.com/invite/g6UWq4b>
- Many others have contributed by pointing out errors in some posts leading to improvements. My goal is to have 100% inter-consistency as well as consistency with the *Tipitaka*. My thanks all of them.

7. I am happy about the status of the discussion forum at puredhamma.net. It completed the second full year on December 17th: “[Forum.](#)”

- Even though only a limited number of people are posting there, the quality of discussions is good. I encourage questions and take each question seriously. Most people have not been exposed to key concepts, and are not aware of them due to no fault on their own.
- There have been few issues with the submission of comments within the last month or so. I am using a software package dedicated to Word Press websites, and they are working on the issue. If anyone has a problem in submitting a question/comment, please send me an email: lal@puredhamma.net.

Happy New Year!

May the Blessings of the Triple Gem (Buddha, Dhamma, Saṅgha) be with you always!

18.10 Reflections on 2018

January 1, 2019

1. Puredhamma.net completed full five years online. There are well over 500 posts at the site. It is getting a bit complex to browse through.

- I am thinking about splitting it to three sites based on the complexity of the material. May be something like: Beginner, Intermediate, and Advanced.
- Even though there are many posts, I have not been able to adequately cover certain sections, especially *Abhidhamma*.

2. On the other hand, last year was an eye-opener for me, in that there is a need to explain basic concepts in Buddha Dhamma. I participated in a well-known Buddhist discussion forum, and only during the past three months or so that I realized that most people there do not have a basic understanding of the key concepts of Buddha Dhamma.

- Deep *suttā* are discussed there without having an understanding of key concepts like the five aggregates: *rūpa*, *vedanā*, *saññā*, *saṅkhāra*, *viññāṇa*.
- Since only a limited number of people make comments there, I am not certain how bad this problem really is.

3. I am seriously thinking about having a “sub-site” where introductory concepts in Buddha Dhamma are explained.

- That includes *dasa akusala*, Four Noble Truths, Noble Eightfold Path, and an introduction to *Paṭicca Samuppāda*.
- By the way, if you are new to puredhamma.net, please read the “[Moral Living and Fundamentals](#)” and the first subsections of the “[Living Dhamma](#)” section.
- It is absolutely necessary to learn the basics before getting into advanced concepts.

4. I am happy about the status of the discussion forum at puredhamma.net. It completed the first full year on December 17th: “[Forum](#).”

- Even though only a limited number of people are posting there, the quality of discussions is good. I encourage questions, and take each question seriously. Most people have not been exposed to key concepts, and are not aware of them due to no fault on their own.
- I am glad to see that at least a limited number of people are making significant progress due to those discussions. It is hard to explain everything in a post. Therefore, the forum is a good way to bring up points that I missed, or not paid enough attention to.
- My sincere thanks to all who are contributing to the discussions by proving their own input.

5. I am appreciative of many kind comments on the usefulness of the site, and about personal achievements; that gives me confidence that there are people who can see the value of Pure Dhamma and can make genuine progress.

- Special thanks to Seng Kiat Ng from Singapore for putting together all the posts in an eBook format and for updating it every week as I write new posts and update old posts. He is also helping manage the discussion forum.
- Tobias Große in Heilbad Heiligenstadt, Germany, has now translated many pages of [puredhamma](http://puredhamma.net) to German. Here is the link: <https://puredhamma/de>
- I understand that there is a Korean translation too. The person who is doing the work has written to me, but seems to want to stay anonymous.

- Christian Schoenrock has organized a group in Eastern Europe. He also has a forum discussing Pure Dhamma in English that is open to everyone: <https://discordapp.com/invite/g6UWq4b>
- Many others have contributed by pointing out errors in some posts leading to improvements. My goal is to have 100% inter-consistency as well as consistency with the *Tipiṭaka*. My thanks all of them.

Happy New Year!

May the Blessings of the Triple Gem (Buddha, Dhamma, Saṅgha) be with you always!

18.11 Reflections on 2017

January 1, 2018

1. Pure Dhamma discussion forum was launched on December 17. I had wanted to do that for a while, and I am glad to see that there are several good discussions started already. I hope more readers will take part, not only to ask questions but also to answer questions by others.

- Over the past few years, I have learned a lot by trying to answer questions put forth by others. Such questions force me to look at a given issue from a different point-of-view.
- Now more people can benefit in two ways: One can get answers from multiple people (different people look at the same issue from different angles), and everyone can benefit from the discussions.

2. I want to start working a new project that I have been wanting to do for a while. It is to illustrate the real connection between quantum mechanics and Buddha Dhamma. Some people have tried to do that highlighting “quantum weirdness”, but in fact there is no weirdness in quantum mechanics.

- So, I hope the discussion forum will grow and I can only drop by once in a while.
- Forum guidelines and how to register: “[Pure Dhamma Discussion Forum Guidelines](#).”
- One does not need to register to read questions and comments by others.

3. Puredhamma.net is now available in German language, thanks to Mr. Tobias Große in Heilbad Heiligenstadt, Germany. Here is the link:

<https://puredhamma/de>

- Professor J. M. R. Sarath Bandara has added more sections to the Sinhala translation of the Puredhamma website recently: [Pure Dhamma – Sinhala Translation](#)

4. I have personally made significant progress. Even though I am not certain that I have been released from the *kāma loka*, it seems I am almost there.

- However, I do not worry about specific attainments. I believe that if I pursue the Path, the fruits will appear naturally, just like a tree will grow and bear fruit if it is taken care of by providing water, sunlight, and nutrients.

5. I need to make a comment about the *jhānā*, since there are some misconceptions. If one cultivates *jhāna*, the fourth *Ariya jhāna* can be attained only by an *Anāgāmī*. It is fairly easy to verify if one has attained the *Anāgāmī* stage (no cravings left for any sensual pleasures including sex, food, music, etc).

- When one attains the *Anāgāmī* stage, *Sammā Samādhi* is complete; hence if one has cultivated *jhāna*, one would attain the fourth *Ariya jhāna*.
- One finally attains the *Arahant* stage by completing *Sammā Nāṇa* and *Sammā Vimutti*: “*atthāngehi samannāgato Sekhā, dasāngehi samannāgato Arahant*”, i.e., there are ten steps to the *Arahant* stage.
- These are discussed in detail at: “[Samādhi, Jhāna \(Dhyāna\), Magga Phala](#).”

6. A related issue is that one does not lose “*kāma guna*” associated with the human *bhava* (i.e., any sense pleasure like the ability to taste the sweetness of sugar) even when attaining the *Arahant* stage. **One just loses any craving for them. One has seen the fruitlessness and dangers in craving for them.**

- Therefore, one with any type of *magga phala* will still taste delicious food as such, or good music as pleasant, or feel the comfort in an air-conditioned room. These are “*kāma guna*” associated with the human *bhava*, and are removed only when an *Arahant* attains *Parinibbāna*, i.e., at the physical death of the body.
- This is explained in “[Kāma Guna, Kāma, Kāma Rāga, Kāmacandha](#)”.

7. Buddha's true message is contrary to the message embodied in all other religions and philosophies/world views. The goal is not to merely live a moral life, but also to see the dangers in "maintaining status quo" by just living a good, moral life: **It is imperative to get out of the rebirth process in order to prevent unimaginable types of suffering in future lives.**

- It is true that a "normal human mind" sees this as a pessimistic message. Stopping the rebirth process seems very drastic and disconcerting.
- **Therefore, it is not even advisable to focus on that in the beginning.** It is better to try to understand basic concepts first, as discussed in the first subsections in the "[Living Dhamma](#)" section (and the "[Bhāvanā \(Meditation\)](#)" section), and feel the increasing levels of *nirāmisā sukha* as one makes progress.
- When one advances to higher subsections of the "[Living Dhamma](#)" section, one will be reading advanced concepts. In the end, one would realize that the key message of the Buddha is actually the best message that one could receive and is more valuable than anything in this world.
- The unconventional message of the Buddha is "a world view that has never been known to the world" or "*pubbe ananussutesu dhammesu.*" That is what I try to explain at this website in a systematic way.

8. If even a single person can attain the *Sotāpanna* stage, that would be worthwhile my time writing for even ten years. That means stopping an uncountable number of births in the *apāyā* for that person.

- But I know that number is higher even for a given year, based on emails that I receive. That will keep me going for as long as I can write. And there is so much to write! Even if I write for ten more years, there will still be more to write.
- Of course, I or anyone else cannot verify whether another has attained the *Sotāpanna* stage or any other *magga phala*. But even if one has become a *Sotāpanna Anugāmi*, he/she is an *Ariya* and is bound to attain the *Sotāpanna* stage in the immediate future. *Sotāpanna Anugāmis* are included in "*Attha purisa puggalā*" or the "Eight types of Noble Persons".

9. I am appreciative of many kind comments on the usefulness of the site, and about personal achievements; that gives me confidence that there are people who can see the value of pure Dhamma and can make genuine progress.

- My thanks also to those who made comments/suggestions/questions that have led to improvements of many web pages. Special thanks to Mr. Seng Kiat Ng from Singapore for putting together all the posts in an eBook format and for updating it every weekend as I write new posts and update old posts.
- Many others also pointed out many errors in posts which have led to improvements. My goal is to have 100% inter-consistency as well as consistency with the *Tipiṭaka*.
- I also want to illustrate that there is no need to consult late commentaries like *Visuddhimagga*; that can only lead to confusion. I have shown many inconsistencies in them; see, "[Historical Background](#)." There are three original commentaries included with the *Tipiṭaka* and those are sufficient.

9. Finally, I always highlight the fact that Buddha Dhamma is not about hiding in a remote place and shying away from the society or subjecting oneself to harsh living.

- One with a purified mind can live in the most seductive place and yet not be perturbed. But of course to get to that point, one needs to gradually reduce attachment to **excess** sense pleasures, and to stay away from bad friends and bad environments (in order to see for oneself how much "peace of mind" can be realized).
- It is not those enticing or seducing things that make us do immoral things and make our minds stressed in turn; rather it is our own defiled minds making us do immoral things (defilements can vary from hate and excess greed to just being ignorant of the true nature of the world).
- All we need to do is to get rid of our bad *gati* (or *gathi*; I note that I have used both spellings over the years) and cultivate good *gati*. This is the key to *Nibbāna*. During that process, one will start feeling the

“cooling down”, and then start comprehending *anicca, dukkha, anatta*, which leads to the *Sotāpanna* stage. Therefore, it is a step-by-step process.

Happy New Year!

May the Blessings of the Triple Gem (Buddha, Dhamma, Saṅgha) be with you always!

18.12 Reflections on 2016

January 1, 2017; revised (#7) January 6, 2016

1. Buddha's true message is contrary to the message embodied in all other religions and philosophies/world views. The goal is not to just live a moral life, but also to see the dangers in "maintaining status quo" by just living a good, moral life. It is imperative to get out of the rebirth process in order to prevent unimaginable types of suffering in future lives.

- This unconventional message of the Buddha is "a world view that has never been known to the world" or "*pubbe ananussutesu dhammesu.*"
- However, it is not possible for a "normal human mind" — no matter how brilliant — to comprehend the fact that **this apparently pessimistic message of the Buddha is actually the best message that one could receive and is more valuable than anything in this world.**

2. I know this by own experience and that is why I am willing to state this straightforwardly, even though it may scare off some, who have been erroneously led to believe that Buddha Dhamma (Buddhism) is not that different from other religions or world views that confine a life's goal to just to live a moral life.

- It is definitely true that one MUST live a moral life. If one lives an immoral life, one's mind will be too contaminated to grasp that critical message of the Buddha.

3. Expressed in a different way: One needs to live a moral life and follow the mundane Eightfold Path first to get rid of the worst defilements (cobwebs that cover the mind) so that one could grasp this unique message.

- So, after three years of writing, and contemplating how to guide someone through the easiest path to grasp that key message of the Buddha that goes against our traditional beliefs, I have started a new section — "[Living Dhamma](#)" — that can hopefully make this process easier.
- **One starts at a place even without having to accept any key foundational concepts like *kamma* and *kamma vipāka* or the validity of the rebirth process.**
- One does not need to believe in anything except one's own experience. Through the improvements in one's sense of well-being, one's mind will become clear and will be able to grasp the key aspects of Buddha Dhamma.

4. My goal is to make this section section the centerpiece of the website. Anyone — regardless of one's familiarity with Buddha Dhamma (Buddhism) — should start at the very beginning, because it is imperative to grasp the very basics. I have had enough correspondences with many readers over these three years to see that many have not fully grasped the basics; that could leave out key pieces in the big picture.

- It could be a big mistake to assume that one knows the basics and thus skip them.
- It is also a mistake to try to contemplate on concepts like *anicca*, *dukkha*, *anatta* or *sunyata* without grasping the essential fact that one needs to start experiencing the "peace of mind" (*nirāmisā sukha*) by staying away from those thoughts, speech, and actions that can defile and make a mind stressful and not susceptible to grasping "a world view that has never been known to the world".
- The goal should be to "capture the essence" and not to try to memorize everything. Bits and pieces of the jigsaw puzzle will start falling into place, leading to joyful "Aha! moments".

5. The website is completing three full years in existence, and I am glad that there an increased interest among countries all over the world despite the fact that pure Dhamma is unconventional.

- When one starts seeing and experiencing the "true Dhamma", it will become a joyful experience and one will be compelled to dig deeper and find more.

6. This is why I am appreciative of many kind comments on the usefulness of the site; that gives me confidence that there are people who can see the value of pure Dhamma.

- My thanks also to those who made comments/suggestions/questions that have led to improvements of many web pages. Special thanks to Mr. Seng Kiat Ng from Singapore for putting together all the posts in

an eBook format and for updating it every weekend as I write new posts and update some old posts. He and many others also pointed out many errors in posts which led to improvements.

- There are readers from many countries and for the year 2016, the top 20 countries are: United States, Singapore, New Zealand, Great Britain, Sri Lanka, Japan, China, Australia, India, Sweden, Hong Kong, Canada, Germany, Bulgaria, Thailand, France, Malaysia, Russian Federation, Indonesia, South Africa.
- A few more statistics from Google Analytics on user experience: Sessions = 50,688; page views = 720,269; Pages / Session = 14.21; Bounce Rate = 1.83%; % New Users = 54.41%. And in December, 8.3% spent over an hour at a time at the site according to the web host.
- Pure Dhamma seems to have no national boundaries, as it should be. It describes the true nature of our world.

7. Another related comment from some is their anxiety of why it is taking too long for them to attain the *Sotāpanna* stage, and how can one know for sure whether one is even making progress.

- This is a very important question. The Buddha was asked the same question. His answer was: “Do not worry about those things day in and day out. Just concentrate on learning Dhamma and keep living by that Dhamma”.
- His gave a simile: “How does a good farmer go about making sure that he gets a good harvest? He prepares the field, uses good seeds, and once they germinate he makes sure to keep the weeds out and provide necessary nutrients. He does not waste time worrying about the harvest”.
- The best way to gauge one’s progress is to look back and see whether one has made improvements in controlling one’s anger and greed by being mindful of one’s thoughts and actions.

8. I would like to share a personal experience that illustrates the “*anicca* nature” of this world. I eat healthy and exercise regularly (yoga and cardio), and have been able to avoid even a minor ailment since 2009. But two weeks ago, a herniated disk (which was first diagnosed in 2008) started giving me physical pain on my left arm/shoulder without any obvious physical cause.

- By the way, I can also confirm that it is impossible to get into *jhānā* when one is under such physical pain. Therefore, there is no relief from this obvious *kamma vipāka*.

This is a good example of the *anicca* nature: unexpected problems can arise even if you take necessary precautions. I must hasten to point out two facts:

- I am not saying that this happened without a cause. It is obviously a strong *kamma vipāka* that was hard to avoid despite taking precautions (eating well/exercise) or in the *Abhidhamma* language, not making bad conditions (*samanantara paccayā*) for such *kamma vipāka* to bear fruit.
- If I had not been engaging in a good exercise program or had not paid attention to what I eat, I am sure I would not have been able to go 7 years without a significant health problem.

But with my productivity plunging (it is almost impossible to concentrate with such acute pain), it has brought me back to reality.

9. Finally, I very much want to highlight the fact that Buddha Dhamma is not about hiding in a remote place and shying away from the society or subjecting oneself to harsh living.

- Even if one is not be able to attain the *Sotāpanna* stage in this life, the effort will not go to waste: it will make it easier in the future. As the Buddha advised, just follow the Path if it seems to make sense; results will follow.
- But to get there, one needs **some self-control** to stay away from such extremes initially. **Learning pure Dhamma is the only way to break through that first barrier.** Once the *Sotāpanna* stage is attained, one will never, ever go back. (if one becomes a *Sotāpanna magga anugami*, one will never go back in this human *bhava*, which could be many more human births).
- One with a purified mind can live in the most seductive place and yet not be perturbed.

- It is not those enticing or seducing things that make us do immoral things and make our minds stressed in turn; rather it is our own defiled minds (defilements can vary from hate and excess greed to just being ignorant of the true nature of the world) making us do immoral things.

Happy New Year!

May the Blessings of the Triple Gem (Buddha, Dhamma, Saṅgha) be with you always!

18.13 Reflections on 2015

January 1, 2016

I started the website sometime in early January of 2014. I am pleasantly surprised to see a marked increase in audience in 2015 compared to 2014. Actually, the increase in time spent at the site (indicated by the bandwidth and pages) has increased much more than the number of visits. That is what I really like: those who “really get it” spend more time learning pure Dhamma.

1. First of all, my heartfelt thanks for the many kind comments on the usefulness of the site, and also making comments/suggestions/questions that have led to improvements of many web pages. Special thanks to Mr. Seng Kiat Ng from Singapore for putting together all the posts in an eBook format and for updating it every weekend as I write new posts and update some old posts; he has also pointed out many errors in posts which led to improvements.

- Many others have pointed out such errors and suggested improvements to the site, and I am grateful to all.
- There are readers from over 50 countries and for the month of December, 2015, the top 20 countries are: United States, Singapore, New Zealand, Great Britain, Sri Lanka, India, Australia, Malaysia, Bulgaria, Ecuador, Netherlands, China, Canada, France, Indonesia, Thailand, Austria, Brazil, Hong Kong, and Russian Federation. Pure Dhamma seems to have no national boundaries, as it should be. It describes the true nature of our world.
- In early December, 2015, I upgraded the hosting platform to have a virtual private server and it also seems to have helped speed up the page loading.
- If you encounter problems accessing the site, avoid the www in the address line: It should just be: <https://puredhamma.net>. Normally, typing just “puredhamma.net” should direct to <https://puredhamma.net>. Or, one could Google search “puredhamma” and the link will come out on the top.
- I also upgraded to a more secure “https” from “http” just to assure that the content will not be tampered with. I encourage sharing or using anything that is on the site. Anyone is “free to copy” any of the content. Reference to the site is a courtesy, but not required.

2. The most common feedback I get is on the usefulness of the site. I appreciate those comments.

- When I started the site, some of my friends warned me that “pure Dhamma” is too difficult to understand, and I may turn off people. But my goal is to present the true message of the Buddha as much as possible. Not everyone may be able to understand it initially, but for those who can, it will be a life-changing experience as it has been for me.

3. Another related comment from some is their anxiety of why it is taking too long for them to attain the *Sotāpanna* stage, and how can one know for sure whether one is even making progress.

- This is a very important question. The Buddha was asked the same question. His answer was: “Do not worry about those things day in and day out. Just concentrate on learning Dhamma and on contemplating the *anicca* nature of this world. The rest will follow”.
- His gave a simile: How does a good a farmer go about making sure that he gets a good harvest? He prepares the field, uses good seeds, and once they germinate he makes sure to keep the weeds out and provide necessary nutrients. He does not waste time worrying about the harvest”.

4. In the same way, one just needs to learn pure Dhamma and live by it. One needs to understand what *Nibbāna* or *Nivana* is, in a step-by-step process. Initially, one does not need to worry about stopping the rebirth process (this is true even up to the *Sotāpanna* stage). One should first focus on “quenching the fires that burn inside”: One should experience the “peace of mind” that is palpable when one gradually loses extreme greed, hate, and ignorance (not knowing the true nature of this world).

- “*Ragakkhayo Nibbanan, dosakkhayo Nibbanan, Mohakkhayo Nibbanan*” (“Cooling down is attained with getting rid of greed, hate, and ignorance”) is valid from this initial “cooling down” all the way to the attainment of the *Arahant* stage. Just concentrate on getting rid of the strongest immoral acts via the body, speech, and the mind first.
- Thus the best way to gauge the progress is to see how much greed, hate, and ignorance has been lost over a given time.
- Here, “getting rid of ignorance” is an important aspect, which can come ONLY via learning Dhamma, i.e., only via learning the true nature of this world.

5. When one follows this basic process, one WILL start feeling the resulting cooling down. One will realize that one becomes more thoughtful and tolerant of others, even when they do inappropriate things.

- And with time, one will see that others also seem to act less harshly. It is hard to believe but one’s mindset CAN affect how others treat oneself. It is a feedback loop that may not be noticeable initially, but will become apparent with time.

6. Then one day, one will realize that one does not have the *gathi* even remotely resembling of those in the four *apāyā*: no extreme hate suitable for a hell being, no extreme greed suitable for a *preta* (hungry ghost), no “animal *gathi*,” and one does not have the mindset to rely on others (*asura*). Then one realizes that one is a *Sotāpanna*.

- When one understands that the consequences of extreme immoral acts can be much more harsh in the long-term compared to any short-lived satisfaction, then one’s mind will automatically reject such thoughts. Comprehending the *anicca* nature will do the same.

7. I very much want to highlight the fact that Buddha Dhamma is not about hiding in a remote place and shying away from the society or subjecting oneself to harsh living.

- It is not those enticing or seducing things that make us do immoral things and make our minds stressed in turn; rather it is our own defiled minds (defilements can vary from vile to just being ignorant of the true nature of the world) making us do immoral things.
- One with a purified mind can live in the most seductive place and yet not be perturbed.
- But to get there, one needs **some self-control** to stay away from such extremes initially. **Learning pure Dhamma is the only way to break through that first barrier.** Once the *Sotāpanna* stage is attained, one will never, ever go back. (if one becomes a *Sotāpanna magga anugami*, one will never go back in this life).
- Even if one is not be able to attain the *Sotāpanna* stage in this life, the effort will not go to waste: it will make it easier in the future. As the Buddha advised, just follow the Path if it seems to make sense; results will follow.

Happy New Year! May the Blessings of the Triple Gem (Buddha, Dhamma, Saṅgha) be with you always!

18.14 Reflections on 2014

January 1, 2015

I started the website sometime in early January of 2014. Since there is no discussion forum at the site, I thought of making a summary on the 52 comments (excluding follow-up correspondence) that I received over the year (I did respond to all individual comments).

1. First of all, my heartfelt thanks for the many kind comments on the usefulness of the site.
2. Some people (mainly those I know personally) “complained” that once they start reading, they “got absorbed” in the material and they could not get to their “daily tasks”. This could be a concern for some others as well. The easiest solution is to set an alarm.
 - I assure everyone that once one gets a “foothold” one will become more responsible for their families, not the other way around. As one begins to understand the true message of the Buddha, one will start allocating one’s time wisely, taking time away from “entertainment” rather than from those tasks that are one’s responsibilities.
 - As some of you may have already noticed, one becomes more thoughtful and considerate, when one starts truly understanding the message of the Buddha. One realizes that we all are in the same boat, trudging along in this tedious rebirth process, and one feels true compassion for others. One will not shy away from one’s responsibilities to anyone let alone to one’s family.
 - If you do get absorbed in the material, it is not to my credit. From experience, I know that pure Dhamma is much more satisfying and fulfilling than any sense pleasure (even before the *jhānā*). Learning Dhamma is learning about nature in a way that had not been possible before the Buddha! And there is no other task that is more important than one’s own “long-term” future.
3. There were several people who made suggestions for new posts. Such suggestions are always welcome. If I have not responded to a couple of requests that is because of a reason. I do not want to “jump ahead” until the background material is presented. Please do not shy away from making suggestions.
4. Another important comment was that, “in the *Satipaṭṭhāna sutta*, didn’t the Buddha recommend the “breathing meditation” contrary to what I described as *ānāpāna*?”. If one is reading the *sutta* as commonly translated these days, that is indeed what the translations say. But we need to examine the Pāli text of the *sutta* to get the correct interpretation. I plan to write a series of posts on the *Satipaṭṭhāna sutta* carefully going through the Pāli text.
 - And we need to sort out the types of meditation recommended by the Buddha from those that have been practiced by *Hindu yogis* and are described in the *Visuddhimagga*. I think this is a “mental block” for even *Theravāda* Buddhists. Unless one sits down and stay like a statue, it does not count as “meditation” for many people.
 - Those days, Buddha’s primary recommendation was to listen to Dhamma discourses. Many people attained *magga phala* just by listening to such discourses. The *Satipaṭṭhāna sutta* was delivered in the later years for *bhikkhus* who needed systematic guidance.
 - If one pays attention, one can get to *samādhi* while listening (and also while reading) Dhamma concepts. I highly recommend reading posts at this site at a quiet time, and see whether it makes you more calm. It will help in getting to *jhānā* in the longer term.
 - Whether listening or reading, one should fully concentrate on the subject, and may even want to stop reading and think about the material when a new concept is discussed. Then the mind focuses on that point and automatically gets to *samādhi*. This is the key to removing defilements from the mind (which are the biggest chunk that in turn trigger other defilements). When one focuses on a “worldly thing” such as breath or a *kasina* object, that just gets the mind to *samādhi*, without doing any cleansing.

5. One does not even need to do any formal meditation initially. If one can spend some “quality time” (quite times where one can think as one reads) a few times a week, that would be more than enough. As with anything with the mind, the mind will ask for more as needed (this is the *chanda* and *citta* part in the *Satara Iddhipāda* of *chanda, citta, viriya, vīmaṃsā*). And when the mind asks for it, that is the best time to start getting absorbed in the material, making the effort (*viriyā*) and critically examining the key concepts (*vīmaṃsā*).

- One can get all the way to the *Sotāpanna* stage by just comprehending the main message that the Buddha was trying to convey: In the long run, it is unprofitable to strive for material things in this world. That there is a happiness of better quality when one loses craving for sense pleasures.
- **But that cannot be achieved by “forcefully giving up sense pleasures”, doing “breath meditation”, or just by following the five precepts.** Rather, by understanding the deep message of the Buddha about the “real nature of this world”, one’s mind gradually realizes the futility of seeking sense pleasures as one gradually comprehends *anicca, dukkha, anatta*. Dhamma will be the guide.

6. I very much want to highlight the fact that Buddha Dhamma is not about hiding in a remote place and shying away from the society or subjecting oneself to harsh living.

- It is not those enticing or seducing things that make us do immoral things and make our minds stressed in turn; rather it is our own defiled minds (defilements can vary from vile to just being ignorant of the true nature of the world) making us do immoral things.
- One with a purified mind can live in the most seductive place and yet not be perturbed.
- But to get there, one needs **some self-control** to stay away from such extremes initially. **Learning pure Dhamma is the only way to break through that first barrier.** Once the *Sotāpanna* stage is attained, one will never go back.

Happy New Year! May the Blessings of the Triple Gem be with you always!

18.15 List of Pāli words with diacritical mark

Pāli characters with diacritical mark

Ā Ī Ū Ñ Ṃ Ñ̃ Ṭ Ḍ Ṅ Ḳ Ṃ
 ā ī ū ñ ṁ ñ̃ ṭ ḍ ṅ ḳ ṃ

Ā ā Ī ī Ū ū Ñ ñ Ṃ ṁ Ñ̃ ñ̃ Ṭ ṭ Ḍ ḍ Ṅ ṅ Ḳ ḳ Ṃ ṃ

The Pāli word “xxxx” is in between two “|”s — i.e. “|xxxx|” to prevent replacement when “Find and Replace” is carried out.

| Pāli word | Pāli word with Diacritical Mark | |
|-------------|---------------------------------|--------------------|
| abhijja | abhijjā [abhijjhā] | Abhijjā [Abhijjhā] |
| abhinna | abhiññā | Abhiññā |
| adinava | ādīnava | Ādīnava |
| adinnadana | adinnādāna | Adinnādāna |
| ahara | āhāra | Āhāra |
| anagami | anāgāmī | Anāgāmī |

18.16 Mars Curiosity Photos Suggest Life May Have Existed on Red Planet

“A careful study of images taken by the NASA rover Curiosity has revealed intriguing similarities between ancient sedimentary rocks on Mars and structures shaped by microbes on Earth. The findings suggest, but do not prove, that life may have existed earlier on the Red Planet”:

[WebLink: NBCNEWS: Mars Curiosity Photos Suggest Life May Have Existed on Red Planet](#)

Here is the pdf of the paper just published that proposed the hypothesis:

[WebLink: LIBERTPUB: Life on Mars Hypothesis-Noffke-Astrobiology-2015](#)

18.17 Recent Publications on Benefits of Meditation

There have been an accelerated activity in studying the benefits of meditation on the brain and on physical health in general. Here are some very recent publications:

- Scientific American November 2014 (volume 311, Number 5) cover story is “Mind of the Meditator”, by M. Ricard et al. : [WebLink: PDF File: Ricard-Mind of the Meditator- Scientific American – November 2014](#)
- A paper that just came out online in early November (in the journal *Cancer*) reports that the [WebLink: WIKI: Telomeres](#) – the protein caps at the end of our chromosomes that determine how quickly a cell ages – stayed the same length in cancer survivors who meditated or took part in support groups over a three-month period: [WebLink: Carlson-Mindfulness based Cancer recovery-2014](#)

I have discussed the effects of changing habits on the brain (which is more related to insight meditation): see, [“Truine Brain: How the Mind Rewires the Brain via Meditation/Habits.”](#) Insight meditation can be expected to have much more significant changes in the brain as well as in physical health. But such studies have not been conducted yet. Selected references on research studies (2011-2012) and books related to meditation can be found in that post; there have been many more publications since then.

I was surprised to come across the following article in the prestigious journal “Science” which, using real time input from 5000 people all over the world, confirmed what the Buddha said 2500 years ago: that a wandering mind is an unhappy mind; see, [WebLink: PDF File: A wandering mind is an unhappy mind- Science-Killingsworth-2010.](#)

Much merits to Neranga Abeyasinghe and his family for sending me the second publication.

18.18 Laniakea: Our home supercluster

Superclusters – regions of space that are densely packed with galaxies – are the biggest structures in the Universe. But scientists have struggled to define exactly where one supercluster ends and another begins. Now, a team based in Hawaii has come up with a new technique that maps the Universe according to the flow of galaxies across space. Redrawing the boundaries of the cosmic map, they redefine our home supercluster and name it Laniakea, which means ‘immeasurable heaven’ in Hawaiian (**from Nature Video**)

[WebLink: YOUTUBE: Laniakea: Our home supercluster](#)

- It amazing to see how unfathomably vast our “world” is, even though this is only a small part of even our universe. However, imagine this together with uncountable worlds teeming with life, that we are not aware of! This is why the Buddha said not to spend time exploring the details of this “world”. There is no end to it, either spacewise or timewise.
- But we need to keep in mind that only human minds can even comprehend such things. If we are to be born an animal or worse this kind of thinking is not possible, and we will get trapped in such worlds for unimaginably long times. Thus what we need to do is to take advantage of the brief time we have in this life to comprehend the true nature of ‘this world’, i.e., *anicca*, *dukkha*, *anatta*, and to become free of it.

18.19 Think Outside the Box!

1. Here is an interesting presentation on the question of what motivates people. Embedded in this presentation is the fact that without self-motivation coming from self-satisfaction, it is hard to examine things from different perspectives. It works the other way too: new insights in turn provide motivation:

[WebLink: YOUTUBE: Dan Pink: The puzzle of motivation](#)

- One of my goals has been to help others to achieve the same exhilarating experience that I have had learning and practising pure Dhamma. It cannot be matched by any other experience.

2. Many people do things just because others do, and follow the “standard practices”. In following Buddha Dhamma too, many just do what their parents or other “established authorities” do. It may be a good idea to pause and re-examine some deeply-embedded ideas. Each person may have his/her own set of “beliefs”.

- Some think it is enough to say some precepts and may be chant or listen to chantings to follow the Path.
- Others think it is silly to do those exact same things. And what needs to be done is to learn *Abhidhamma* at the deepest level.
- I think there is a value in each, if done properly. And what needs to be given priority in one’s practice should be in line with one’s own preferences, but the horizons need to be expanded to look into other aspects once-in-a-while and see whether there is something to be gained from those too. Our perspectives change as we make progress.

3. Yet, no matter what one does, real progress cannot be even STARTED without understanding the main message of the Buddha: the true nature of this world, i.e., *anicca, dukkha, anatta*.

- It makes a huge difference between the interpretation of *anicca* as “impermanence” or “not being able to maintain to one’s satisfaction”. Same with *anatta* as “no-self” or “one ends up truly helpless trying to seek happiness in this rebirth process”.
- See, “[Anicca, Dukkha, Anatta – Wrong Interpretations](#)” and the follow-up posts.

18.20 There are as many creatures on your body as there are people on Earth!

January 20, 2016: A new study on household bugs added (below the video)

1. Before the simple microscope was invented in the late 1500's, people could see only those animals visible to the naked eye. Life seemed to explode when Van Leeuwenhoek reported the discovery of microorganisms in 1676; he first reported numerous "microscopic creatures" in a glass of water.

With the new scientific instruments we can "see" even more minute lifeforms:

[WebLink: YOUTUBE: There are as many creatures on your body as there are people on Earth](#)

2. A new study reveals that there are numerous species of bugs — not counting the actual number — that live in a house (which has only a few humans):

[WebLink: EUREKALERT.ORG: First study of arthropods in US homes finds huge biodiversity](#)

The pdf file of the publication: [WebLink: PDF File: Bertone-Arthropods of the great indoors-peerj-2016](#)

3. The number of people on this Earth is insignificantly small compared to the number of other beings (seen and unseen), or even just the animals. As the above video shows, there are a huge number of living beings even on a human body; imagine how many would be on the body of an unclean animal. This is why the Buddha said it is extremely difficult to get a human birth; see, "[How the Buddha Described the Chance of Rebirth in the Human Realm.](#)"

4. It must be noted that Buddha's disciples (and probably other *Hindu yogis*) were able to "see" such microscopic creatures with their *abhiññā* powers. There is a story in the *Tipiṭaka* about a *bhikkhu* with *abhiññā* powers (but not yet attained *Arahanthood*) once focused his powers to a glass of water that he was about to drink and saw a multitude of tiny creatures. He kept trying to filter them out and was getting distressed. The Buddha saw this and told the *bhikkhu* that it is not possible to live in this world without hurting other beings, but that does not count as an immoral act since the intention is not to hurt.

- For example, if we have a wound on the head, we have to apply medication and get it healed; otherwise one may even die from that. Yet, numerous tiny creatures on the wound die when we apply the medication. There is nothing we can do to avoid it unless we are willing to risk our own life.
- But the point is that this single human life is much more "worthy" than all those creatures multiplied many times over; see, "[How to Evaluate Weights of Different Kamma.](#)"
- This is an important point because many people get stressed over even cleaning their house for the fear of killing insects. But if we do not keep the house clean, those insects will multiply and make the problem even bigger. One always need to look at things with a deeper understanding. The best thing to do is to keep the house clean so that insects are not attracted in the first place.
- It is important to clarify these concepts, because it is difficult to attain any kind of calmness (*samādhī*) in the mind if one's mind is agitated by such things as "Am I sitting on some unseen tiny insects and killing them?". As long as our intent is not directed to willfully taking another life with hatred, there will not be any negative consequences.

18.21 News Article on Robin Williams and Buddhist Meditation

I have not read the books written by the author of this following news article, so I cannot comment on his books. But I thought this sad news about Robin Williams illustrates the concept of *anicca* (that one cannot maintain anything to one's satisfaction in this world and that there is hidden suffering). He had more than enough money and fame, but apparently he was depressed in the latter years.

- Having a peaceful mind cannot be matched by any amount of money or fame; see, "[First Noble Truth – A Simple Explanation of One Aspect.](#)"
- According to the Buddha, the suffering is proportional to the craving. Getting old is more stressful for those who have enjoyed beauty, fame, power, etc. But the inevitability of old age and dying is common to us all.

[WebLink: YOUTUBE: Aging Stars of the Golden Age](#)

- Buddhist meditation is primarily on understanding the true nature of the world and that hidden suffering may come out unexpectedly; that understanding itself makes one have a peaceful mind; see, "[1. Introduction to Buddhist Meditation.](#)"
- When depression or old age hits, the mind gets weak. Thus one should preferably start when the mind is sound and healthy.
- Suicide can only make things worse in the "long term" in the rebirth process. It is never too late to start at any stage. Human life is rare and should not be wasted at any stage.

Article: [Meditation Isn't Enough: A Buddhist Perspective on Suicide](#)

18.22 **World Historical Timeline**

It will be convenient to have a timeline of the major world events that I can refer to in my posts. Please let me know any errors that you may see. My goal is to provide a consistent and accurate timeline.

Note: I used c. to denote *circa* or about

I have added descriptive links to some events, and will try to add more links in the future.

| Date | Event |
|--------------------|---|
| Before 10k BCE | WebLink: WIKI: Last Ice Age |
| 3.1k BCE | First king of Egypt, King Menes |
| 2.5k BCE | WebLink: WIKI: Mohenjo Daro civilization in India |
| 2.1k - 1.6k BCE | WebLink: WIKI: The Xia Dynasty of China |
| Before 1.7k BCE | Abraham came to Jerusalem from Ur (Old Testament) |
| 1.4k BCE | City of Troy, kingdom of Crete, and other Greek cities |
| 1.4k - 0.9k BCE | Olmec civilization in Mexico |
| 776 BCE | First Olympiad |
| 558-530 BCE | Cyrus ruled North India |
| Until 536 BCE | Daries I, II, III ruled North India; until Chandagupta, Persian and Greek kings ruled North India |
| 563-483 BCE | Buddha Gotama |
| 470-399 BCE | Philosopher Socrates |
| 538 BCE | Old Testament was written |
| 424-348 BCE | Plato: First Western philosopher whose writings survived intact |
| 384 - 322 BCE | Aristotle: student of Plato and teacher of Alexander the Great |
| c. 333 BCE | Emperor Alexander's Empire peaks |
| 323 - 325 BCE | Alexander the Great in India |
| 268-231 BCE | Emperor Asoka ruled North India |
| 307-276 BCE | King Devanampiyatissa in Sri Lanka |
| 247 BCE | Ven. Mahinda in Anuradhapura, Sri Lanka |
| 41 BCE | Beginning of the Roman Empire |

| Date | Event |
|---------------------------|--|
| 29 BCE | Tipiṭaka written down in Sri Lanka |
| 6–4 BC to 30–33 AD | Jesus of Nazareth or Jesus Christ |
| 31 BCE | Augustus becomes the first Roman Emperor and ruled until 14 CE |
| c. 150-250 CE | WebLink: WIKI: Life of Nagarjuna ; considered to be the founder of Mahayana Buddhism |
| After 200 CE | Roman empire starts to decline |
| 4th century CE | Buddhism introduced to Korea |
| 380 CE | Christianity became the official religion in Roman empire |
| 5th century CE | Burma adopts Theravāda Buddhism |
| 412-434 CE | Buddhaghosa arrives in Sri Lanka and writes Visuddhimagga |
| 552 CE | Buddhism enters Japan from Korea |
| 589 CE | First Chinese commentaries written |
| 586 CE | Beginning of the Dark Ages in Europe with the decay of the Roman empire |
| 6th century CE | First diffusion of Buddhism in Tibet |
| 570-632 CE | Prophet Muhammad |
| 622 CE - (1258-1492) CE | WebLink: WIKI: Islamic Golden Age |
| 618-907 CE | Chinese T'ang dynasty; golden age of Buddhism in China |
| 1215 CE | King John signs the Magna Carta granting rights to English citizens |
| 1280 | WebLink: WIKI: Eyeglasses invented in Italy |
| c. 1420 - c. 1600 | Renaissance in Europe starting in Florence, Italy |
| 1450 | Gutenberg in Germany invents the printing press |
| 1492 | Modern Age begins with the arrival of Columbus in America |
| 1564–1642 | Galileo Galilei |
| 1596–1650 | Rene Descartes |
| 1610 | Galileo announces observation of mountains on the Moon and the existence of four planets. |

| Date | Event |
|-------------------|--|
| 1642 | Adding machine invented by Blaise Pascal |
| 1643–1727 | Isaac Newton |
| c. 1650 - c. 1800 | WebLink: WIKI: European "Enlightenment" |
| 1662 | Fermat's Principle of Least Time |
| 1678 | Huygens' wave theory |
| 1687 | Newton published Principia Mathematica |
| 1688 | English revolution |
| 1698 | Steam engine invented by Thomas Savery |
| 1749–1827 | P.S. de Laplace |
| 1774 | Priestly isolates oxygen |
| 1776 | America declares independence from England |
| 1789 | French revolution period |
| 1791 | Steamboat invented by John Fitch |
| 1798 | Vaccination invented by Edward Jenner |
| 1804 | Locomotive invented by Richard Trevithick |
| 1809–1882 | Charles Darwin |
| 1816 | Huygens–Fresnel principle explaining light interference |
| 1821 | Faraday demonstrates the principle of the electric motor |
| 1822 | Charles Babbage designs his first mechanical computer |
| 1826 | Photography invented by Joseph Nicephore Niepce |
| 1834 | Refrigerator invented by Jacob Perkins |
| 1835 | Morse code invented by Samuel Morse |
| 1837 | American Samuel Morse invented telegraph |
| 1842 | Anaesthesia invented by Crawford Long |
| 1843 | Typewriter invented by Charles Thurber |

| Date | Event |
|------|---|
| 1846 | Rotary printing press invented by Richard M. Hoe |
| 1859 | Charles Darwin publishes <i>The Origin of Species</i> |
| 1868 | Poisson explained Young's double slit experiment with Huygens–Fresnel principle |
| 1869 | Mendeleev produces the Periodic Table |
| 1873 | Maxwell states the laws of electro-magnetic radiation |
| 1877 | Phonograph invented by Thomas Alva Edison;Microphone invented by Emile Berliner |
| 1878 | Edison invents the incandescent lamp |
| 1883 | First skyscraper built in Chicago (ten stories) |
| 1888 | Hertz produces radio waves |
| 1893 | Wireless communication invented by Nikola Tesla |
| 1895 | Diesel engine invented by Rudolf Diesel |
| 1898 | Remote control invented by Nikola Tesla |
| 1900 | Planck develops quantum theory |
| 1901 | Vacuum cleaner invented by Hubert Booth |
| 1903 | Powered airplane invented by Wilbur Wright and Orville Wright |
| 1905 | Einstein proved that photon is a particle |
| 1905 | Einstein's Theory of Relativity |
| 1907 | Color photography invented by Auguste and Louis Lumiere |
| 1908 | Henry Ford mass-produces the Model T |
| 1919 | London to Paris air service begins |
| 1923 | Sound film invented by Lee DeForest |
| 1923 | Edwin Hubble discovers the first galaxy other than Milky Way |
| 1928 | Antibiotics, penicillin invented by Alexander Fleming |
| 1937 | Jet engine invented by Frank Whittle and Hans von Ohain |
| 1937 | Alan Turing develops the concept of a theoretical computing machine |

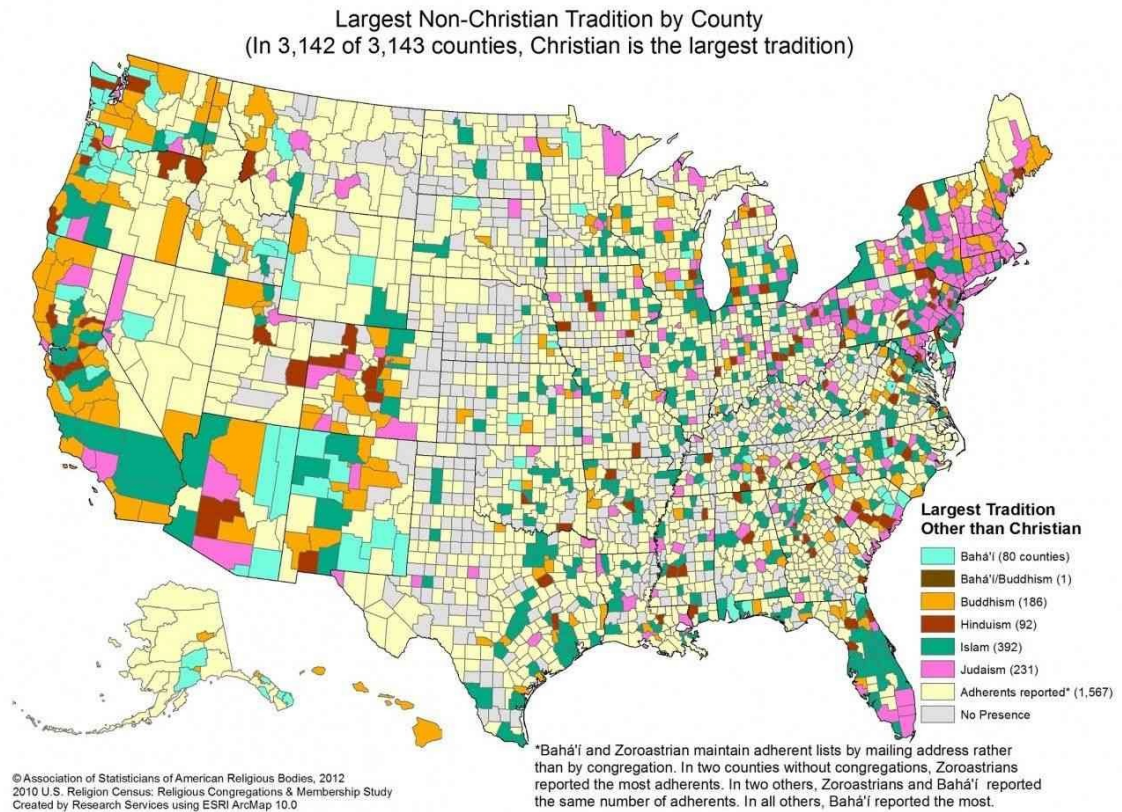

| Date | Event |
|------|---|
| 1945 | The atomic bomb |
| 1951 | Nuclear power reactor invented by Walter Zinn |
| 1957 | Sputnik I and Sputnik II: Sputnik I and Sputnik II are launched by the Russians |
| 1958 | The first integrated circuit, or silicon chip, is produced by the US Jack Kilby & Robert Noyce |
| 1960 | Laser invented by Theodore Harold Maiman |
| 1961 | Uri Gagarin is the first man in space |
| 1965 | The Big Bang theory confirmed by Penzias and Wilson |
| 1969 | Neil Armstrong sets foot on the moon |
| 1971 | E-mail invented by Ray Tomlinson |
| 1971 | Floppy Disk invented by David Noble with IBM |
| 1973 | Ethernet invented by Bob Metcalfe and David Boggs |
| 1973 | Personal computer invented by Xerox PARC |
| 1983 | Camcorder invented by Sony |
| 1990 | World Wide Web invented by Tim Berners-Lee |

18.23 Second Largest Religion by State in the US

The second largest religion by state in the United States (2012):

[WebLink: BOINGBOING: Christianity is the top Religion](#)

However, Buddha Dhamma is not a religion, in the sense of providing a set of guidelines to live by. It is about the natural laws of nature. Any person of any religious faith (or no faith in any religion, i.e., atheist) can follow Dhamma and benefit. All religions are about leading a good moral life, but Buddha Dhamma describes a much more comprehensive “world view” where this life of 100 years is just a blip.

If one becomes convinced of the truth of the Buddha's world view, i.e., that this life is not the only we had or we will have, and that there are consequences to one's actions, and the only way to get relief from inevitable suffering at least at the old age and death is to purify one's mind, then the person is a Buddhist. It is all in one's mind. No one else is tracking one's progress, and no one else can purify one's own mind.

18.24 Introduction to “Rebirth by Francis Story” – Ian Stevenson

The following are the scanned pages from the book, “Rebirth-as Doctrine and Experience” by Francis Story. The first scan is an inside cover page, and the rest are the Introduction pages by Ian Stevenson. Dr. Stevenson mentions that he is a Buddhist on page 3. The whole introduction is insightful.

[WebLink: PDF File: Introduction-Stevenson](#)

18.25 Thirty One Planes of Existence

Here is a video from Carl Sagan to get an idea how vast our “detectable universe” is:

[WebLink: YOUTUBE: Carl Sagan "100 Billion Galaxies each W/100 Billion Stars"](#)

The “world view” of the Buddha is not merely about the living beings on this planet. Our Solar system is one of an infinite number of “world systems” (planetary systems). In EACH planetary system with life (scientists have not found even one yet; but they are out there!), there are 31 “planes of existence”. As we find out below, we can “see” only two of these realms: our human realm and the animal realm. Thus our “world” is much more complex than even the present-day science believes. As some of you may already know, science cannot account for 95% of the mass of the universe, which they label “dark energy” and “dark matter”. This is why I say that the Buddha transcended “this world”. He was able to “see” the whole of existence: see “Godel’s Incompleteness Theorem” under “Dhamma and Science”.

Now, it is not easy to describe the 31 planes of existence in a short essay. Therefore, I will use a visual to simplify things a bit.

Imagine a sphere with 31 shells, with a small sphere in the middle. Thus the total volume of the big sphere is completely filled by the center sphere and surrounding shells. The 31 sections represent the 31 planes of existence. I emphasize that this is just a visual. The reality is different. For example, animal and human realms co-exist in reality. Also, both time and space are infinite in reality.

1. The innermost sphere represent the Niraya (hell) where there is non-stop suffering; next is the animal realm. Going outward there are two more realms where suffering is higher than at the human realm (the fifth shell). The sixth through eleventh shells represent the realms of the devas (wrongly translated as gods by many), beings who enjoy higher level of mundane happiness and no suffering. These innermost 11 shells represent the kamaloka, where all five physical sense faculties are present.
2. The next 16 shells represent realms where only two physical sense faculties (eye and ear) are active. These beings have very fine (less dense) bodies. These are called rūpa lokas.
3. The last 4 shells represent the arūpa lokas, where beings have ultra fine bodies and only the mind faculty; no physical senses.
4. In rūpa and arūpa lokas, the beings are in jhānic states. These states can be attained by humans and thus a humans can “temporarily live” in those lokas by attaining jhānā. The 16 realms in the rūpa loka correspond to the four lower jhānā, and the 4 realms in the arūpa loka correspond to the higher four jhānā.
5. Any living being (including each of us) has been in all realms in this beginning-less saṃsāra. We have been in the niraya (hell) and we have been at the highest (except on arūpa loka which can be accessed only by Anāgāmiīs or Non-Returners). One time the Buddha pointed to a bunch of ants on the ground and told bhikkhus that each of those ants had lived in a Brahma loka. The saṃsāra is that long; there is no discernible beginning.
6. Above the human realm, there is no suffering (except at death, which is inevitable). However, unless one has achieved at least the Stream Entry (Sotāpanna) stage, even a being at the highest level can fall to any lower level, and thus will end up in the niraya (hell) at some point; once there one will spend a long agonizing time there and eventually come out. Each of us have done this many times over. I will explain the cause of births in different realms in terms of “kamma seeds” in upcoming posts.
7. So, each living being just moves from one realm to another, but spends most time in the four lower worlds, mainly because once fallen there it is hard to come out. This “samsaric wandering” is the critical point to think about and comprehend.

8. As one moves away from the center the level of suffering decreases, and level of mundane pleasure increases up to the 11th realm. After that in the rūpa and arūpa lokas it is mainly the jhānic pleasures, not the sense pleasures.

9. The human realm is the only one from which one can attain Nibbāna. Nibbāna, in this model, corresponds to getting out of all 31 shells, out of the big sphere; no more rebirth in any of the 31 realms. Nibbāna is where the permanent sukha or nirāmisa sukha, is. When one attains Nibbāna or Arahant hood, he/she looks just like any other human, but has no attachments to any worldly things. He still has some kamma vipāka to pay off from the kamma seed that he was born with. When that kammic power is used up, he dies and is not reborn because there are no kamma seeds left to start a new birth. He/she is in *Parinibbāna* with *nirāmisa sukha*.

10. Can we taste Nibbānic “pleasure”? Yes. We can taste it in increments, even below the Stream Entry stage. This is nirāmisa sukha, the “pleasure of giving up worldly things”. This nirāmisa sukha has “quantum jumps” at the four stages of Nibbāna: Stream Entry, Once-Returner, Non-Returner, Arahant. Thus when one is on the Path, one can experience nirāmisa sukha at varying degrees, all the way to Nibbānic bliss, during this very lifetime.

11. All these 31 realms are located in our solar system (Chakrawata), and are associated with the Earth. There are a great number of such Chakrawata (planetary systems) in existence at all times with living beings. These are in clusters of small (galaxies?), medium (universes?), and large (multiverse?) “world systems”. But none is permanent. They come into being and eventually perish. Within the past 100 years or so, scientists have confirmed the existence of billions of planetary systems within galaxies in our universe, and are now exploring the possibility of the existence of multiple universes (multiverse).

The other big factor to take into account is that we have been born in almost all of these realms in our sansāric journey that has no traceable beginning. All of us have been bouncing around “inside the sphere” (mainly in the inner ones) from a beginning that is not even discernible to a Buddha.

18.26 Curiosity Rover finds Crater probably was once a Giant Martian Lake

According to Buddha Dhamma we are alone in the universe. These preliminary results from the NASA Curiosity Rover may not hold up in the end as evidence that life existed on Mars. But there will many more to come, especially if technology is developed to explore distant stars.

[WebLink: YOUTUBE: Curiosity rover finds crater it is exploring was once a giant Martian LAKE](#)

Here is a report that came out today, Dec 9, 2014, which has another video by NASA:

[WebLink: DAILYMAIL: Curiosity rover finds crater it is exploring was once a giant Martian LAKE](#)

18.27 Did Not Get a Response to Your Comment?**July 18, 2016**

I reply to each and every question that comes through “Comments” under each post.

Several of my replies bounced back within the past few weeks, including one today because the email address of the sender was not typed correctly. Please make sure that you type your email address correctly.

18.28 **Ancient teeth found in China challenge modern human migration theory****October 16, 2015**

When we discuss the *Aggañña Sutta*, that describes how the Earth and life originated it will become very clear that the basis of current theories on “human evolution” is completely wrong. However, they are consistent with Buddha Dhamma in the sense that species will exist only when conditions for their existence prevail.

- The current scientific theory is that human originated in Africa and then migrated to other parts of the world, starting about 50,000 years ago. Recent evidence just published in the prestigious journal Nature provides evidence of the existence of humans like us in China some 80,000 to 100,000 years ago. Below is the news article from CNN. I will add the paper from Nature when it becomes available:

[WebLink: CNN: Ancient teeth found in China challenge modern human migration theory](#)

- In this context, I must also point out that there are other archeological evidence for the existence of humans in Sri Lanka and India dating back to 30,000 years and earlier:

[WebLink: WIKI: Balangoda Man](#)

XIX Quantum Mechanics and Dhamma

March 13, 2018

This section will discuss two issues:

1. **A new interpretation of quantum mechanics (QM) based on non-locality is presented based on Feynman's ideas.** Concepts like wave-particle duality, observer effect, are not needed. Furthermore, complex interpretations like the "Many-Worlds interpretation" are avoided. All existing experimental data will be shown to be consistent with this interpretation.
 2. **A deeper understanding of how *kamma* automatically lead to corresponding *kamma vipāka* in Buddhism (Buddha Dhamma), becomes clear with this interpretation.**

19.1 Quantum Mechanics and Dhamma – Introduction

March 13, 2018; revised January 9, 2019; November 15, 2019

Introduction

1. This section will discuss two issues:

- a. **A new interpretation of quantum mechanics (QM) based on non-locality will be presented, where wave-particle duality is shown to be an incorrect and unnecessary assumption.** All existing experimental data are shown to be inter-consistent with this interpretation.
- b. **A deeper understanding of how *kamma* automatically lead to corresponding *kamma vipāka* in Buddhism (Buddha Dhamma), can be realized with this interpretation.**

Relevant Work of Richard Feynman

2. I started working on this project to provide a new interpretation of quantum mechanics based on some new and exciting experimental observations within the past 20 years or so. My goal is to provide a simple explanation with only a few mathematical equations. This work is an extension of the work of the late physicist Richard Feynman.

- To understand this material, one needs to have at least a high-school level physics background. Only those who have some background QM can follow the material here.
- **I would NOT recommend anyone to start learning QM to follow this section.** It is better to spend that time to learn Buddha Dhamma. But of course, anyone may be able to get a general idea. Just read the first several posts and see.
- At the end of this project, I believe that a deep connection to Buddha Dhamma can be made, especially regarding how *kamma vipāka* materialize naturally due to one's *kamma*.

Going “Against the Grain” of Scientific Consensus

3. When I started working on this project over two years ago, I had conversations with Professor Gayanath Fernando and we tried to get a paper published on the proposed interpretation of QM. However, we were unable to convince the reviewers, and the paper did not get published. I am attaching the pdf of the last version here: “[WebLink: PDF file download: A Self Consistent Interpretation of Quantum Mechanics Based on Nonlocality.](#)”

- But it got rejected from several journals, because physicists refuse to believe that the “light speed barrier” can be broken: Einstein’s relativity theory says nothing can propagate faster than light.
- Our point is that nothing actually “travels” between the two “connected electrons”. They are intrinsically connected.
- However, it is ironic that non-locality of Nature was firmly established in 2015, as we discussed in the above paper.

Fundamental Ideas

4. Let me try to give the gist of the mechanism: Two electrons can be created simultaneously with two opposing spins (say A with spin up and B with spin down). Then they can be sent to opposite ends even across the universe, and they remain “entangled”.

- What does it mean by saying the A and B remain “entangled” even when separated by great distances? That means if the spin of particle A flips, then the spin of B will flip AT THE SAME TIME. It is as if they can interact with each other across the universe instantaneously.

- The basic idea is that the two electrons will stay “connected” no matter how far they are apart. This idea is called “non-locality”.
- More information on the basic idea at: [“Quantum Entanglement – We Are All Connected.”](#)

Kammic Influences Have No Space Limitations

5. **I want to develop this idea to show that *kammic* energy has instantaneous influence across the universe. If inert particles have this “connectedness” in Nature, it is natural to extend it to the mental realm.**

- The bridge is the *kammic* energy (also called *viññāṇa*). We create these energies in our minds with *javana citta*. That is a deep subject matter in *Abhidhamma*; see, [“Nāma & Rūpa to Nāmarūpa.”](#)

6. In this section, I will also discuss the implications of this new interpretation of QM for Buddha Dhamma and try to provide some key ideas. A key issue that keeps coming up in the discussion forum is what intention in *kamma* is, and how the Nature “knows” what the connection of the person committing the *kamma* to the person affected by that *kamma*.

- For example, consider person X who was adopted and brought up by foster parents soon after birth, and is not even aware that he was adopted. Suppose X kills his biological father later on, of course, without knowing that it was his father. It is still an *anantariya kamma*. Since it is the Nature that automatically manages *kamma/kamma vipāka*, how would the Nature know the connection between those two people?

Confirmation From Recent Experiments In QM

7. That is the crucial question on which we may get some clues from QM. Non-locality is a key feature of the proposed interpretation of QM. I will explain what is meant by non-locality in future posts (see also, [“Quantum Entanglement – We Are All Connected”](#)). Non-locality of Nature automatically enforces *kamma/kamma vipāka*.

- Of course, the Buddha had not mentioned what this mechanism is, because, at that time, it was not possible to explain concepts like quantum entanglement.
- Furthermore, it is not necessary to know such details. But since we are at a point to be able to make this connection, it is better to do so. That could help build confidence in Buddha Dhamma.

8. I plan to write several posts in this section laying out the basic ideas and welcome comments from knowledgeable readers who are familiar with concepts in quantum mechanics. I have opened a new forum entitled [“Quantum Mechanics – A New Interpretation”](#) at the discussion forum to discuss each post that is published.

- Anyone will be able to read these posts and also the posts at the discussion forum. However, one needs to register at the discussion forum to ask questions or make comments. Forum registration instructions at, [“WebLink: General Information and Updates.”](#)
- Now, let us discuss briefly the key idea behind the proposed connection of *kamma vipāka* to QM.

Intention in *Kamma* – Connection to Quantum Mechanics

1. Two key steps are relevant in evaluating how to assess a *kamma vipāka*:

- i. **Which of the *dasa akusala* is the intention?** For example, it could be taking a life, stealing, harsh speech, etc. Who is affected is not involved in this step. The “*cetana*” in “*cetana ham bhikkhave*

kamman vadami,” is just which *dasa akusala* (and associated *cetasika*) are in one's mind when one is committing that *kamma*. That is all.

- ii. Then the **strength of the *kammā vipāka* is based on the “level of consciousness” or “moral qualities” of the living beings affected** by that *kammā*. For example, killing a human will bring stronger *kamma vipāka* than killing an animal. In the same way, giving to an *Arahant* will be much more worthy than giving to an average human.

That is the best way to analyze any given situation.

2. In another example, in a recent discourse on *Tilakkhaṇa*, I discussed the case of a person killing a bunch of people with a bomb; see Discourse 2 in [“Three Marks of Existence – English Discourses.”](#)

- His intention (*cetanā*) was to kill. Thus the *dasa akusala* involved is “*pānatipāta*,” that of taking a life.
- Now to the second step. That person may not even know who was killed. By some coincidence, if the bomb killed a parent of the killer, then he would have done a *ānantariya pāpa kammā*. If an *Arahant* was killed, the same. If a *Sotāpanna* was killed, then it would not be a *ānantariya kammā*, but still equivalent to killing thousands of normal humans.
- So, it is important to understand that “*cetanā*” is which of *dasa akusala* are in one's mind when a *kamma* is committed. It could be more than one. In the case of the bomber, there is *micchā diṭṭhi*, and likely greed also, in addition to “*pānatipātā*.”
- One can analyze various situations with the above two steps.

3. We know that there are five *ānantariya kammā*. Those are so grave that one will be subjected to their *vipākain* the very next life in the *niraya* (lowest realm.) They are, killing one's mother, killing one's father, killing an *Arahant*, and injuring a Buddha, and causing schism in the *Saṅgha* (which really means trying to propagate a wrong version of the Buddha Dhamma).

- Since killing an average human is not a *ānantariya kammā*, it is clear that the “strength of the *kammā*” depends on who got killed.
- *Kamma vipāka* for committing any other offense is similar. Hurting an *Arahant* would be millionfold grave compared to hurting an average human. Thus, logically, beating an *Anāgāmi*, a *Sakadāgāmi*, a *Sotāpanna* would have corresponding levels of consequences.
- The “value of a life” depends on the “mental status” of that life-form. Any life is not the same. This is not possible to compare the value of the life of an animal with that of a human. Even among animals there are huge variations, and we can easily see that a gorilla or a dog is “more sentient” than a worm.
- However, we must keep in mind that we all had been born a lowly worm. So even though we need to keep in mind that there is a variation, we should never take the life of ANY sentient being intentionally (unnecessarily).

4. Regarding the issue of “how would one know” the status of the living person who is affected by one's actions, that does not matter. The “Nature” would know.

- This point of “we are all inter-connected” is now proven by quantum mechanics: [“Quantum Entanglement – We Are All Connected.”](#)
- That is a key factor in understanding *kammā/vipāka*. The proposed interpretation of QM can show this at an even deeper level.

5. The above discussion is a part of the post, [“What is Intention in Kamma?”](#) You may want to read that get more information.

- Another relevant post is, [“What is Kamma? – Is Everything Determined by Kamma?”](#)

6. We will start discussing QM with the next post. These days there is so much confusion about whether a photon is a particle or a wave, i.e., “wave-particle duality” in QM. I will address the issue of wave-particle duality in the next few posts.

- We will define what is meant by a wave and what is meant by a particle. Furthermore, many people confuse a “wave function” as a “wave.” A wave function is a mathematical concept that can REPRESENT the motion of a particle; it is not a wave.
- We will discuss the fact that a photon is a particle and not a wave. It does not have dual Nature (particle and wave Nature) either, even though a wave function can represent it.

As I always say, one needs to know (or define) such fundamental entities before tackling more in-depth issues. Otherwise, we will get bogged down in re-defining what is meant by a particular word in the middle of a discussion.

19.2 Quantum Mechanics and Consciousness

March 20, 2018

[Will Quantum Mechanics Be Able to Explain Consciousness?](#)

[The Observer Effect in Quantum Mechanics](#)

19.2.1 Will Quantum Mechanics Be Able to Explain Consciousness?

March 20, 2018

1. Quantum mechanics (QM) has some features (quantum entanglement, Heisenberg uncertainty principle, etc), **that makes it appear “mysterious”** compared to classical physics where the predictions are intuitive and transparently deterministic.

- The “hard problem in consciousness” (discussed in philosophy) is also mysterious, just like quantum phenomena: **the question of how consciousness can arise in a brain made of inert matter.**
- When quantum mechanics was emerging in the early 1900’s, many people started tying the two together, and speculating that the new found quantum theory would be able to explain how consciousness arises in the brain.

2. There have been several such QM based theories proposed to explain consciousness.

- There have been several popular books published recently that emphasize the possible role of QM in generating human consciousness (Walker, 2000; Penrose et. al.2011; Rosenblum and Kuttner, 2011; Stapp, H. 2011).
- Recent scientific activity in this area of research can be found in the review paper: “[WebLink: PDF File: Neural correlates of consciousness- Koch et al- 2016.](#)”
- Another proposed approach, for example, is based on consciousness originating in microtubules in neurons: “[WebLink: PDF File: Consciousness in the universe – Hameroff and Penrose-2014.](#)”

3. Other than such activities in science, a hot topic in current philosophy is “how consciousness arises in a material brain”. Most philosophers are physicalists, and believe in the “causal closure of the physical domain”, i.e., all phenomena can be explained with a physical (matter) basis. For a collection of discussions with a number of philosophers, see, (Blackmore, 2005).

- As David Chalmers pointed out in 1994 at the first Tucson conference on consciousness: “The hard problem...is the question of how physical processes in the brain give rise to subjective experience” (Chalmers, 1995).
- The problem in philosophy (and in science) then is to figure out how the “subjective” consciousness arises from “objective” matter. **This is an impossible task.**

4. This key bottleneck was also emphasized by Thomas Nagel (Nagel, 1974) even earlier in his famous essay, “[WebLink: PDF File: What Is It Like to Be a Bat- Nagel- 1974](#)”. As he pointed out at the end of the essay, “...it seems unlikely that any physical theory of mind can be contemplated until more thought has been given to the general problem of subjective and objective. Otherwise we cannot even pose the mind-body problem without sidestepping it” .

- The difference between “subjective” and “objective” is becoming clear with the neuroscience research done especially in the past decade, and we will discuss those new developments below. Subjectivity plays an important role in cognition (consciousness), and the question is how that can arise from an “objective” material base.

Subjective versus Objective: Difference between Mind and Matter

1. In order to clearly state the issue that we intend to address, we need to first clarify the distinction between “objective” and “subjective”.

- **Objective simply means one’s own personal opinions and biases do not come into play.** It is easy to be objective about physical properties of matter: We all agree what the length, weight, density, color, etc of a given object is. We have developed standard procedures for measuring them. Therefore, no matter who makes the measurement, the same answer will result.
- Thus we all agree (unless one is color blind) that a certain rose is red; that is also objective.

2. **Then, what is subjective? Those are personal opinions that can vary from person to person.**

- For example, if you ask the opinion about politician X from many people, some will love him, some will hate him, and others will be somewhere in between.
- Same is true about politics in general, religions, foods, smells, books, movies, etc. All those are subjective.
- In Buddha Dhamma, those subjective opinions arise because different people have different “*gati*”; see, [“The Law of Attraction, Habits, Character \(Gati\), and Cravings \(Asavas\)”](#).

3. Therefore, it is clear that while objective assessments are much easier to assess compared to subjective. By definition, we all cannot agree on something subjective. That is because we place different values on things, and have different opinions based on our value systems.

- But, one would think that it should be easy for science to figure out how objective assessments are made in our brains. But even that is more complex than we would think.

4. For example, neuroscience is not yet able to explain how our brains even discern a rose as “red”, i.e., how inert neurons can give rise to an “experience” even if it is objective. Explaining subjective experiences is much harder.

- This root problem even in handling such basic aspects of “qualia” has been pointed out by several philosophers and scientists over the years; see, for example, Noe and Thompson (2004), Bitbol (2008), Miller (2014), Aru and Bachmann (2015), and references therein.
- As these authors point out, currently efforts are focused on investigating just *neural correlates* of consciousness; but finding *neural constitution* of consciousness (how consciousness arises), appears impossible (and it is!).
- It is impossible because consciousness is not in the physical body. It is in the mental body (*gandhabba*); see, [“Ghost in the Machine – Synonym for the Manomaya Kāya?”](#).

5. To emphasize; Even though the color of a rose is an objective property, we still do not know how that is identified in the brain. **Still, the real subjective experience entails not only in identifying a rose as red, but also forming a feeling about that rose. And that is the really critical problem.**

- Therefore, “the actual problem of consciousness” is much more complex because the *feeling* that arises upon seeing a red-color object can be different for different people; some like red clothes to wear, for example, and some don’t. **Thus it is those feelings and perceptions that arise due to a sensory experience that are truly subjective.**
- Until recently, neuroscience had not been able to even recognize the existence of mental attributes such as emotions, feelings, and perceptions. The availability of precision neuro-imaging methods has enabled an explosion of activity in those areas basically within the past decade; see, for example (Lindquist and Barrett, 2012; Bird and Viding, 2014; Klasen et al., 2014; Lamm and Majdandzic, 2015). However, these studies are able to point out only *neural correlates* (not *neural constitution*) of these mental qualities.

6. Therefore, even if we solve the “hard problem” associated with discerning basic aspects of “qualia” (such as experiencing “redness of a rose”), that will still not solve the problem of the “subjective experience”. *For that the neurons in each person's brain must have its own set of some special “characteristics” to provide the “subjective experience”.* Yet, neurons are neurons. How can person X's neurons be different from those of person Y?

- Thus the difference between mind and matter is much deeper than just “qualia” (redness of a rose); it is those complex, very personal, feelings (happiness, sadness, greediness, hatefulness, jealousy, etc.). Because of that, our follow-up actions also become very personalized. Mind is much more complex than matter.
- The problem in trying to explain the mind phenomena with inert neurons in the brain has its root in trying to explain complex “subjective mental phenomena” with an ontologically different “objective” material base (neurons).
- The Buddha has explained that those feelings arise not in the physical body, but in the mental body (*gandhabba*).; see, “[Mental Body – Gandhabba](#).”

7. We have a thriving science and technology field because we deal objectively (and thus rationally) with inert matter in such cases. Thus we can lay out an experiment in detail and then carry it out anywhere by any team of competent scientists who design and carry out experiments objectively, and they will get the same result (within experimental uncertainties) which they all can agree on.

- Science and technology would not be able to flourish if such experiments did not produce consistent and repeatable results.

8. In any case, we are focusing on even a narrower aspect in this paper, i.e., the role of quantum mechanics.

- It is pointed out that there is no evidence for even a correlation between the mind and quantum phenomena, let alone a causal connection.
- Results of QM experiments do not depend on the “subjectivity” of the person conducting those experiments, simply because truly subjective decisions are not involved in such experiments.

9. Subjective decisions are very personalized, like voting liberal versus conservative, buying versus selling a given stock, liking versus disliking a given food, and zillions of such decisions that are truly subjective.

- **Quantum mechanical experiments do not involve any such subjective decisions, and the same result is obtained regardless of who does the experiment. Backbone of QM, as with any area in science, is the reproducibility of experimental results, and QM measurements are reproducible.**
- This is the key to realizing that quantum phenomena have nothing to do with the mind.

Both Classical and Quantum Phenomena Are Objective and Deterministic

1. Transparently “deterministic” classical physics (Newtonian mechanics) did not come even close to explaining the “subjective” consciousness. But the emergence of QM with its “unusual aspects” immediately led many to infer that it may be able to explain the equally “mysterious” consciousness.

- Since the 1920s attempts were made to rationalize the “unusual” nature of QM and ideas emerged from the physics community itself that conscious observations could affect the outcomes of an experiment (e.g., the “observer effect”); see “[The ‘Observer Effect’ in Quantum Mechanics](#)”. Recently, such ideas have been adopted to explain the origin of consciousness itself.
- We will summarize the existing experimental results in future posts to show that there is no evidence to suggest that quantum mechanical phenomena are even related to consciousness, let alone be able to explain consciousness.

2. It is true that quantum phenomena have characteristics that are very different from classical phenomena (described by Newtonian mechanics); **but both quantum and classical phenomena are objective**. There is no evidence of quantum phenomena having anything to do with the subjective consciousness of a human.

- The use of the phrase “non-deterministic” (or “indeterminacy”) for quantum phenomena is a misleading one. It gives the impression that results of QM experiments cannot be pre-determined. That is false.
- Even though many “classical experiments” have just one outcome, that is not true in all cases. For example, in chaos theory, one can calculate only probabilities.
- Similarly, in QM experiments one can calculate only probabilities, but those predictions are ALWAYS consistent with experimental measurements. **Therefore, it is misleading to label QM phenomena as “non-deterministic”.**

3. All QM experiments conducted up to date are totally objective in nature, and subjective consciousness does not play any role in these experiments. A given QM experiment may give different results based on the conditions under which the measurements are made; but if those conditions are fixed, then the results are the same regardless of who does the experiment or where it is done.

- There is no “intrinsic subjectivity” in those experiments, other than the possibility of a range of outcomes (with known probability) due to the Heisenberg uncertainty principle.
- If the same experiment is conducted under the same conditions, the same result is obtained regardless of who does the experiment; no connection to consciousness of the observer.
- We will continue this discussion in the next post, “[The Observer Effect in Quantum Mechanics.](#)” Later on, we will discuss different types of QM experiments, including the famous double-slit experiment.

Any questions on these QM posts can be discussed at the discussion forum: “[Quantum Mechanics – A New Interpretation.](#)”

19.2.2 The Observer Effect in Quantum Mechanics

March 20, 2018

1. The “observer effect” — sometimes called the “measurement problem”— in quantum mechanics is defined as the problem of how (or *whether*) wave function collapse occurs. But the whole point is that there is no need for a “wave function collapse”, as we explain in this post.

- Let us start with what is meant by “wave function collapse”. It is always good start with the basics.
- Please make sure to read the previous post, “Will Quantum Mechanics Be Able to Explain Consciousness?”, including the section there on “Subjective versus Objective: Difference between Mind and Matter”.

2. The wave function in quantum mechanics evolves deterministically according to the Schrodinger equation as a linear superposition of different states. But actual measurements always find the physical system in a definite state. Therefore, it seems that at the time of the measurements all those multiple states should collapse to just one (the observed).

- Since an observer is needed to make a measurement (and thus “cause a collapse”), it is called the “observer effect”.

3. Even if such an “observer effect” exists, just the mere decision to make a measurement does not make such a measurement “subjective” in the sense we defined the term subjective in the post, “Will Quantum Mechanics Be Able to Explain Consciousness?”.

- There is no “measurement problem” in the sense that the “personal” mind state of an observer does not play a role; **anyone can initiate a measurement and get the same result. Furthermore, terminating a given experiment can also be achieved at random by a computer program and a conscious observer is not needed.**

4. This controversy over an “observer effect” arises in the first place because of the assumption that the wave function is “ontic”, i.e., it has all the correct information about the particle in it.

- But this assumption has been rejected not only by Einstein but many others including Bell: “..Either the wavefunction, as given by the Schrodinger equation is not everything, or it is not right.” (Bell, 1987, p. 201).

5. **Furthermore, this requirement to “collapse the wave function” or the involvement of an “observer” is absent in Bohmian mechanics**, a version of quantum theory discovered by Louis de Broglie in 1927 and rediscovered by David Bohm in 1952 (Bohm, 1952).

- In Bohmian mechanics a system of particles is described in part by its wave function, evolving, as usual, according to Schrodinger’s equation. **But this description is completed by the specification of the actual**

positions of the particles by a “pilot wave” or a “guiding wave”. In Bohmian mechanics, particle trajectories can be traced in real time without the need for a “wave function collapse”.

6. A key experiment that actually led to the concept of an “observer effect” is the famous “double-slit experiment”.

- However, recent double-slit experiments (Kocsis et al., 2011; Schleich, et al., 2013b), where individual trajectories of particles were monitored and any possibility of a “mind effect” or “observer effect” was ruled out.
- The results of those recent experiments were shown to be consistent with the trajectories of individual particles calculated with Bohmian mechanics.

7. All possible paths are naturally described by Bohmian mechanics. Each one can be assigned a probability and experimental outcomes have been verified to be in agreement with those probabilities.

- **So, the measurements are deterministic, in the sense that when a series of measurements is made, the outcome is compatible with the predictions.** Those measurements are objective.
- A detailed description of Bohmian mechanics can be found in (Durr, Goldstein, and Zanghi, 1992).

8. Physicists have been slow to use Bohmian mechanics because it involves more work (solving the pilot wave equation), but there has been a renewed interest in recent years.

- We have done a literature survey on the Science Citation Index and found that interest in Bohmian mechanics seems to have accelerated starting around the turn of the century. The total number of publications from 1992-1999 were 52. From 2000-2005, 2006-2011, and 2012-2017 had 134, 174, and 200 papers published respectively. Thus, even though it took time to gain traction, Bohmian mechanics seems to be attracting attention now.

9. Furthermore, a series of recent papers have illustrated the beautiful connection between classical mechanics and quantum mechanics; see, for example, (Field, 2011; Taylor, 2003, Hanc et. al., 2003), which was originally pointed out by Feynman (Feynman, 1948).

- **These and other papers show how the “sum over all possible paths” by Feynman in quantum mechanics (Feynman, 1948) converges to the “path of least action” in classical mechanics at the limit \hbar (Planck’s constant) approaching zero.** Thus classical mechanics is just a limiting case of quantum mechanics.

10. Other papers have described how the Schrodinger’s equation can be derived from classical mechanics; see, (de Gosson and Hiley, 2011; Field, 2011; Schleich et al., 2013a).

- The so-called “quantum weirdness” arises due to the effects of the Heisenberg uncertainty principle, which becomes non-negligible when \hbar is non-negligible in the microscopic realm.

11. **Therefore, there is no connection to human consciousness in QM experiments.** Quantum mechanical experiments always provide consistent results that are not subject to or even related to the “conscious state” of the observer.

- The need for a “personal” or subjective conscious mind is not even needed; a computer can randomly to decide when to initiate/terminate a measurement and get the same result.

Quantum Phenomena May Be “Weird” but Nothing to Do with Mind

Quantum phenomena, just like some phenomena in relativity, seem “unusual” to us, since they were uncovered only since 1900, and are not of common occurrence. But they all involve the behavior of inert matter at small scale (quantum phenomena), and speeds approaching the speed of light (relativity). This

unusual behavior has nothing to do with the human consciousness; that is how Nature works in the microscopic realm.

1. There are two issues that need to be separated out:

- (i). Do quantum phenomena display characteristics that are very different from phenomena displayed by classical (Newtonian) systems?
- (ii). Do quantum phenomena provide any evidence that they are related to mental phenomena (i.e., are they affected by the particular state of mind of the experimenter?).

2. The answer to (i) above is unequivocally “yes”. The experiments that we discuss below all display characteristics that are alien to the phenomena displayed by Newtonian or classical systems.

- **However, QM is not alone in that respect.** The two theories of relativity also are applicable to phenomena that are not compatible with classical phenomena: time dilation and length contraction are obvious examples.

3. In both relativity and QM, **the mental state of the observer** is NOT involved in any such “alien phenomena”.

- For example, relativity predicts that if a person takes off in a rocket, travels at speeds close to speed the light for an extended time, and comes back, he will find that those on Earth have aged much more than him. This is called time dilation.
- However, if two people travel at similar speeds for a certain time and come back, the time dilation experienced by both will be the same.
- In the same way, if any of those “weird” QM experiments are conducted by two different people, they will get the same result.

4. In both cases of QM and relativity, the results are “weird” by classical standards, but there is no involvement of the “consciousness of the observer”; and this apparent “weirdness” in QM goes away smoothly as the Plank’s constant (h) becomes negligibly small (and in relativity as the speed is reduced).

- There is no “mind effect” or “observer effect” in the sense of the subjectivity of the observer affecting the results of either type of experiment; **there are no subjective decisions to be made during an experiment.**
- By definition, unless an experimenter is truly objective, the results of any experiment cannot be reproduced.

5. In other words, all quantum phenomena, as well as those explained by relativity, are objective just like classical phenomena.

- **On the other hand, mind phenomena CAN BE subjective.** As discussed earlier, when describing physical properties of matter, two people can be objective, i.e., they report the same length, weight, etc for the object. But their PERCEPTION of a given person X, or a given food or music, etc , could be very different. Those are subjective.
- For example, two people with opposing political views (A and B) may encounter a politician C on the street who has views compatible with those of A. Person A will be happy to meet C and may go up to C, shake his hands and talk to him enthusiastically. On the other hand, Person B will automatically have irritable thoughts about C and is likely to avoid C.
- What properties of neurons in A and B could lead to such huge difference in feelings and intentions (consciousness) upon seeing the same person?
- Such subjective mental states do not play a role in carrying out experiments, whether quantum or classical. But they do play critical roles in making decisions in everyday life.

6. Therefore, those two issues need to be handled separately. Quantum phenomena have characteristics that are very different from classical phenomena; but both quantum and classical phenomena are objective. There is no evidence of quantum phenomena having anything to do with the subjective consciousness of a human.

- The crucial distinction that we need to realize here is that the phrase “non-deterministic” as applied to such QM experiments is not correct. Some measurements may not provide the exact location of a particle, for example. There could be many possible locations for that particle, but they all can be predicted with associated probabilities accurately.
- There is no “intrinsic subjectivity” in those experiments, other than the indeterminacy depicted by the Heisenberg uncertainty principle. If the same experiment is conducted under the same conditions, the same result is obtained regardless of who does the experiment; no connection to consciousness.

19.3 Quantum Mechanics – A New Interpretation

March 13, 2018

1. A new interpretation of quantum mechanics (QM) based on nonlocality and realism is presented, where wave-particle duality is shown to be an incorrect and unnecessary assumption.
 - In our proposed interpretation, appropriate wave functions are established instantaneously across space in accordance with nonlocality.
 - Nonlocality of Nature is hard for many to accept, but it has been shown to be valid in three key experiments conducted in 2015.
 - All existing experimental data, including those, are shown to be inter-consistent with this interpretation.
2. When I started working on this project over two years ago, I had conversations with Professor Gayanath Fernando and we tried to get a paper published on the proposed interpretation of QM.
 - However, we were unable to convince the reviewers, and the paper did not get published. The pdf of a recent version can be downloaded here: "[WebLink: PDF File: A Self Consistent Interpretation of Quantum Mechanics Based on Nonlocality.](#)"
 - The main objection of the reviewers seemed to be the nonlocality argument, and some were reluctant to reject the "wave-particle duality". I will be discussing those and other issues in detail in this section.
 - However, it is ironic that the non-locality of Nature was firmly established in 2015, as we discussed in the above paper.
3. I plan to write a series of posts in this section and welcome comments from knowledgeable readers who are familiar with concepts in quantum mechanics. I have opened a new forum entitled, "[Quantum Mechanics – A New Interpretation](#)" at the discussion forum in order to discuss each post that is published.
 - Anyone will be able to read these posts and also the posts at the discussion forum. However, one needs to register at the forum to ask questions or make comments. Forum registration instructions can be found at, "[WebLink: General Information and Updates](#)".
 - Now, let us discuss briefly the key idea behind the proposed connection of *kamma vipāka* to QM.
4. I will systematically expand the arguments given in the above paper (in #2 above) in a series of posts on the website. The following are the posts published so far:

19.3.1 What Is a Wave and What Is a Particle?

March 13, 2018; revised April 18, 2020 (added video in #7)

1. Waves involve the transport of energy without transport of matter. When you drop a pebble onto a water reservoir, you can see the ripples move out. There is no displacement of water from one place to another, but the disturbance moves out.

- Therefore, a **wave** can be described as a disturbance that travels through a medium, transporting energy from one location (its source) to another location without transporting matter.
 - On the other hand, a **particle** can move and therefore transfer matter. The most important characteristic of a particle is that its position is localized at any given time, and it is detected as a single detection event or a “single-click”.
 - Those are the ways waves and particles were expected to behave before the advent of quantum mechanics. But starting around the year 1900, our ideas about waves and particles became somewhat confusing, due to many drastic changes that took place for many years.
2. The fundamental concepts in quantum mechanics (QM) were worked out between roughly from 1900 to 1930. A good description of the evolution of QM within this period and beyond is given in the book “Einstein, Bohr and the Quantum Dilemma” by Andrew Whitaker (second edition, 2006).
- That book describes how the keywords like waves, particles, and wave functions related to QM evolved. Some of the old — and unnecessary — concepts like “wave-particle duality” linger on because of the impressions made at that time.
 - Experiments carried out within the past 20-30 years (some key experiments within the past few years), show that such lingering ideas on “wave-particle duality” are really an obstruction to grasping the reality revealed by QM.
3. For a long time, it was thought that light is a wave, specifically an electromagnetic wave. That idea still lingers on.
- Light consists of particles (photons.) That was firmly established only in 1986. We will discuss the next post.
 - **The most distinguishing characteristic of a particle is that its detection is recorded as a single event (“a click”) at the detector.**
4. However, the motion of a particle — including a photon — can be represented by a wave function, which is a mathematical function, not a wave. **A wave function is extremely useful for calculating experimental results, but it is not something that is physically real.**
- It is easier to see the differences among the terms waves, particles, and wave functions by looking at what happens when waves and particles go through two adjoining slits.

5. When normal particles that we are familiar with go through two slits and fall on a screen to make their imprints, we will see two “line images” as shown on the left in the figure below. On the other hand, a wave (like a water wave) will give rise to “fringes” as shown on the right.

- In normal life we will see particles (say marbles) going through two large slits leading to those marbles hitting the screen as shown on the left
- With a water wave going through two slits we will see ripples giving rise to water wave crests as shown on the right.

Those are the scenarios with normal particles and normal waves.

6. If quantum particles (like electrons or photons) are going through two slits where slit opening are LARGE (say a cm or more), then we will again see the “normal particle pattern” shown on the LEFT.

- **However, if quantum particles (like electrons or photons) are going through two slits where slit opening are SMALL (say less than a mm), then we will see the “wave pattern” shown on the RIGHT.** If the aperture dimensions are of the order of h/p (where h = Planck's constant and p is the momentum of the particle), then such diffuse wave patterns can be expected.
- In such cases, those experimental results can be CALCULATED by using wave functions to represent the motion of such particles.
- However, a particle is never spread out. A given particle will always be detected at a certain point within that diffraction pattern. One needs to repeat the experiment with a single particle many times to get that diffraction pattern.

We will discuss this in detail in upcoming posts, together with the following related issues.

Light is a Wave or a Particle?

1. In the early days, Newton's concept of light consisting of particles prevailed for a long time. But Newton's corpuscular theory of light was abandoned around 1850 because it could not explain interference and diffraction phenomena, and Young and Fresnel showed that the wave picture could explain those experimental results.

- However, a wave needs a medium to support it. A water wave propagates in water, and a sound wave can propagate in a solid or a liquid, and needs at least air to propagate. Still, light can travel in a vacuum, and therefore the existence of a yet unknown “aether” was proposed as the all-pervading medium through which light could propagate.
- The “aether theory” itself ran into several objections, and finally was abandoned after the famous Michelson–Morley experiment performed in 1887, which conclusively proved the absence of an aether.

2. Now we know that light doesn't need a medium through which to travel. Furthermore, the speed of light is constant and is independent of the movement of the source or detector or the direction in which it travels, as shown by the theory of relativity of Einstein (discovered in 1905).

- Therefore, light is not a wave. This was confirmed without any doubt by an experiment conducted with single photons in 1986, which we will discuss in the next post. I just wanted to present the background in this post.

Matter as Waves?

1. While the debate was going on about whether light is a wave or a particle between 1850 to early 1900's, and even up to 1986 to some extent, another related development came with the early studies in quantum mechanics beginning around 1900.

- The issue was whether solid particles can be treated as waves.

2. After Planck, Einstein, Compton, and others established that light behaved as particles (photons), Bohr in 1913 came up with an idea to quantize the energy levels of a hydrogen atom. He was able to explain why discrete lines in the spectra of hydrogen.

- The reason why Bohr's idea worked was clarified by a yet another ground-breaking hypothesis put forth by de Broglie in 1924. He proposed that just like photons can be represented by a wave (specifically with electromagnetic wave equations of Maxwell), the motion of electrons can be represented by a “wave”. At that time it was not fully clear what this “wave” would be. Now, we know that it is a wave function.

3. Light had been considered to be a wave for a long time, as we discussed above. But the idea that electrons with no-zero rest mass could be represented by waves was an unanticipated one.

- Then in 1927, Davisson and Germer produced clear diffraction patterns for electron scattering from a nickel lattice, just like a diffraction pattern due to light. This led to the speculation that maybe particles sometime behave as waves.
- That is how the idea of “wave-particle duality” evolved in the confusing period of 1900 to about 1930. Even though an accepted “quantum theory” had been established by around 1930, the idea of “wave-particle duality” lingers to the present.
- Nowadays, those diffraction patterns seen with electrons can be explained via the wave functions that represent the motion of electrons. However, a given electron can be found only at one location at a given time.

Heisenberg Uncertainty Principle

1. To make things even more complicated, in 1927 Heisenberg came up with his famous uncertainty principle. This principle says that the uncertainty of the position of a particle (σ_x) multiplied by the uncertainty of the particle’s momentum (σ_p) must be larger than what is known as the Planck’s constant, \hbar :

$$\sigma_x \cdot \sigma_p \geq \hbar$$

- Planck’s constant is extremely small; it has a value of about 10^{-34} Js.
 - For any particle that we can see with our eyes, any uncertainty in particle’s position will be much smaller than the size of the particle. Therefore, we don’t notice this in our normal lives.
2. However, when it comes to microscopic particles like electrons, the uncertainty in position is normally very large. If you have seen a pictorial representation of the orbit of an electron in a hydrogen atom, it is shown as an area; the electron could be anywhere within that area.

The following picture shows some examples of such electron orbitals. An electron could be anywhere within a given orbital at a given time.

- Therefore, the key point to remember is that the uncertainty in the position and the momentum (or velocity) of a particle become significant only for small particles like electrons and photons.
3. We can make the following statements about the location of such a “quantum particle” at a given time.
- The significance of this uncertainty is that we cannot say precisely where such a small particle to be found. We can only say that it should be located within a certain region and calculate the probability for it to be found at a given point within that region.
 - But that does not mean “the particle is spread out in that volume”. At any given time, the particle is located at only one point. It is just that we cannot say precisely at which point due to the uncertainty principle.

I hope you can see the difference. Some people make the grave mistake of saying a quantum particle is “spread over space” just like a wave. That is grave mistake, and is a key reason why people have a hard time understanding quantum mechanics.

Any questions on these QM posts can be discussed at the discussion forum: "[Quantum Mechanics – A New Interpretation.](#)"

19.3.2 Photons Are Particles Not Waves

March 13, 2018

Summary: Photons are ALWAYS particles. They travel as particles and are detected as particles. But the position of a photon during travel cannot be pinned down to a point (due to the Heisenberg uncertainty principle; see, "What Is a Wave and What Is a Particle?"). Only POSSIBLE LOCATIONS of the photon at any time (and the probability of detection at each location) are provided by the wave function that represents the photon. The difference between a wave and a wave function was discussed in the previous post.

1. I must warn that this post could be too advanced for many people. However, this is the sort of "deepest level" that we will go to in this section, and if one can at least comprehend the basic idea, then one should be able to follow the future posts. The basic idea that I am trying to express is that light consists of particles, which are called photons.

- What is meant by a "wave" in wave-particle duality is vague and different people seem to interpret the term differently. Therefore, it is helpful to resolve what is meant by a "wave" in "wave-particle" duality. Is it a "real wave" like a water wave or is it a mathematical function?
- As we show below, it has been confirmed that photons are particles, and the word "wave" SHOULD NOT be used to describe light. But, the motion of a photon can be REPRESENTED by a wave function, a mathematical representation.

2. For example, a statement that is made frequently is, "...the position of a single particle is spread out over space..." **This is a misleading statement, and never should be used.** *A particle always occupies a localized position*; what is spread out is the wave function, indicating possible positions for the particle to be at a given time. See the summary statement above.

- A particle, whether it is an electron or a photon, is detected at a detector as a single detection event. When light — reduced to low intensity — is detected at a detector, those photons are registered as "single clicks".
- **Therefore, we should give up the notion of light as a "wave".** Light consists of photons and each photon may be represented by a wave function, which is a mathematical concept. This lingering and false idea of a "wave" is the main obstacle to have a unified theory of QM.

3. Newton believed that light consisted of particles. Newton's corpuscular theory of light prevailed until around 1850 when it was abandoned because it could not explain the interference and diffraction effects of light. Since then light was regarded as a wave for a while.

- But starting around 1900 that wave picture could not account for many new experimental observations including the photoelectric effect, black-body radiation, and Compton scattering. Einstein proposed that light is quantized to explain the photoelectric effect (Einstein, 1905) — for which he received the Nobel Prize in physics in 1921 — and those quanta were given the name photon; they are the original "quanta" of quantum mechanics.
- A photon was a particle with momentum was confirmed experimentally by Compton (Compton, 1923), for which he received the Nobel Prize in 1927.
- The photon concept has led to momentous advances in experimental and theoretical physics such as lasers, Bose–Einstein condensation, and quantum field theory.

4. Then, in 1948 Feynman illustrated that it is not necessary to consider photons as waves at all in quantum electrodynamics (Feynman, 1948; Feynman, 1949; Feynman, 1985).

- While the first two references above are technical papers, third one is a book written in very simple terms. I would recommend those who are interested to read the book . I am only going to summarize what is in the book.
- That book was based on a series of 4 lectures. These are simple lectures delivered to non-physicists, and could be useful especially if one does not have access to the book:

[WebLink: YOUTUBE: QED: Photons — Corpuscles of Light — Richard Feynman \(1/4\)](#)

5. However, there was a persistent view up to 1986 that light could not be particles, and that many effects such as the photoelectric effect can be explained without the concept of a photon (Lamb and Scully, 1968; Crisp and Jaynes, 1969; Mandel, 1976).

- The final confirmation of a photon as a particle had to wait until single photon sources were developed, and in 1986 Granger, Roger, and Aspect confirmed in their anticorrelation experiments that photons are indeed particles. We discuss this experiment below.

Proof That Photons Are Particles

The figure below shows the experimental configuration used by Granger, Roger, and Aspect to verify that photons are indeed particles (Granger, Roger, and Aspect, 1986).

1. Single photons generated at S are sent through a beam splitter and signal via each leg is detected at D_1 and D_2 . In this experiment, **one photon at a time** is incident on the beam splitter A.

- If a photon is a particle, then it can be either reflected at A and go towards mirror M_1 , which then will be detected at detector D_1 , OR, it could go through A, reflected by mirror M_2 , and detected at detector D_2 . **Then a detection would register only at D_1 or D_2 .**
- However, if the photon is a wave, it could partially propagate through each arm and be detected at **both D_1 and D_2 simultaneously**. That would count as a “coincidence count (N_c)”.
- If a photon sometimes acts like a wave, there should be some coincidence counts.

2. The experiments confirmed that a given photon always takes one path at a time (Granger, Roger, and Aspect, 1986).

- This experiment conclusively proved that a photon travels **either** via the path A M₁ D₁ **or** the path A M₂ D₂.
 - If photons had the “wave nature”, there would have been at least some coincidence counts.
3. With this experimental confirmation (together with all other evidence discussed above), a photon is now categorized as an elementary particle. A photon at any wavelength is detected as a particle.
- In Feynman's Quantum Electrodynamics (QED), a photon is successfully treated as a particle which takes into account “all possible paths” via path integrals.
 - In our proposed theory, a photon is a particle and its motion is governed by a mathematical wave function that is set up instantaneously across space taking into account the details of the experimental arrangement; interference and diffraction effects are explained by this wave function.
4. Newton's corpuscular theory of light was abandoned around 1850 because it could not explain interference and diffraction phenomena.
- However, when Feynman introduced his new approach to quantum mechanics in 1948, he proposed that, “..The probability that a particle will be found to have a path $x(t)$ lying somewhere within a region of space time is the square of a sum of contributions, one from each path in the region. The contribution from a single path is postulated to be an exponential whose (imaginary) phase is the classical action (in units of \hbar) for the path in question..” (Feynman, 1948, p. 367).
 - Then he applied that concept to describe the propagation of photons as well as electrons in his formulation of quantum electrodynamics (QED); see (Feynman, 1949). The basic idea of photon propagation using “all possible paths available” has been explained by Feynman in his introductory book (Feynman, 1985) on QED.
5. Feynman has explained his theory of QED with simple diagrams without using any equations in his book (Feynman, 1985). I will use one of his diagrams to illustrate the basic concept in the next post.
- However, his technique was completely ad hoc; there was no rationale behind it. As he explained (p. 10 of Feynman, 1985): “..what I am telling you is, while I am describing to you *how* Nature works, you won't understand why Nature works that way. But you see, nobody understands that. I can't explain why Nature behaves in this particular way”.
 - With new experimental results published since that time, now we can understand the rationale behind his technique. That is what we will be discussing in the first series of posts, and is also in the unpublished paper: [“WebLink: Docx File: A Self-Consistent Interpretation of Quantum Mechanics Based on Nonlocality.”](#)
6. Of course, many phenomena involving light can be explained with light treated as an electromagnetic (EM) wave, just like the motion of large particles can be treated with Newtonian mechanics.
- But when analyzing quantum phenomena, the EM theory does not work for light and the Newtonian mechanics does not work for microscopic particles. This is quite apparent in QED, which deals with interactions of light with electrons.

19.3.3. **Feynman’s Glass Plate Experiment**

1

March 16, 2018; revised March 25, 2018

1. Feynman’s glass plate experiment that he discussed in pages 17 – 35 in his book (see the References below) is discussed in order to lay the foundation for our new interpretation of quantum mechanics (QM).

This is a key post that lays the foundation for the “nonlocality” argument. Even before I explain in detail what “nonlocality” is, I want to illustrate the simple fundamental idea behind it.

- **This idea is:** Even before a particle takes off, Nature evaluates all possible paths that particle could take, and come up “with a plan” for its motion. This happens AUTOMATICALLY and some “unconventional paths” could result only in the case of microscopic particles like electrons and photons.
- This is why quantum mechanics appear to reveal “strange phenomena”. But when particles increase in size, this “unusual behavior” goes away naturally.
- This simple idea that the physicist Richard Feynman came up is best illustrated with a simple experiment that is discussed in his book (see the References below). That experimental setup and the key result is shown in the figure below.

Experiments show signal at D_R to vary from 0% to 16% as the thickness of glass plate varied.

One would expect constant reflection at about 8%.

2. There are two “special features” in this experiment (it could be easier to print the post and read):

- i. The two surfaces of the glass slab are well-polished and are parallel to each other with high accuracy.
- ii. The light is monochromatic, which means it has a well-defined wavelength.

3. Light from the source (S) is incident on a glass plate. Part of the light is reflected as indicated by the arrow labelled #1, and the rest is transmitted through the glass and incident on the second surface where a part of it is reflected and goes back up as indicated by the arrow #2. Rest of light emerges from the other side of the glass plate indicated by the dotted arrow. Two more things to be noted:

- What is plotted on the right side of the figure is the light signal in the reflected beams #1 and #2.
- Variable on the X-axis of that figure is the thickness of the glass plate (L).

4. The first thing one would expect is to have a fraction of light (about 8%) to be reflected via path #1. In fact, that is what one WILL observe with normal light (with all wavelengths in the visible region).

- However, as we can see in the experimental data to the right in the figure, that reflected signal varies from 0% to 16% as the thickness of the glass plate is increased for light with a well-defined wavelength (like from a laser).
- It is interesting to see that the reflected signal is zero (very low) at some thicknesses of the glass plate. **This is a KEY feature that cannot be explained without our interpretation of QM.** If anyone can, please post at the discussion forum. Feynman explicitly said that he could not, on p. 10 of his book.

5. Normally, one would expect the light reflected from the front surface (#1) to be at a constant level since photons are particles, i.e., a photon hitting the first surface would have no idea whether another interface existed below or not. Again, this is the key to the puzzle.

- For an analogy, we can consider the following case. Imagine a wire fence with holes a bit larger than a ball that we throw at it. Some balls (those that align with the holes) will go through those holes and others will bounce back. Would it make any difference to the number of balls that bounce back if we install another fence a little bit beyond the first fence? Would it matter how far apart the fences are? Of course not.

- That is a reasonable analogy that shows how amazing the above observations — seen with the glass plate and the particles of light (photons) — are.
 - But such effects are seen only in the microscopic realm, as we will discuss later.
6. The following is how Feynman devised a “rule” that turned out to be able to account for those observations in the figure above.
- For a photon to get to the detector D_R , there are two paths available via the glass plate (#1 and #2), as shown in the figure. **Feynman’s key assumption was that wave functions are established instantaneously via both those paths, and the vector sum of them would determine the possible path for a photon. These are not real waves, but just mathematical functions.**
 - In quantum electrodynamics (QED), this procedure of “summing up all possible paths” is given the fancy name, “path integrals”.
 - When the path difference between those two paths is equal to the wavelength of the light, those two contributions are cancelled out (there is a phase shift of 180° for the two paths in addition). That is why one sees zero intensity at plate thicknesses that are multiples of even number of half the wavelength.
 - On the other hand, when the path difference between those two paths is equal to the half of the wavelength of the light, those two contributions add together. That is why one sees large intensity at plate thicknesses that are odd multiples of half the wavelength.
 - Those are just technical details. Don’t worry about them if you are “non-technical”.
7. **As long as one uses monochromatic light (and glass with no defects), one could in principle make the width of the plate arbitrarily large and those oscillations in the signal in the above figure persist.** Thus as long as those two possible paths are available (without any defects in the glass plate), **the resultant wave function will enforce “no reflection” at the front surface regardless of how thick the glass plate is.**
- On p. 21 of his book (Feynman, 1985), Feynman says, “..Today, with lasers (which produce a very pure, monochromatic light), we can see this cycle still going strong after more than 100,000,000 repetitions — **which corresponds to glass that is more than 50 meters thick.**” This is an amazing observation!
8. Therefore, QM wave functions — which take into account the phases and amplitudes of all possible paths — *are established instantaneously.* **This is a consequence of the nonlocality of nature that we will discuss in detail in upcoming posts.**
- In the case of the above figure, there are two possible paths for a given photon — indicated by the arrows #1 and #2 — leading to D_R as shown in the figure. It is important to note that the path of a given photon leaving the source (S) is predetermined from the start.
 - Thus the question does not arise as to how the photon coming to the first surface “knows” that there is a second surface below it. There is no causality problem here, *since the QM wave function is established at the very beginning* because of the nonlocality of nature; if any changes are made to the experimental setup, the wave function will adjust *instantaneously*. **Nonlocality means exactly that: physical proximity is not needed for this mechanism to work.**
9. **Now we will discuss a critical implication of Feynman’s “a particle exploring all possible paths” or “path integral” approach, that even Feynman did not realize.**
- **What happens when we increase the thickness of the (defect-free) glass plate to a value that is greater than the distance from the glass plate to the detector D_R ?**

- Now, a photon reflecting off of the front surface would have had time to reach the detector before another photon going through the glass plate even reaches the lower glass-air surface, and start coming back to the detector D_R via #2 path.
 - You need to take time and think about this. That is why it could be better to print the post and read. I don't think the reviewers of our paper even realized this key point; see, bullet #3 of "[Quantum Mechanics and Dhamma – Introduction](#)."
10. Therefore, in the absence of wave functions establishing instantaneously across both possible paths (and thus undergoing destructive interference), there CANNOT be a zero signal at the detector D_R , for ANY thickness of the glass plate **if that thickness (L) is greater than the distance from the glass plate to the detector D_R** .
- This is the second aspect of the key observation that cannot be explained without our proposed interpretation of QM.
 - Again, please make comments at the discussion forum, if anyone can explain this observation in another way.
11. With the above observation, this experiment also confirms that photons are not waves, which we established in the post, "[Photons Are Particles Not Waves](#)." In principle, two waves coming off of the front and back surfaces of the glass plate COULD destructively interfere to yield the zero intensities at those plate thicknesses.
- However, in this particular case (thickness of the glass plate larger than the distance from the glass plate to the detector D_R), the "light wave" from the front surface would have arrived at the detector and be gone, by the time "light wave" from the back surface of the glass surface arrives at the detector.
 - Therefore, destructive interference at the detector cannot take place **in the case of real waves propagating at the speed of light**. What undergoes destructive interference are the **mathematical wave functions** representing a photon.
 - This is why it is important to distinguish between waves and wave functions; see, "[What Is a Wave and What Is a Particle?](#)."
12. Therefore, the zero intensity observed at some plate thicknesses is not due to the destructive interference of waves. Instead it is due to the combined contributions from those two paths (two wave functions).
- If the two wave functions destructively interfere, **then not even a single photon will be directed via either of those paths, and all incident photons will go through the glass slab**.
 - If the two wave functions interfere constructively, then maximum possible number of photons will be directed via those paths, and maximum possible signal (16%) will be observed at D_R ; rest of the photons will go through the glass slab.
13. Therefore, it is very important to understand the difference between waves and wave functions. Light cannot be really called electromagnetic waves, even though the term is used even today. We have established that in the post, "[Photons Are Particles Not Waves](#)." I am proceeding slowly to establish a solid foundation, so that questions like this do not arise later on.
- Feynman's method says that even before a particle starts moving, **wave functions** for "all possible paths" for that particle are established instantaneously. The particle will then move along a path that results from the "summation over all those paths".
 - These wave functions are vectors (i.e., they have a magnitude and a direction). Therefore, vector addition must be used in "summing up all possible paths". For those who are "non-technical" such details can be skipped; just get the idea.
 - This vector addition using a simple method with arrows is described by Professor Feynman in his book and also in a series of four public lectures (see the References below).

14. To summarize the above discussion in another way, let me quote from Feynman's book (p.36):

- **“This strange phenomenon of partial reflection by two surfaces can be explained for intense light by a theory of waves, but the wave theory cannot explain how the detector makes equally loud clicks as the light gets dimmer. Quantum electrodynamics “resolves” this wave-particle duality by saying that light is made of particles, but the price of this great advancement of science is retreat by physics to the position of being able to calculate only the probability that a photon will hit a detector, without offering a good model of how it actually happens.”**
- Our proposed theory shows exactly how it happens.

15. As we will discuss in the upcoming posts, we point out that Feynman's idea of a photon exploring all possible paths is none other than the enforcement of nonlocality; *Feynman's QED implicitly assumed nonlocality*.

- A wave function is instantaneously set up over all space taking into account the phases for all possible paths; there is no spatial limitation. This is why two particles across the universe could be still entangled; see, [“Quantum Entanglement – We Are All Connected.”](#)
- In the next post we will show that in the above case, a photon will actually “explore ALL possible paths”, an infinite number of them! However, only those two paths actually came into play in the above discussion, because all others cancel out at ALL TIMES.

Any questions on these QM posts can be discussed at the discussion forum: [“Quantum Mechanics – A New Interpretation.”](#)

19.3.3. Feynman's Method of “A Particle Exploring All Possible Paths” 2

March 29, 2018

1. In the previous post we discussed Professor Feynman's illustration of how **two wave functions (not waves)** corresponding to two possible paths for a photon interfere (constructively and destructively) to produce an oscillating signal; see, [“Feynman's Glass Plate Experiment.”](#)

- It was pointed out that this experimental result is not explainable if light is treated as an electromagnetic wave.
- More importantly, it showed that a path for a photon is mapped out instantaneously by Nature, as soon as the photon takes off.
- In this post, we will discuss his argument that the Nature actually takes into account **ALL possible paths, an infinite number of them!** This is our key idea behind “nonlocality”, so we will proceed step-by-step to make our case crystal clear.

2. This discussion is also based on the following figure from Feynman's book (p 43); see the reference below. Light received at point P due to source S is considered; direct path from S to P is blocked by a screen placed in between them.

- Everyone is familiar with the “law of light reflection” where the light from from A goes to a Point B in a path that is defined by the angle incident being equal to the angle of reflection.

- Of course, the time for a photon to get from S to D is minimum close to the center of the mirror.
 - However, Feynman showed that a better picture with more explanatory power is available with the concept of “a photon exploring all paths”. He showed that most possible paths are cancelled out and only those paths that lie close to the expected path stated by the Law of Reflection contribute to the final detection probability.
3. In order to illustrate the concept of a photon “exploring all possible paths”, the mirror is divided into sections A through M, and reflection from each section of the mirror is indicated (see the above figure).
- Due to different distances of travel, the time taken for each path varies as shown in the middle figure, and correspondingly the phase varies as shown below that. The final amplitude is given by adding those arrows, and is indicated at the bottom of the figure.
4. Just like in adding the contributions from two “waves”, adding the contributions from “wave functions” requires one to take into account the difference in phase angle. Feynman has described this in simple terms, how to add contributions due to many wave functions using vector addition (see pp. 24-35).
- It is evident that the major contribution to the final arrow’s length is made by arrows E through I (from the central part of the mirror), whose directions are nearly the same because the timing of their paths is nearly the same. **This also happens to be where the total time is the least indicated by the heavy arrow, which is the expected path from the law of reflection.**
 - The law of reflection, that we learn at high school, is a simple rule that works. But actually reflections from **each point in the mirror** contribute to the signal at P. It is just that most of those contributions cancel out (as shown by the bottom part of the above figure).
5. **To prove that even the edge of the mirror does contribute to the signal at P**, we chop off most of the mirror, leaving only the sections A, B, C on the left. From the above figure, if we add the three arrows

due to those those three sections, they nearly cancel out. This is why we do not see significant contributions from parts of the away from the center.

- If we now divide that section (of A,B,C in the above figure) into **four equal sections**, they of course again cancel out as shown in the top section of the figure below.

- **But if we now carefully scrape two alternating sections of those four sections (as shown in the bottom figure),** then the signals due to the two reflecting sections **add up to give an intense signal;** see the bottom part of the above figure.

6. This conclusively proves that during normal reflection, parts of the mirror away from the center also contribute to the signal. It is just that most of that signal is cancelled out. Thus, for all practical purposes, it is sufficient to just take the reflection from the center part of the mirror (i.e., to use the law of reflection in geometrical optics).

- However, If only the arrows in a particular direction are kept, while the others in opposite direction are removed (by etching the mirror in those places), then a substantial amount of light reflects from a piece of mirror located away from the center, as shown in #5 above.
- **That modified section of the mirror is of course now a diffraction grating.**

7. Feynman discusses several examples in his book, but let us discuss just one more example to illustrate the point that this method is consistent with the Principle of Causation.

- **Here we consider the case of refraction, which had led to causal issues with the “photon as a particle” idea of Newton and Fermat.**
- Those who are really interested can read in detail the historical evolution of ideas from Newton through Fermat to Feynman, in the book by Ivar Ekeland (see References below).

8. Figure below shows the refraction of light from a source (S) in the air to a detector (D) placed in water. As in the case of the mirror, we consider all possible paths from S to D, and map out the time taken for a photon to reach point D via “different sections” of the water surface.

- The observation of light taking the “time of least time” to reach a detector in the water by changing its path (called “refraction”) was explained by Fermat back in 1657, by taking into the account that light travels slower in water than in air; we will discuss this in the next post, “Exploring All Possible Paths” Leads to Fermat’s Principle of Least Time”.

- However, until Feynman came up with his method of “a particle exploring all possible paths”, this phenomenon could not be explained within the “particle picture”.

- Once again, most paths away from the optimum path are CANCELLED OUT. The major contributions come from those paths close to the expected arrow indicated by the heavy arrow, and the Fermat's Principle of Least Time is recovered with this “particle representation”.

9. What bothered everyone (including Feynman) about Fermat's idea is that it seemed to require agency. How could light *choose* a path? How could it possibly *know* which path was the fastest?

Here's how Feynman puts it (Feynman Lectures, Vol. 1, Chapter 26):

“The principle of least time is a completely different philosophical principle about the way nature works. Instead of saying it is a causal thing, that when we do one thing, something else happens, and so on, it says this: we set up the situation, and light decides which is the shortest time, or the extreme one, and chooses that path. But what does it do, how does it find out? Does it smell the nearby paths, and check them against each other? The answer is, yes, it does, in a way.”

- **The explanation is that Feynman method works because the Nature is nonlocal.** We will discuss this in detail in future posts.
- A link to Feynman Lectures is given in the References.

An Electron Will Also Explore All Possible Paths

As Feynman pointed out, everything we have discussed so far can be applied to the propagation and detection of electrons: Electrons also “explore all possible paths”, and these paths are determined by the experimental configuration.

- If the experimental configuration changes, those paths reconfigure instantaneously. Of course, quantum electrodynamics (QED) incorporates the possible trajectories of both electrons and photons.
- It is amazing to realize that physicists used Feynman's version of QED for 70 years without realizing that the same needs to be applied to quantum phenomena like the “double-slit experiment”.

Conclusion

The key philosophical problem that existed for Newton to Fermat to Feynman with their “particle representation of light” was to explain how a photon would know in advance how to determine the path of least time.

- But that problem goes away when we realize that a photon (or any particle) takes into account “all possible paths” **dictated by the nonlocality of Nature.**
- We will discuss the nonlocality in detail in upcoming posts. I just wanted to provide the experimental evidence from the work of Professor Feynman first.

Any questions on these QM posts can be discussed at the discussion forum: [“Quantum Mechanics – A New Interpretation.”](#)

19.3.3. ³ “Exploring All Possible Paths” Leads to Fermat’s Principle of Least Time

April 1, 2018

1. In 1657 the French lawyer and mathematician Pierre De Fermat (behind Fermat’s Last Theorem) worked out that when light travels from one place to another, it always takes the path of least time. The path of a ray of light going from air to water shown below.

- There's a formula called Snell's law (shown in the figure) that correctly predicts the exact angle by which the light bends, depending on the materials it's traveling through and the angle at which it hits the surface.
- Fermat explained this observation of light taking the "time of least time" to reach a detector in the water by changing its path (called "refraction") by taking into account that light travels slower in water than in air.
- But the question of WHY it does that has not been answered up to now. Furthermore, how would a photon know there is an interface coming up ahead? **As we saw in the post, "Feynman's Method of [A Particle Exploring All Possible Paths](#)," the wave theory of light cannot explain it.**
- As we also saw in that post, Feynman came up with a technique called "a photon exploring all possible paths," but admitted that he did not know WHY it worked. In future posts, we will show that it is due to the nonlocality of Nature and the instantaneous establishment of quantum fields for "all possible paths" for the photon.

2. That is precisely the same procedure followed by a lifeguard (instinctively) in reaching a drowning swimmer in water. The figure below illustrates the situation.

3. When we look at the above figure, at the first glance, one may wonder whether a straight line (path A) is the fastest path. That is indeed the shortest one, but it isn't the quickest. Because one can run faster along the beach, and cover more distance on land than in water.

- However, if one runs on path B, make the distance in water to be minimum, that is not the quickest either. This route is too long, and it slows you down.
- The quickest path is C, a very specific path that lies somewhere between A and B, where the lifeguard jumps in at a distance x before the shortest path in water.
- **Of course, a lifeguard would not even think about all this. He/she would instinctively choose a path that turns out to be close to this optimum path C.**

4. I have not come across anyone experimenting on lifeguards, and seeing how close they get to the "optimum path." But I came across a paper by a math professor who studied on his dog fetching a ball thrown into Lake Michigan.

- He found out that his dog's path (over many measurements) came close to the "optimum path" predicted by Snell's law: "[WebLink: PDF File: Do Dogs Know Calculus- Pennings-2003.](#)"

5. After collecting 35 data points (the x and y values in the figure above, in meters), Professor Pennings plotted them. Along with these data points, he also drew the optimal trajectory predicted by the Snell's law, shown by the straight line below (figure from the above paper).

- Therefore, just like a photon “would know” how to take the “path of least time,” a dog would too!

6. Even more interestingly, even ants seem to be able to find the “optimum path” that takes the least time to get to their food.

- A group of researchers used a glass surface and a rough green felt surface — analogous to air and water or sand and water in above cases – to separate a colony of ants. They placed ant-food some distance into the rough green felt surface.
- They found that the ant trails were far closer to the quickest path than to the direct route. Like light and lifeguards, these ants seemed to minimize time and not distance. The following figure showing the trail of the ants is from their paper: [“WebLink: PDF File: Fermat’s Principle of Least Time Predicts Refraction of Ant Trails at Substrate Borders.”](#)

Conclusion

The critical philosophical problem that existed for Newton to Fermat to Feynman with their “particle representation of light” was to explain “how a photon would know” in advance how to determine the path of least time; see the book by Ivar Ekeland in the References.

- But that problem goes away when we realize that a photon (or any particle) takes into account “all possible paths” instantaneously due to the nonlocality of Nature. That is the basis of our new interpretation of quantum mechanics. We will discuss this in detail in upcoming posts.
- Even more interestingly, the observations of humans, dogs, and ants also taking the “path of least time” just instinctively, illustrate that this is how Nature works. **Even living beings are guided by this “nonlocality of Nature.”** This example illustrates that there is so much that we DO NOT KNOW about how Nature works.
- That is closely related to how Nature AUTOMATICALLY executes *kamma vipāka*. That will become more clear as we proceed.

Any questions on these QM posts can be discussed at the discussion forum: [“Quantum Mechanics – A New Interpretation.”](#)

XX About Author

Revised March 9, 2017; April 14, 2018; November 10, 2018; August 13, 2019

My name is Lal Ariyaratna Pinnaduwege. I loved physics from the school days and became a physicist, and became a Senior Scientist at the Oak Ridge National Laboratory and a Research Professor at the University of Tennessee, Knoxville. I was elected a Fellow of the American Physical Society in 2004. Since retiring in 2009 at age 55, I have been on a quest to uncover the pure Dhamma of the Buddha.

Even though I am a Buddhist by birth, I did not really “practice” until I retired. Initially, it was to find out what “Buddhism” really was, and how it compared with other world religions.

- I provided the above description in keeping with my intention to be fully open. Also, I intend to make the website “as experienced” by myself. I will specifically mention what I have not experienced as such. I will record my progress in these web pages as much as advisable. (Not everybody will have the same kind of experiences related to *samādhi*, *jhāna*, or *magga phala*).
- What I have found is that Buddha Dhamma is different from not only other religions but also many forms of “Buddhism” that we have today. Other religious and cultural influences have contaminated even the Theravāda version.

In July 2013, I accidentally came to know about new interpretations of *anicca*, *dukkha*, *anatta* (true Nature of existence). It was “the main missing piece” for me. I will never forget the ecstatic feeling while listening to that fateful *desanā* from one *Thero* on July 30, 2013, on the internet. I made a trip to Sri Lanka and was able to get more information, even though I was not able to meet Venerable Waharaka Abhayaratnalankara *Thero*, who had uncovered the actual teachings. What I present here is this complete picture, with my input from my science background.

- Waharaka *Thero* passed away on February 9, 2017; see, “[Parinibbāna of Waharaka Thero](#).” A large number of his *desanās* available at “[waharaka.com](#)” (explore the top menu!). Unfortunately, those *desanās* are available only in the Sinhala language.
- As in science, here, I am going to treat Buddha Dhamma as a theory and explore whether it provides a consistent picture of our world. Buddha Dhamma is a complete worldview and its principles are the laws of Nature. Scientists have uncovered only a fraction of these laws, and only those about inert matter. But mind precedes matter.

I hope is that I can give you a taste of the exhilarating experience that I have enjoyed over the past several years in uncovering the pure Dhamma. Buddha Dhamma is indeed for those who seek to broaden their horizons. You will truly gain benefit from this site if you leave behind any preconceived ideas about “Buddhism.”

- Above all, I wanted to convey the truth of the fact that one CAN experience the “cooling down” or “*Nivana*” or “*Nibbāna*” at various levels as one LEARNS AND LIVES the pure Dhamma. That is not something to be attained in future lives but is something that one CAN experience in this very life by cleansing one’s mind. What I describe here is what I have experienced, to a large extent.
- Most people do not like to talk about their “spiritual experiences,” and that is understandable. But I think it could be beneficial to others if I describe my progress to get an idea of what to expect. A brief description of my progress is given in, “[10. Attaining the Sotāpanna Stage via Removing Ditthasava](#)” and the posts mentioned there. This will also provide a context for the material presented at this website. Please be aware that each person’s experience is different.
- Please ask your questions at the discussion forum; see below. If you have a questions of personal Nature, you can send it to me at: lal@puredhamma.net.

- Buddha Dhamma is a self-consistent description of the Nature's laws, and if there are any inconsistencies in these pages, they are due to my own mistakes and I should be able to correct them. I do revise these posts on a continuously as my own understanding improves.

The Buddha said, “*Sabba dānaṃ Dhamma dānaṃ jināti*”, or “Gift of Dhamma excels all other gifts.” Please inform others about this site if you benefit from it.

December of 2017: Discussion forum initiated: “[Forum](#).”

Updates and new posts at “[2- General Information and Updates](#).”

March 2018: A new section on “[Quantum Mechanics and Dhamma](#).”

November 10, 2018: There are over 500 posts at the site as of today. There are two ways to find relevant posts on a given concept/ topic.

- All posts are under sections and subsections; see “[Pure Dhamma – Sitemap](#).” One could scan through it to locate relevant posts.
- The “Search” button at the top right is also good at extracting relevant posts for a given keyword or keywords.

July 2019: New sub-section on “[Origin of Life](#).”

April 2020: Re-writing of the section on “[The Five Aggregates \(Pañcakkhandha\)](#).”

XXI Sitemap

I have arranged the sections roughly in increasing complexity. However, you may want to scan through each section to get an idea of what is in each section. People have backgrounds at very different levels. Furthermore, even those who have been exposed to Buddhism for many years may not have a good understanding of the fundamentals.

Inconsistencies with Science

1. We all are impressed by the scientific advances made during the past 100 years or so making our lives easier and more productive. I am actually a cheerleader for scientific and technological advances.

- Physics had been my passion since high school days, and that changed when I started learning Buddha Dhamma several years ago. I still love and work on topics of interest in physics (and science in general). Fortunately, I am finding that those two interests are not mutually exclusive, and there is significant overlap. In fact, this section is the result of my two overlapping interests.

2. The following posts discuss cases where current theories of science are not consistent with Buddha Dhamma. I believe that science will recognize the primary nature of the mind in the future, and will discard the current notion that the mind (consciousness) arises out of inert matter.

[Neuroscience says there is no Free Will? – That is a Misinterpretation!](#)

[The Double Slit Experiment – Correlation between Mind and Matter?](#)

[Vision \(Cakkhu Viññāna\) is Not Just Seeing](#)

3. Despite the advances in science and technology, there is much about the human mind that science does not understand, and has not even begun to understand. **Western science is based on the five physical senses, leaving out the most important one, the mind.**

- At the present time, in 2016, scientists have the wrong view that consciousness originates in the brain.
- All scientific theories relating to the mind are based on this wrong hypothesis. However, Buddha Dhamma says not only that mind is a sense of its own, but it is the most powerful of all six senses.

Here is a post from the Abhidhamma section that has a deeper analysis of the brain-mind connection:

[Brain – Interface between Mind and Body](#)

Quantum Mechanics and Dhamma

This section will discuss two issues:

1. **A new interpretation of quantum mechanics (QM) based on non-locality is presented based on Feynman's ideas.** Concepts like wave-particle duality, observer effect, are not needed. Furthermore, complex interpretations like the "Many-Worlds interpretation" are avoided. All existing experimental data will be shown to be consistent with this interpretation.
2. **A deeper understanding of how *kamma* automatically lead to corresponding *kamma vipāka* in Buddhism (Buddha Dhamma), becomes clear with this interpretation.**

XXII Notes

| Word | Details |
|----------------------------|--|
| <i>anuloma</i> | “ <i>anuloma</i> ” comes from “ <i>anu</i> ” + “ <i>lo</i> ” + “ <i>ma</i> ” where “ <i>anu</i> ” means “through the understanding of <i>Tilakkhaṇa</i> ”, “ <i>lo</i> ” means “craving for worldly things”, and “ <i>ma</i> ” means “removal”, and thus “ <i>anuloma</i> ” means “removal of craving for worldly things to some extent via the comprehension of <i>Tilakkhaṇa</i> ” or conformity (behaviour in accordance with socially accepted conventions). |
| <i>bhagavatā</i> | “ <i>Bhagavatā</i> ” (“ <i>bhaga</i> ” + “ <i>vata</i> ” where “ <i>bhaga</i> ” means divide and “ <i>vata</i> ” means “the process” that looks like a “living being”) means this Dhamma, by analyzing a “person” in terms of “actions”, illustrates that there is no enduring entity in a “living being”. |
| <u><i>dhammānusārī</i></u> | <i>dhamma</i> + <i>anusārī</i> is a Dhamma-follower <i>anusārī</i> : (adj.) , striving after; acting in accordance with; follower. <i>anusari</i> :[aor. of <i>anusarati</i>] went after; followed. |
| <i>gandhabba</i> | <i>gandhabba</i> can only inhale odours (“ <i>gandha</i> ” + “ <i>abba</i> ”) as food, and thus the name. |
| <i>kāmacchanda</i> | <i>kāma chanda</i> = “ <i>kāma</i> ” + “ <i>icca</i> ” + “ <i>andha</i> ” where “ <i>kāma</i> ” is sense pleasures, “ <i>ichcha</i> ” is liking and “ <i>andha</i> ” is becomes blind; thus <i>kāmacchanda</i> means blinded by attachment to sense pleasures. |
| <i>lobha</i> | “ <i>lobha</i> ” comes from “ <i>lo</i> ” + “ <i>bha</i> ” where “ <i>lo</i> ” means “craving for worldly things” and “ <i>bha</i> ” means “appear and gets established” or “immersed” and thus “ <i>lobha</i> ” means “immersed in craving for worldly things”. <i>lobha</i> is the extreme of greed. “ <i>lo</i> ” + “ <i>bha</i> ” where “ <i>lo</i> ” is for the <i>lokaya</i> or world and “ <i>bha</i> ” is for “ <i>bihiveema</i> ” (arise or establish) is the main reason how the material world is created and sustained with greed. |
| <u><i>māna</i></u> | ‘conceit’, pride, is one of the 10 fetters binding to existence (<i>s.samyojana</i>). It vanishes completely only at the entrance to Arahantship, or Holiness (cf. <i>asmi-māna</i>). It is further one of the proclivities (<i>s.anusaya</i>) and defilements (<i>s.kilesa</i>). “The equality-conceit (<i>māna</i>), the inferiority-conceit (<i>omāna</i>) and the superiority-conceit (<i>atimāna</i>): this threefold conceit should be overcome. For, after overcoming this threefold conceit, the monk, through the full penetration of conceit, is said to have put an end to suffering” (A. VI, 49). |
| <i>moha</i> | <i>Moha</i> comes from “ <i>muva</i> ” + “ <i>hā</i> ” which symbolizes a vessel with its mouth closed; thus one cannot see what is inside. In the same way, one acts with <i>moha</i> because one is totally unaware that such immoral acts will have very bad consequences; one’s mind is totally dark. |
| <i>paṭicca</i> | “ <i>paṭicca</i> ” (“ <i>paṭi</i> ” + “ <i>icca</i> ,” where “ <i>paṭi</i> ” is bind or bond and “ <i>icca</i> ” means desire and <i>paṭicca</i> means bond with desire willingly). |
| <u><i>saddhānusārī</i></u> | <i>saddha</i> + <i>anusārī</i> is a faith-follower <i>anusārī</i> : (adj.) , striving after; acting in accordance with; follower. <i>anusari</i> :[aor. of <i>anusarati</i>] went after; followed. |
| <i>samauppāda</i> | “ <i>sama uppāda</i> ” (where “ <i>sama</i> ” is similar and “ <i>uppāda</i> ” means birth). |

| | |
|---|---|
| sammā | sammā which comes from “ san ” + “ mā ,” which means “to become free of san .” |
| san | “ san ” is basically the term for “good and bad things we acquire” through our moral/immoral deeds. |
| sandiṭṭhiko | “ Sandiṭṭhiko ” (“ san ” + “ diṭṭhiko ”). <i>Dhamma</i> explains and clarifies “ san ” that are the causes (<i>avijjā</i> and <i>taṇhā</i>) for arising of <i>saṅkhata</i> (<i>sankata</i> in Sinhala) (whether they are living or inert). |
| saṅgha | <i>saṅgha</i> is “ san ” + “ gha ”, or those who have either gotten rid or are successfully getting rid of ”san ”, and by this definition, one does not have to be a <i>bhikkhu</i> to belong to the <i>saṅgha</i> |
| saṅkhata (<i>sankata</i> in Sinhala) | [pp. of <i>saṅkharoti</i>] conditioned; prepared; produced by a cause; the ‘formed’, i.e. anything originated or conditioned, comprises all phenomena of existence. |
| saṅkhāra | <i>Saṅkhāra</i> (“ san ” + “ kara ” or actions; සන්ඛාර in Sinhala) are anything (thought, speech, bodily actions) done while living in “this world” of 31 realms. |
| saṅkhata | (<i>sankata</i> in Sinhala) [pp. of <i>saṅkharoti</i>] conditioned; prepared; produced by a cause. |
| svakkhata | “ Svakkhata ” (“ sva ” for “self” and “+ “ akkata ” or “ akrutha ” or “ akriya ” means putting out of action) meaning it leads to getting rid of the concept of a “me” (<i>asmai māna</i>) — which happens at the <i>Arahant</i> stage. It is not about whether a “self” exists or not; it is rather to realize that nothing in this world is worth to be considered “mine”. |
| upādāna | <i>Upādāna</i> basically means “pulling it closer (in one’s mind)” (“ upa ” + “ ādāna ”, where “ upa ” means “close” and “ ādāna ” means “pull”). [ādāna : (nt.) , taking up; grasping.] |
| vinaya | <i>vinaya</i> comes from “ vi ” + “ naya ”, where “ naya ” in Pāli or Sinhala means debt and <i>vinaya</i> means not in debt. |
| <u>vipallāsa</u> | ‘perversions’ or ‘distortions’. - “There are 4 perversions which may be either: ▪ of perception (<i>saññā-vipallāsa</i>), ▪ of consciousness (<i>citta-vipallāsa</i>), or ▪ of views (<i>diṭṭhi-vipallāsa</i>). And which are these four? To regard: ▪ what is <i>anicca</i> as <i>nicca</i> ; ▪ what is <i>dukkha</i> as <i>sukha</i> (or happiness-yielding); ▪ what is <i>anattā</i> as <i>attā</i> ; ▪ what is impure (ugly: <i>asubha</i>) as pure or (beautiful: <i>subha</i>)” (A.IV.49). - See Manual of Insight, by Ledi Sayadaw (WHEEL 31/32). p.5. |

| | |
|--------------------|---|
| | <p>“Of the perversions, the following are eliminated by the 1st path-knowledge (<i>sotāpatti</i>): the perversions of perception, consciousness and views, that the <i>anicca</i> is <i>nicca</i> and what is <i>anatta</i> is <i>atta</i>; further, the perversion of views that the <i>dukkha</i> (suffering) is <i>sukha</i> (happiness), and the <i>asubha</i> (impure) is <i>subha</i> (pure) is also eliminated.</p> <p>By the 3rd path-knowledge (<i>anāgāmitā</i>) are eliminated: the perversions of perception and consciousness that the <i>asubha</i> (impure) is <i>subha</i> (pure).</p> <p>By the 4th path-knowledge (<i>arahatta</i>) are eliminated the perversions of perception and consciousness that the <i>dukkha</i> (suffering) is <i>sukha</i> (happiness)” (Vis. M. XXII, 68).</p> |
| <i>vipariyesa</i> | (a contamination form between ° <i>pariyaya</i> & ° <i>pallāsa</i>) reversal, contrariness, wrong state Kvu 306 (three reversals: <i>saññā</i> °, <i>citta</i> °, <i>diṭṭhi</i> °; or of perception, consciousness & views. |
| <i>vyāpada</i> | <i>vyāpada</i> comes from “ <i>vaya</i> ” + “ <i>pada</i> ”, where “ <i>vaya</i> ” means decline and “ <i>pada</i> ” means walk towards; thus <i>vyāpada</i> means one is on a (morally) declining path. |
| <i>yuñjati</i> | [<i>yuj</i> + <i>ṃ</i> - <i>a</i>] joins with; engages in; endeavours. |
| <u><i>yuta</i></u> | [pp. of yuñjati] yoked; harnessed; connected with ; given to; engaged in; proper. |
| | |
| | |
| | |
